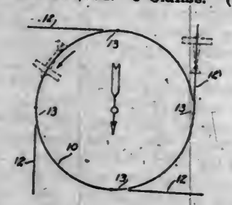
1. Apparatus for tipping traveling mine-skips comprising a continuous rail track consisting of an upwardly inclined entry section, a downwardly and rearwardly curved section joined at its upper end to the forward end of the entry section and composed of rails of channel section with the channels opposed, a central or return section joined at one end to the lower end of said curved section, and upwardly and forwardly curved section joined at its lower end to the other end of the central section and composed of channel rails with their channels opposed, said central section being at a slight angle, horizontally, to the entry section, and an exit section joined at one end to the upper end of the last mentioned curved section; and, in combination with said track, means for progressing a mine-skip about said track, said means comprising an endless chain equipped with fingers to engage an element of the under frame of a skip on the track, and four sprockets, one of which is power driven, about which said chain is reeved, two of said sprockets being located respectively at the entry and exit ends of the track, while the other two respectively are mounted concentrically with the curved portions of the track; all operating as and for the purpose set forth.

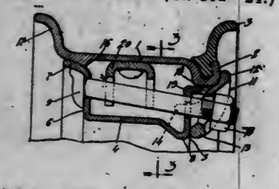
1,749,355. TRAVERSING MEANS FOR WINDING MACHINES. FRANKLIN AUGUSTUS REECE, Chestnut Hill, Mass., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 25, 1929. Serial No. 342,544. 10 Claims. (Cl. 242—43.)

1. A yarn-traversing device for winding machines comprising a rotating element having on its peripheral surface a groove in which the yarn is received and by which it is guided, said groove being in the form of opposite crossing helices, the point of one projection between opposite portions of the groove at a crossing being chamfered to insure the yarn being guided in a predetermined direction.



1,749,356. SEWAGE CONTROL FOR MOVING VEHICLES. OSCAR A. ROSS, New York, N. Y. Filed Aug. 9, 1928. Serial No. 298,448. 13 Claims. (Cl. 4—8.)

5. In combination with a railway car having a walled room containing a toilet, the toilet having a lever pivotally supported by the wall structure for effecting a flushing of the toilet, of a locking device supported by the walled structure normally arranged to lockingly engage the lever to prevent operation thereof to flush the toilet, means controlled by the rate of travel of the car for effecting an unlocked position of the device upon a pre-



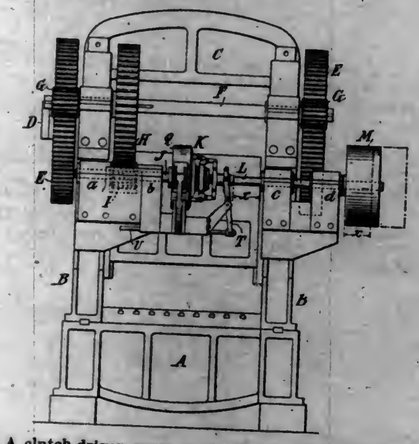
determined increase in the rate of travel thereof whereby the toilet may be flushed, and key operated means for manually unlocking the device whereby the toilet may be flushed independently of the rate of travel control means.

1,749,357. AIRCRAFT-LAUNCHING APPARATUS. ERNST M. SCHMELZ, Detroit, Mich. Filed Aug. 2, 1928. Serial No. 297,001. 6 Claims. (Cl. 244—2.)

1. In launching apparatus for an aircraft, a circular trackway for the ground wheels of an aircraft provided with a guide rail extending substantially along the midline thereof, and a plurality of switch trackways extending tangentially in different directions from the circular trackway, each switch trackway provided with a correspondingly located guide rail having a switch connection with the guide rail of the circular trackway.

1,749,358. DEMOUNTABLE RIM AND ITS COOPERATING FELLY. FRANK W. SCHMIDT, Jackson, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 19, 1925. Serial No. 16,689. 1 Claim. (Cl. 301—24.)

A wheel felly comprising a base portion, and radial side flanges spaced apart from one another and extending outwardly from said base; the periphery of the inner one of said flanges being shaped to receive and support the inner side of a rim, and the inner part of the outer of said flanges serving as a fulcrum for clamps for securing a rim in place upon the felly; the base of the felly where it merges with the outer of said side flanges being depressed inwardly and toward the axis of the wheel to thereby provide a continuous circumferentially extending ridge depending from the base whereby fulcrums for the clamps aforesaid are provided which lie inside the base and nearer the axis of the wheel than the base.



1,749,359. INSULATOR MOUNTING. BURTON M. SMALLEY, Chicago, Ill., assignor to Joslyn Manufacturing & Supply Co., Chicago, Ill., a Corporation of Illinois. Filed May 31, 1924. Serial No. 716,923. 6 Claims. (Cl. 173—321.)

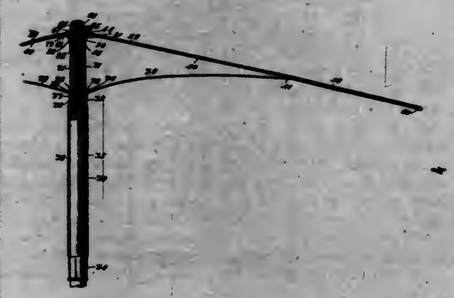
1. In combination, a base member having a flat wall, depending flanges for spacing said wall from a supporting surface, said wall having an aperture, a threaded nut secured to the inside surface of the wall in line with the opening, an insulator having a threaded stud centrally attached fixedly thereto, said stud being adapted to thread into said nut, and a yielding washer between the base of the insulator and the outer surface of the wall.

3. In combination, a base member having a flat seating surface for an insulator, said seating surface having a central aperture, screw threads about said aperture, a transversely perforated insulator having a cooperating flat base and having a threaded stud fixedly secured centrally thereof and adapted to cooperate with the threads of the base, and a yielding washer between the base of the insulator and said base member to permit of angular adjustment of the insulator with respect to said base.

1,749,360. FRICTION-CLUTCH-DRIVEN PRESS. ROBERT W. STROUT, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Filed Apr. 28, 1928. Serial No. 273,789. 4 Claims. (Cl. 192—110.)

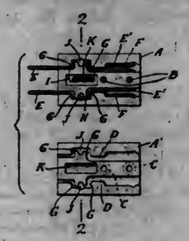
1. A clutch-driven press or the like having primary and secondary drive shafts and an intervening friction clutch, having driving and driven members, the primary shaft removably united to the driving member of the clutch and slidably mounted to be displaced endwise for giving access to the clutch.

1,749,361. EPHEDRINE-ALDEHYDE COMPOUND AND SOLUTION AND PROCESS OF PREPARING SUCH COMPOUND. ELMER H. STUART, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a Corporation of Indiana. Filed May 3, 1928. Serial No. 274,965. 12 Claims. (Cl. 167—58.)



1. A compound obtained by the reaction of 1 mol of l-ephedrine with 1 mol of an aldehyde other than one which is an oxidation-decomposition product of such ephedrine.

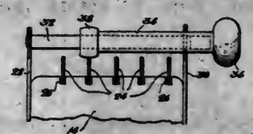
1,749,362. RAILWAY-CAR BRAKE. JOSEPH M. SUAREZ, Baltimore, Md., assignor of one-fifth to Sterling P. Buck, Baltimore, Md. Filed Apr. 29, 1927. Serial No. 187,601. 9 Claims. (Cl. 188—77.)



1. The combination of a rotary brake-drum, a brake-band around the periphery of said brake-drum, said brake-band comprising a series of arcuate members having shoulders on one side and having apertured radially extending ears on the opposite side and at opposite ends, brake-shoes secured between the shoulders of each of said arcuate members, compression springs between the adjacent radial ears of the arcuate members, bolts through said radial ears and operable to move them towards one another against the compression of the springs, and means to contract the brake-band as a whole for causing said brake-shoes to frictionally engage with said brake-drum.

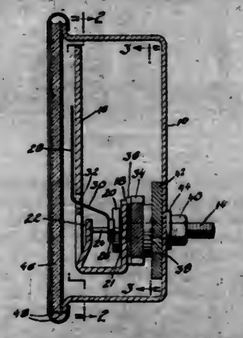
1,749,363. UMBRELLA CONSTRUCTION. CLARENCE H. VENNER, Jr., New York, N. Y. Filed Aug. 23, 1926. Serial No. 130,816. 18 Claims. (Cl. 135—20.)

2. An umbrella construction comprising in combination a stick, a flexible wire frame pivotally and slidably mounted thereon and a removable waterproof cover shrunk on said frame.



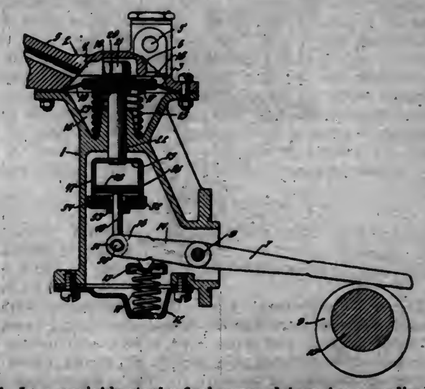
1,749,364. RADIO RECEIVING APPARATUS. SIDNEY WEISBERG, Brooklyn, N. Y., assignor of one-half to Morris Pichson, Brooklyn, N. Y. Filed Mar. 29, 1928. Serial No. 265,529. 8 Claims. (Cl. 200—115.5.)

1. A device for protecting the tubes of a radio receiving set, comprising a casing of insulating material, electrical conductors in said casing comprising two separated sections located in alignment with each other, a wire connecting said sections having a resistance greater than that of the tubes of the set to be protected, two other sectional conductors located in alignment with each other, a fuse wire of predetermined resistance connecting said last mentioned conductors and designed to fuse prior to the fusing temperature of said first wire, said conductors being adapted for connection with standard plug terminal elements used in connecting electrical circuits.



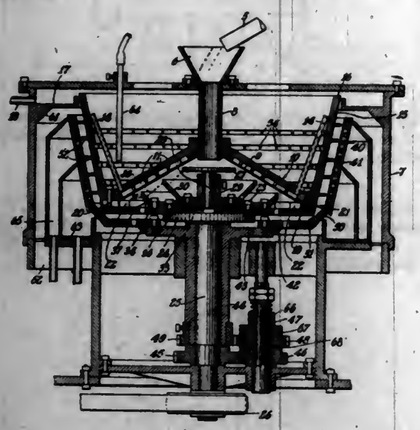
1,749,365. SERVICE INDICATOR. JOSEPH ZUBATY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed June 18, 1927. Serial No. 198,519. 8 Claims. (Cl. 40—68.)

1. A service indicating device comprising, in combination, a plurality of indicating members, means in driving engagement with each of said members, and an axially movable member including a resilient portion, said portion



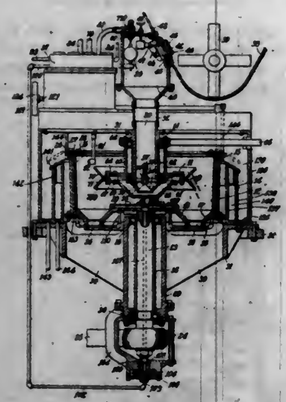
being adapted to frictionally engage said means for the purpose of resetting its respective member to a desired position.

1,749,366. AMMETER MAGNET. JOSEPH ZUBATY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed July 20, 1927. Serial No. 207,265. 3 Claims. (Cl. 171—95.)



1. In an ammeter, a conductor comprising a permanent magnet, a dial insulated from said conductor, terminals, common means for uniting said dial, magnet and terminals, an oppositely disposed finger and a tongue on said dial, and a pointer swinging mechanism mounted on said finger and tongue.

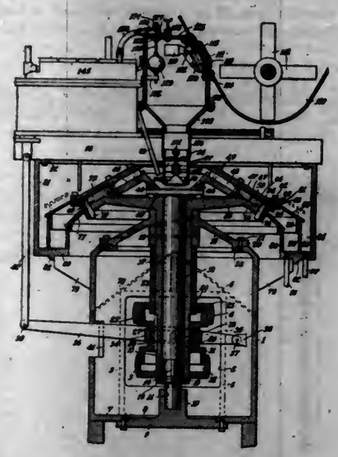
1,749,367. ACCELERATING MEANS FOR FUEL PUMPS. JOSEPH ZUBATY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed June 18, 1928. Serial No. 286,361. 6 Claims. (Cl. 103—38.)



1. In a variable-stroke fuel pump driven by a cyclically moving part; a reciprocable pumping element conditionally movable relatively to a pump chamber; a pump actuating element engageable by said cyclically moving part; and intermediate means therebetween capable of imparting only intake movements to said reciprocable pumping element when running at relatively slow speeds but becoming capable of transmitting expulsion strokes also when running at relatively high speeds.

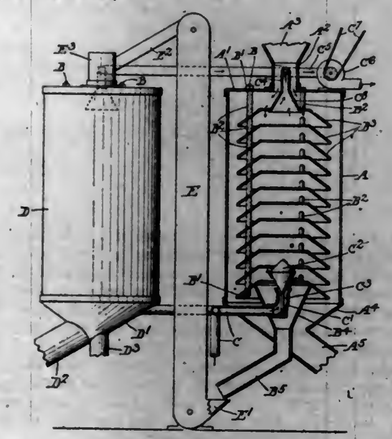
1,749,368. CONTINUOUS SEPARATION OF LIQUIDS AND SOLIDS. HANS C. BEHR, Scarsdale, N. Y. Filed Sept. 1, 1927. Serial No. 216,810. 9 Claims. (Cl. 210—69.)

1. Apparatus for separating in two stages liquid from solids, comprising means for supplying a continuous stream of the material under treatment, a rotary screen, means for causing the material to move centrifugally over the screen with gradually increasing energy of rotation, a second stage embodying a rotary receiving device having a receptive capacity less than the natural rate of centrifugal delivery from the first stage, for impeding the movement over the screen in the first stage.



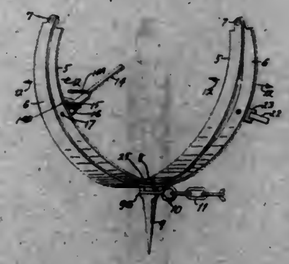
1,749,369. CENTRIFUGAL DRIER. HANS C. BEHR, Scarsdale, N. Y. Filed Aug. 3, 1928. Serial No. 297,294. 22 Claims. (Cl. 210—69.)

17. In a centrifugal drier, the combination with a basket, a screen carried by the basket, there being passages provided between the screen and basket, and means for intermittently rotating the basket, of means timed for admitting fluid under pressure to such passages upon the cessation of the rotation of the basket.



1,749,370. CENTRIFUGAL DRIER. HANS C. BEHR, Scarsdale, N. Y. Filed Aug. 23, 1928. Serial No. 301,478. 4 Claims. (Cl. 210—69.)

1. In a centrifugal drier for separating liquid from solid aggregate, the combination with a conical basket so sloped that the material being treated, if unobstructed, would be moved outwardly over its inner surface by centrifugal force, there being formed on the inner surface of the basket numerous substantially radial ribs, and passages communicating with the spaces between the ribs and passing through the basket to its periphery, and means adapted to continuously rotate the basket, of a screen



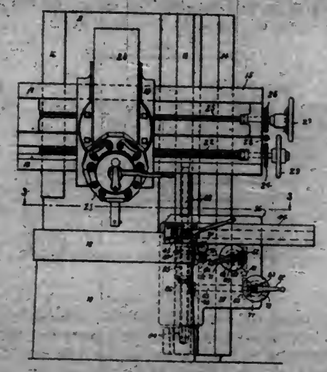
bedded on the tops of the ribs, a smooth retaining cone rigid with and coned inwardly from the basket, a discharger consisting of a disc and blades carried upon its periphery and adapted to move the material being treated inwardly over the inner surface of the retaining cone, and means for selectively causing the discharger to rotate either in unison with or at a different rate of speed from the speed of rotation of the basket.

1,749,371. APPARATUS AND PROCESS FOR MINERALS SEPARATION. JOHN BLAND, Tinton, S. Dak. Filed Sept. 20, 1926. Serial No. 136,400. 8 Claims. (Cl. 209—139.)

1. The method of separating relatively flat, relatively light, particles from granular particles which includes causing a stream of such mixed materials to drop downwardly along a predetermined axis and directing upwardly along said axis a current of air sufficient to cause the flat particles to eddy laterally, while insufficient to resist the downward movement of the granular particles or to impart substantial upward movement to the flat particles.

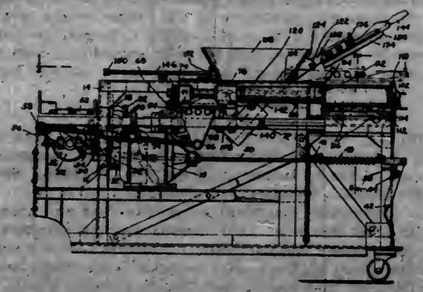
1,749,372. ANIMAL TRAP. FRED C. BLOOM, St. Paul, Minn. Filed Mar. 15, 1928. Serial No. 261,878. 4 Claims. (Cl. 43—90.)

1. An animal trap comprising a pair of arched flat-spring metal arms one within the other and their adjacent ends pivotally connected, a main pivot member connecting said arms intermediate said ends, said arms normally in approximately a common plane when sprung and their pivotally connected end parts in spaced relation, said spaced end parts adapted to be sprung toward each other and the arms simultaneously spread apart to spring the arms to approximately circular set formation in a plane at right angles to the first described sprung position, and means for holding said arms in the set position.



1,749,373. COMBINED BLOWER AND SUCTION DEVICE. ADAM A. BERGER, Chicago, Ill. Filed June 16, 1927. Serial No. 199,193. 1 Claim. (Cl. 230—117.)

In a combined blower and suction device including a fan casing having a tubular member in communication therewith, a perforated plate positioned in the open end of said tubular member and means including a shoulder and lugs connected to said member for detachably retaining said plate in position between the same, said plate having recesses to allow said lugs to pass therethrough and an outwardly cupped central portion accessible from the open end of said tubular member adapted to be grasped by the fingers for enabling said plate recesses to be turned into and out of register with said lugs to permit of said plate being attached to or removed from said tubular member.



1,749,374. MACHINE TOOL. EDWARD P. BULLARD, Jr., Stratford, Conn., assignor to The Bullard Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 26, 1927. Serial No. 215,600. 7 Claims. (Cl. 29—29.)

1. In a lathe of the class described, the combination with a base and upright having vertical front and side ways, a rotary work table, a front turret head mounted above the table, a saddle including a front portion and a side portion engaging the ways, a slide mounted in the saddle and carrying a tool head adapted to be moved to and from the axis of the table, a vertically disposed threaded rod secured to the base, a rotatable sleeve carried by the saddle and engaging the threaded rod, power means for operating the sleeve upon the rod, to raise

and lower the saddle and tool slide, and power means for feeding the tool slide longitudinally in the saddle and with respect to the axis of the table.

1,749,375. CINDER-BLOCK MACHINE. VALENTINE DAHL, Woodhaven, N. Y. Filed Aug. 26, 1927. Serial No. 215,539. 5 Claims. (Cl. 25—41.)

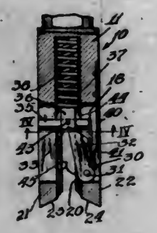
5. In a machine of the class described, in combination, a block mold, a plunger, means for advancing said plunger axially into said mold, means for rotating said plunger while it is being advanced, means comprising a clutch under control of the operator for starting said advancing and rotating means into operation, a cam device for disengaging said clutch when said plunger has reached a predetermined position in said mold, means under control of the operator for retracting said plunger from said mold and for rotating said plunger while it is being retracted, and a cam device for stopping the movement of said plunger when it has been retracted from said mold.

1,749,376. MEANS FOR FILING AND HANDLING LARGE SHEETS. HAROLD L. DE LISLE, Chicago, Ill. Filed Oct. 1, 1928. Serial No. 309,465. 5 Claims. (Cl. 129—1.)

4. A holder for relatively large sheets of the character described comprising a flat base and a flat cover both of strong and stiff sheet material, the cover and base being hinged together at their rear edge portions respectively and by a flexible hinge connection providing a material

amount of space between the cover and the base at the hinge connection whereby a substantially large number of sheets may be held between the cover and the base with the cover lying flat upon the sheet material.

1,749,377. SHIPPING COOP. ADAH M. EUBANKS, Charleston, Wash. Filed Nov. 19, 1927. Serial No. 232,393. 1 Claim. (Cl. 119—18.)

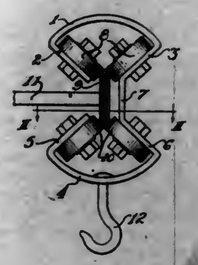


A coop comprising a solid bottom, side and end walls, said side and end walls being solid from the bottom to a point about half way the height of the coop and the remaining portions of such side and end walls being formed of spaced apart slats, the solid portions of the side walls at opposite ends being formed with openings, the inner walls thereof being inclined upwardly toward the end walls, feed and water troughs at opposite ends of the coops insertable in the end openings and each having an inner inclined wall corresponding to the inclination of the inner walls of the openings, short horizontal partitions extending inwardly from the solid portions of the end and side walls, inclined spaced apart strips extending from the inner edges of the horizontal partitions to the bottom of the coop in alignment with the inner walls of the end openings, and a vertically disposed central partition extending across the coop between the opposite solid portions of the side walls.

1,749,378. BRIQUETTE. RALPH T. GOODWIN, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Feb. 18, 1926. Serial No. 89,060. 7 Claims. (Cl. 44—23.)

7. A briquette containing anthracite fines and about 5 to 15% by weight of carbonaceous material precipitated by addition of a small quantity of sulfuric acid to a heavy residue of oil cracking, said material being characterized by fusibility and partial solubility in carbon disulfid.

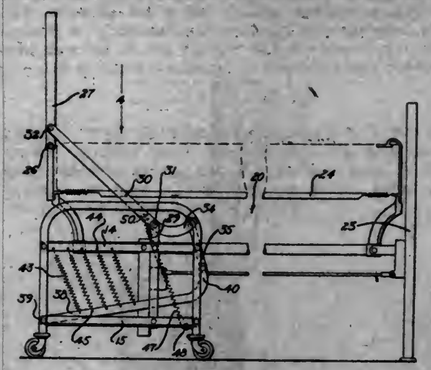
1,749,379. TRIP-LATCH JACK. FRANK J. HINDERLITER, Tulsa, Okla. Filed Oct. 19, 1927. Serial No. 227,199. 12 Claims. (Cl. 294—110.)



1. In combination, in a device for removing a bailer from a well, a body including an opening adapted to receive the reins of the bailer, a latch extending into said opening, means for holding said latch in said opening and adapted to be tripped by the entry of the reins in said opening, whereby said latch will be released, said latch being arranged so that upon it being tripped it will connect the reins to said body for movement therewith, and resilient means disposed in alignment with said opening adapted to maintain said holding means in contact with the bailer reins upon the tripping of said latch.

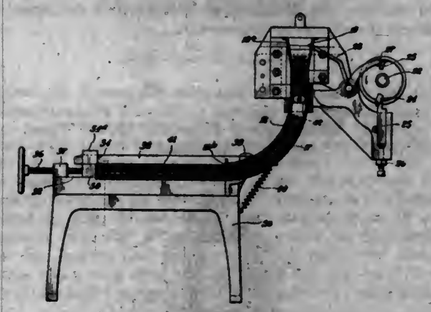
1,749,380. BAILER SPEAR. FRANK J. HINDERLITER, Tulsa, Okla. Filed Oct. 19, 1927. Serial No. 227,200. 14 Claims. (Cl. 294—96.)

1. In combination, in a spear of the class described, a tubular member adapted to be lowered into a well, and a spear member connected at its upper end to said tubular member and extending downwardly in said member, said spear member including wedge means to engage the inner surface of a tube to be raised from said well; said tubular member being arranged to embrace the outer surface of the tube being raised, said spear member being provided with vertical grooves to accommodate the broken ends of the bail links of the tube.



1,749,381. CONVEYER CARRIAGE. JOSEPH HUEBSCH, Milwaukee, Wis., assignor to Huebsch Mfg. Co., a Corporation of Wisconsin. Filed July 5, 1927. Serial No. 203,290. 9 Claims. (Cl. 104—93.)

1. A conveyer carriage comprising a framework having an opening in one side thereof, a carrier thereon, and a plurality of rollers rotatably mounted in said framework with the peripheries of said rollers positioned at an angle with respect to one another.



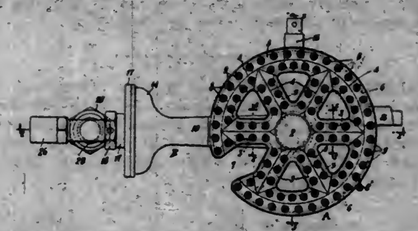
1,749,382. AUTOMATICALLY-STABILIZED FOLDING BED. FRANCIS S. INCO, Los Angeles, Calif. Filed Aug. 10, 1927. Serial No. 211,896. 10 Claims. (Cl. 5—164.)

1. In a folding bed, the combination of: a carriage; a main frame pivoted to said carriage, adapted to swing between raised and lowered position; a secondary lever pivoted to said carriage; a head-piece pivoted to said main frame; a primary lever pivoted to said head-piece and carriage; means for pivoting the free end of said secondary

lever to the free end of said primary lever; and primary tension means connected to said secondary lever and said carriage.

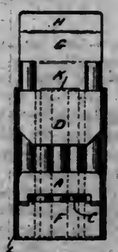
1,749,383. APPARATUS FOR FORMING RADIATORS. JOHN KARMAZIN, Detroit, Mich. Filed Oct. 12, 1927. Serial No. 225,703. 9 Claims. (Cl. 113—1.)

2. In combination with a sheet metal forming machine of the character described, adapted for forming tubular projections on a strip of sheet material, means for cutting said strip into elements, means for superposing said elements with the projections thereof in engaging relation, and means for horizontally compacting said elements in view of the operator.



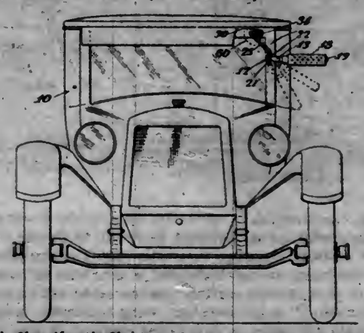
1,749,384. TRUCK FOR TOY VEHICLES. JOHN C. KOERBER, South Orange, N. J. Filed Apr. 28, 1928. Serial No. 278,460. 13 Claims. (Cl. 105—182.)

1. A toy car truck body formed to represent a standard car truck and formed of two die cast metal members removably connected together, each member comprising one side of the truck body.



2. A toy truck comprising two members each forming one side of the truck and each member having an inwardly extending portion, and means for removably securing said portions together at their inner ends, said means also serving to secure the truck to the car body.

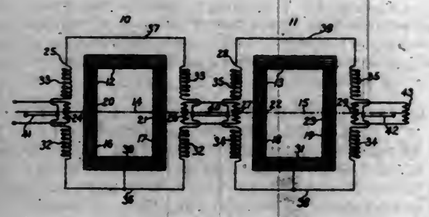
1,749,385. GAS BURNER. JOHN H. KOLTS, Crafton, and EDWARD A. KRAH, Jr., Pittsburgh, Pa., assignors to Pittsburg Water Heater Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed July 22, 1927. Serial No. 207,617. 9 Claims. (Cl. 158—99.)



1. A gas burner comprising in combination, a hub chamber with an imperforate face, a plurality of channels radiating therefrom, and a Venturi mixer discharging thru the bottom of the hub chamber against said imperforate face.

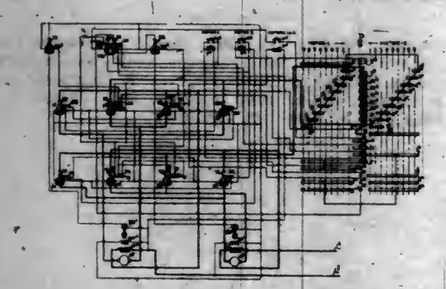
1,749,386. LIFTING DEVICE TO FACILITATE THE REMOVAL OF CIGARETTES OR OTHER SMALL ARTICLES OF SIMILAR SHAPE FROM PACKETS AND LIKE CONTAINERS. HENRY WILLIAM MARTIN, East Kirkby, England. Filed Sept. 8, 1927, Serial No. 218,188, and in Great Britain Oct. 28, 1926. 3 Claims. (Cl. 206—41.)

1. The combination with a case open at both ends, of a drawer formed of two interengaging blanks, one of which is slotted near one end and folded at that end to form one bottom and folded at the other end to provide a closing flap for the package, and the other of which blanks passes through the slotted part of the first blank and has the contiguous end folded to provide another bottom for the package while its opposite end is folded to act as a depressor means.



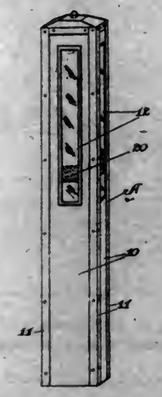
1,749,387. TRAFFIC SIGNAL. OSIE C. MATTHEWS and DOLOR F. MALCOM, San Bernardino, Calif.; said Malcom assignor to Floyd H. Jones and Pearl P. Matthews, San Bernardino, Calif. Filed June 18, 1927. Serial No. 198,431. 2 Claims. (Cl. 116—62.)

1. A direction indicator of the character described, comprising an arm adapted to be pivotally mounted on the



front of a vehicle adjacent one side thereof, a perforated tubular casing rigid with said arm, illuminating means arranged within said casing, a bell crank lever rigid with said arm, a shaft journalled in the front of said vehicle adjacent the top thereof, a second lever rigid with said shaft, a link pivoted to both levers, and an operating handle rigid with said shaft inside the vehicle.

1,749,388. TRANSFORMER. AUGUST MEYERHANS, Ennetbaden, Switzerland, assignor to A. G. Brown Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Oct. 25, 1927, Serial No. 228,596, and in Germany and Switzerland Nov. 8, 1926. 5 Claims. (Cl. 175—356.)

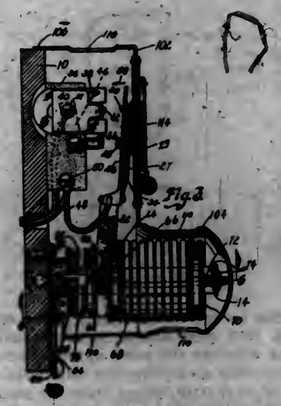


1. In a transformer, a core having an axis of symmetry and legs with substantially equal portions thereof disposed on opposite sides of said axis, a primary winding disposed on one of said legs at said axis, a second winding similar to said primary winding disposed on the other of said legs at said axis for providing a supply source for a second transformer, and parallel-connected secondary windings symmetrical with respect to said axis and disposed respectively on the leg portions of said core on opposite sides of said axis, the points of connection of said secondary windings with each other being disposed substantially on said axis.

1,749,389. CONTROLLER FOR ELECTRIC MOTORS. WILLIAM R. MILBURN, Shorewood, Wis., assignor, by mesne assignments, to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed Nov. 26, 1926. Serial No. 150,939. 19 Claims. (Cl. 172—179.)

1. In combination, a plurality of electric motors, common resistance to be included in circuit with one or more of said motors, a master controller for commutating said resistance, and means including a plurality of manually operable push button switches cooperating with said master controller, said switches being operable selectively to provide for joint or individual control of said motors upon a given operation of said master controller.

1,749,390. TRAFFIC SIGNAL. ALVIN O. OLAFSON, St. Paul, Minn., assignor, by direct and mesne assignments, to National Traffic Signal Company, St. Paul, Minn., a Corporation of Minnesota. Filed Nov. 18, 1927. Serial No. 234,167. 10 Claims. (Cl. 116—63.)



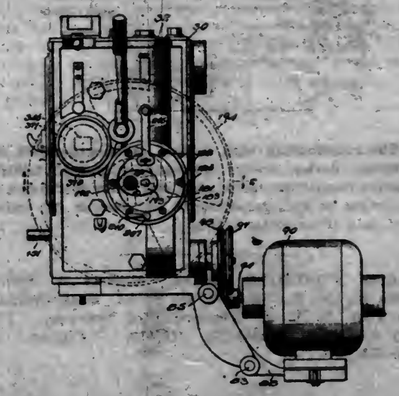
1. A traffic signal comprising, a signal window extending longitudinally along the side thereof, a color screen for changing the signal extending virtually the length of said window, and an indicator intercepting the signal to indicate the change of the same.

1,749,391. BEARING. HERBERT PATTERSON, Greenfield, Mass., assignor of one-half to Edward M. Abercrombie, Deerfield, Mass. Filed June 25, 1927. Serial No. 201,298. 1 Claim. (Cl. 308—237.)

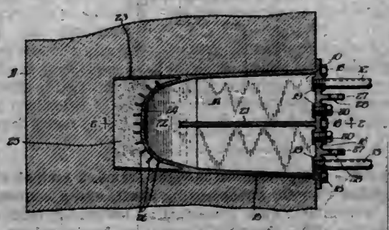
A bearing comprising, in combination, a bearing housing having a radial opening, the inner and outer portions of which are of two different diameters, the inner portion being of smaller diameter and having smooth walls throughout its length and the outer portion being of larger diameter and having smooth walls on its inner part and being internally threaded on its outer part, an annular seat being provided between said inner and outer portions, a bushing positioned within the bearing housing and having a radial opening registering with the inner portion of the opening in the housing and of the same diameter, a keeper for preventing movement of the bushing in the housing, the keeper comprising a smooth walled pin portion positioned in the inner portion of the opening in the housing and extending into the opening in the bushing and provided with a passage therethrough for the delivery of lubricant, and a top portion of enlarged diameter having smooth outer walls and fitting loosely within the smooth walled part of the outer portion of the opening in the bushing, said top portion being hollow to hold a supply of lubricant and having an annular shoulder to engage said seat, and a closure for the outer end of the opening in the bushing provided with an externally threaded portion to fit within the threaded portion of said opening and to engage the top of the keeper to clamp the latter with its shoulder in firm engagement with the annular seat, and also provided with means external of the bearing whereby the closure may be rotated to clamp the keeper in position under pressure.

1,749,392. TEMPERATURE CONTROL SWITCH STRUCTURE. ALBERT PENN, Des Moines, Iowa, assignor to Penn Electric Switch Co., Des Moines, Iowa, a Corporation of Iowa. Filed Mar. 10, 1928. Serial No. 260,796. 12 Claims. (Cl. 200—140.)

1. A structure of the character disclosed comprising a stationary contact, a yoke, a movable armature pivoted thereto, a contact carried by said armature and adapted to engage the stationary contact when the armature is in one position of its movement, a magnet, said armature being in close proximity to said magnet when in such position whereby a snap action switch is provided, a bellows having one end anchored to said yoke and its other end acting upon said armature for moving it in one direction and a spring opposing the action of said bellows.



1,749,393. DRAWING DEVICE FOR SPINNING FRAMES AND FOR PREPARING MACHINERY. JULES PFLIMLIN, Mulhouse, France. Filed Nov. 10, 1928, Serial No. 318,558, and in France and Great Britain May 29, 1928. 8 Claims. (Cl. 19—141.)

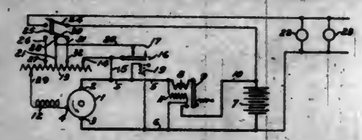


1. In drawing devices for spinning frames and preparing machinery, a sleeve for floater rollers formed of very elastic material and comprising a hub portion and an outer skin, the arrangement being such that the suppleness and compressibility of the floater is increased by providing hollow compartments between the hub and the skin.

1,749,394. MOTION-PICTURE-PROJECTING APPARATUS. JOHN PROKSA, Chicago, Ill., assignor to Helios Corporation, Chicago, Ill., a Corporation of Delaware. Filed Mar. 21, 1925. Serial No. 17,337. 3 Claims. (Cl. 88—17.)

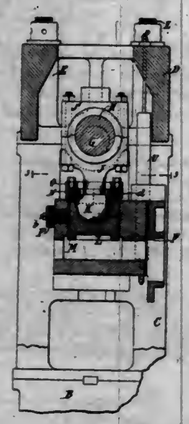
2. In an apparatus of the kind described, a housing for encasing film-projecting mechanism, means for displacing the shutter in a plane normal to its axis of rotation comprising a circular recess in said housing, a bracket having an annular flange, said annular flange seated in said recess, a collar secured to said housing and engaging said annular flange to hold same in said recess, a handle on said bracket for adjustably rotating said bracket in said recess, and means for forcing a portion of said collar firmly against said annular flange for holding said bracket in adjusted position.

1,749,395. INWALL COOLING PLATE. OWEN R. RICE, Chicago, Ill., assignor to Freyn Engineering Company, Chicago, Ill., a Corporation of Maine. Filed Oct. 22, 1927. Serial No. 227,963. 5 Claims. (Cl. 122—6.1.)



1. An inwall cooling plate comprising a casing having a water compartment and a recessed nose, the wall between said compartment and nose recess being tapered in a manner to provide a portion of said water compartment projecting centrally into said recess, and refractory material in said recess and surrounding said projecting portion of said water compartment.

1,749,396. SOLDERING IRON. JOHN F. SCHYLANDER, Chicago, Ill. Filed Oct. 19, 1927. Serial No. 227,087. 15 Claims. (Cl. 219—26.)

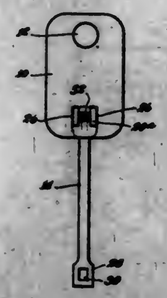


2. A device of the kind described comprising a soldering tip, means carrying said tip, tubular metallic members mounted in said means, and adapted to be connected to a source of electrical energy, and an electrical heating unit mounted in said means and provided with electrical terminal members insertable in said tubular metallic members and slidably engageable therewith.

1,749,397. ELECTRICAL SYSTEM. FRANKLIN W. SPRINGER, Minneapolis, Minn. Filed Apr. 27, 1925. Serial No. 26,100. 38 Claims. (Cl. 171—318.)

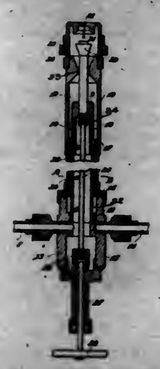
1. The combination with a third brush generator, of a translating device, means for connecting said translating device to said generator, and means for increasing the total output of said generator in response to the connection of said translating device.

1,749,398. PUNCHING PRESS. ROBERT W. STROUT, Brooklyn, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Filed May 21, 1928. Serial No. 279,413. 7 Claims. (Cl. 164—28.)



1. A press comprising an upright frame, a reciprocating slide guided therein, an operating shaft, and a connecting rod of invariable length transmitting movement from said shaft to the slide, the slide comprising two members, one of which has pivotal engagement with the connecting rod, and the two slide members having vertically adjustable relation, so that without varying the length of the connecting rod the effective portion of the slide may be set to varying vertical adjustments.

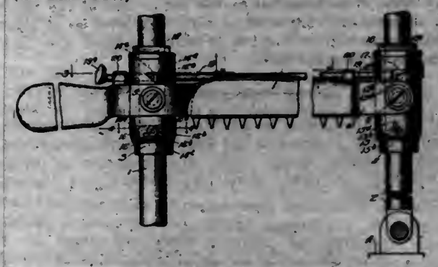
1,749,399. KEY TAG. REUEL H. THAYER, New York, N. Y., assignor to Thayer Telkee Corporation, San Francisco, Calif., a Corporation of California. Filed Apr. 6, 1926. Serial No. 100,083. 3 Claims. (Cl. 40—21.)



1. In an identification tag for a key, a face portion, a dished flange around the edge thereof, said face having an opening near the edge thereof, a back portion, a dished flange around the edge thereof adapted to fit inside of the flange on said face portion to hold said back and face portions together, and a key engaging link integral with said back portion, said link having an opening near the end thereof, a hook integral with said face portion and on the inner side thereof adjacent the opening therein, said link passing through the opening in said face, the opening therein engaging said hook.

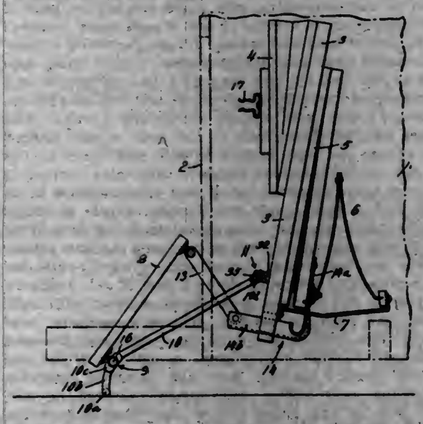
1,749,400. IDENTIFICATION KEY TAG. REUEL H. THAYER, Los Angeles, Calif., assignor to Thayer Telkee Corporation, San Francisco, Calif., a Corporation of California. Filed Mar. 16, 1928. Serial No. 262,219. 5 Claims. (Cl. 40—21.)

1. A marker for keys comprising a tag, a strip attached to said tag, said strip having means forming a pocket with the tag adjacent the point of attachment thereto, a tongue on the strip projecting into said pocket, and means on the end of said strip remote from the point of attachment projecting into said pocket and cooperating with said tongue to permanently secure both ends of the strip together adjacent the tag.



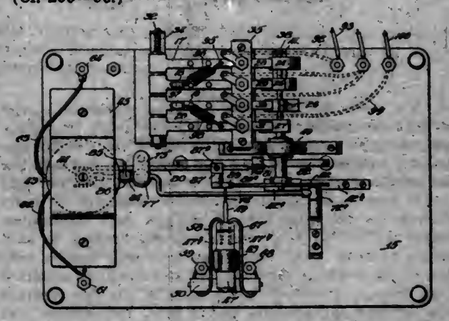
1,749,401. OIL BURNER. BARNARD J. TIDY, Port Alice, British Columbia, Canada. Filed Apr. 19, 1928. Serial No. 271,295. 1 Claim. (Cl. 158—75.)

An oil burner comprising, a connection head or body member, pipe branches on said body member adapted to receive pipe connections for the supply of fuel and steam respectively, a tubular casing secured at one end to said body member, a conical aperture in the outer extremity of said casing, a rod through said casing with its axis coincident with that of the casing and having a coned extremity adapted to engage the said conical aperture in the end of the casing, a hand wheel on the other extremity of said rod, an interior tubular member secured to said body member communicating with said steam pipe branch, longitudinal flutings in the outer periphery of said interior member whereby its heating surface is augmented and a



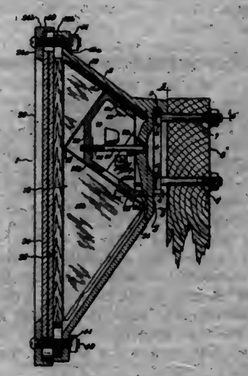
plurality of channels is provided for the passage of the fuel oil, a duct connecting the said channels with the said body member and the said fuel pipe branch, an oil disc forming a perforated annular extremity to the chamber formed by the said casing and the said interior member, said disc having on its outer and inner peripheries helical grooves through which the heated fuel oil passes into the atomizing chamber adjacent the outer extremity of the said casing, a portion of the said interior member projecting beyond the said oil disc and having perforations in its circular wall whereby steam issuing therethrough from the said interior central member unites with the heated fuel oil issuing from the said helical grooves thereby completing the atomizing process.

1,749,402. SLICING MACHINE. WILHELMUS PETRUS VAN LAMMEREN, Voorschoten, Netherlands, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed May 5, 1928, Serial No. 275,401, and in Great Britain May 25, 1927. 23 Claims. (Cl. 146—217.)



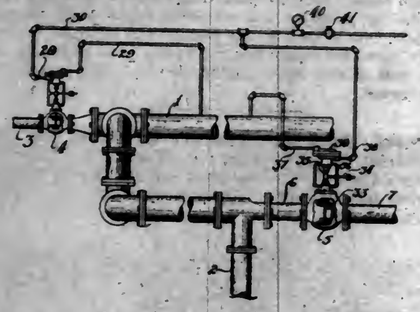
1. In a work clamp for slicing machines, a sleeve member, a rod member disposed in said sleeve member, one of said members being guided for sliding movement by the other of said members and a clamp bar carried by said sliding member, a friction element disposed between said members frictionally engaging said rod member to releasably hold said members against relative sliding movement, said friction element having a separate releasing means connected therewith and supported on one of said members to disengage said friction element from said rod member and permit relative movement between said members.

1,749,403. PEDAL MEANS FOR AUTOMATIC PIANOS AND THE LIKE. FRED VOLARE, Scotch Plains, N. J., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Feb. 24, 1927. Serial No. 170,581. 6 Claims. (Cl. 84—78.)



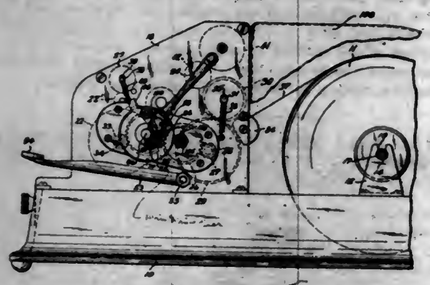
1. Pedal means for automatic pianos and the like, adapted to be folded up into the piano and also to be unfolded and lowered into supporting contact with the floor, comprising the combination of two U-shaped frames each comprising two side bars connected by a cross piece, the cross pieces of which rest on the floor when said frames are down in position for the pedals to be used, the side bars of said frames being pivotally supported at their free ends within the piano; a rod extending transversely through the side bars of said frames parallel and adjacent to their cross pieces for supporting the pedals; and means on the free ends of said rod engaging the outer side bars of the two frames.

1,749,404. ELECTRIC-CIRCUIT CONTROLLING AND TIMING DEVICE. HARRY C. WANNER and LEROY H. MOSS, Chicago, Ill.; said Moss assignor to said Wanner. Filed Oct. 26, 1927. Serial No. 228,726. 18 Claims. (Cl. 200—90.)



1. In a device of the character described, the combination of a solenoid having a reciprocable core, a mercury switch mounted on a tiltable support and connected to a source of electric energy through said solenoid, a lever having one end rotatably supported and the other end engaging said solenoid core for movement therewith and being also connected to said switch support to tilt said switch to energize and deenergize said solenoid and reciprocate said core, a rotatable contact actuating member, a driven wheel carried by said member, and a drive element connected to said lever and engaging said wheel for imparting motion to said contact actuating member.

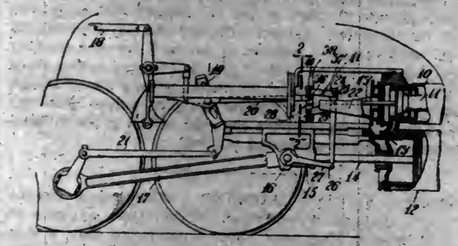
1,749,405. REFLECTOR SIGNAL. JOHN A. WERTZ, Canton, Ohio. Filed Nov. 2, 1927. Serial No. 230,501. 8 Claims. (Cl. 88—1.)



4. A reflector signal including a casing, a reflector mounting block secured to the casing, a plurality of plane reflector surfaces intersecting each other at right angles carried by the mounting block, and cooperating means between the mounting block and casing permitting independent expansion and contraction of the reflector surfaces and the casing.

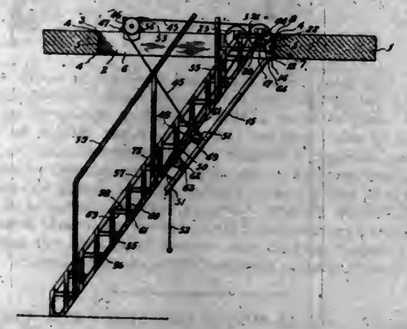
1,749,406. VALVE-CONTROLLING APPARATUS. JOHN O. WOODSOMB, Detroit, Mich. Original application filed June 16, 1926, Serial No. 116,806. Divided and this application filed Dec. 12, 1927. Serial No. 239,504. 4 Claims. (Cl. 34—48.)

1. In a steam drying system for paper machines, a drier header, a low pressure steam supply line and a live steam supply line for said header, an exhaust line, diaphragm regulated valves between said live steam line and said low pressure line and between said low pressure line and said exhaust line, a source of fluid under measured pressure connected to the same side of each of said diaphragms connecting the other sides of said diaphragms to said header, whereby when the pressure in said header falls below the pressure of the fluid, live steam will be admitted to the header and when the pressure of the low pressure steam exceeds the pressure of the fluid, the exhaust line valve will be opened.



1,749,407. GUMMED-TAPE-DISPENSING MACHINE. RAY G. BEACH, Fairfield, Conn., assignor to Hugh Lavery, Bridgeport, Conn. Filed Jan. 28, 1925. Serial No. 4,247. 4 Claims. (Cl. 91—14.5.)

4. In a tape dispensing device of the character described, means for intermittently advancing a tape capable of permitting elapse of time between successive advancing movements, means for moistening one side of the strip comprising a container, a rotary roll projecting into the container to remove moisture therefrom, a fibre covered roll in contact with the first roll to receive moisture from said roll, said fibre cover being in contact with the tape and adapted to absorb the moisture and retain it during the intervals between advancing movements of the tape so that it will remain moist in these intervals and will immediately moisten the tape on its next advance movement prior to the time additional moisture can be supplied by the first roll and means for holding the tape against the second roll.

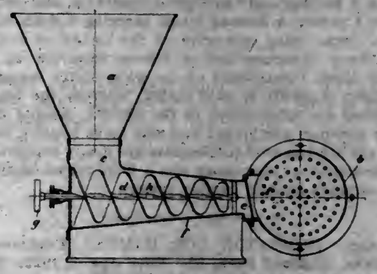


1,749,408. LOCOMOTIVE VALVE GEAR. FRANK H. BENTON, Topeka, Kans. Filed Feb. 10, 1927. Serial No. 167,092. 2 Claims. (Cl. 121—163.)

1. In combination with a valved chamber head, a valve stem cross-head, a locomotive valve gear involving a combination lever and a radius rod, a rearwardly disposed bracket secured to the valve chamber head, a vertically disposed lever fulcrumed at its lower end on said bracket, a horizontally disposed link pivotally connected at one end to the upper end of said lever while the other end of the

link is pivotally connected to the upper end of the combination lever of the valve gear above its connection to the valve stem cross head, while the radius rod of the valve gear is pivotally connected to said first lever at a point below the pivotal connection of said first lever with said horizontally disposed link.

1,749,409. MOVABLE STAIRWAY. FRANK E. BESSLER, Akron, Ohio, assignor to The Bessler Disappearing Stairway Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 13, 1928. Serial No. 253,811. 11 Claims. (Cl. 226—50.)

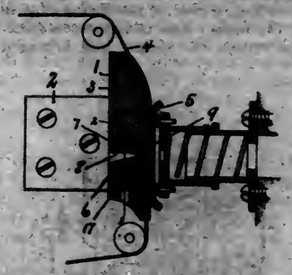


1. A movable stairway comprising, in combination with a ceiling-opening metal frame formed with upper and lower peripheral angle members, and end plates and side plates secured to and connecting said angle member; a pair of spaced hanger plates secured to one of said angle members adjacent one of said end plates; hinges vertically adjustably mounted upon said hanger plates; a steel panel supported at one end by said hinges; a pair of spaced box supports secured to said hanger plates and said side plates, respectively, each box support comprising vertical side members secured respectively to the ends of said hanger plates at one end and secured to said side plate at the other end, one of said side members being also secured to said upper angle member, one of said side members being formed with a right angle end portion, a pair of longitudinally-spaced vertical open-top slots being formed in each of said side members adjacent said hanger plates, said side members being formed with upwardly-extended tongues projecting into said slots; a pair of axle members formed with end recesses adapted to register with said tongues; end plates secured to said axle members, having web bars also adapted to fit said axle recesses, and secured to said side plates; a pair of drums for each box housing having both hub portions rotatably mounted on said axles; coil springs secured at one end to each of said axles and at the other end to the side walls of said drums, respectively; a bar connecting said pair of box supports adjacent said hanger plates; a

pair of rollers rotatably mounted on said bar adjacent the ends thereof; a pair of pulleys rotatably mounted on opposite sides of said metal frame adjacent the end thereof opposite to said hanger plates; pulleys movably secured to said panel; cables secured to one of each pair of drums at one end, traversing said first-mentioned pulleys, and connected at their other ends to said second-mentioned pulleys, respectively; a steel stairway; cables secured at one end adjacent the bottom of said stairway and secured at the other end to the other of each pair of drums, respectively; a pair of rollers mounted upon said panel adjacent the lower end thereof, said stairway being longitudinally movable of said panel upon said last-mentioned rollers and also upon said rollers mounted on said bar connecting said box supports; means for guiding said stairway; and means for preventing the latter from jumping off said rollers.

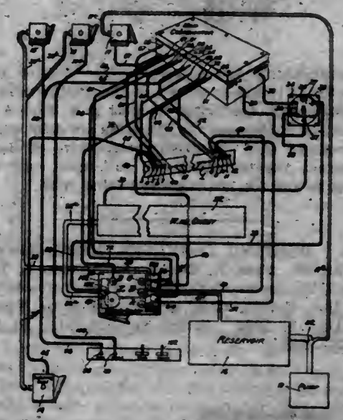
1,749,410. METHOD OF TREATING WOOL AND THE WOOL THUS TREATED. CHARLES A. BROWN, Salem, and GUSTAVUS J. ESSELEN, Jr., Swampscott, Mass., assignors to Manufacturing Improvement Corporation, Boston, Mass., a Corporation of Massachusetts. Filed July 23, 1927. Serial No. 208,050. 4 Claims. (Cl. 19—66.)

1. The method of treating fibre for the production of woolen or worsted fabrics and the like, which consists in treating the scoured and washed fibre with a mechanically stabilized emulsion of an oil lubricant and water, in which the oil is dispersed throughout the water in relatively minute globules to produce an emulsion which has the flow characteristics of water and is capable of accomplishing a thorough and effectual penetration of the mass of the fibres, and which inhibits evaporation of water therefrom for a sufficient period of time to permit a complete processing of the fibre into the finished fabric without substantial alteration of the lubricating properties and thereafter processing the fibres while so lubricated.



1,749,411. APPARATUS FOR PRODUCING FOAM FOR FIRE-EXTINGUISHING PURPOSES. HANS BURMEISTER, Berlin, Germany, assignor to Pyrene-Minimax Corporation, a Corporation of Delaware. Filed Sept. 10, 1927, Serial No. 218,809, and in Germany Oct. 26, 1926. 6 Claims. (Cl. 169—15.)

1. In apparatus for producing fire foam, a worm gear for forcing the chemicals for producing the foam into a current of water under compression and subdividing means for said chemicals mounted within the pressure water pipe.

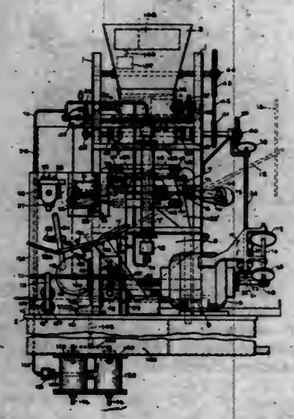


1,749,412. TALKING-PICTURE APPARATUS. THEODORE WILLARD CASE, Auburn, N. Y., assignor to Case Research Laboratory Incorporated, Auburn, N. Y., a Corporation of New York. Filed Dec. 10, 1926. Serial No. 154,007. 3 Claims. (Cl. 179—100.31.)

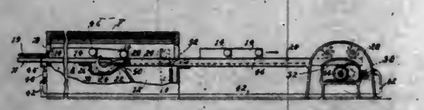
2. A talking picture apparatus, comprising a base having a track over which a film is adapted to slide, a slit-containing member mounted in said base adapted to be rotated about an axis parallel to a beam of light passing through the slit in said member and to be moved toward and from a film sliding on said track, means for moving said slit-containing member toward and from said film

and rotating said member about said axis, and means for securely holding said slit-containing member in a predetermined position.

1,749,413. EXPRESSION DEVICE FOR AUTOMATIC MUSICAL INSTRUMENTS. TOLBERT F. CHEEK, New York, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Jan. 4, 1924. Serial No. 684,352. 4 Claims. (Cl. 84—124.)



1. Expression regulating mechanism for automatic musical instruments comprising the combination with a tracker bar and a source of power supply, of a unitary expression regulator adapted to operate in accordance with the expression perforations of any one of a plurality of different note sheets, means for effecting coordination of the nomenclature of expression apertures of the tracker bar in accordance with said different note sheets, means for rendering said expression regulator operative in accordance with the particular note sheet used, said expression regulator being adapted to be directly operated initially through tracker bar expression apertures in the case of a note sheet of one type, and an auxiliary coordinator forming part of said expression regulator, said auxiliary coordinator being directly actuated initially through expression apertures of said tracker bar, and means for causing said auxiliary coordinator to effect operation of said expression regulator in accordance with a particular note sheet.

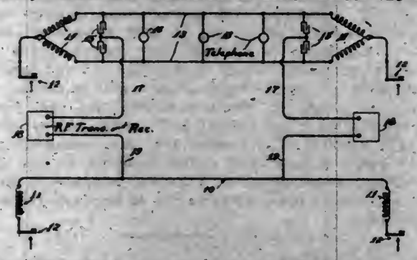


1,749,414. AUTOMATIC WAFFLE MACHINE. CARL O. CHRISTIANSON, Merriman, Nebr., assignor to Super-Automatic Food-Machine Corporation, Valentine, Nebr. Filed Dec. 5, 1928. Serial No. 323,815. 11 Claims. (Cl. 107—4.)

1. In a waffle machine, a frame, baking-grids arranged in pairs and mounted on the frame, a housing having dis-

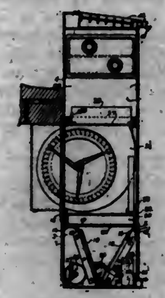
charge apertures and disposed above the baking-grids, a pair of cylindrical mixing-receptacles in the housing each having a discharge-aperture and an intake-aperture, a hopper on the housing, a pair of measuring-cups in the housing between the hopper and mixing-receptacles for receiving ingredients from the hopper and arranged to be rotated approximately 180 degrees for discharging said ingredients to the intake-apertures of the mixing-receptacles, said mixing-receptacles being movable in a circle's arc of approximately 90 degrees for disposing its discharge-aperture in register with the discharge-aperture of the housing to permit the ingredients to fall upon said baking-grids, and means for heating the baking-grids.

1,749,415. DUMPING CONVEYER MECHANISM FOR FURNACES. FRED R. COLBY and ARNOLD L. LARSEN, Toledo, Ohio, assignors to The Surface Combustion Company, Inc., Toledo, Ohio, a Corporation of New York. Filed Dec. 8, 1927. Serial No. 238,731. 16 Claims. (Cl. 198—218.)



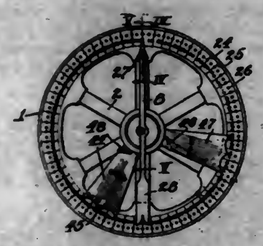
1. A conveyor comprising in combination, a track having its continuity interrupted by an unbridged space, containers adapted to be moved along the track, means reciprocable alongside said space, and means for establishing pivotal connection between the containers and said reciprocable means to move the containers across said space whereby the containers may tilt about the connection to dump the container contents into said space in moving thereacross.

15. In combination, a track having an unbridged space, pans movable on said track, trunnions projecting from the pans laterally of the track, means for moving the pans toward said space, and separate means at the sides of said space for moving the pans thereacross while hanging from their trunnions.



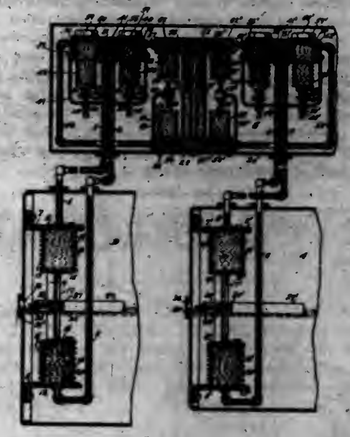
1,749,416. TELEPHONE AND TELEGRAPH CIRCUITS. JOHN W. COOK, Topeka, Kans. Filed Apr. 8, 1925. Serial No. 21,486. 2 Claims. (Cl. 179—25.)

1. Telephone and telegraph circuits comprising sending and receiving telephone and telegraph apparatus, line circuits, a superimposed circuit on said line circuits involving additional sending and receiving apparatus, air choke coils connected in series between the first mentioned telegraph sending and receiving apparatus and the ends of the telegraph portion of the line circuits, and small capacity condensers connected in series across the line



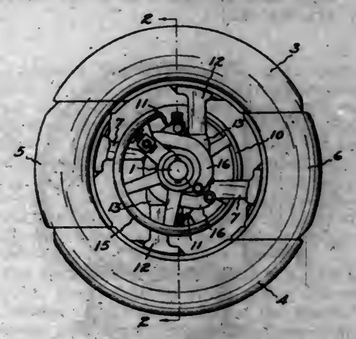
wires of the telephone portion of said line circuits so as to provide a connection for the super-imposed circuit to the telephone portion of the circuits of equal capacity to both sides of said line wires of the telephone portion of the line circuits.

1,749,417. UNIT HEATING AND VENTILATING APPARATUS. HERMAN CHARLES DAVIS and LEWIS D. HARNETT, Columbus, Ohio, assignors to The Buckeye Blower Company, Columbus, Ohio, a Corporation of Ohio. Filed June 10, 1927. Serial No. 197,984. 12 Claims. (Cl. 257—187.)



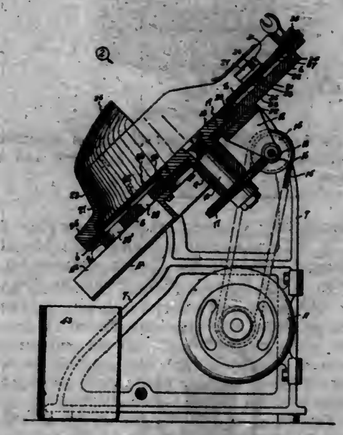
4. In a heating and ventilating apparatus, the combination of a casing, a damper frame carrying a damper, said damper frame being supported on the bottom of said casing, blower housings and a blower mounted on said damper frame independent of the walls of the casing and a radiator mounted on said casing, whereby the walls of the casing are independent of the damper, damper frame, blower housings and blower and may move relative thereto while the aforementioned elements are firmly supported on the foundation of the casing, and a filter frame carrying a filter mounted on said damper frame.

1,749,418. INDICATOR FOR GAMES. THEODORE H. DECKER, Highland Park, Ill. Filed Apr. 1, 1929. Serial No. 351,583. 6 Claims. (Cl. 116—133.)



1. An indicator including a fixed wheel-like dial having indicia thereon, a ring of spaced pegs on said dial, a rotatable pointer movable over said dial, a ratchet wheel connected to said pointer for moving it in one direction, a spring finger carried by said pointer for contacting said pegs, a movable member carrying a pawl for engaging said ratchet wheel, and means for moving said member.

1,749,419. TANK INDICATOR. CLARENCE A. DE GIERS, New York, N. Y., assignor, by mesne assignments, to The Liquidometer Corporation, Wilmington, Del., a Corporation of Delaware. Filed Feb. 25, 1921. Serial No. 447,640. 12 Claims. (Cl. 73—82.)

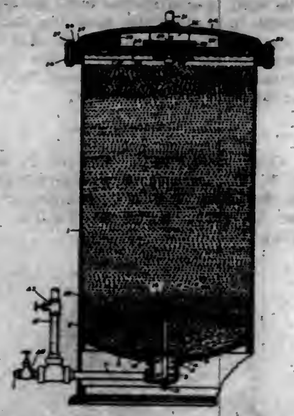


7. The combination of a tank, a float therein, an indicator gauge glass, fluid containing connections at each end of the glass, different colored fluids in the connections meeting in the glass, means including two flexible-walled compressible and expansible chambers which are operated by the rise and fall of the float in the tank for causing the liquids to advance or recede in the connections and in the glass, and means including expansible chambers in the connections acting to compensate for expansion or contraction of the fluids therein due to temperature changes without causing variations of the fluid level at the indicator.

1,749,420. COLLAPSIBLE CORE. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 5, 1928. Serial No. 259,287. 5 Claims. (Cl. 154—9.)

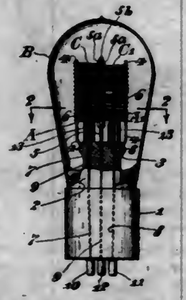
1. The combination with a support, of a shaft projecting outwardly from said support, and an annular tire core composed of collapsibly mounted main and key sections, said main and key sections being independently mounted on said shaft and relatively movable longitudinally of the shaft to position the main sections clear of the key sections to permit collapse of the main sections, said main sections being supported on said shaft outwardly of said key sections whereby a tire supported on the main sections may be directly removed from said main sections over the outer end of said shaft.

1,749,421. COIN ASSORTER. EDWARD P. DONNELLAN, Brooklyn, N. Y., assignor to Standard-Johnson Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 16, 1927. Serial No. 219,905. 8 Claims. (Cl. 133—8.)



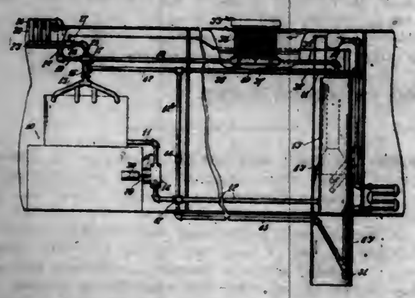
1. In a coin assorting machine having an inclined base plate provided with assorting openings adapted to discharge coins therethrough selectively as to size and a rotatable spindle centrally journaled in said base plate, a pair of axially spaced flat disc-like conveyer plates mounted on said spindle so as to be rotated thereby, the lower conveyer plate being disposed to ride slidingly on said base plate so as to discharge coins conveyed thereby through said assorting openings of the latter, a stationary partition plate intermediate said conveyer plates, said conveyer plates having conveyer openings to receive and carry coins singly and flatwise therein, the openings of said lower conveyer plate being aligned respectively with corresponding openings of said upper conveyer plate, and said partition plate having a transfer opening aligned in the path of movement of the conveyer openings of said conveyer plates, said transfer opening being positioned in advance of the assorting openings whereby coins are transferred from conveyer openings of the upper conveyer plate to corresponding conveyer openings of the lower conveyer plate before they may be discharged through the assorting openings.

1,749,422. WATER SOFTENER. CHARLES P. EISENHAUER, Dayton, Ohio, assignor to The Duro Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 30, 1928. Serial No. 250,537. 4 Claims. (Cl. 210—24.)



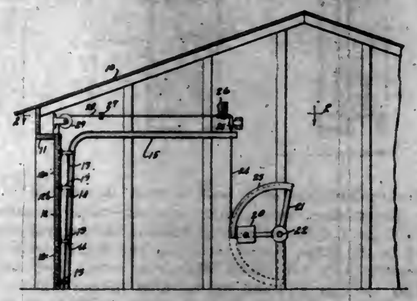
1. In combination, a softening tank, a gravel bed in the bottom thereof, a retaining means for said gravel, softening material mounted thereon, a relatively fine retaining screen spaced from the top of said mineral at the top of the tank, exit means at the top of the tank beyond said screen, a hard water and brine inlet at the

bottom of said tank, an injector in said inlet, predetermined orifices for said means to control said hard water and said brine, and a distributor at the bottom of said



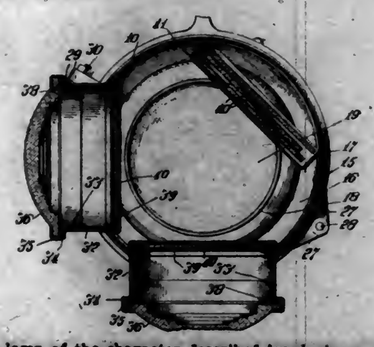
tank where the fluid enters the gravel, and a distributor at the top of the tank between the exit line and the retaining screen.

1,749,423. ELECTRIC VALVE. ALMON N. FENTON, Collingswood, N. J., assignor to Atwater Kent Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 11, 1927. Serial No. 198,181. 12 Claims. (Cl. 250—27.5.)



9. An electric valve of the glow discharge cold electrode type comprising, in an atmosphere of helium, a hollow foraminous cathode structure of tantalum, and a plurality of rod-like anodes disposed therein.

1,749,424. MOTOR HEATING AND COOLING SYSTEM. GERALD D. GORDON, Marion, Iowa. Filed May 2, 1927. Serial No. 188,262. 2 Claims. (Cl. 123—174.)

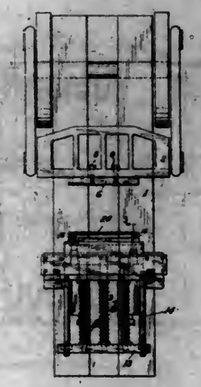


1. A system of the character described comprising, in combination with a water-cooled engine, a water supply tank capable of holding all of the water of said system, radiator sections arranged above the level of the water-jackets of said engine, said sections being independently controllable, an automatically controlled pump having connection with the lower end of said tank and with the lowest point of water-jacket of said engine, temperature controlled mechanism intermediate of the pump and the engine whereby the pump is placed into operative relation with the engine when a predetermined temperature is reached, a common connection between the upper ends of said water-jackets and the lowest points of said radiator sections, means for separately controlling the flow to the different radiator sections, a return line intermediate of the highest points in said radiator sections and the upper end of said tank, thermostatically controlled means in said common connection, a by-pass intermediate of said thermostatically controlled means and said return line whereby water from the water jackets of the engine may be made to circulate through said radiator sections before returning to said tank when the temperature is above a predetermined degree and made to flow through said by-pass and back to said tank when the temperature is below said predetermined degree.

1,749,425. CLOSURE OPERATOR. MARCUS R. HARRIS, Detroit, Mich. Filed Feb. 15, 1926. Serial No. 88,277. 1 Claim. (Cl. 20—19.)

Counterweight means for doors adapted to be lifted from closed position and guided to horizontal open position wherein said doors are supported by the guiding means, said counterweight means consisting of a sector of a grooved pulley having spokes, a weight secured to one of said spokes, and a cable connection from the outer end of said weighted spoke to said door, said cable being of such length that said weighted spoke assumes a horizontal position with the rest of the sector above, when said door is in closed position.

1,749,426. LAMP. JOSEPH F. R. HEINISCH, Topeka, Kans. Filed Nov. 14, 1927. Serial No. 232,967. 1 Claim. (Cl. 240—22.)

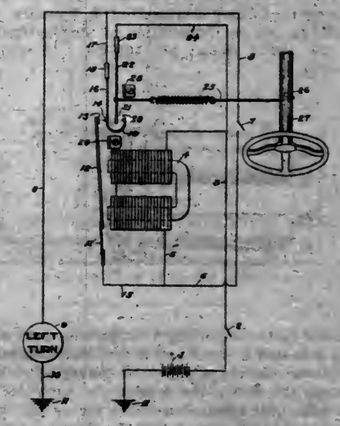


In a lamp of the character described involoving a main casing provided with a pair of light emitting openings,

in the sides thereof arranged substantially at right angles to each other, a supporting frame disposed about the lower end of the casing and consisting of a pair of ring segments hingedly connected together at one end while the other end of each segment is adapted to receive a fastening bolt or screw, at least one of said segments having an outwardly extending socket engaging lug, means whereby the position of the ring segments and said lug relative to the light emitting openings in the casing is determined, the inner perimeters of the ring segments being each provided with an upstanding semi-circular flange, and a removable bottom provided with an upwardly extending flange having an outwardly disposed annular rib adapted to engage with the inner flanges of said ring segments.

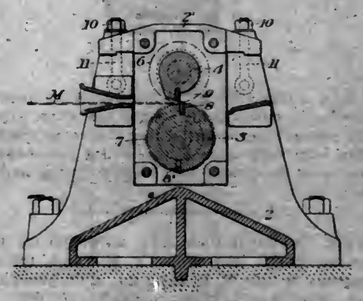
1,749,427. TREATING BUTTER. CHARLES HOFFMAN, Tuckahoe, and THOMAS ROBERT SCHWEITZER, Ozone Park, N. Y., assignors to Ward Baking Company, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1925. Serial No. 74,919. 6 Claims. (Cl. 99—11.)

1. The method of improving the whipping quality of butter which consists in agitating it at a temperature where the fat is soft enough to permit of a uniform mixing of the constituents and below the temperature at which the constituents separate and refrigerating sufficiently for the butter fat to harden.



1,749,428. METHOD AND MEANS FOR FORMING HOLLOW ARTICLES. EARL K. HOLMES, Cleveland, Ohio, assignor, by mesne assignments, to Steel and Tubes, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed May 27, 1926. Serial No. 111,990. 9 Claims. (Cl. 153—48.)

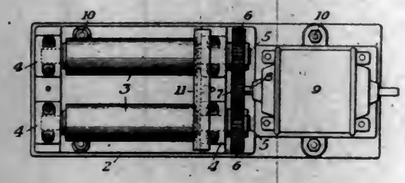
1. Apparatus for changing the cross sectional configuration of a hard steel tube which comprises a suitably recessed die, means for advancing the said die, an oppositely disposed die toward which the first said die may be advanced and being suitably recessed, the second said die being composed of a plurality of parts, certain of the parts projecting above others of the parts, means for yieldingly supporting the said projecting parts, means for yieldingly supporting the remaining parts of the said die, and means for fixedly supporting all of the parts of the die at one end of the stroke.



2. The method of shaping a length of brittle metal tubing which comprises placing the tubing between spaced dies, causing relative movement of the dies to compress the tubing therebetween, and causing one of the dies to yieldably with progressively increasing force resist the movement of the opposing die until the cross-sectional configuration of the length of tubing is changed.

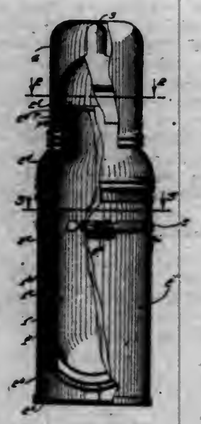
1,749,429. INDICATING SYSTEM. ERWIN C. HORTON, Hamburg, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y. Filed Aug. 24, 1926. Serial No. 131,169. 7 Claims. (Cl. 177—339.)

1. In a signaling system for motor vehicles; a presetting circuit comprising a source of electrical energy, an electromagnet, a manually set switch which opens when released from the hand, and a signaling device all connected in series; a retention circuit interconnected with the first circuit for shunting the manually set switch and comprising an armature for the electro-magnet, and a movable switch part with which said armature, when attracted, normally engages for closing the retention circuit therethrough; and an action circuit closable upon the initiation of the preindicated action and adapted to be opened upon the substantial completion of the preindicated action, said action circuit comprising a switch part movable by and during movement of a part of the vehicle which part is moved to effect the preindicated action, said second switch part first moving into engagement with said first switch part to close the action circuit therethrough and thereby shunt the electromagnet, and then moving said first switch part from electrical contact with said armature for breaking said retention circuit.



1,749,430. ROTARY SHEARS. LORENZ IVERSEN, Pittsburgh, Pa. Filed Apr. 3, 1926. Serial No. 99,595. 1 Claim. (Cl. 164—66.)

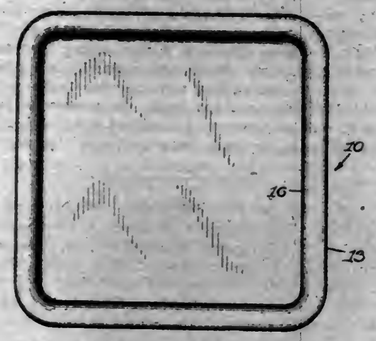
In a shear, a rotor having a single blade thereon, a second rotor having a plurality of blades thereon, and means for bringing a predetermined blade on said last mentioned



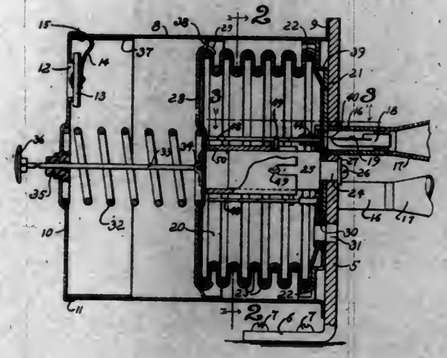
rotor into shearing relation with the blade on said first mentioned rotor once during a plurality of revolutions of both of said rotors, substantially as described.

1,749,431. ROLL TABLE. LANE JOHNSON, Ingram, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 20, 1927. Serial No. 162,337. 12 Claims. (Cl. 198—127.)

1. A roll table comprising a supporting base, a plurality of units mounted thereon and individually removable, each of said units comprising a pair of conveying rolls, gearing for driving the same, and a separate motor for the rolls only of each unit bodily removable therewith, the driving means of each unit being relatively disconnected from the supporting rolls of the other unit.



1,749,432. NURSING BOTTLE. ELIZABETH KRIEGE, San Diego, Calif. Filed June 6, 1927. Serial No. 196,786. 4 Claims. (Cl. 215—11.)

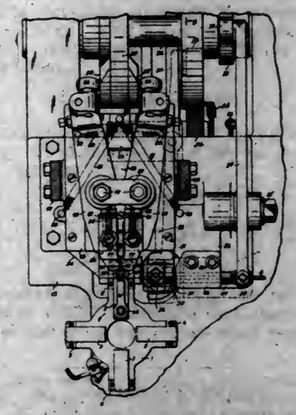


1. In a nursing bottle, a wide-mouthed vacuum wall receptacle, an outer casing spaced therefrom with a wide mouth, resilient means for holding said receptacle in spaced relation with said outer casing, and a bell-shaped nipple secured over the mouth ends of said casing and said receptacle.

1,749,433. BAKING PAN AND METHOD OF BAKING. EDWARD KUSSA and WILLIAM E. LONG, Chicago, Ill., assignors to The W. E. Long Co., a Corporation of Illinois. Filed Apr. 2, 1928. Serial No. 266,663. 1 Claim. (Cl. 53—6.)

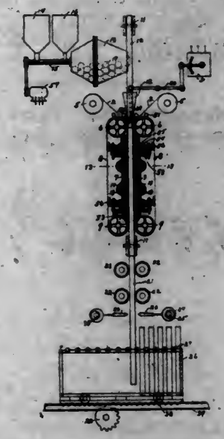
In a device of the class described, an outer imperforate metallic vessel having a rolled edge, an inner imperforate metallic vessel having its marginal edge closed about the rolled edge of said outer vessel and forming the sole means of support of said inner vessel, said closure being sufficiently tight to hinder the free circulation of air between said inner and outer vessels but providing passages through which air may be forced by positive pressures resulting from the heating or cooling of said vessels.

1,749,434. SIGNALING DEVICE. ROGER K. LEE, Detroit, Mich. Filed Oct. 23, 1929. Serial No. 401,651. 18 Claims. (Cl. 116—139.)



1. A signaling apparatus comprising an air motor, means for operating said motor, a signal device communicating with said air motor, a valve for controlling such communication, and means actuated by said motor operating means for operating said valve.

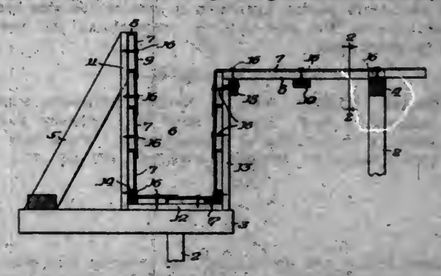
1,749,435. CHAIN-MAKING MACHINE. ARTHUR J. LEWIS, Stratford, Conn., assignor to The Baird Machine Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Nov. 17, 1924. Serial No. 750,237. 55 Claims. (Cl. 59—18.)



24. In a chain making machine, a movable support, a plurality of chain link holders carried by said support, means for bending a piece of wire into a loop with the ends butting, means for welding the butting ends comprising a pair of contacts to engage the link on opposite

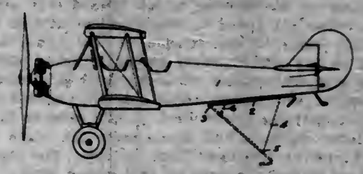
sides of and spaced from said ends, independent slides for said contacts, means for independently operating the slides

to bring the contacts into engagement with the link, and means for indexing the support to transfer the links from the forming mechanism to the welding mechanism.



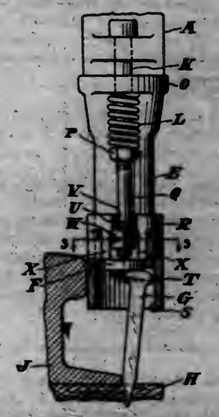
1,749,436. APPARATUS FOR MAKING PLASTER BOARD. ALBERT J. MEIER, St. Louis, Mo., assignor, by mesne assignments, to Rockwood Corporation of America, St. Louis, Mo., a Corporation of Delaware. Filed Apr. 16, 1923. Serial No. 632,426. 11 Claims. (Cl. 154—1.)

1. An apparatus for making plaster board, comprising, means for feeding the facings downwardly, side belts adapted to move with the facings, means extending along said belts for supporting the same against bulging in order to support the facings, and means for pouring the plaster downwardly between the facings so supported.



1,749,437. CONCRETE FORM. CHARLES LOUIS MEYER, Omaha, Nebr., assignor to Concrete Engineering Company, Omaha, Nebr., a Corporation of Nebraska. Filed Feb. 18, 1927. Serial No. 169,156. 2 Claims. (Cl. 25—131.5.)

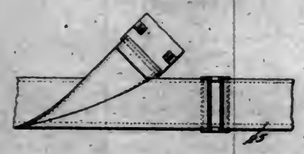
1. A concrete form for corner construction comprising a pair of angle plates each having one long and one short leg, the long legs of the plates abutting one another throughout their lengths at the corner and defining the angle thereof, the short legs being directed outwardly of



the corner, a batten extending longitudinally of said plates adjacent the juncture thereof at the exterior side of the corner to brace the edge of the long leg of one of said plates, and means securing said one plate to said batten.

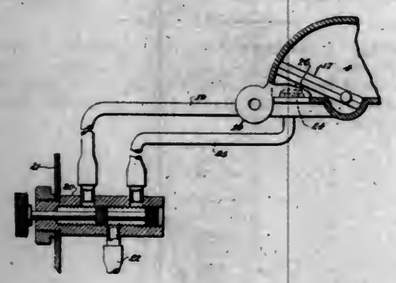
1,749,438. SHOCK-ABSORBING LANDING HOOK. ROBERT J. MINSHALL, Seattle, Wash., assignor to Boeing Airplane Company, Seattle, Wash. Filed Sept. 12, 1928. Serial No. 305,530. 6 Claims. (Cl. 244—2.)

1. An arresting mechanism of the class described consisting of a hook the shank of which is pivotally and swingably mounted to the underside of an airplane fuselage, a fluid actuated double acting shock absorbing and dampening means interposed between said hook shank and said fuselage adapted to retard the upward movement of the hook toward the fuselage and to accelerate its opposite or downward movement.



1,749,439. FASTENER-HOLDING DEVICE. ANDREW J. NEAFIE, Mountain Lakes, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 5, 1928. Serial No. 275,398. 2 Claims. (Cl. 1—5.)

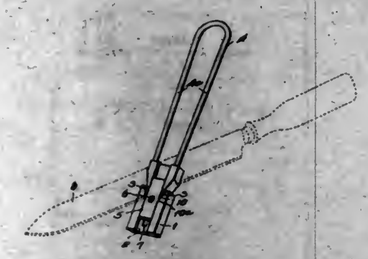
1. In a fastener holding device, the combination of a hammer tool having a cylinder and a front head, side rods for clamping the cylinder and the front head in assembled



relationship, a hammer piston in the cylinder for delivering blows of impact, a sleeve slidable on the front head for guiding a fastener during the driving thereof, lugs on the sleeve having apertures to receive the side rods, and nuts on the side rods for maintaining the sleeve on the front head.

1,749,440. CLASP. NELS T. NELSON, Attleboro, Mass., assignor to J. F. Sturdy's Sons Co., Attleboro Falls, Mass., a Corporation of Massachusetts. Filed July 8, 1929. Serial No. 376,697. 1 Claim. (Cl. 24—77.)

A clasp for a band bracelet or the like comprising a pair of superimposed sheet metal members one member having spaced transverse openings to slidably position it on a ribbon band and the other having an opening through which an end of the band may be looped, integral side extensions on one member folded toward each other and thence outwardly rolled to form resilient detents presenting their edges to the tension on the band, and side flanges on the other member having inturned portions to engage said detents and releasably hold said members in engagement, said flanges being braced by spaced cut and folded up portions of the stock of said member to engage their inner surfaces and also engage the edges of said detents and at the same time to form the above said spaced transverse openings for said ribbon band.



1,749,441. WINDSHIELD-CLEANER MOUNTING. JOHN R. OISHEI, Buffalo, N. Y., assignor to Trico Products Corporation, Buffalo, N. Y. Filed Dec. 13, 1926. Serial No. 154,479. 6 Claims. (Cl. 15—253.)

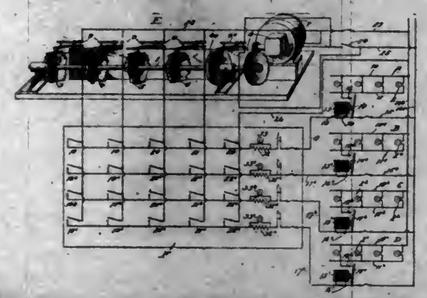
1. In combination with a windshield motor having spaced mounting parts, a mounting member adapted to be secured to a windshield frame and being provided with spaced offsets matching said spaced mounting parts for attachment thereto, and means for connecting said offsets to said spaced mounting parts, said motor having a wiper operating shaft projecting into and terminating in the space between said offsets.

1,749,442. KNIFE SHARPENER. FRED PASS, Chicago, Ill., assignor of one-half to George D. Norton, Toledo, Ohio. Filed Nov. 22, 1926. Serial No. 149,912. 4 Claims. (Cl. 76—68.)

1. A sharpening device of the character described comprising a block of substantial thickness, a sharpening member mounted on the block, there being a narrow slot having parallel walls in the block extending to the sharpening member, the block being of such thickness that the

walls of the slot are relatively wide whereby the slot serves to guide and maintain an article to be sharpened at the proper angle against the sharpening member.

1,749,443. ELECTRODEPOSITION OF CHROMIUM. CHARLES HENRY PROCTOR, Arlington, N. J., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Mar. 9, 1929. Serial No. 345,888. 2 Claims. (Cl. 204—1.)



2. As a new composition, a chromic acid electroplating solution containing, for each gallon of water, the following ingredients in about the proportions given:

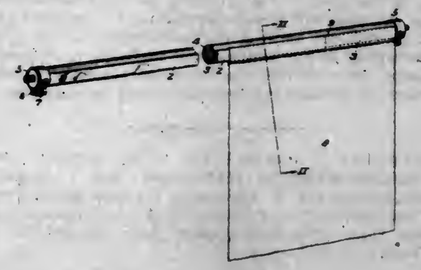
	Ounces
Chromic acid (CrO_3)	8 to 48
Chrome-iron ore (commercial)	¼ to 1½
Sulfuric acid	1/15 to ½

the chrome-iron ore having essentially the following analysis:

	By weight (per cent)
Chrome oxide (Cr_2O_3)	48–50
Iron oxide (Fe_2O_3)	20–25
Silicon oxide (SiO_2)	7– 7
Magnesium oxide (MgO)	12–14
Aluminum oxide (Al_2O_3)	7–10

1,749,444. SIGNAL SYSTEM. FRANK B. RAE, Berkeley, Calif. Filed July 20, 1926. Serial No. 123,611. 1 Claim. (Cl. 177—360.)

A signal system of the class described, comprising a central station, a plurality of signal stations, line wires extending from the central station to each of the signal stations, signal devices included in the line wires and means at the central station for transmitting the same or different code impulse combinations over said line wires simultaneously or independently to operate said devices, said means comprising a shaft and means for rotating it, a plurality of code wheels of different code characters on said shaft, a circuit breaker for each of said code wheels operated thereby, a plurality of groups of switches equal in number to the number of line circuits, each group having a number of corresponding switches equal in number to the number of circuit breakers, a



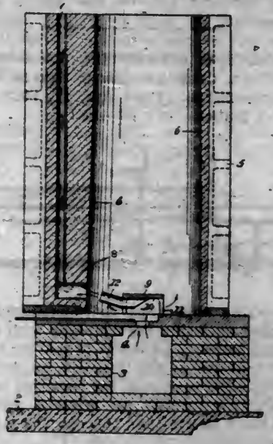
source of electric energy, connections from one side of the source and through the respective line wires to one terminal of each of the switches in the respective groups, connections from the second terminals of the corresponding switches in each group to one of the terminals of the corresponding circuit breakers and connections from the other terminals of the circuit breakers to the other terminal of said source.

1,749,445. TOILET COMPACT. FAY B. SALOMON, New York, N. Y. Filed Nov. 20, 1928. Serial No. 320,590. 3 Claims. (Cl. 132—82.)

3. As an article of manufacture, a toilet compact holder, comprising a body including a bottom and marginal side wall, said bottom being inwardly displaced at a central point to provide a truncated frusto-conical hollow support, partitions radiating from the support and merging into the side wall to provide independent compartments in the body, non-flexible cover sections for the compartments, and hinges concealed in the support and cover sections to swingingly connect the latter to the support, said side wall and cover sections being ornamented and flush at their meeting edges to effect a completed flower, said support having its smaller end closed and ornamented to effect the center of the flower representation.

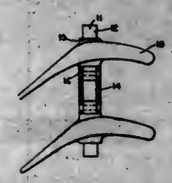
1,749,446. SHADE HOLDER. JOSEPH SANTARCANGELO, Pittsburgh, Pa. Filed Jan. 23, 1928. Serial No. 248,648. 5 Claims. (Cl. 156—25.)

4. A holder of the character described, comprising a pair of relatively extensible members adapted to substantially conform to and lie closely adjacent a shade roller, a ring link clamp connected to one end of each of said members and extending transversely therefrom adapted to be detachably secured to a shade roller at any point intermediate the ends thereof, and means for maintaining the clamps in adjusted position.



1,749,447. TOY TELEPHONE. BERTRAM F. SCHUCHMAN, Pittsburgh, Pa., assignor to Forster Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 26, 1928. Serial No. 264,779. 2 Claims. (Cl. 46—46.)

2. The combination with a toy telephone of a dialing mechanism including a shaft rotatably mounted in the base of said phone, said shaft having a rotating dial secured thereto above said base, a toothed wheel and a bell secured to said shaft beneath said base, a striker pivoted



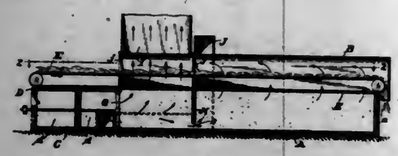
to said base adjacent said bell and an escapement mechanism operated by said toothed wheel for actuating said striker.

1,749,448. DRYING SAND MOLDS. RAY SCULTHORPE, Sharpsville, Pa., assignor to Shenango-Penn Mold Company, Sharpsville, Pa., a Corporation of Pennsylvania. Filed Nov. 17, 1928. Serial No. 320,196. 10 Claims. (Cl. 22—87.)

5. The combination of a source of gases for drying sand mold walls, means for conducting the gases into the presence of a mold wall having a pouring gate therein, and means for directing the gases toward the mold wall, such means having provision for directing at least a localized portion of the gases directly toward the gate.

1,749,449. TURBINE BLADING AND LASHING THEREFOR. HOWARD R. STEVENSON, Audubon, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 6, 1928. Serial No. 283,345. 7 Claims. (Cl. 253—77.)

1. In a turbine, a plurality of imperforate blades in a row, lashing means comprising a plurality of lashing elements interposed between adjacent blades, said lashing elements being located intermediate the inlet and outlet



edges and spaced from the ends of the blades, the outer terminal portions of the lashing elements being integral with the adjacent blades, and means for securing the lashing elements together between the blades.

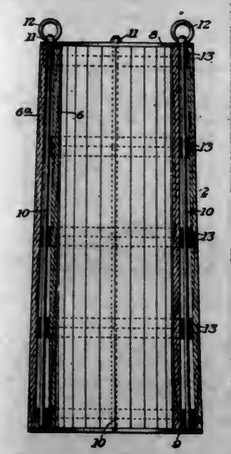
1,749,450. CURTAIN AND VALANCE OR LAMBREQUIN SUPPORT. GORDON R. STREICH, Buffalo, N. Y. Filed Aug. 27, 1928. Serial No. 302,337. 8 Claims. (Cl. 156—13.)

5. A valance hanger comprising a thin flexible strip having a series of spaced apertures adjacent each of its longest edges, one of said edges being attached to the outside of a window frame through its adjacent apertures and the remaining edge receiving valance attaching means in its adjacent apertures to support a valance, said flexible strip being bent to conform to the top portion of the window frame.

1,749,451. DRYING APPARATUS. WILLIAM M. STRONG, Santa Barbara, Calif., assignor to General Drying Engineering Corporation. Filed Apr. 17, 1928. Serial No. 270,787. 7 Claims. (Cl. 34—12.)

1. In a drying apparatus, the combination of a conveyor, a casing enclosing the conveyor with an air chamber above and below, a source of heated air supply, a fan beneath the conveyor at the inlet end, an outlet for moist air above the initial section of the conveyor and means for passing heated air through the material beyond this initial section more slowly than through the material in the initial section.

1,749,452. EPHEDRINE-KETONE COMPOUND AND SOLUTION AND PROCESS OF PREPARING SUCH COMPOUND. ELMER H. STUART, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 20, 1928, Serial No. 300,946. Renewed Jan. 8, 1930. 9 Claims. (Cl. 167—58.)

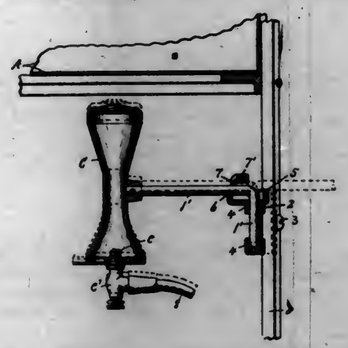


1. A compound obtainable by reacting an ephedrine with a ketone.

1,749,453. MOTOR-VEHICLE FENDER. HORACE T. THOMAS, Lansing, Mich., assignor to Reo Motor Car Company, Lansing, Mich., a Corporation of Michigan. Filed May 19, 1924. Serial No. 714,508. 5 Claims. (Cl. 280—152.)

3. In a motor vehicle, a fender including in combination a frame formed of spaced side bars substantially rigid in the direction of their length but yieldably movable toward and away from each other to absorb blows imparted to the side of the vehicle, and a covering for said frame.

1,749,454. MOLD PATTERN. FRANK W. TICKNER, Sharon, and JAMES THOMAS, Sharpsville, Pa., assignors to Shenango-Penn Mold Company, Sharpsville, Pa., a Corporation of Pennsylvania. Filed Feb. 4, 1929. Serial No. 337,248. 11 Claims. (Cl. 22—158.)

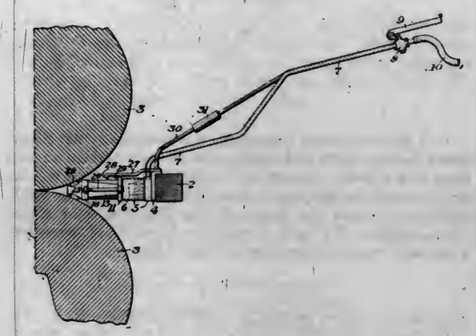


7. A pattern for molding sand for casting, comprising a hollow wooden pattern member having molding surfaces on both the inside and outside thereof, and metallic strengthening means connected with the pattern member and providing means for taking a lifting stress to lift the pattern.

1,749,455. PROCESS OF DEHYDRATING MATERIALS. JUSTIN F. WAIT, New York, N. Y., assignor to National Aniline & Chemical Co., Inc., a Corporation of New York. Filed Dec. 31, 1924. Serial No. 759,047. 9 Claims. (Cl. 23—184.)

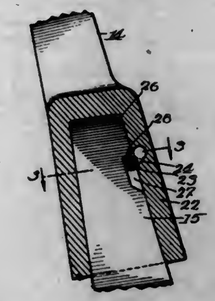
7. In the process of dehydrating molten alkaline materials, the steps which comprise passing said material containing moisture between electrodes while causing sufficient current to flow between said electrodes to evaporate moisture and removing the vapors by passing a current of inert gas through said material during the evaporation.

1,749,456. GAS-BURNER ATTACHMENT FOR CLOTHES-WASHING MACHINES. GUY C. WILKINSON, Syracuse, N. Y., assignor to Syracuse Washing Machine Corporation, Syracuse, N. Y., a Corporation of New York. Filed Feb. 5, 1924. Serial No. 690,727. 1 Claim. (Cl. 248—20.)



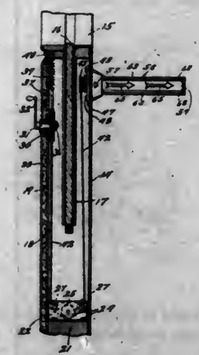
A gas burner attachment for clothes washing machines and the like comprising a bracket having an offset support

CARNEGIE LIBRARY OF ATLANTA



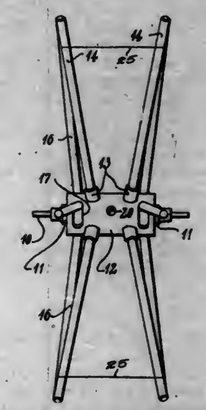
and an upright journal bearing in the support, a laterally extending support adjacent the upper end of the bearing, and a lug overhanging a portion of the last named support and being offset from the bearing, said bearing being adapted to receive an offset extension of a burner supporting arm, the distance between the free end of the lug and upper surface of the laterally extending support being sufficient to permit the passage therebetween of the offset extension of the burner supporting arm.

1,749,457. MEANS FOR GRINDING OR POLISHING ROLLS. JOHN D. WILLIAMS, Niles, Ohio. Filed Aug. 15, 1924. Serial No. 732,197. 3 Claims. (Cl. 51—255.)



1. A grinding and polishing means including a fixed supporting bar, a carrier slidably mounted on the bar, a cylinder on the carrier, a piston in the cylinder, and an abrading element supported on the piston, substantially as described.

1,749,458. GRATE SHAKER. HOWARD C. WOODBRIDGE, Rochester, N. Y., assignor, by mesne assignments, to The Standard Stoker Company Inc., New York, N. Y., a Corporation of Delaware. Filed June 1, 1926. Serial No. 112,768. 1 Claim. (Cl. 287—119.)

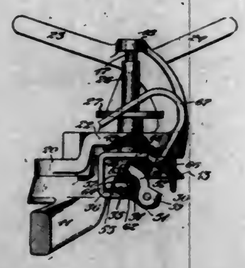


In a grate shaking mechanism, in combination, a swinging lever having an instanding backwardly facing substantially abrupt shoulder adjacent its outer end, an extension bar having an end socket for receiving the outer end of the lever and an oblique transverse slot opening through opposite walls of the socket and extending into a connecting wall to form a recess therein, the inner end of the slot being inclined toward the open end of the socket, and a pin laterally slidable in the slot into a position within said recess within said connecting wall or into a position engageable with said shoulder for preventing the removal of said lever when the parts are assembled.

1,749,459. DIRECTION INDICATOR FOR AUTOMOBILES. ANDREW ZAPART, Brooklyn, N. Y. Filed Sept. 15, 1928. Serial No. 306,103. 11 Claims. (Cl. 116—48.)

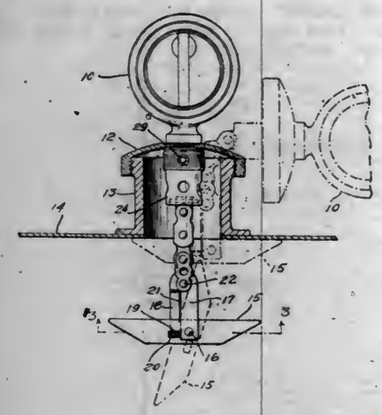
1. In a direction indicator, a housing adapted to be arranged on the side of the car, a casing bearing pointers arranged to lie within said housing alongside of the car, means connecting said casing with the housing to permit movement both axially and pivotally of the casing with respect to the housing to project the same therefrom, and means for bodily moving said casing.

1,749,460. SWIFT. EUGENE R. ALDERMAN, South Hadley, Mass. Filed Sept. 7, 1928. Serial No. 304,540. 3 Claims. (Cl. 242—110.)



1. A swift comprising a hub structure, a sleeve surrounding the hub structure and rotatable thereon and formed with circumferentially spaced pairs of slots, pairs of arms spaced circumferentially about the sleeve and secured thereto, pairs of arms secured to the hub structure and extending through the slots in the sleeve, and a spring connection between the hub structure and the sleeve tending to hold the hub-secured arms at one end of the slots and spaced evenly between the sleeve-secured arms while permitting the hub structure to be rotated relative to the sleeve to bring the hub-secured arms adjacent the sleeve-secured arms.

1,749,461. SLUG CATCHER OR YARN CLEANER. GUSTAF S. BECKMAN, Cranston, R. I., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed June 8, 1926. Serial No. 114,562. 9 Claims. (Cl. 28—70.)

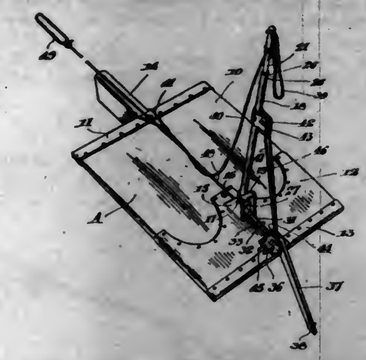


1. A slug-catcher or yarn-cleaner for operating on a longitudinally and laterally moving strand comprising an ele-

ment having a slit through which the strand draws and adapted to be oscillated transversely of the path of travel of the strand under the lateral movement of the latter

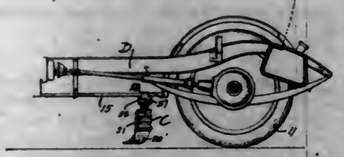
whereby the strand is caused to slide longitudinally of the slit to prevent the accumulation of lint and foreign matter therein.

1,749,462. RETAINING DEVICE FOR CAPS. CORD H. BEHNKE, Flushing, N. Y., assignor, by mesne assignments, to Moto Meter Gauge & Equipment Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Mar. 25, 1927. Serial No. 178,177. 6 Claims. (Cl. 220—24.)



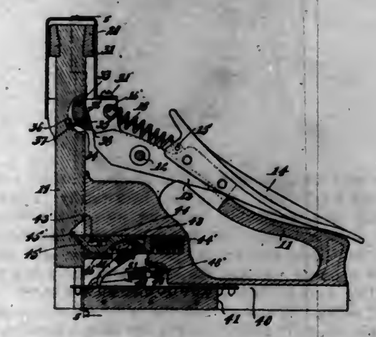
1. A retaining device for a radiator cap, including a link flexibly but permanently connected with said cap, an anchor member pivoted substantially centrally on said link, and spring means integral with said link to lock said member substantially perpendicular to said link upon movement to such position but maintained retracted, and ineffective when said member and said link are out of such perpendicular relation.

1,749,463. PROCESS FOR OBTAINING SULPHONATION PRODUCTS FROM POLYMERIZED FATS OR OILS OR THE ACIDS THEREOF. HEINRICH BERTSCH, Chemnitz, Germany, assignor to H. Th. Böhme A. G., Chemnitz, Germany, a Corporation of Germany. Filed Sept. 12, 1927, Serial No. 219,169, and in Germany July 8, 1926. 7 Claims. (Cl. 87—6.)



1. The sulphonation of polymerized fatty material, including polymerized fats, oils, and fatty acids, consisting in treating said material with the sulphonating reagent and simultaneously with an anhydrous organic acid radical compound.

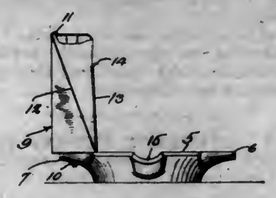
1,749,464. FLOATING SINKER. JOHN WILLIAM BOND, Victoria, British Columbia, Canada. Filed Apr. 26, 1929. Serial No. 358,396. 13 Claims. (Cl. 43—52.)



1. A floating sinker comprising a substantially flat plane-faced floating body, trip mechanism directly carried on said body and a feeler carried by the body connected with the trip mechanism and means associated with said trip mechanism and feeler for automatically directing said sinker to the surface of a body of water in which it is immersed, when said feeler encounters an obstruction.

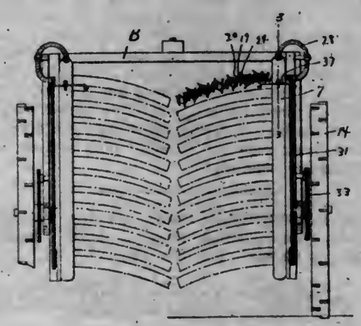
1,749,465. SNOW-SHOVEL ATTACHMENT FOR VEHICLES. LANODON CASKIN, Devon, Pa. Filed Aug. 9, 1928. Serial No. 298,525. 4 Claims. (Cl. 37—42.)

1. In a snow plow construction a carrier of corrugated channel cross section, a blade including a scooping portion and a corrugated attaching portion adapted to interfit to various depths in the corrugated channel of the carrier.



1,749,466. STAPLING MACHINE. JOHN B. CROFOOT, Arlington Heights, Ill. Filed May 4, 1928. Serial No. 274,988. 9 Claims. (Cl. 1—48.)

8. A stapling machine comprising a frame having a magazine for the reception of a strip of staples, a casing

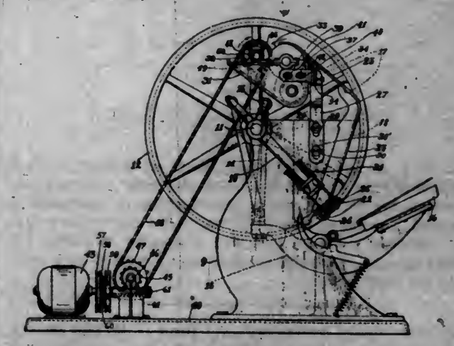


integral with said frame, said casing having a central bore and a pair of pockets one on each side of said bore, a pair of springs secured in said pockets, a plunger connected to said springs and slidable in said bore, said plunger having a notch, a spring pressed bolt receivable in said notch and having a guide slot receiving a pin secured to the frame, said plunger and said notch cooperating to cause reciprocation of said bolt, a feed pawl pivoted to said bolt, said feed pawl having a pair of arms, one of said arms being for the normal progressive feeding of said strip of staples into the bore, the other of said arms serving as a means to feed and eject the last of said strip of staples into the bore, a spring actuated retention pawl serving to prevent retraction of the strip of staples, and a cap inclosing the bore, part of said barrel and said plunger.

1,749,467. COMBINED ASH TRAY AND CIGARETTE-PACKAGE CONTAINER. JOSEPH A. DANN, Miami, Fla., assignor to Sarah Dann, a Free Dealer under the laws of Florida. Filed May 23, 1928. Serial No. 279,976. 1 Claim. (Cl. 131—59.)

A cigarette package holder including a base, a holder section including a rear wall and a front wall, the rear wall having its upper edge turned forwardly and downwardly to engage a package of cigarettes positioned in the holder section, to secure the package of cigarettes within the holder section, and the upper edge of the front wall being curved outwardly.

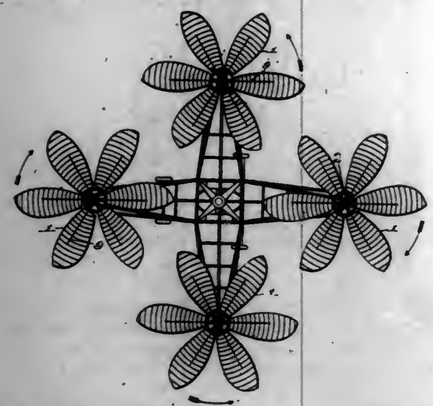
1,749,468. COTTON HARVESTER AND PICKER. JOSEPH DARBONNE, Jr., Elton, La. Filed Mar. 1, 1928. Serial No. 258,328. 8 Claims. (Cl. 56—40.)



1. In a cotton picking apparatus of the class described, a picker mechanism comprising a stationary coil, a rotatable coil in the stationary coil, said stationary coil having coil springs wrapped about the coils thereof, star wheels rotatable on the strand of the outer coil, and held in place by the coil springs, said star wheels having their teeth extending between the coils of the rotating coil to be actuated thereby.

1,749,469. LIQUID-DISPENSING APPARATUS. JOHN B. DAVIS, Springfield, Mass., assignor to Gilbert & Barker Manufacturing Company, West Springfield, Mass., a Corporation of Massachusetts. Filed Sept. 7, 1927. Serial No. 218,087. 9 Claims. (Cl. 221—100.)

1. A liquid dispensing apparatus, comprising, two measuring chambers, a conduit through which liquid may be supplied thereto, a conduit through which liquid may be discharged therefrom, valve means for alternately connecting said chambers to the supply and discharge conduits arranged so that while one chamber is connected to the supply conduit the other is connected to the discharge conduit, means for supplying liquid under pressure through the supply conduit, means adapted to be first stressed and then released to quickly shift the valve means and reverse the connections of said chambers to said conduits, an overflow conduit for each chamber communicating therewith near the upper end thereof, a cylinder connected near one end to each overflow conduit, a piston in each cylinder adapted to be moved by fluid under pressure from said overflow conduit, means alternately operated by said pistons for stressing and then releasing said valve shifting means, and means for discharging fluid from each cylinder through its piston after the latter has been moved by the fluid to effect the shifting of said valve means.



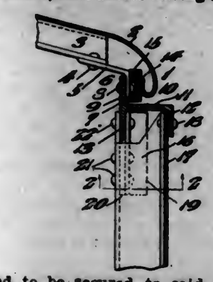
1,749,470. PRINTING PRESS. CLYDE DEAN, Chicago, Ill. Filed Aug. 1, 1928. Serial No. 296,656. 9 Claims. (Cl. 101—340.)

1. In combination with a printing press, an independent fountain connected to said printing press, and horizontally and vertically adjustable relatively thereto, a plu-

rality of rollers in said fountain, one of said rollers being engaged by the ink transmitting rollers of said printing press, one of the other of said rollers being mounted for horizontal and vertical adjustment relatively to said last mentioned rollers.

1,749,471. HELICOPTER. GEORGE DE BOTHEZAT, New York, N. Y. Filed Mar. 29, 1924. Serial No. 702,871. 24 Claims. (Cl. 244—19.)

1. In a helicopter flying machine, a plurality of pairs of lifting propellers mounted on the frame of said machine, and symmetrically disposed about the central vertical axis thereof, and means for unbalancing the torque of said propellers while maintaining the total thrust constant for the purpose described.

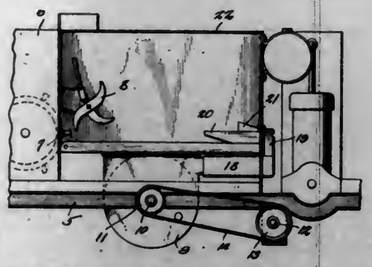


1,749,472. EGG GATHERER. ARTHUR DE PAEMELAERE, Gardena, Calif. Filed May 24, 1929. Serial No. 365,772. 2 Claims. (Cl. 294—103.)

1. In a device of the class described, a staff, a fixed jaw comprising cooperating loops the outer side portions of which are formed into a shank which is connected to the staff, the inner side portions of the loops being free and resilient, a second jaw, and means for mounting the second jaw on the staff for movement toward and away from the first jaw.

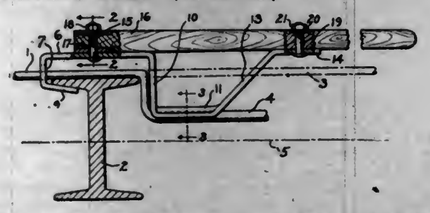
1,749,473. ROOF STRUCTURE. JOHN C. M. DES ISLETS, Bethlehem, Pa. Filed Oct. 28, 1927. Serial No. 229,296. 8 Claims. (Cl. 105—407.)

1. In a device of the character stated, a side plate composed of a laterally extending web, inner upper extending and lower pendant flanges and an outer pendant flange all of integral structure, roof sheets having a terminal pendant



portion adapted to be secured to said upper flange, and side posts having their upper portions secured to said inner and outer pendant flanges of said side plate.

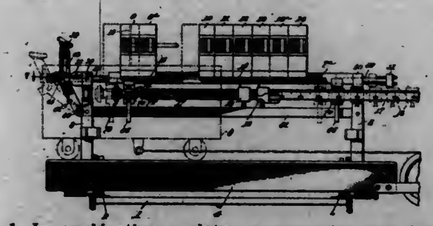
1,749,474. BALLOON ENVELOPE. JUNIUS D. EDWARDS, Oakmont, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 6, 1927. Serial No. 217,875. 3 Claims. (Cl. 244—3.)



1. A gas-retaining balloon-envelope made of fabric bearing a gas-retaining coating composed of rubber having flake-like metallic particles distributed throughout a substantial portion of its thickness.

1,749,475. PNEUMATIC FEEDING DEVICE FOR THRASHERS. MARTIN EISELE, Graymont, Ill. Filed Nov. 12, 1928. Serial No. 318,836. 2 Claims. (Cl. 130—1.)

1. A thrashing machine including a receiver compartment, a blower casing mounted under the receiver compartment, a main pipe extending along the bottom of the receiver compartment and extending upwardly at one end of the receiver compartment and communicating with the interior of the receiver compartment, a deflector pipe communicating with the first mentioned pipe and extending an appreciable distance within the receiver compartment, and a blower in the blower casing for directing a blast of air through the main pipe and deflector pipe to blow bundles of grain into the machine.

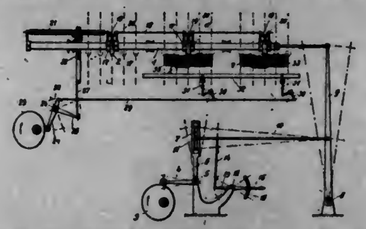


1,749,476. ROD-BENDING TOOL. CHARLES G. FILLMORE, Waltham, Mass. Filed Mar. 7, 1928. Serial No. 259,781. 8 Claims. (Cl. 81—15.)

7. In a device of the character described, a rigid member providing a fulcrum and a bend forming projection

comprising a base member having a depending hook portion adjacent one end, a bend forming projection intermediate the hook portion and the opposite end, said bend forming projection having a pair of supporting members depending from the base and carrying a bend contacting portion, and a handle secured to the base portion.

1,749,477. DEBIT AND CREDIT POSTING MACHINE. HARRY A. FOOTHORAP, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Original application filed Dec. 31, 1920, Serial No. 434,250, Patent No. 1,505,385. Divided and this application filed May 3, 1924. Serial No. 710,801. 10 Claims. (Cl. 235—59.)

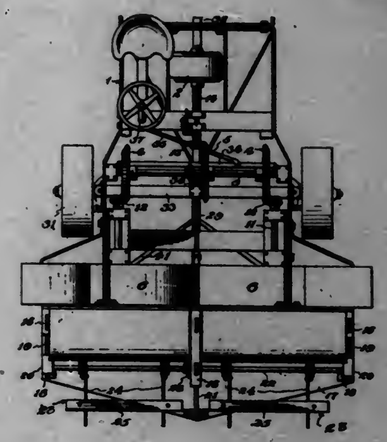


1. In combination a platen, a computing unit including a debit register and a credit register, and means for shifting said unit in opposite directions to present either register in position to be operated as debits or credits are recorded in the column and to displace the other register from such operative position.

1,749,478. SWITCH THROW OR KEEPER. ALBERT GALEY, Seelyville, Ind. Filed May 14, 1928. Serial No. 277,499. 6 Claims. (Cl. 246—318.)

1. In a keeper for switch points of switch structures including a longitudinally movable bridle, the combination of a housing including a pair of parallel spaced apart side plates, throw and rocker cranks pivotally mounted in the side plates, a throw arm pivotally mounted at one end upon the rocker crank and slidably engageable with the throw crank, an expansion spring encircling the throw arm and acting upon the crank for normally urging the crank into opposite angular positions, and a link pivotally connected with the throw crank for attachment to one end of said bridle whereby the bridle is yieldably retained in either of its longitudinally movable positions.

1,749,479. FLAT KNITTING FRAME. RUDOLPH GRAEBER, Chemnitz, Germany, assignor to Schubert & Salzer Maschinenfabrik Aktiengesellschaft, Chemnitz, Germany. Filed Sept. 24, 1926, Serial No. 137,585, and in Germany Sept. 1, 1925. 2 Claims. (Cl. 66—110.)



1. In a flat knitting machine having a plurality of sinker beds and slurcocks for operating at the respective sinker beds, the combination with means to drive the said slurcocks, of means for adjusting the said driving means to vary the extent to which the slurcocks are driven and thereby the number of sinkers operated in any given bed.

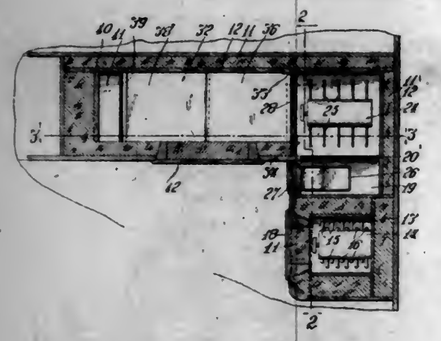
1,749,480. HIGH-TENSION-CURRENT CONDUCTOR AND SPARK INTENSIFIER. JOHN S. M. HENDRESHOT, Boonton, N. J. Filed May 5, 1926. Serial No. 106,939. 2 Claims. (Cl. 175—183.)

1. In a device of the class described, the combination of an elongated block of insulating material having recesses provided in opposite edges adjacent the one end of the block and forming a neck portion and a heel portion, and a conductor plate comprising a body portion having aligned slits in its side edges, forming intermediate and end clamping tongues at each side of the body portion, and a clamping tongue formed at the rear edge of the body portion, said intermediate and rear clamping tongues clamped respectively about the neck and heel portions of the block for securing the conductor plate to the block, and said end clamping tongues adapted to be clamped about the terminal of a conductor wire for electrically connecting the wire to the conductor plate.

1,749,481. SNOWPLOW. ARTHUR P. JENSEN, Marvin, S. Dak. Filed Oct. 13, 1927. Serial No. 225,948. 2 Claims. (Cl. 37—43.)

1. A device of the class described comprising a frame, a pair of casings mounted upon the frame and having openings in their front sides, a plow blade adjustably mounted in advance of the casings, brackets carried by the casings and plow blade, vertically disposed cutting blades having their lower ends pivotally connected to the brackets of the plow blade and their upper ends slidable in the brackets carried by the casings, a shaft journaled intermediate the ends of the blades, paddle wheels fixed to the shaft in

line with said openings, fans mounted in the casing, and means for simultaneously rotating the fans and paddle wheels.

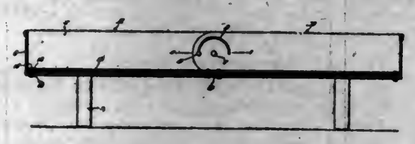


1,749,482. METHOD OF PRODUCING ALKYL ESTERS OF ABIETIC ACID. ALAN C. JOHNSTON, Kenvil, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 18, 1927. Serial No. 227,042. 25 Claims. (Cl. 260—98.)

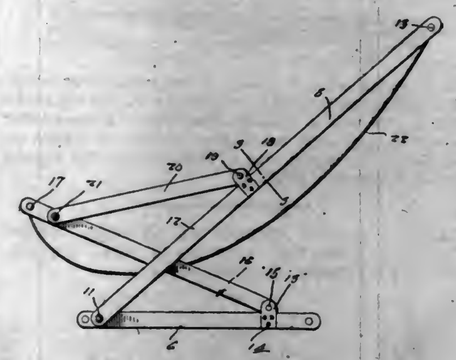
1. The method of producing an alkyl ester of a resin acid, which includes the step of treating a resin acid with an alkyl halide in the presence of an alkali and distilling off the ester formed under reduced pressure.

1,749,483. METHOD OF PRODUCING ALKYL ESTERS OF ABIETIC ACID. ALAN C. JOHNSTON, Kenvil, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Original application filed Oct. 18, 1927, Serial No. 227,042. Divided and this application filed June 12, 1928. Serial No. 284,877. 22 Claims. (Cl. 260—98.)

1. The method of producing the amyl ester of a resin acid, which includes the step of treating a resin acid with an amyl halide in the presence of an alkali.



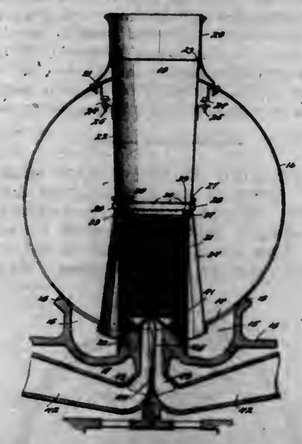
1,749,484. COMBINED REFRIGERATOR AND ICE-CREAM CABINET. CHARLES G. JUNEAU, deceased, Wauwatosa, Wis., by Anna K. Juneau, Wauwatosa, Wis., administratrix, and Walter C. Marshall, Milwaukee, Wis. Filed May 25, 1928. Serial No. 280,538. 3 Claims. (Cl. 62—89.)



1. A combined refrigerator and ice cream cabinet provided with insulated top, bottom and side walls, an insulated chamber provided with a refrigerating unit provided with loop-coils arranged intermediate of the front and rear walls, ice cream holding containers arranged within the loops of said coils, a second refrigerating unit chamber spaced from the first mentioned chamber, a chilling compartment arranged intermediate of the two chambers, air passages between the bottom and top of said compartment and said second chamber, said compartment having outwardly moving doors, and ice-cube holding vessels carried by said doors.

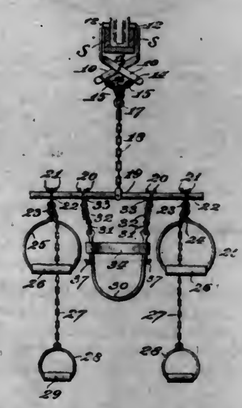
1,749,485. DRIER. ROSE KASTEAD, Cressey, Mich. Filed Feb. 11, 1929. Serial No. 339,162. 4 Claims. (Cl. 34—17.)

1. In a drier of the class described, a pair of pivotally connected sections, each of said sections including a pair of spaced parallel side walls and an end wall connecting said side walls at one end, the free end walls of the respective sections being disposed in overlapping relation, pivot bolts extending through the overlapping ends of said walls, the free ends of the side walls of one of said sections being provided with an arcuate slot, and a pin extending through the slot and the adjacent end of the wall of the other of said sections.



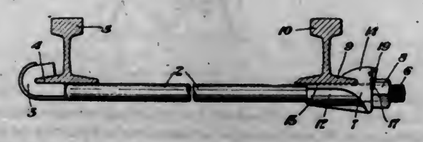
1,749,486. FOLDING CHAIR. WALTER H. KENDALL, New York, N. Y. Filed Oct. 29, 1928. Serial No. 315,823. 1 Claim. (Cl. 155—56.)

A folding chair of the character described comprising a pair of spaced parallel horizontally disposed base members, connecting rods secured at their opposite ends to the end portions of the base members, a tubular guard sleeve mounted on one of the connecting rods, pairs of vertically extending brackets mounted on opposite side faces of the base members adjacent the rear ends thereof, pivot pins extending through the upper portions of the pairs of brackets, forwardly and upwardly inclined supporting legs mounted on the pivot pins at their lower ends and provided, at their upper ends with a horizontal connecting bar, a pair of rearwardly extending upwardly inclined legs of greater length than the first named legs, pivotally connected to the outer side faces of the base members adjacent the forward ends thereof, and intersecting the first named legs, the upper portions of the last named legs constituting a back support, pairs of laterally extending spaced brackets mounted on the last named legs in spaced relation to the base members, pivot pins extending through the pairs of brackets, arms pivotally mounted on the pivot pin at one end and pivotally connected to the first named legs on the outer faces thereof and adjacent the forward end of said legs, a horizontal connecting bar secured to the upper end of the rearwardly extending legs, and a flexible seat and back element connected at its upper end to the connecting bars on the upper ends of the forwardly and rearwardly extending pairs of legs.



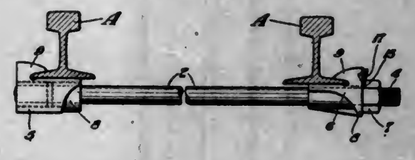
1,749,487. SMOKE BOX AND STACK. WILLIAM F. KIESEL, Jr., Altoona, Pa. Filed July 8, 1927. Serial No. 204,303. 21 Claims. (Cl. 105—44.)

12. In a locomotive, in combination, a smoke-box, a cylinder saddle closing the lower portion of said smoke-box, a cavity in said saddle, a projection in said cavity, an exhaust nozzle secured directly to said projection in said cavity and an exhaust passage in said saddle gradually



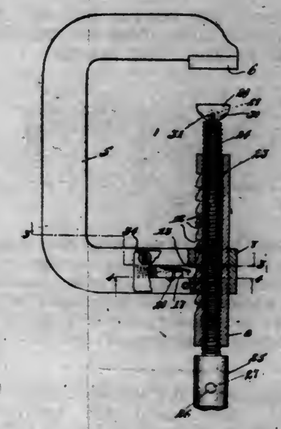
merging in said projection to the cross sectional configuration of said nozzle outlet, said passage replacing the usual exhaust pot.

1,749,488. EXERCISING APPARATUS. FRANCIS KING, Los Angeles, Calif. Filed Aug. 22, 1927. Serial No. 214,510. 8 Claims. (Cl. 272—80.)



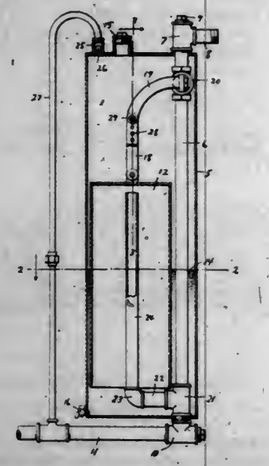
1. In an exercising apparatus, a pair of pivotally connected crossed bars having their upper ends terminating in hooks, a flexible member depending from said crossed bars, a bar carried by the lower end of said flexible member, and rings detachably connected to and suspended from said bar.

1,749,489. GAUGE ROD. MICHAEL J. KIST, Johnstown, Pa. Filed Apr. 18, 1929. Serial No. 356,169. 3 Claims. (Cl. 238—53.)



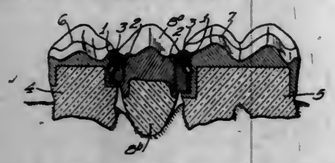
1. In a gauge rod device, the combination of a rod member having a fixed jaw at one end and having its other end threaded, a movable jaw mounted on said rod and in opposite relation with respect to the fixed jaw, said jaw having a substantially vertical outer end face, a nut threaded on said rod and adapted to contact with said outer end face of said movable jaw to move said jaw toward said fixed jaw to engage the flange of a track rail, said outer end face of said movable jaw and the inner face of said nut being provided with recesses adapted to be brought into alinement by the rotation of said nut, and a locking pin adapted to be mounted in said alined recesses to lock said nut against rotation.

1,749,490. GAUGE ROD. MICHAEL J. KIST, Johnstown, Pa. Filed May 7, 1929. Serial No. 361,058. 4 Claims. (Cl. 238—53.)



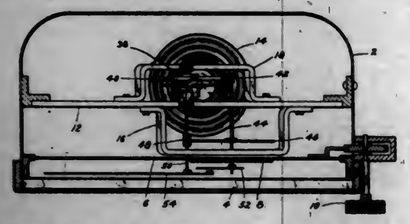
1. A gauge rod comprising a one-piece rod member having one end upset to form a head portion and the other end of said rod being threaded to receive a nut, a pair of jaws having bored base portions to receive said rod, said jaws being removably mounted on said rod, one of said jaws having its bore enlarged at its outer end to receive said upset head of said rod, and a nut threaded on the threaded end of said rod to contact with the outer end face of said other jaw to move said jaw toward the headed end of said rod to engage the flange of a track rail and secure said rod in place.

1,749,491. CLAMP. STEPHEN KOKAY, Chicago, Ill. Filed Mar. 26, 1927. Serial No. 178,541. 1 Claim. (Cl. 144—305.)



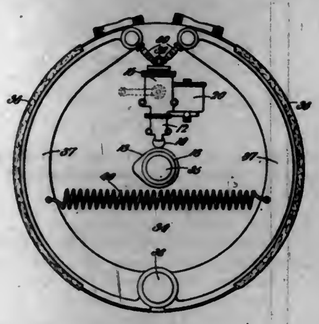
A clamp comprising a U-shaped clamping jaw having a clamping plate at one end thereof; a cylindrical opening through one end thereof having a clamping bolt therethrough; a hollow cylindrical member surrounding said bolt and passing through said cylindrical opening; said member having screw thread engagement with said bolt; notches in said cylindrical member; a pawl slidable in a direction at right angles to said cylindrical member and adapted to be yieldingly held in said notches; a manually operated push rod having a cam face engaging another cam face on said pawl for releasing said pawl from engagement with said cylindrical member; and a set screw engaging a slot in said cylindrical member for preventing rotary motion thereof.

1,749,492. AUTOMATIC FUEL CONTROL FOR NATURAL-GAS ENGINES. WILLIAM CHARLES LAMBING, McDonald, Pa., assignor of one-third to T. J. Britton, Cecil, Pa. Filed Nov. 6, 1928. Serial No. 317,643. 5 Claims. (Cl. 50—33.)



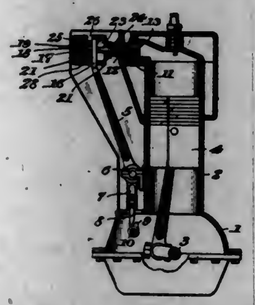
1. A fuel feed regulator of the class described comprising in combination, a closed container having a feed pipe extending vertically therethrough, a valve interposed in said feed pipe and positioned within the container, a float operable within the container and open at its lower end, a pipe extension communicating with said feed pipe and terminating within the float whereby to admit fuel into the float, in excess of the consumption thereof and means operatively connecting the float with said valve.

1,749,493. SEMIFIXED DENTAL BRIDGE. MERVYN C. LASKY, Hollywood, Calif. Filed Mar. 21, 1928. Serial No. 263,234. 10 Claims. (Cl. 32—12.)



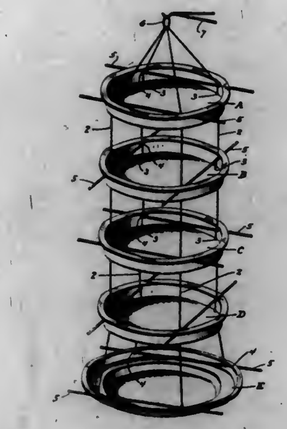
1. In a dental bridge, a socket member securable to a tooth, a male member securable to another tooth adapted to fit into said socket member, one of said members having a recess, and a screw mounted in the other member at an angle from the end thereof adapted to extend into said recess and retain said members relative to each other.

1,749,494. SENSITIVE ALTIMETER. GEORGE P. LUCKEY, Dayton, Ohio. Filed June 27, 1923. Serial No. 648,057. 3 Claims. (Cl. 73—4.)



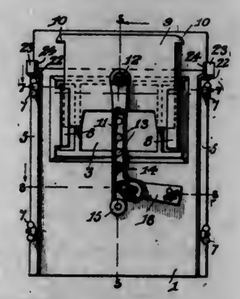
1. In an instrument having sealed atmospheric pressure responsive means, a plurality of dials, an indicator for each of said dials, one of said dials and indicators being geared to the other so as to move only a fraction of a revolution for each complete revolution of the other, link mechanism connecting said pressure responsive means to said indicators for transforming unequal movements of said means into uniform rotary movement of said indicators, and a device included in said mechanism for changing the ratio of the movement of the said indicators in respect to the movement of said pressure responsive means.

1,749,495. BRAKING OF THE UNDERCARRIAGE OR LANDING WHEELS OF AEROPLANES AND LIKE AIRCRAFT. MARTIN CLISSOLD MACPHERSON, Hayes, England, assignor to Charles Richard Fairey, Hayes, England. Filed Apr. 5, 1928, Serial No. 267,771, and in Great Britain Apr. 27, 1927. 6 Claims. (Cl. 244—2.)



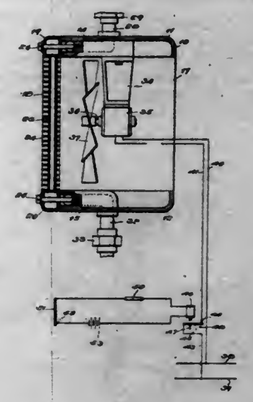
6. A braking system for the undercarriage or landing wheels of an aeroplane or like aircraft, comprising fluid-pressure brakes, actuating and controlling means therefor, said actuating and controlling means being so arranged that said fluid-pressure brakes are adapted to function so long only as the pressure of the rear portion of the machine bears upon the landing surface, and pumping means operated by rotation of the landing wheels and by a member at the tail of the machine for creating the fluid pressure for actuating the brakes.

1,749,496. VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. MARION GASKELL MASTERS, Evansville, Ind., assignor of one-half to Bernard Henry Mason, Vanderburg County, Ind. Filed Apr. 28, 1927. Serial No. 187,263. 2 Claims. (Cl. 123—90.)



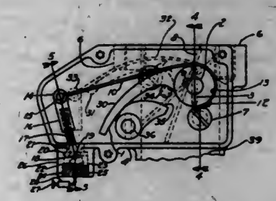
1. In a valve mechanism for internal combustion engines, the combination with a valve for a cylinder of said engine, of a valve operator, a valve tappet having a screw threaded connection to the valve operator and adapted for operating the valve, a nut for securing said tappet in its adjusted position, a housing carried by the stem of the valve, and a coil spring contained within the housing and bearing on it and on the valve operator, said spring serving as a cushion for the valve operator, said housing being provided with openings for the introduction of means to adjust the tappet and its securing device and to permit the play of the valve operator.

1,749,497. BIRD LURE. CHARLES F. MCGLASHAN, Truckee, Calif. Filed Mar. 12, 1929. Serial No. 346,434. 3 Claims. (Cl. 119—61.)



1. A bird lure comprising a plurality of superposed interspaced pans for the reception of bird feed, and perch rods supported by each pan, extending crosswise thereof and projecting outwardly therefrom.

1,749,498. DAMPER. WILLOUGHBY S. MILLER, Reading, Pa. Filed June 10, 1929. Serial No. 369,793. 1 Claim. (Cl. 126—293.)

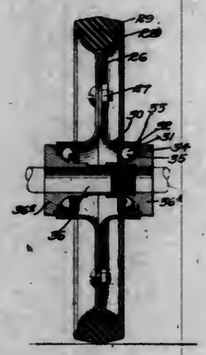


In a device of the class described, a tubular member comprising sections, each section having an opening, doors slidable longitudinally of the sections and controlling the openings, extension plates overlapping on the longitudinal edges of the sections, means for connecting the extension plates adjustably to the sections, a pipe-receiving shoulder on the sections, and the upper ends of the extension plates being outwardly offset to form wings extended upwardly higher than the shoulder, the inner surfaces of the wings lying inwardly of a circle coinciding with the inner surfaces of the doors, thereby to prevent a pipe from interfering with the raising of the doors, should the pipe be dislodged from the shoulder.

1,749,499. AIR-HEATING APPARATUS. ARTHUR B. MODINE, Racine, Wis. Filed May 28, 1926. Serial No. 112,373. 2 Claims. (Cl. 257—2.)

2. Heating apparatus comprising a radiator core, means for supporting said radiator core to permit angular adjustment thereof around an axis of rotation, electrically driven means constrained to move bodily with the radiator core for advancing a column of air therethrough, an electric circuit connected to said air advancing means, a relay in said circuit, and a thermostat in said circuit for controlling said relay.

1,749,500. GOVERNOR FOR INTERNAL-COMBUSTION ENGINES. GLENN L. MOYERS, St. Clair Shores, and EARL A. ABRAHAM, Detroit, Mich., assignors to Monarch Governor Co., Detroit, Mich. Filed Feb. 20, 1928. Serial No. 255,736. 20 Claims. (Cl. 137—152.)



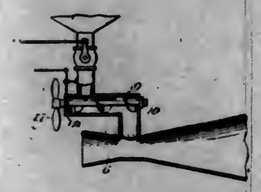
1. In a governing device for a hydrocarbon engine, the combination of a housing having an intake conduit, a governing member located in the intake conduit of the said housing, the said governing member being capable of being moved to a closed position by the reactions imposed thereupon by the operation of the motor, a cam connected to the said governing member and adapted to move therewith, a movable member mounted on the said housing, and a resilient member contacting with the said cam, the said resilient member being connected to the said cam and the said movable member, the said resilient member increasing its length of contact with the said cam during the movement of the said governing member to a closed position and thereby exerting an increasing tension to maintain, in accordance with a predetermined curve, the said governing member in a state of equilibrium at a predetermined speed, relative to the reactions imposed thereupon by the operation of the engine.

1,749,501. VAT DYESTUFFS. HEINRICH NEBSHEIMER and WILHELM SCHNEIDER, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 9, 1927, Serial No. 232,188, and in Germany Nov. 15, 1926. 6 Claims. (Cl. 260—60.)

1. The process for the production of orange-colored vat dyestuffs of the anthraquinone series, which consists in acting on a 1-acylamino-4-hydroxy-anthraquinone with an agent capable of supplying a radicle of a polyvalent alcohol.

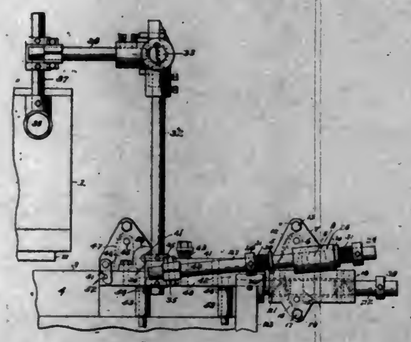
1,749,502. WHEEL STRUCTURE. HANS P. NIELSEN, Alameda, Calif., assignor to Eames Company, San Francisco, Calif., a Corporation of California. Filed Mar. 28, 1927. Serial No. 177,590. 1 Claim. (Cl. 308—190.)

A wheel of the character described including a pair of complementary disks secured together, each disk having an outwardly drawn hub end cooperating to form a hub for the wheel, a cup-shaped outer cone of a diameter agreeing with the interior diameter of the hub, one of said cup-shaped outer cones being tightly pressed within each end of the hub, a circumscribing flange at the outer end of each cup-shaped outer cone, said flange being of a diameter agreeing with the exterior diameter of the hub against the end of which it is adapted to abut when the outer cones are pressed into place, a spindle adapted to extend transversely through the hub, said spindle formed in two parts arranged in longitudinal alignment, the inner end of the parts being of a diameter permitting them to be inserted into the hub hub through the outer cones, the inner ends of the parts of the spindle being formed with male and female threads whereby they may be threadedly connected, the outer end of each part of the spindle being enlarged and of a transverse dimension substantially the same as the diameter of the hub, an inner cone turned on each portion of the spindle to cooperate with the outer cones, and anti-friction bearing members interposed between the inner and outer cones, the adjustment of the bearings being made my adjusting the portions of the spindle toward and away from each other, said spindle having a central bore formed axially therethrough to receive an axle.



1,749,503. SANITARY GARBAGE AND REFUSE REMOVER. ELIAS PALE, San Pedro, Calif., assignor of one-half to Lloyd S. Nix, Los Angeles, Calif. Filed Mar. 29, 1926. Serial No. 98,288. 3 Claims. (Cl. 220—85.)

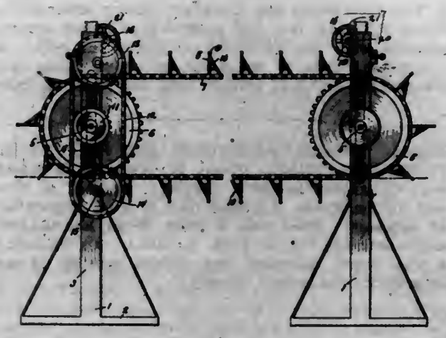
1. In combination with a container or receptacle, a scavenging device comprising a follower of substantially the shape and area of the inner cross-section of the container or receptacle, and a rod pivoted to the bottom of the receptacle or container and to the follower to fold down upon the bottom in one position to dispose the follower on



the bottom, and to swing out in another position to permit movement of the follower lengthwise of the container or receptacle.

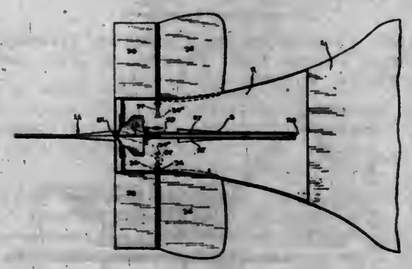
1,749,504. AERIAL DISTRIBUTION OF MATERIALS. CLIFFORD L. PELTON, Norristown, Pa. Filed Dec. 15, 1924. Serial No. 755,969. 2 Claims. (Cl. 244—1.)

1. In a flying machine, a receptacle for pulverulent material, an air impelled mechanical means for distributing such material mounted below said receptacle and a connection between said receptacle and said distributing means.



1,749,505. AUTOMATIC PUNCH-PRESS FEED. EDWARD M. PIERCE, Dayton, Ohio. Filed Mar. 5, 1925. Serial No. 13,136. 10 Claims. (Cl. 271—2.5.)

1. In a stock feeding device, a supporting structure mounted for reciprocatory movement, a gripping element carried by said structure and comprising a plurality of independently movable jaws pivotally adjacently mounted on a common axis, said jaws each having a rounded work contacting face adapted to grip stock of substantially

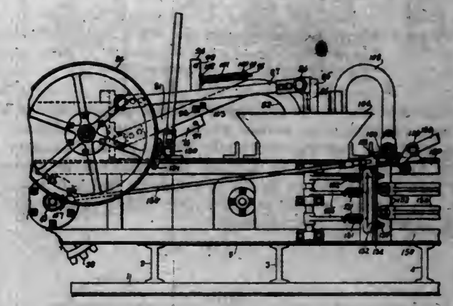


different thicknesses, means carried by said structure to urgingly support the stock in contact with said jaws, said jaws being so arranged that the movement of said structure in one direction will cause them to grip the stock and the movement of said structure in the opposite direction, will cause them to release the stock.

1,749,506. WATER MOTOR. THENO THEODORE RANDMETZ, New York, N. Y. Filed July 5, 1927. Serial No. 203,529. 2 Claims. (Cl. 170—90.)

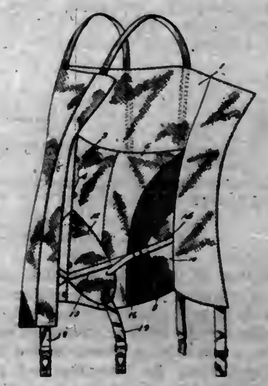
1. A water motor comprising a pair of spaced uprights, spaced sprockets journaled in fixed bearings beside one upright, an endless sprocket chain passing over the sprockets and forming a substantially vertical lap between the sprockets, members vertically slidable upon the uprights, means to adjust the members slidably, a shaft journaled in one pair of said members, and movable therewith, a sprocket carried by the shaft in interengagement with the vertical lap of the sprocket chain at any position of adjustment, a second sprocket member on said shaft, a second pair of spaced uprights, a shaft journaled and vertically adjustable on said second pair of uprights, a third sprocket carried by said shaft, and an endless current engaging organization passing over and about the second and third mentoned sprockets.

1,749,507. AIRCRAFT EMPENNAGE. EDWARD LEONARD REYNOLDS, Tulsa, Okla. Filed Feb. 8, 1929. Serial No. 338,505. 15 Claims. (Cl. 244—29.)



1. An empennage including a rudder consisting of upper and lower sections detachably connected together, a hull to which the rudder is connected, and means for detaching the upper section from the lower section, and for moving the upper section into the hull.

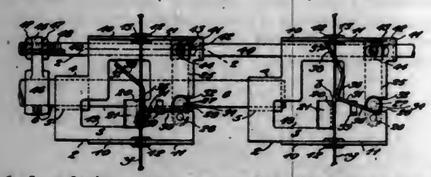
1,749,508. PROCESS OF MAKING POROUS PRODUCTS. JOHN A. RICE, Berkeley, Calif., assignor to The Bubblestone Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 29, 1924. Serial No. 716,825. 4 Claims. (Cl. 106—18.)



3. The process of making a porous article which comprises the steps of forcing a stiff jelly through a sieve, mixing said granular jelly into a mortar, and causing the latter to harden.

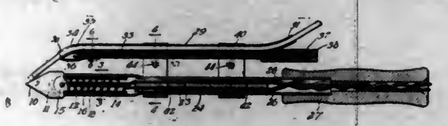
1,749,509. PRESS. BRUCE ROLLMAN, Bellevue, Ohio, assignor to The Ohio Cultivator Company, Bellevue, Ohio, a Corporation of Ohio. Original application filed Nov. 16, 1925, Serial No. 69,392. Divided and this application filed May 3, 1926. Serial No. 106,338. 4 Claims. (Cl. 100—30.)

1. In a baler, in combination with division blocks and a plurality of retaining means adapted to permit of the passage of the division block in one direction and to prevent its return movement in the other direction, said retaining means consisting of a plurality of superimposed spaced dogs, the noses of which project into the baler, yielding means to maintain them in their inward position and a common supporting plate for pivotally supporting them and a common adjusting means.



1,749,510. CORSET ACCESSORY. LAURA ROSS, Los Angeles, Calif. Filed Nov. 7, 1928. Serial No. 317,755. 1 Claim. (Cl. 2—27.)

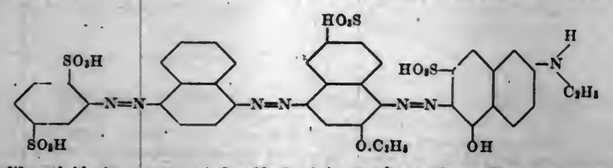
The combination with a corset, of an abdominal support for association therewith, said abdominal support including front fabric gores detachably secured together at their inner adjacent edges, elastic gores attached along their inner side edges to the outer side edges of the front gores, and at their outer side edges to the adjacent portions of the corset, means for adjusting the abdominal support to maintain the same in proper position on the body of the



wearer, said means including side flaps secured only along their outer side edges to the outer side edge portions of the elastic gores, downwardly diverging front flaps secured only along their inner opposed edges to the respective front gores at their inner opposed edges, and adjustable bands connecting the respective pairs of flaps together.

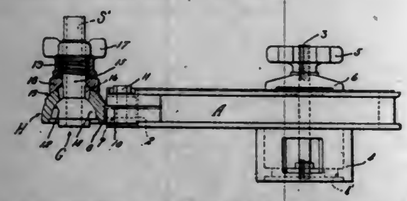
1,749,511. SLUG OR BUNCH CATCHER. THOMAS J. SANDS, Auburn, R. I., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed July 8, 1925. Serial No. 42,289. 4 Claims. (Cl. 28—64.)

1. In a device of the type specified, the combination of a pivoted detector-lever across which the yarn is normally free to travel, and a slitted blade carried by said detector-lever and adapted to be thrown into position to cause the yarn to be seized in its slit to arrest its travel to break the strand when a slug or other obstruction on the yarn acts to move the detector-lever.



1,749,512. SOLDERING DEVICE. JOHN F. SCHYLANDER, Chicago, Ill. Filed Nov. 30, 1925. Serial No. 72,289. 8 Claims. (Cl. 113—109.)

1. The combination with means for guiding solder to the tip of a soldering iron, and a slidably journaled plunger engageable with the solder for advancing the solder in said guiding means, of means for quickly mounting said guiding means and said plunger upon the soldering iron.



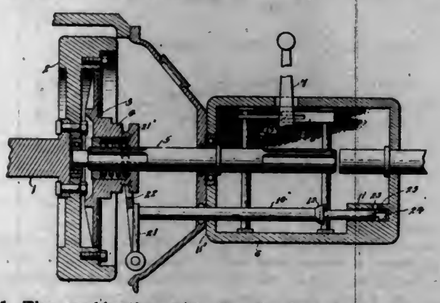
1,749,513. TRISAZO DYESTUFFS AND PROCESS OF PRODUCING THEM. HUGO SCHWEITZER, Wiesdorf, near Cologne-on-the-Rhine, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 4, 1927, Serial No. 166,009, and in Germany Feb. 26, 1926. 5 Claims. (Cl. 260—72.)

5. The herein described new trisazo dyestuff having most probably the general formula:

which dyestuff is readily soluble in concentrated sulfuric-acid with a blue coloration, yielding upon careful reduction with stannous chloride and hydrochloric acid aniline-3.6-disulfonic-acid, 1-4-naphthylenediamine, 1-4-diamino-2-naphthol-ethyl-ether-6-sulfonic-acid, and 2-ethylamino-5-hydroxy-6-naphthylamine-7-sulfonic-acid; dyeing cotton clear greenish blue shades of good fastness properties.

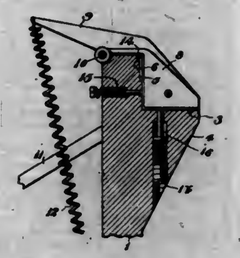
1,749,514. VALVE-RESEATING APPARATUS. JAMES Y. SCOTT, Springfield, Mass., assignor to Van Norman Machine Tool Company, Springfield, Mass., a Corporation of Massachusetts. Filed Nov. 7, 1927. Serial No. 231,546. 17 Claims. (Cl. 90—12.5)

1. An apparatus of the class described comprising in combination, a support, a guide receiving member adjustably movable in said support, a tool spindle guide adjustably movable in said member having an opening therein for receiving a tool spindle, means carried by said guide operable axially thereof for clamping said guide in adjusted position to said member and a tool spindle.



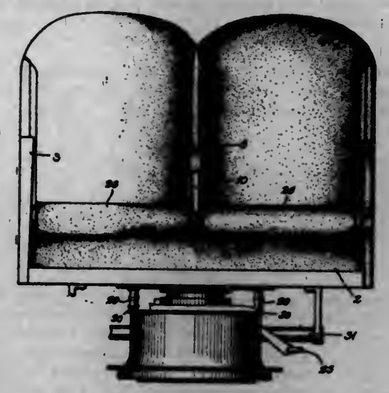
1,749,515. PULLEY BLOCK. HAROLD SLEEMAN, Iron River, Mich. Filed May 9, 1927. Serial No. 189,926. 2 Claims. (Cl. 254—193.)

1. A pulley block comprising a pulley, relatively rotatable sides substantially covering the sides of the pulley and which are provided on their inner walls with combined rope retainers and side spacers adapted, collectively, to overhang the pulley, said sides being widest at their tops and having the aforesaid retainers and spacers extending substantially across said sides at their widest tops to prevent the rope from "sawing" laterally across the



pulley, and hook means carried by the widest tops of the sides for anchoring the pulley block and for keeping the sides in alinement with the rope retainers and spacers facing each other for the purpose of collectively overhanging the pulley.

1,749,516. CLUTCH. MARION F. SMITH and ADELBERT E. WILKINS, Lansing, Mich. Filed May 2, 1929. Serial No. 359,924. 6 Claims. (Cl. 74—39.)

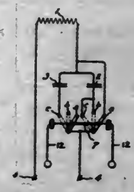


1. The combination with the clutch and transmission mechanism of a motor vehicle, of a shaft movable longitudinally for disengaging the clutch, rotatably mounted posts in the transmission case, bars fixed to the ends of the posts and arranged in pairs upon opposite sides of the shaft, said bars being pivotally and slidably connected at adjacent ends, said bars being operable by the gear shift lever for rotating the posts, and means carried by certain of the posts for shifting the shaft to disengage the clutch.

1,749,517. CLEAT-FORMING TOOL. CHARLES W. STRANSKY, Francis Creek, Wis. Filed June 5, 1928. Serial No. 283,063. 3 Claims. (Cl. 153—15.)

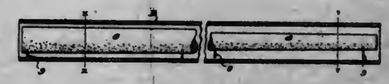
1. A cleat forming tool comprising complemental jaws, an element adapted to have an end portion of the blank bent thereover, an ejector for lifting the cleat to disengage the bent end thereof from the shaping element, and a second ejector for effecting automatic discharge of the cleat when formed.

1,749,518. CAR SEAT. JOHN J. TATUM, Baltimore, Md. Filed Dec. 27, 1927. Serial No. 242,899. 6 Claims. (Cl. 155—112.)



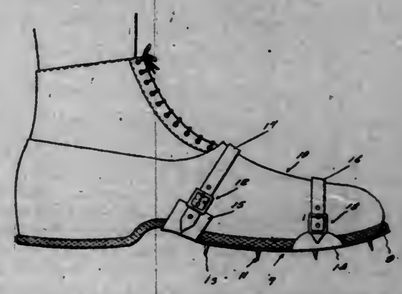
6. A seat back having a divider intermediate its ends forming a part of the back, said divider comprising sections, and means for holding the lower portion of said divider in position to form an arm rest.

1,749,519. PROCESS OF PRODUCING 1-PHENYL-BENZANTHRONE COMPOUNDS. WILLY TRAUTNER, BERTHOLD STEIN, and ROBERT BERLINER, Elberfeld, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed July 11, 1927, Serial No. 205,030, and in Germany Nov. 23, 1925. 4 Claims. (Cl. 260—61.)



1. The process of producing 1-phenyl-benzanthrone compounds which consists in heating the mixture of an anthrone compound and cinnamic aldehyde in the presence of a high boiling solvent to a temperature of about 200–300° C.

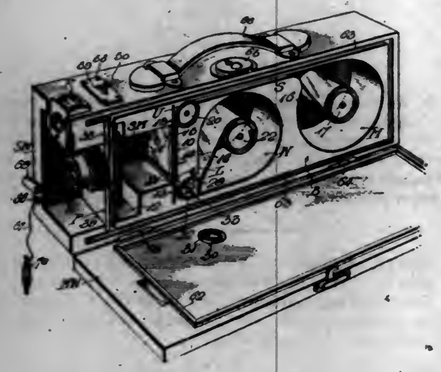
1,749,520. INCANDESCENT ELECTRIC LAMP. NICOLAAS A. J. VOORHOEVE, Eindhoven, Netherlands, assignor to General Electric Company, a Corporation of New York. Filed Nov. 10, 1926, Serial No. 147,548, and in the Netherlands Dec. 28, 1925. 2 Claims. (Cl. 176—16.)



1. An incandescent lamp comprising a bulb, a filament in said bulb, a plurality of condensers mounted on said bulb, and switching means on said bulb for at will connecting one of said condensers in series with all of said filament or more than one of said condensers in parallel with each other and all in series with said filament.

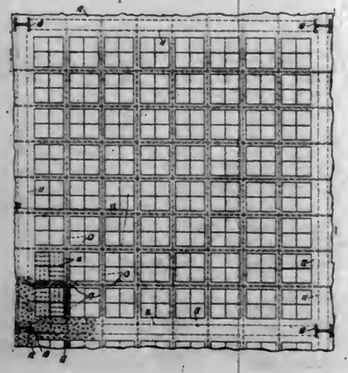
1,749,521. VAPOR PHASE METHOD OF OIL CONVERSION. CARY R. WAGNER, Chicago, Ill., assignor to Gyro Process Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 21, 1928. Serial No. 256,038. 6 Claims. (Cl. 196—61.)

1. In a process of refining oil, the improvement comprising passing a rapid flow of vapors of oil substantially free from hydrocarbon constituents in the liquid state in a stream of restricted cross-section in a series of successive passes through a heater and heating the oil vapors during their passage therethrough to a temperature in excess of 1000° F., and in regulating the flow of the oil vapors through the initial passes of said heater to obtain vapor velocities in said initial passes materially in excess of those existing in the succeeding passes.



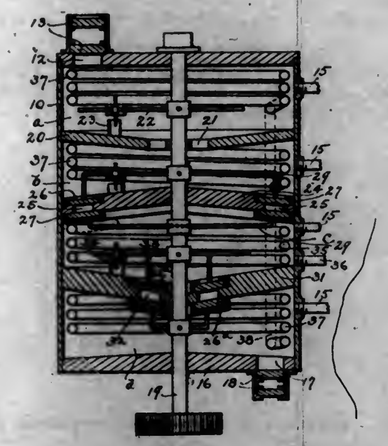
1,749,522. ICE CREEPER. BERTRAND WEDIG, Belmont, Wis. Filed Apr. 29, 1929. Serial No. 358,949. 1 Claim. (Cl. 36—63.)

As a new product of manufacture, an ice creeper of the class described comprising a sole plate composed of an upper ply of metal and a lower ply, said plies being rigidly fastened together, the lower ply being provided with a multiplicity of transverse rows of apertures having countersunk sockets, and anti-slipping calks each including a pointed stem portion and a beveled head portion, the beveled head portion being seated in the complemental socket and the heads of the respective calks being con-



fined between said plies, the lower ply being provided on opposite edges and at longitudinally spaced points with upwardly bent ears engaging the adjacent edges of the upper ply forming toe and arch clips, and attaching and retaining straps associated with the respective pairs of clips.

1,749,523. PHOTOGRAPHIC CAMERA. THOMAS CARROLL WILLSON, Philadelphia, Pa. Filed Jan. 11, 1926. Serial No. 80,531. 7 Claims. (Cl. 95—34.)

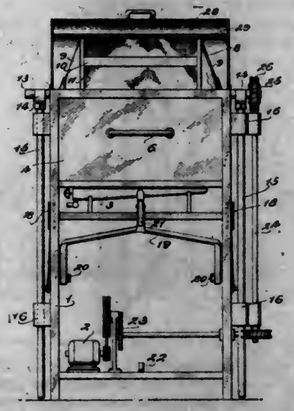


1. A strip advancement indicator comprising a casing having an opening, a strip-engaging roller within the casing having a central pin at one end received within said opening and tapered to an off-center point at its outer end, said point being confined within the opening, and an indicator at the edge of said opening co-operable with said point.

1,749,524. SLAB CONSTRUCTION. THEODORE BARBATO, Union City, N. J. Filed June 6, 1927. Serial No. 196,697. 6 Claims. (Cl. 72—66.)

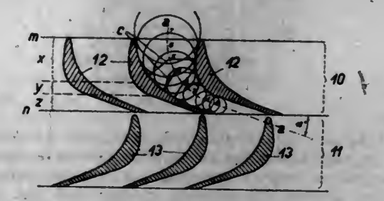
6. A floor structure or slab comprising a two-way system of re-inforced concrete ribs forming an open-work the apertures of which are closed by units of hollow tile bonded to the ribs in the formation of the latter by the pouring or tamping, and setting, of the concrete between and against the tile units; each such tile-unit consisting of tiles so set one to the other in the plane of the slab that one open end of each tile abuts the side wall of another tile; the tiles acting with the concrete in cantilever formation.

1,749,525. DRIER. CLARENCE J. BLEIL, Los Angeles, Calif. Filed Apr. 12, 1928. Serial No. 269,482. 10 Claims. (Cl. 34—23.)



1. In an apparatus for extracting oleaginous constituents, a drier comprising a chamber provided with partitions dividing it into a plurality of independent compartments, certain of said partitions being provided with centrally located openings, the alternate partitions being provided with openings near their peripheries, a rotatable shaft extended through said drier, and valves carried by said shaft and controlling the openings in the respective partitions.

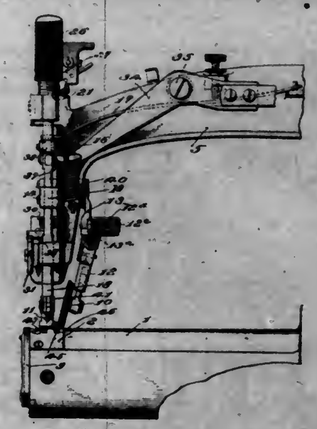
1,749,526. ARTIFICIAL FLOWER. WILLIAM E. COMPTON, Compton, Calif. Filed Sept. 23, 1927, Serial No. 221,512. Renewed Sept. 19, 1929. 3 Claims. (Cl. 41—13.)



2. A tubular plant element having a stitched, interior hem and tapering end, and a draw string along the stitched portion whereby the string may be drawn to change the shape of the element.

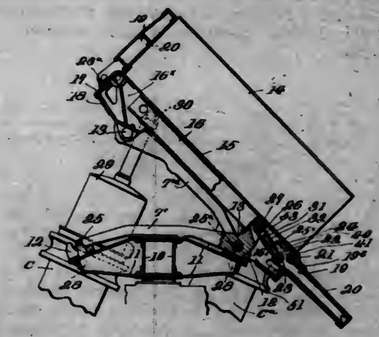
1,749,527. COMBINATION COOKER AND ROASTER. ANTHONY COOK, Logan, Ohio. Filed June 2, 1928. Serial No. 282,466. 6 Claims. (Cl. 53—7.)

1. In a device of the class described, a tank for cooking oil, a drum for rotation within said tank, bearings on which said drum is rotated, and means for raising and lowering said bearings.



1,749,528. BLADING FOR REACTION TURBINES. JEAN DE FREUDENREICH, Baden, and KARL FENY, Ennetbaden, Switzerland, assignors to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed May 13, 1926, Serial No. 108,728, and in Switzerland May 27, 1925. 10 Claims. (Cl. 253—77.)

1. Reaction turbine blading comprising blades extending radially and defining intervening steam passages, the blades having a profile and arrangement giving said passages a relatively wide pressure portion at the entrance side and a relativelly short and restricted velocity portion at the exit side, said portions connecting through an intermediate portion of rapidly contracting width wherein the blade profile converges on the mean steam path of the passage at a rate exceeding that of the sides of an angle of 15°.

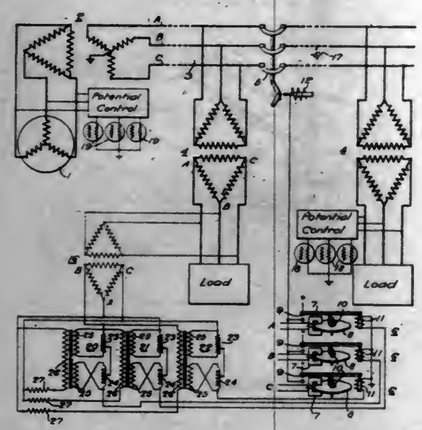


1,749,529. PRESSER-FOOT MECHANISM FOR SEWING MACHINES. WILLIAM A. FRIGEL, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 8, 1925. Serial No. 54,205. 10 Claims. (Cl. 112—235.)

1. In a sewing machine, the combination of a work support, a feed dog, needles, a roller presser foot at one side of said needles, spring means for yieldingly holding said roller foot against the work, a main presser bar on which said roller foot is supported, an auxiliary presser foot mechanism including an auxiliary presser bar disposed in rear of said main presser bar, and an auxiliary presser foot on the needle side of said roller presser foot, said auxiliary presser foot having a shank rigidly secured to the lower end of said auxiliary presser bar and having a free sliding connection with said main presser bar whereby

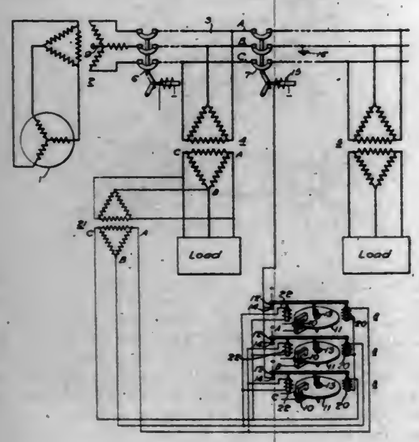
said auxiliary presser foot can move vertically independently of the main presser bar and is held from lateral movement about the axis of said auxiliary bar by said main bar and independent spring means for holding the auxiliary presser foot against the work.

1,749,530. YIELDING-DOOR MECHANISM. HENRY FORT FLOWERS, Findlay, Ohio. Filed May 7, 1928. Serial No. 275,759. 15 Claims. (Cl. 105—276.)



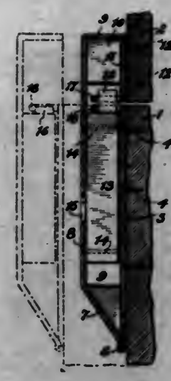
1. In a dump vehicle, a frame, a dump body mounted on the frame to be tiltable for dumping at either side of the vehicle, a side door pivoted to said body and adapted to open during the tilting of the body whereby the load may be discharged, and a door controlling device cooperating with the body and the frame to positively close the door during the return of the body from tilted position, said device including a sacrifice member adapted to yield when the door is blocked against closing, whereby to avoid a breakage of another part of the vehicle.

1,749,531. RELAY SYSTEM. SHIRLEY L. GOLDSBOROUGH, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 2, 1925. Serial No. 41,172. 4 Claims. (Cl. 175—294.)



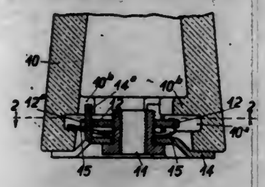
3. An electrical system comprising a polyphase transmission circuit having a grounded neutral, a substation, an

ungrounded transformer in said substation supplying a relatively low-voltage load from said transmission circuit, a ground relay having a current actuating winding and a voltage-restraining winding, connections between said voltage-restraining winding of said relay and the



low-voltage winding of said transformer and means including a transformer having a winding in series with said voltage-restraining winding of said relay for modifying the energization thereof in accordance with the displacement of the neutral of said ungrounded load transformer when a ground fault occurs upon the transmission circuit.

1,749,532. RELAY SYSTEM. SHIRLEY L. GOLDSBOROUGH, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 2, 1925. Serial No. 41,173. 6 Claims. (Cl. 175—294.)

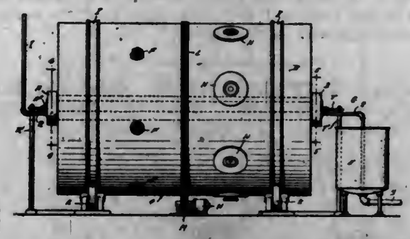


1. In an electrical system, the combination with a main circuit, of a relay connected to said circuit comprising a current element energized in accordance with the current traversing the circuit, and a plurality of voltage elements one of which is energized in accordance with the actual value of a voltage in the circuit when it is affected by a fault upon one conductor thereof, and another of which is energized in accordance with an apparent value of a voltage in the circuit under such conditions.

1,749,533. LOCK. LOUIS GRAVEURE, New York, N. Y. Filed Oct. 8, 1927. Serial No. 224,784. 1 Claim. (Cl. 70—5.)

A lock having a securing plate, a keeper, a casing pivotally attached to said plate and enclosing the keeper, a bolt for engagement with the keeper, and means on the securing plate constantly engaged by the bolt to hold the casing in a position to cover its securing plate when the lock is either in its closed or open position.

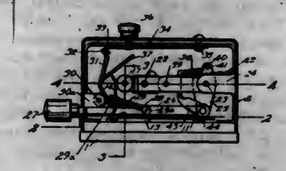
1,749,534. INSULATOR CONSTRUCTION. ARNOLD HALLER, Baden, Switzerland, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Feb. 18, 1926, Serial No. 89,179, and in Germany Feb. 26, 1925. 5 Claims. (Cl. 173—321.)



1. Insulator construction comprising the combination with an insulator having an inwardly extending flange, of a clamping member, a clamping nut, radially adjustable members between the clamping member and nut, and a bushing operable in the clamping member and nut to secure the radially adjustable members and clamping member in clamping engagement with said flange.

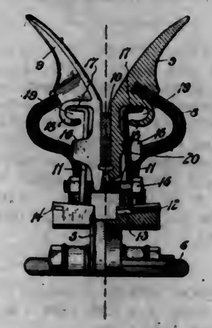
4. In insulator construction, an insulating body member having a notched internal flange, a nut having notches registering with the notches in said flange, a clamping plate having portions extending laterally therefrom and disposed in the notches in said flange and said nut to prevent rotation thereof, and means cooperating with said nut to clamp said plate against said body member.

1,749,535. SYSTEM FOR HOLDING MILK. BARGE L. HARTZ, Elyria, Ohio. Filed Nov. 16, 1925. Serial No. 69,364. 25 Claims. (Cl. 137—21.)



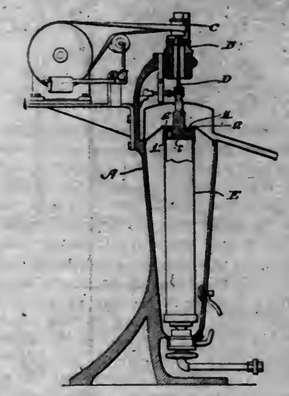
1. In a system or apparatus for holding milk, the combination of a container, and means for rotating the same about a horizontal axis, of a series of radially extending tanks within said container, the heads of the container and the outer wall thereof constituting end and outer walls for the tanks, check valves in the outer wall of the container arranged to admit air to the tanks therein, a conduit for supplying milk to the tanks in said container, valve mechanism comprising a casing secured to and concentric with one end of the container and having ports

communicating with the tanks therein, a plug within said casing having a port which communicates with the conduit and which is adapted to register with the casing ports successively, a valve casing at the opposite end of the container and having emptying ports communicating with the tanks therein, and a valve plug within the last-mentioned casing having an emptying port adapted to register successively with the ports in said casing and also having a



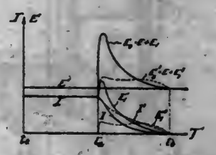
venting port angularly spaced from such emptying port and adapted to register successively with the ports in the last-mentioned casing thereby to vent each tank during the filling operation, the last-mentioned plug being provided with a port extending therethrough adapted to deliver milk that may leak from one of the said tanks through an emptying port in the last-mentioned casing into a tank further remote from the emptying port in said plug.

1,749,536. SWITCH. JAY J. HOGAN, Erie, Pa., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 21, 1927. Serial No. 162,487. 20 Claims. (Cl. 200—116.)



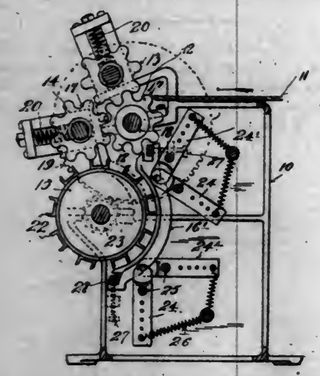
1. In a switch, the combination of a manually actuated closing means; a manually actuated opening mechanism; an electrically responsive member put in circuit by the closing of the switch; and devices actuated by the electrically responsive member opening the switch comprising a catch, one engaging surface of the catch being a roller.

1,749,537. HIGH-TENSION SWITCH. TOMLINSON FORT JOHNSON, Jr., Atlanta, Ga. Filed Oct. 4, 1926. Serial No. 139,459. 12 Claims. (Cl. 200—166.)



1. In a switch, the combination of a pair of opposed spring plates, and a pair of contact jaws loosely and wholly supported by the respective plates to permit limited up and down movement of the jaws and adapted to receive a switch blade between them, each of said jaws having a rounded knob on its outer face engaging the inner face of its supporting plate, and constituting a fulcrum about which the jaw may rock transversely of the plate to aline itself with the surface of the switch blade.

1,749,538. CLARIFIER BOWL. LEO D. JONES and ARTHUR U. AYRES, Philadelphia, Pa., assignors to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 4, 1925. Serial No. 54,478. 1 Claim. (Cl. 233—46.)

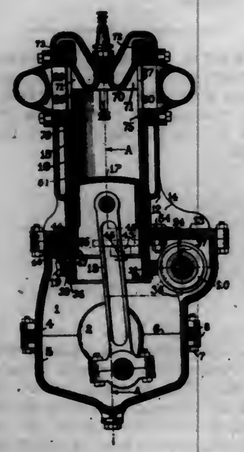


A centrifugal clarifier bowl, comprising a substantially cylindrical bowl shell open at one end, a head for the open end of said shell and comprising a neck adapted for supporting and rotating said bowl and a disc-like portion secured to said neck and to the open end of said shell and having passages extending therethrough in the direction of the axis of the bowl, the radially outermost walls of said passages being substantially parallel with the axis of the bowl and being spaced from said axis a radial distance substantially equal to the radial distance from the axis to the inner wall of said shell, the radially innermost portion of said passages lying adjacent said neck and said passages providing unobstructed access to the interior of the bowl, a removable and replaceable ring dam surrounding said neck in spaced relation and extending radially outward beyond the outermost wall of said passages, and means clamping said dam in position to control discharge through said passages.

1,749,539. SWITCH APPARATUS. ROBERT KELLER, Ennetbaden, Switzerland, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed June 28, 1927, Serial No. 202,103, and in Germany July 3, 1926. 3 Claims. (Cl. 175—294.)

1. In a circuit comprising a source of energy and impedance means, a switch having a pair of main arcing electrodes for interrupting the current in said circuit, one of said electrodes being connected to one terminal of said impedance means, an auxiliary arcing electrode associated with said switch and connected to the other terminal of said impedance means, said auxiliary electrode being disposed in the path of the travel of the interrupting arc on said one of said electrodes and forming therewith a gap converging in the direction of arc travel.

1,749,540. MACHINE FOR OBTAINING THE FIBERS FROM FIBROUS PLANTS. GEORGE A. LOWRY, New York, N. Y., assignor to Fabricord, Inc., New York, N. Y., a Corporation of New York. Filed July 18, 1925. Serial No. 44,496. 6 Claims. (Cl. 19—27.)



1. In a machine for obtaining the fiber material from fibrous leaves and fiber bearing plants, a scraper mechanism including a scraper device and an apron cooperating therewith, said apron comprising floating fingers disposed longitudinally of the path of travel of the material, means for bodily tensioning each end of the fingers onto the scraping device and adjustable means at the ends of said fingers for limiting the movement of the fingers.

1,749,541. COMPOUND FOR FILLING RECESSES IN METAL CASTINGS AND THE LIKE. ZACHEUS M. MARR, Fremont, Nebr. Filed Apr. 16, 1928. Serial No. 270,583. 3 Claims. (Cl. 106—8.)

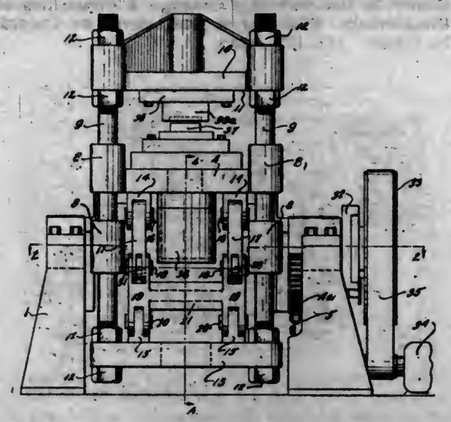
3. A luting composition consisting of such a mixture of sulphur, graphite and antimony as to produce a filler having a comparatively high melting point and degree of hardness and capable of use when melted as a filler for castings.

1,749,542. INTERNAL-COMBUSTION ENGINE. LAURENCE LEIGH MEAD, Carlinville, Ill. Filed June 14, 1926. Serial No. 115,898. 12 Claims. (Cl. 123—80.)

1. In an internal combustion engine of the class described the combination of a suitable crankcase, crankshaft, pitman and piston; of a cylinder casing mounted thereon with a sleeve valve telescoped and in sliding revoluble contact therewith, with ports adapted to register; of actuating mechanism connected with the crankshaft for suitably actuating said valve, and means for carrying the radial load of said actuating mechnism and preventing rubbing of the valve on adjacent parts resultant from said load; said means being a spindle so disposed as to carry said thrust or load, said spindle being operatively connected with said valve by parts rotatively co-operating with said spindle.

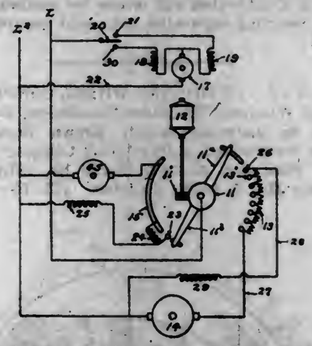
1,749,543. HAND HAIR CLIPPER. JOHN OSTER, Racine, Wis. Filed Sept. 2, 1926. Serial No. 133,158. 9 Claims. (Cl. 30—1.)

1. In a hair clipper, a fixed lower blade, a reciprocating upper blade slidably mounted thereon, a cap resiliently mounted at its rear on the rear of the fixed blade and extending forwardly a distance over the reciprocating blade, the reciprocating blade formed with a groove thereacross and a slot through the blade at the central portion of the groove, the forward edge of the cap slidably engaged by said groove and formed with a tongue depending through said slot for movement vertically therein and permitting limited reciprocation of the blade, the forward edge of the cap alining the reciprocating blade with the fixed blade and movable vertically due to the resilient mounting of the cap to increase or decrease the pressure thereof exerted on the reciprocating blade to adjust the tension between the blades.



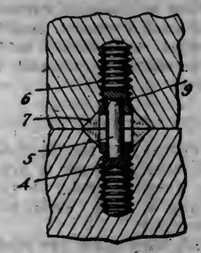
1,749,544. EXERCISING APPARATUS. JOSEPH PAGANO, Memphis, Tenn. Filed Feb. 13, 1928. Serial No. 253,979. 7 Claims. (Cl. 272—79.)

7. In an exercising apparatus, comprising handles and elastic straps, detachable connecting means, each comprising a slotted hollow cylindrical member secured to a handle, an elongated link of a slightly greater length than said cylindrical member, having one side operatively positioned within said member and capable of being detached therefrom and re-attached thereto, a strap end folded over the opposite side of said link and means securing said strap to said link.



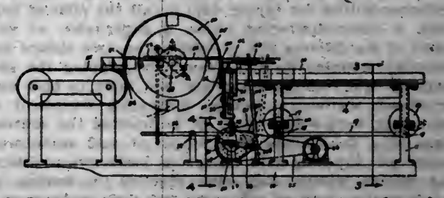
1,749,545. PUNCH PRESS. ERNEST P. PIERCE, Cleveland, Ohio. Filed Jan. 27, 1928. Serial No. 249,933. 10 Claims. (Cl. 113—38.)

1. In a punch press, a base, a body having a bed portion, a head arranged on said body for opening and closing movement, and actuating means having a driving connection with said head, said body being arranged for adjustment on said base about a horizontal axis, and



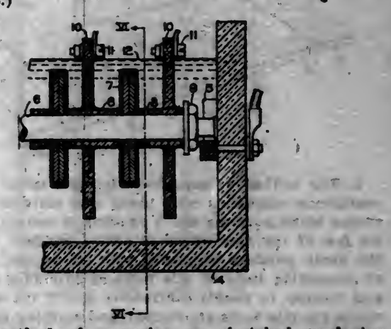
said driving connection having a member arranged along said axis whereby said connection is not affected by said adjustment.

1,749,546. WEB-CUTTING MECHANISM. HOWARD REYNOLDS, New Orleans, La., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 28, 1928. Serial No. 273,672. 9 Claims. (Cl. 164—67.)



1. In a printing machine, the combination of a press motor, a cutting cylinder driven by the press motor, a cutting element carried by the cylinder, a power means independent of the press motor for effecting a movement of the cutting element, and means for actuating the power means before the starting of the press motor.

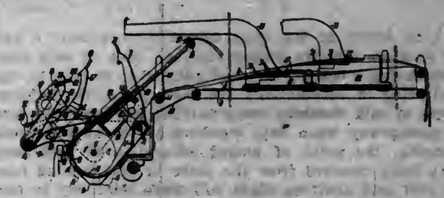
1,749,547. DOWEL-PIN CONSTRUCTION. MARTIN T. RUDDY, Lakewood, Ohio. Filed Aug. 16, 1926. Serial No. 129,680. 1 Claim. (Cl. 85—42.)



A dowel pin construction comprising two axially opposed members, each of said members having a threaded shank and a transverse slot at one end whereby the members may be inserted into an object, said members each having an axial socket formed in the shank, and a pin carried by the socket of one of said members and adapted to be inserted into the socket of the other member.

1,749,548. BRICK-WRAPPING MACHINE. JOHN J. SCHLOSSER, Frankfort, Ind. Filed Sept. 4, 1926. Serial No. 133,649. 8 Claims. (Cl. 93—7.)

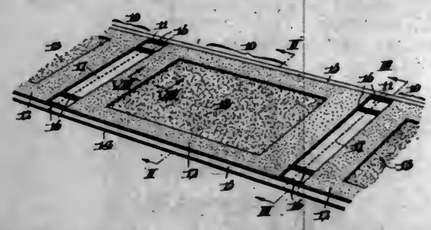
1. In a wrapping machine, the combination of a wheel including an article receiving pocket, means positioned adjacent the peripheral path of said wheel, additional means positioned adjacent the sides of said wheel for simultaneously engaging an article wrapping for folding the same, means for rotating said wheel for securing said wrapping, and means for rotating said wheel in opposite directions for wrapping.



1,749,549. RECTIFIER. JOSEPH SLEPIAN, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 19, 1927. Serial No. 162,078. 19 Claims. (Cl. 175—818.)

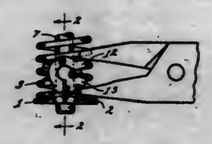
2. The method of preparing an electrical conductor possessing a uni-lateral conductivity which comprises forming, on copper, a compound thereof and subjecting the surface of said compound to electrolytic reduction.

12. A conducting body comprising a base of mother metal, a layer comprising a chemical compound of said mother metal, and a third layer produced by electrolytic reduction of said chemical compound.



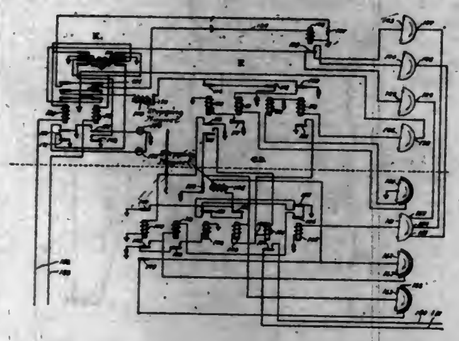
1,749,550. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed June 30, 1927. Serial No. 202,631. 22 Claims. (Cl. 197—126.)

1. In a carbon-stripping web-manifolding typewriting machine, in combination, a carriage, a platen around



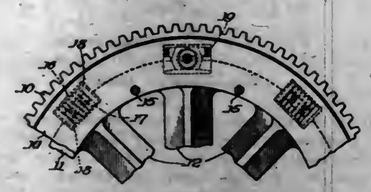
which may be fed a multiple-ply record-web and an outer, narrower multiple-ply work-web printed with a succession of forms, each form bearing space for name and address, said outer work-web being disposed intermediate the side edges of said record-web, a rear extension for said carriage including a track, two separately-movable carbon-carriers on said track, one disposed behind the other for holding carbons interleaved between the plies of said record-web, the front carbon-carrier holding carbons interleaved between the plies of said outer work-web, typing instrumentalities for typing data on all the plies of both webs, a platen-displacing frame, a paper-table on said frame at the delivery side of said platen, two clamps displaceably mounted on said frame for gripping the side edges of said record-web against said table to hold said record-web stationary without preventing movement of said outer work-web, a gage for positioning the address-space of a form above the carbons of said record-web, means for disposing said clamps in ineffective positions, and reverse feeding mechanism effective for feeding, at one operation, both of said webs and their carbons rearwardly a predetermined amount to bring the carbons of said record-web below the printing line and the first line of said address to the printing line preparatory to typing said address and thereafter severing said form.

1,749,551. PILE FABRIC. JAMES P. STROUD, Noble, Pa. Original application filed Aug. 2, 1926, Serial No. 126,375. Divided and this application filed Feb. 27, 1928. Serial No. 257,387. 3 Claims. (Cl. 139—405.)



1. The method of manufacturing pile fabric articles in continuous succession with blank side margins and intervening blank portions which consists in maintaining a certin few of the face warps in action incident to weaving the blank portions aforesaid with consequent production of connecting lines of pile tufts at intervals theresacross and thereby to enable continuous use of the wires about which the pile loops are formed, and severing the material so produced across the blank portions into individual articles.

1,749,552. SPRING RETAINER. JOHN R. WARREN, Grand Rapids, Mich., assignor of one-half to Alfred Brechting, Grand Rapids, Mich. Filed May 10, 1928. Serial No. 276,559. 10 Claims. (Cl. 251—144.)

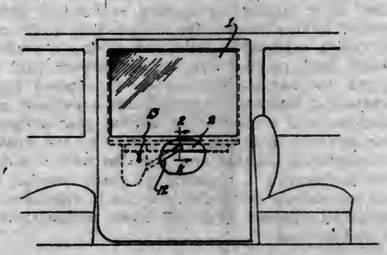


1. A device of the class described comprising a pair of members directly hinged together, each of said members having a bearing face and adapted to fit edge to edge and being in substantially the same plane, the adjacent edges of said members being notched in registry to form a passageway when said members are in abutting relationship, the point of hinged connection of said members being removed from the plane of said bearing faces so that said abutting edges will move relatively to each other when said members are swung on their hinged connections.

1,749,553. SUPERVISORY CONTROL SYSTEM. ROY J. WENSLEY, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 6, 1923. Serial No. 655,793. 14 Claims. (Cl. 177—353.)

9. In a supervisory control system, a first station, a second station, apparatus units at said second station, normally non-operating selecting apparatus at said first and said second station, means for starting said selecting apparatus into operation, means for operating said selecting apparatus in synchronism, means including said selecting apparatus for selecting one of said apparatus units for operation, means for preventing the operation of any of said units except when said selecting apparatus operate in synchronism and means for continually operating said selecting apparatus until said apparatus unit is operated.

1,749,554. CUSHIONED-WHEEL CONSTRUCTION. ALFRED WICHERT, Mannheim-Neuostheim, Germany, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Apr. 27, 1927, Serial No. 187,087, and in Germany May 7, 1926. 8 Claims. (Cl. 74—29.)



1. In a wheel construction, the combination with a power receiving portion and a power transmitting portion connected for limited relative rotational movement, of buffing means for opposing spring resistance to such relative rotational movement, cooperating friction plates operated by said portions to interpose frictional resistance to their relative rotational movement, said friction plates being rendered effective consecutively incident to such relative rotational movement to increase the frictional resistance progressively.

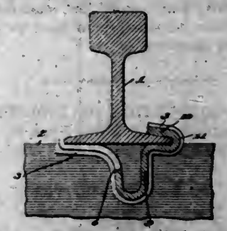
1,749,555. SASH-OPERATING MECHANISM. ALOIS J. ZWIERZINA, Detroit, Mich., assignor to Ackerman, Blaesser, Fezzy, Inc., Detroit, Mich., a Corporation of Michigan. Filed Aug. 4, 1926. Serial No. 126,988. 2 Claims. (Cl. 268—126.)

1. In sash operating mechanism, the combination with a sash having a way at its lower edge, of a roller riding in the said way, a shaft for the roller, an operating arm

for raising and lowering the sash to which the shaft is fixed, the roller being formed of two half parts each independently rotatable upon the shaft, a spring tending to force the two half parts together, the two half parts

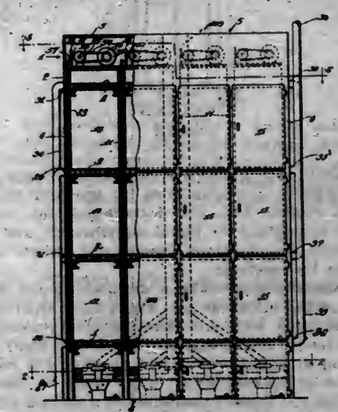
being shaped to provide a peripheral groove in which the edge of the sash lies and the said spring tending to force the halves to engagement with the sash on the one side and the bottom of the way on the other whereby the said roller is held under tension in the way.

1,749,556. SHADE OR BLIND. AUGUST AMREIN, St. Petersburg, Fla. Filed June 30, 1927. Serial No. 202,685. 8 Claims. (Cl. 156—16.)



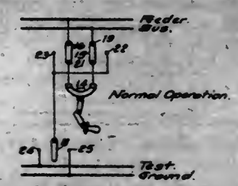
2. Shades or blinds, comprising slats each having single slots extending longitudinally of their length and positioned near the top edges of the slats, tapes folded to form loops which pass through said slots, means in the loops to retain them in assembled position, said slats having openings therethrough, and cords passing through said openings to effect the raising and lowering of said slats and said slats being at all times vertically disposed during the raising and lowering of the shade.

1,749,557. TREATING RESIDUAL LIQUORS ACCRUING FROM THE TREATMENT OF CELLULOSE MATERIAL. PIERRE ALFRED BARBOU, Paris, France, assignor to Société Barbou & Cie., Paris, France, a French Corporation. Filed Apr. 5, 1927, Serial No. 181,282, and in France Apr. 21, 1926. 2 Claims. (Cl. 23—131.)



1. A process for recovering SO_2 and Na_2O contained in residual liquors derived from the boiling of cellulose material, comprising a treatment of the said residual liquors, accruing from the boiling of vegetable matter in a sodium sulphite solution, with an alkaline-earth base to produce caustic soda, an organo-sodium compound and an insoluble alkaline-earth metal sulphite, and treating the liquors thus obtained with a bisulphite to form a sodium sulphite, this compound being formed together with the precipitation of organic matter in the form of organo-metallic combinations corresponding to the bisulphites used.

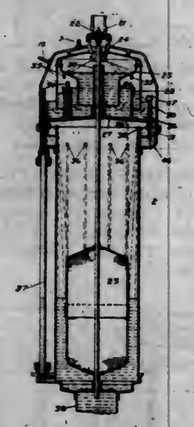
1,749,558. RAILWAY-RAIL ANCHOR. ARTHUR E. H. BARILI and JACOB A. HYLE, Los Angeles, Calif., assignors to Empire Railway Supply Corporation, a Corporation of Delaware. Filed Aug. 26, 1929. Serial No. 388,591. 7 Claims. (Cl. 238—330.)



1. A single piece rail anchor formed with a thickened reinforced portion at each side, an intermediate thinner portion forming a resilient tongue member, and a clamping jaw formed at each end portion thereof.

1,749,559. APPARATUS FOR SMOKING, CURING, AND DRYING FOOD PRODUCTS AND THE LIKE. ALBERT P. D. BELANGER, Chicago, Ill., assignor to Reynolds Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 15, 1928. Serial No. 285,574. 9 Claims. (Cl. 99—2.)

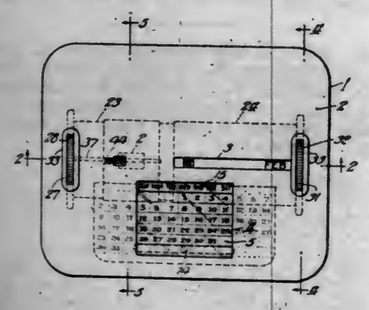
1. In an apparatus of the class described, the combination of a plurality of superposed treating chambers, an inlet passage leading into the lowermost chamber, an outlet passage leading from the upper part of an adjacent upper chamber, an intermediate connecting passage between said chambers, means associated with said inlet passage, for supplying gaseous fluid to the same, and means for opening and closing said passages in predetermined order.



1,749,560. SWITCH MECHANISM. JAMES M. BROWN, deceased, Pittsburgh, Pa., by Jane D. Brown, administratrix, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 11, 1927. Serial No. 182,677. 15 Claims. (Cl. 200—5.)

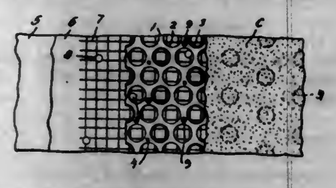
1. A switch mechanism comprising a circuit breaker, disconnecting switches for the circuit breaker, the dis-

connecting switches having three positions, operative, open and test, a motor-operated mechanism for moving the disconnecting switches to and from their open operative positions, and means for manually operating the disconnecting switches to and from their open positions and their test positions, and means for rendering the motor-operated mechanism inoperative so long as the manually-operated means is operable.



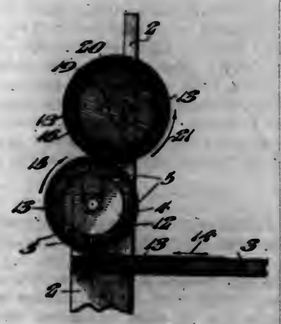
1,749,561. DEGASIFICATION OF LIQUIDS. RALPH W. CADMAN, Pittsburgh, Pa. Filed June 26, 1924. Serial No. 722,626. 10 Claims. (Cl. 183—2.5.)

1. Apparatus for degasifying liquids, comprising a reservoir, a degasifier, a conduit from the reservoir to the degasifier, a conduit from the degasifier to the reservoir, means for circulating the liquid therethrough, and a division wall in the reservoir between the outlets of said conduits in the reservoir.



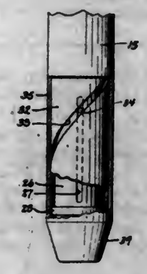
5. A degasifier comprising a chamber having a liquid inlet port, a gas discharge port and a liquid delivery port, means associated with said inlet port for projecting the water delivered therethrough in the form of spray, baffles located and arranged within said chamber for collecting and consolidating such spray into a body of liquid and for directing the liquid so collected in a defined upwardly moving stream, and means communicating with said delivery port for increasing the pressure of the liquid and for discharging it from said chamber.

1,749,562. CALENDAR. JOHN B. CARROLL, Oak Park, Ill. Filed Oct. 15, 1928. Serial No. 312,559. 8 Claims. (Cl. 40—111.)



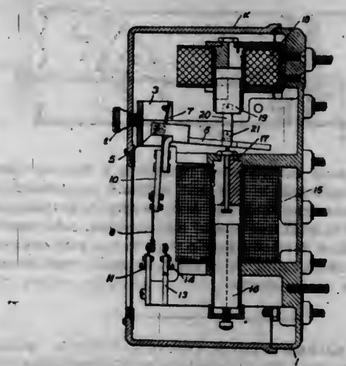
1. In a calendar, the combination of a casing having a windowed front side, a cylindrical week day name designating member rotatively mounted in the casing and having thereon designations of the week day names of the first days of the months of a plurality of years adapted to be moved to and from a window opening in said casing, a cylindrical month designating member mounted in concentric rotative relation to and adapted to encircle the week day name designating member, said month designating member having thereon the designations of the names of the twelve calendar months and having a perforated peripheral wall portion adapted to uncover said week day name designations successively in exposed position in coordinated relation to corresponding exposed month designations, and a rotative cylindrical year designating member mounted in concentric relation to the week day name designating member and provided with a series of numbers designating a plurality of years adapted to be exposed successively in reading position in alignment with corresponding exposed week day name designations and month designations.

1,749,563. FLOOR CONSTRUCTION. HAROLD B. CHAMBERLAIN, East Orange, N. J., assignor to Tuco Products Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 25, 1929. Serial No. 357,916. 7 Claims. (Cl. 94—3.)



1. A floor structure of the type described comprising a sub-floor, a reinforcing member above said sub-floor, a metallic plate above said reinforcing member, upwardly protruding wear-retarding extensions on said plate, means for securing said reinforcing member and said plate to said sub-floor and a plastic surfacing material embedding said reinforcing member and said plate and extending above said wear-retarding extensions.

1,749,564. METHOD OF AND APPARATUS FOR STEAMING AND REFINISHING CLOTH. ISRAEL COHEN, Philadelphia, Pa. Filed Apr. 13, 1929. Serial No. 354,846. 3 Claims. (Cl. 26—48.)

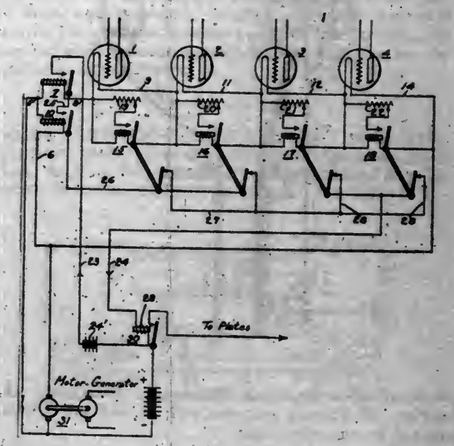


1. In a device of the character stated, an upright frame, a perforated cylinder rotatably carried by said frame, means for rotating said cylinder, an idle press roll positioned upon and rotatable with said cylinder, the longitudinal axis of said press roll being disposed between vertical planes passing through said upright frame and through the longitudinal axis of said cylinder, and end journals for said press roll adapted to bear against the upper ends of said frame to prevent horizontal displacement of said press roll.

1,749,565. TOILET ARTICLE. CHARLES N. CORTELL, Mamaroneck, N. Y., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Apr. 6, 1927. Serial No. 181,301. 4 Claims. (Cl. 132—79.)

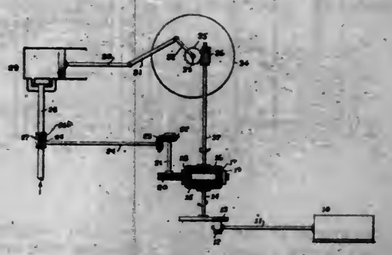
3. A container comprising an inner casing capacitated to carry a toilet accessory, a second inner casing arranged end to end with the first casing and frictionally secured thereto capacitated to carry a toilet accessory, outer casings enclosing the inner casing and removable in opposite directions, each outer casing forming a handle for the container when the other outer casing is removed.

1,749,566. RELAY. LESLIE N. CRICHTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 5, 1923. Serial No. 672,828. 9 Claims. (Cl. 200—106.)



1. In an electrical control mechanism, a coil, a movable core member therefor, a second movable member independently mounted in the path of said core member to be actuated thereby, latching means for retaining said second movable member only in its actuated position, a contact member mounted on said movable member, and a plurality of stationary contact members between which said movable contact member is adapted to move upon the energization of said coil.

1,749,567. ALKYLATED LEAD. HERBERT W. DAUDT, Carneys Point, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 15, 1927. Serial No. 226,529. 13 Claims. (Cl. 260—11.)

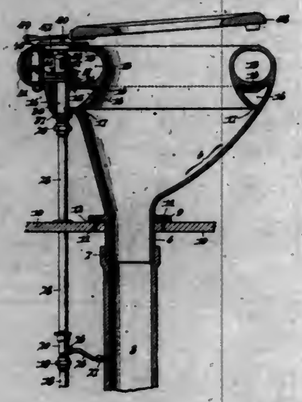


1. A process for making an alkylated lead which comprises effecting a reaction solely between an alloy of lead with at least one alkali metal, and an alkyl chloride, at substantially atmospheric pressure.

1,749,568. PROTECTIVE SYSTEM FOR TRIODES. ROBERT L. DAVIS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 23, 1924. Serial No. 739,251. 6 Claims. (Cl. 250—27.)

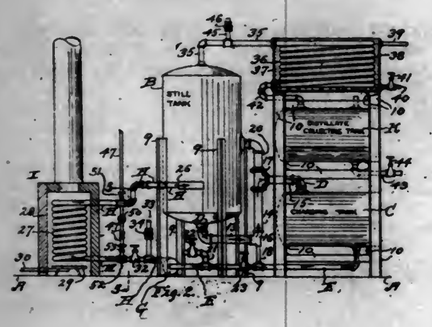
2. In combination, a thermionic device comprising a cathode and an anode, means for heating said cathode, means capable of energizing said anode, and means permitting the energization of said anode only during the continued maintenance of said cathode at its normal operating temperature.

1,749,569. SPEED REGULATOR AND METHOD OF SPEED REGULATION. LUIS DE FLOREZ, Pomfret, Conn. Filed July 8, 1924. Serial No. 724,017. 14 Claims. (Cl. 137—78.)



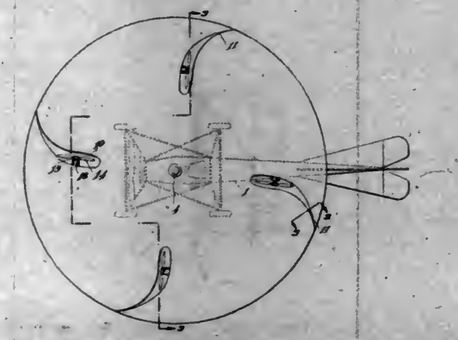
1. A speed regulator comprising a conduit adapted to carry a flow of fluid, means in said conduit for measuring the rate of flow of fluid therein, a speed standard, and means for regulating the rate of flow of fluid in response both to such rate of flow and to the rate of speed of the speed standard.

1,749,570. WATER-CLOSET. JOSEPH DE ROSE, Philadelphia, Pa. Filed Nov. 3, 1928. Serial No. 317,075. 11 Claims. (Cl. 4—23.)



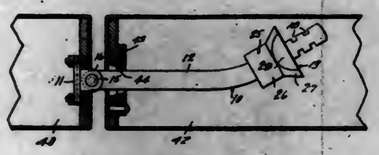
1. The combination with a water-closet embodying a flush-water reservoir about its top and a yieldingly sup-

ported seat, of a remote valve located well below normal ground-freezing level and controlling supply of flush-water to said reservoir, and an alignment oppositely mov-



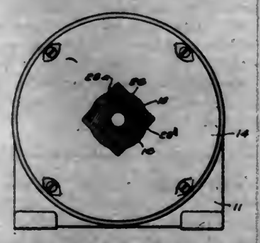
able local valve governing discharge of water from the reservoir for flushing purposes, both of said valves being actuated by the closet seat.

1,749,571. APPARATUS FOR TREATING USED LUBRICATING OIL. RICHARD M. DILWORTH, Lakewood, and FRED G. NIECE, Cleveland, Ohio, assignors to The Electro-Motive Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 4, 1927. Serial No. 231,032. 11 Claims. (Cl. 196—16.)



1. Apparatus of the character indicated comprising a still-tank having a vapor-outlet, a charging tank arranged externally of the still-tank, piping leading from the bottom of the still-tank and arranged to feed oil from the still-tank to the charging tank, a pump, piping arranged to feed oil to said pump from the charging tank, piping arranged to feed oil from said pump to the still-tank, heating means arranged in connection with the last-mentioned piping and adapted to be employed in heating oil being fed to the still-tank, means whereby steam may be supplied to oil being fed to the still-tank, and a drain-pipe placed in communication with the first-mentioned piping and with the second-mentioned piping, said drain-pipe and connected first-mentioned piping and second-mentioned piping being relatively arranged and capacitated to effect the draining, into the second-mentioned piping, of water that may accompany oil being conducted from the still-tank by the first-mentioned piping.

1,749,572. AEROPLANE. ALBERT W. DORGAN, Birmingham, Mich., assignor of one-half to George W. Yeoman, Detroit, Mich. Filed Feb. 11, 1928. Serial No. 253,538. 5 Claims. (Cl. 244—15.)

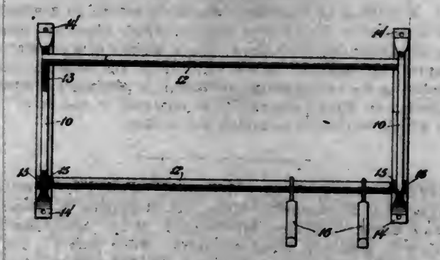


1. In an aeroplane, a fuselage, a disk rotatably mounted over said fuselage, said disk being supported to lie normally in a horizontal plane, means for rotating said disk, said disk having substantially radial openings from the upper to the lower surface thereof, and propellers mounted in said openings, said propellers lying in planes substantially radial to said disk.

1,749,573. DOORCHECK. ALBERT C. EARHART, Cleveland Heights, Ohio. Filed July 10, 1929. Serial No. 377,092. 2 Claims. (Cl. 16—86.)

1. A door-stop construction including a bar, a rubber cushion through which said bar extends, a member detachably secured to said bar and having a bearing surface adapted to abut one end of said cushion, said cushion having a cavity formed therein to receive said member, said cavity conforming in shape to said member and receiving the same snugly.

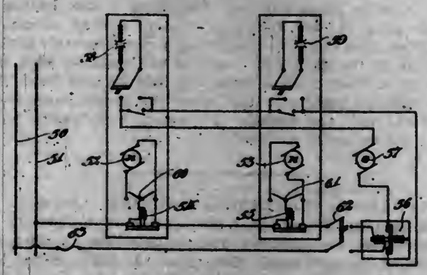
1,749,574. LUBRICATING DEVICE. RALPH EHRENFELD, Springfield, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 14, 1928. Serial No. 326,030. 5 Claims. (Cl. 308—182.)



1. In a lubricating system for an electric motor to be selectively mounted in any one of a plurality of positions, in combination, a bearing housing having a shaft-receiving opening therein, a plurality of lubricant-receiving openings extending through the housing angularly relative to the axis of the shaft and communicating intermediate their ends with the shaft-receiving opening, lubricant in each of said last named openings, a puncturable seal at each end of said last named openings and a perforated protecting cap for each seal, whereby selective puncturing of the uppermost seal may be effected in accordance with the motor mounting.

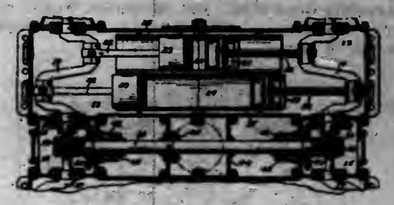
1,749,575. PROCESS OF DISINFECTING SEEDS AND COMPOSITION THEREFOR. MAX ENGELMANN, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 29, 1926. Serial No. 145,099. 8 Claims. (Cl. 167—16.)

7. A process for the disinfection of seeds, which comprises treating the seeds with a mixture of copper sulfate and an alkaline substance insufficient in amount to convert the copper sulfate entirely to the insoluble basic sulfate.



8. A process for the disinfection of seeds, which comprises treating the seeds with a dry, finely powdered mixture of copper sulfate and magnesium oxide, the amount of the latter being insufficient to convert the copper sulfate entirely to the insoluble basic sulfate.

1,749,576. GARMENT RACK. WILLIAM LEWIS EVANS, Washington, Ind. Filed Nov. 7, 1928. Serial No. 317,776. 2 Claims. (Cl. 211—87.)



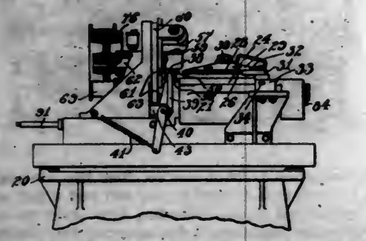
1. A rack of the character described comprising, in combination, end brackets having provision to be secured to a wall; vertically spaced, horizontal rows of wooden bars supported between the brackets to provide hat supports, the front bar of the lower shelf being made of metal and made fast to the brackets to add rigidity and to afford a coat hanger support.

1,749,577. FIRE-PREVENTING MEANS FOR MOTION-PICTURE-PROJECTING MACHINES. THOMAS LEWIS FENNEY and HUMBERT GODOY, Philadelphia, Pa., assignors, by mesne assignments, to Sentry Safety Control Corporation, Philadelphia, Pa. Filed Dec. 11, 1926. Serial No. 154,095. 2 Claims. (Cl. 88—17.)

1. In a mechanism for motion picture projection, a source of alternating current, a motor and a switch for connecting said motor with said source, a make and break switching device and a second switch for energizing said device in circuit with said source, a direct current generator adapted to be placed in circuit for maintaining an electric arc for projecting a film upon a screen, means operative responsive to said first switch for starting said motor, means including said device operative responsive to said second switch for starting said generator to cause said arc to function, said device being dependent for its energization upon said two switches and said source of alternating current, said generator being instantaneously inoperative upon the de-energization of said device.

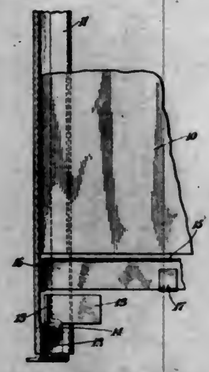
1,749,578. OPPOSED-PISTON ENGINE. HENRY FORD, Dearborn, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Filed Nov. 26, 1927. Serial No. 235,981. 4 Claims. (Cl. 123—51.)

1. In an opposed piston engine, four like castings each having a crank case formed at one end and a pair of open ended cylindrical bores extending into said crank case from the other end, means for securing the castings together in pairs each pair consisting of two continuous cylinders and two spaced crank cases thereby forming an engine half, a crank shaft disposed in each crank case, means for securing the engine halves together with the spaced crank shafts of each pair of crank cases aligned with each other, a coupling connecting each pair of aligned crank shafts, and a transverse shaft having each end connected by gears to the crank shafts disposed between the engine halves to synchronize all four crank shafts.



1,749,579. VENDING MACHINE. HARVEY GILES, Brooklyn, N. Y., assignor to Artemas Ward Inc., a Corporation of Delaware. Filed Jan. 23, 1928. Serial No. 248,829. 15 Claims. (Cl. 194—72.)

1. In combination with a vending machine, a coin-controlled mechanism comprising, a vertically arranged pocket for receiving the coin, yielding means for holding

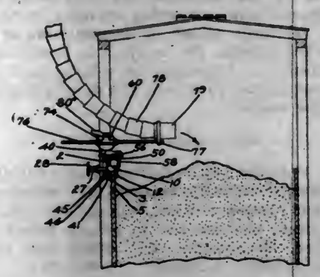


the coin in the pocket, said pocket having a slot in one side permitting access to the coin, a vertically reciprocable slide, a handle fastened to the slide, a member pivotally mounted on the slide and extending downwardly, a bell crank lever one arm of which is connected with the vending machine, said pivoted member having a part adapted to engage and actuate the other arm of the bell crank lever, and a yieldable deflector over which the part of the pivoted member is normally positioned, downward movement of the slide causing said part to travel on the deflector and be deflected thereby to move the pivoted member into position to contact the coin in the pocket, further downward movement of the slide causing said part to force aside the yieldable deflector and engage and actuate the bell crank lever.

1,749,580. GEAR-TOOTH-CHAMFERING MACHINE. CHARLES E. HAMILTON, Richmond, Ind., assignor to Automotive Gear Works, Inc., Richmond, Ind., a Corporation of Delaware. Filed Apr. 14, 1928. Serial No. 269,882. 6 Claims. (Cl. 90—15.)

1. A machine for chamfering gear teeth, comprising a holder for the gear to be operated upon, a cutter-shaft-carrier adjustable about two axes, each at an angle to the axis of the holder, a cutter shaft mounted for rotation in said carrier about an axis at an acute angle to the plane of such gear when so held and at an angle to the axis of the holder, means for rotating the cutter shaft independent of rotation of such gear, and means for causing a relative reciprocation between the gear holder and cutter shaft laterally of the axes of the cutter shaft and such gear.

1,749,581. CONTAINER. GEORGE D. HAUSER, Utica, N. Y., assignor to Utica Products, Inc., Utica, N. Y., a Corporation of New York. Filed Jan. 8, 1929. Serial No. 331,064. 9 Claims. (Cl. 220—1.)

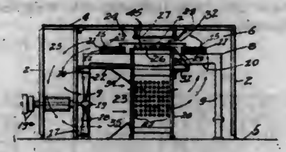


1. A device of the character described comprising side plates and angle strips having interlocking turned back edges, feet having flanges fitting into the spaces formed by the turned back edges of the angle strips, each foot having an inwardly offset portion arranged within said side plates and a bottom member resting on said offset portion.

1,749,582. METHOD OF IMPROVING CIGARETTES, CIGARS, AND PIPE CARTRIDGES. NEVIL MONROE HOPKINS, New York, N. Y., assignor of twenty-five per cent to Tobacco Perfecting Corporation, a Corporation of New York, and twelve per cent to Rene Georges Le Brosi, Port Washington, N. Y. Filed Dec. 18, 1924. Serial No. 756,732. 6 Claims. (Cl. 131—55.)

1. A method of treating a smoker's article to graduate the strength of the tobacco therein, which comprises passing lengthwise through the article a stream of a substance adapted to vary the flavor content of the tobacco, and regulating the action of the substance to produce a gradual variation in flavor content from one end to the other of the article without consuming the article.

1,749,583. GRAIN-SPOUT HOLDER. ROBERT R. HOWELL, deceased, Minneapolis, Minn., by Benjamin R. Howell and Margaret Stokes, Minneapolis, Minn., and John R. Howell, Madison, Wis., executors. Filed July 11, 1927. Serial No. 205,021. 4 Claims. (Cl. 248—30.)

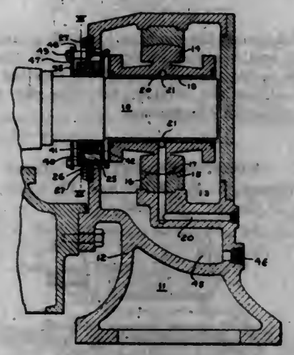


1. A grain spout adjuster comprising a base having a worm gear thereon facing upwardly, a head rotatably mounted upon the base, and having a crank-operable pinion carried by the head and engaging and meshing with the gear from above, and a spout rod held by said head, the arrangement being such that when the hands respectively hold the rod, and operate the pinion, both hands move with the rotatably mounted head.

1,749,584. TENTERING MACHINE. ALPHEUS O. HURXTHAL, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 18, 1928. Serial No. 286,320. 12 Claims. (Cl. 26—60.)

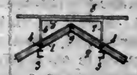
1. In a tentering machine, the combination of a casing, having a restricted passageway formed by a pair of walls

disposed relatively close together and extending longitudinally of said casing, means for supporting a strip of



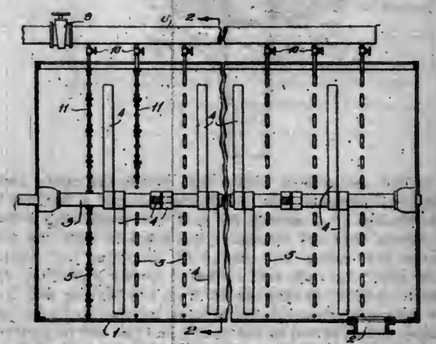
material in said passageway, and means for forcing air through said passageway in a direction transversely of the strip of material.

1,749,585. MUSICAL-INSTRUMENT CASE. WEBSTER E. JANSSEN, New York, N. Y. Filed May 1, 1928. Serial No. 274,204. 14 Claims. (Cl. 84—177.)



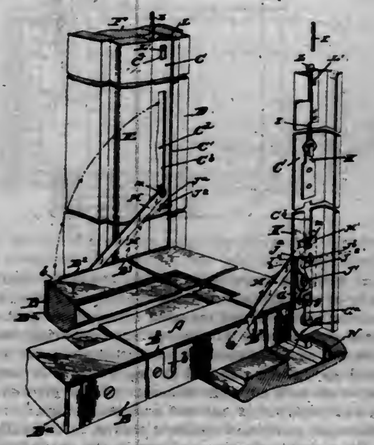
1. A musical instrument case comprising a playing action compartment having an opening toward the front, and a writing-desk top foldable and slidingly pivoted within the case to cover said playing action compartment but exposing said opening when said desk-top is folded.

1,749,586. OIL-SEALING RING FOR TURBINE BEARINGS. JOSIAH F. JOHNSON, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 28, 1924. Serial No. 702,545. 6 Claims. (Cl. 286—10.)



3. A sealing ring for rotatable shafts adapted to be secured to a bearing housing and having its inner periphery grooved to form a plurality of small chambers separated by ridges adapted to approach the shaft with a close clearance, means for draining said chambers, and means for maintaining a liquid seal between the chambers.

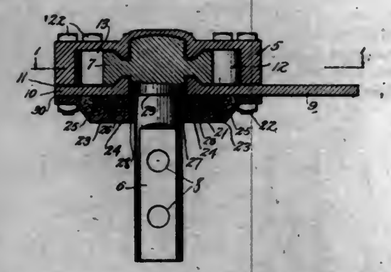
1,749,587. DUMPING CAR BODY OR CAR TOP. THÖGER GRÖNBORG JUNGERSEN, Lyngby, near Copenhagen, Denmark. Filed Mar. 21, 1927, Serial No. 177,127, and in Denmark May 31, 1926. 4 Claims. (Cl. 105—268.)



1. The combination in a dumping car of a frame member, a body member, rollers carried by one of said members, and inclined intersecting trackways carried by the other of said members and having upward extensions beyond their point of intersection, said trackways coacting with said rollers to permit the dumping movement of said body.

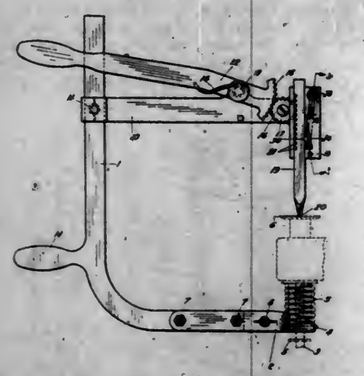
1,749,588. METHOD OF AND APPARATUS FOR CRYSTALLIZATION. ERNST W. KOPKE, New York, N. Y., assignor to Frank L. Allen, Montclair, N. J. Filed Jan. 19, 1927. Serial No. 161,981. 6 Claims. (Cl. 127—58.)

4. The method of treating massecuites which consists in establishing a plurality of similar temperature modifying effects in a series of planes, and passing the massecuites through substantially the entire area of said planes, to produce a uniform temperature modification of the entire mass.



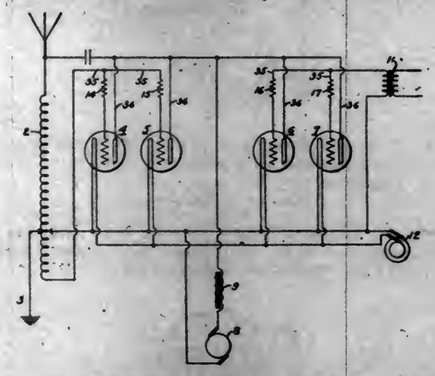
1,749,589. VERTICALLY-SLIDABLE INWARDLY-SWINGING WINDOW. JOHN G. KRAMER, Detroit, Mich., assignor, by mesne assignments, to Car-Kra Corporation, Detroit, Mich., a Corporation of Michigan. Filed June 28, 1928. Serial No. 288,955. 2 Claims. (Cl. 20—40.)

1. In a device of the character described, a pair of vertically movable channel members; a swinging sash frame



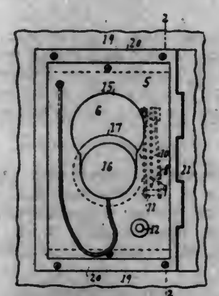
detachably pivoted to the channel members, whereby the sash frame may be adjusted at an angle to the vertically movable channel members for cleaning, or removed for repairs; means for automatically locking the swinging sash frame in alignment with the channel members for vertical adjustment; a pair of link bars pivoted at one end to the sash frame and fitted with adjustable heads slidable in slots formed in the walls of the channel members,—said heads when adjusted being adapted to release the links from the channel members for the removal of the sash frame.

1,749,590. SHOCK ABSORBER. MARIUS C. KRARUP, New York, N. Y. Filed Nov. 15, 1919. Serial No. 338,212. 5 Claims. (Cl. 286—10.)



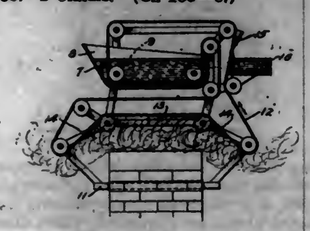
1. The combination with a fluid containing casing and a relatively movable hub projecting through a bearing on said casing, of a packing for said hub comprising a body of plastic wax-like substance non-miscible with the fluid within the casing, and means for confining said plastic body about the hub, said confining means embodying concentric annular flanges spaced from the bearing and from one another disposed in overlapping relative positions, said flanges being carried by the casing and the hub respectively and one of said flanges being movable within the body of plastic material without displacing said material.

1,749,591. SPRING COMPRESSOR. RAY B. LAW and JOSEPHUS A. CLAPPER, Muscatine, Iowa. Filed Dec. 16, 1927. Serial No. 240,470. 14 Claims. (Cl. 29—86.3.)



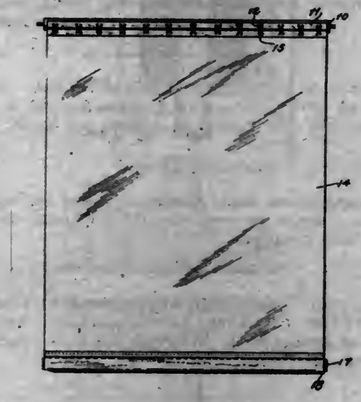
1. In a spring compressor of the character specified, a frame to engage the spring to be compressed and an element having teeth thereon and movable with respect to the frame to cause compression of the spring; operating means to actuate the movable element, comprising a gear pivotally mounted upon the frame and having its teeth in mesh with the teeth on said movable element, a lever pivoted on the frame and carrying at one end a segmental gear to engage the aforesaid gear, and resilient means to normally withdraw the movable element and retain the parts in position ready for use.

1,749,592. VACUUM-TUBE SYSTEM. DONALD G. LITTLE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 25, 1924. Serial No. 688,388. 3 Claims. (Cl. 250—17.)



1. In a radio system, a plurality of modulator tubes, a connection between the cathodes of said tubes, a common connection between the anodes of said tubes, a source of modulating potential, means for connecting the input circuits of said tubes in parallel to said source, and a plurality of high-resistance devices respectively individual to said tubes and respectively connected between the grids thereof and their common connection to said source of modulating potential.

1,749,593. TELEPHONE. LOUIS J. LOEFFLER, Stapleton, N. Y. Filed Jan. 28, 1929. Serial No. 335,466. 3 Claims. (Cl. 179—100.)

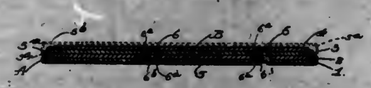


1. In a telephone, the combination with a casing having a transmitter and a spring switch, of a slot located in the front of the casing for coaction with a receiver to open the switch by sliding the receiver into the slot or close the switch by removing the receiver.

1,749,594. SMOKE SEPARATOR. HARRY C. LYONS, Mount Vernon, N. Y. Filed Apr. 17, 1928. Serial No. 270,638. 2 Claims. (Cl. 183—8.)

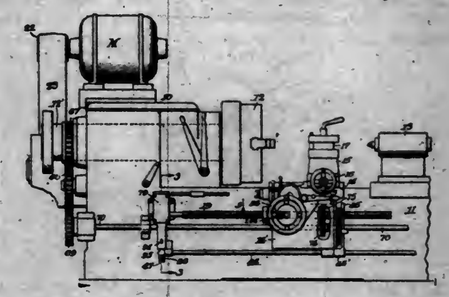
1. In a smoke separator, a framework extending above the substantially vertical outlet of a chimney, an endless belt carried by said framework, said endless belt having a substantially horizontal portion just above the vertical chimney outlet, a tank for containing liquid carried by said framework above the horizontal portion of said endless belt, and means for guiding said endless belt through a body of liquid in said tank.

1,749,595. SHADE OR CURTAIN FASTENER. DORA MARK, Neponsit, Long Island, N. Y. Filed May 14, 1928. Serial No. 277,592. 1 Claim. (Cl. 156—25.)



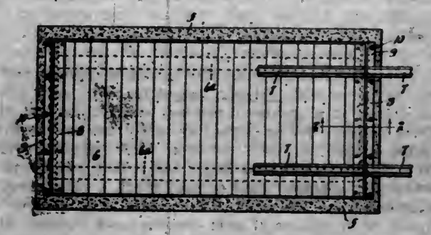
A shade or curtain fastener comprising, a band, adapted to be glued to a roller or pole in the direction of its longitudinal axis, a plurality of wire eyes, fastening means passed through the upper side loops of said eyes for securing the same to said band, a plurality of wire hooks and fastening means passed through said lower side loops of said hooks to secure the same to a shade near and parallel to the upper edge thereof, said hooks adapted to engage said eyes for removably hanging a shade or curtain from the roller or pole.

1,749,596. SOLE PLATE FOR LAUNDRY IRONS. MICHAEL W. MCARDLE, Chicago, Ill. Filed Feb. 2, 1927. Serial No. 165,269. 4 Claims. (Cl. 68—26.)



1. A composite sole plate for laundry irons comprising a peripherally flanged sheet metal shell and a metal filler for the same, the shell defining a cavity housing the filler, said flange extending inwardly at its upper edge into locking engagement with the filler to permanently secure these elements together.

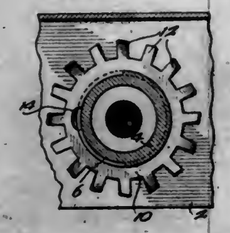
1,749,597. SOLE PLATE FOR LAUNDRY IRONS. MICHAEL W. MCARDLE, Chicago, Ill. Original application filed Feb. 2, 1927, Serial No. 165,269. Divided and this application filed Feb. 5, 1927. Serial No. 166,135. 8 Claims. (Cl. 68—26.)



1. A sole plate for a laundry iron comprising a peripherally flanged sheet metal shell and a metal filler for the same including a plate having its peripheral edge substantially perpendicular to its faces and its horizontal dimensions less than those of the inner surface of the bottom web of the shell, the flange of the shell extending inwardly in inclined position into contact with the upper corner of the periphery of the plate for retaining the same symmetrically positioned in the shell and enclosing the air spaces in the shell around the periphery of the filler.

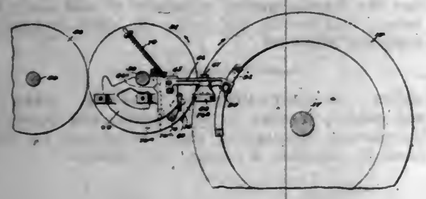
1,749,598. LEAD-SCREW-CONTROLLING DEVICE FOR LATHES. EDWARD F. MCNUTT, Youngstown, Ohio, assignor to Gisholt Machine Company, Madison, Wis., a Corporation of Wisconsin. Filed Dec. 20, 1928. Serial No. 327,211. 8 Claims. (Cl. 82—22.)

1. In a lead screw controlling device for lathes, the combination with a lathe bed, a tool carriage mounted to reciprocate on said bed, a lead screw, a nut on said carriage cooperating with said lead screw, means, including a clutch, for driving said lead screw, and carriage feed mechanism geared to said nut, of means for arresting the rotation of said lead screw at a predetermined point comprising a notched disc rotated by said lead screw, a spring-pressed locking pin cooperating with the notches of said disc, means, including a lever, for shifting the clutch of said lead screw driving means, and means actuated by said lever serving to retract said locking pin during the clutch-engaging movement of said lever and to release said locking pin during the clutch-disengaging movement of said lever.



1,749,599. SCALE-PLATFORM CLEARER. LUKE W. NORTHFIELD, WESLEY A. NORTHFIELD, and GLENN H. NORTHFIELD, Minneapolis, Minn. Filed Dec. 19, 1927. Serial No. 241,244. 3 Claims. (Cl. 265—71.)

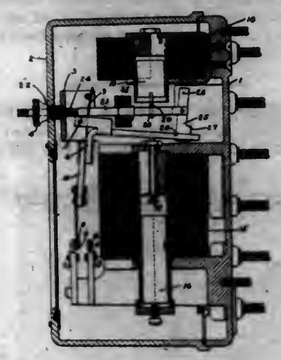
1. A platform scale for weighing matter in vehicles having in combination, a frame over which vehicles are adapted to pass, said frame having a rectangular opening therein, a rigid platform shaped similarly to and disposed in said opening and of smaller dimensions than said opening and constructed and arranged to have vehicles move thereon from said frame and to support said vehicles, the top of said platform being substantially flush with the top of said frame, a metal member secured to one of said parts and having a horizontal side with the thin edge projecting toward the other part, said other part having a metal member secured thereto having a vertical surface opposite said edge whereby in the relative



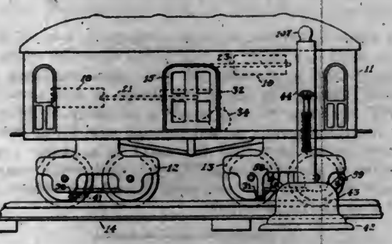
movement of said frame and platform caused by vehicles moving thereon any obstruction caught between said metal members will be cut or crushed and will drop below said edge whereby the space between said metal members will be cleared.

1,749,600. LOCK NUT. CARL G. OLSON, Chicago, Ill., assignor to Shakeproof Lock Washer Company, Chicago, Ill., a Corporation of Delaware. Filed July 11, 1928. Serial No. 291,739. 8 Claims. (Cl. 151—37.)

1. A lock nut comprising an annular body portion of flat stock, and a plurality of marginal twisted teeth for lockingly engaging the work, said body portion being adapted for application upon the threaded portion of an element to be secured.



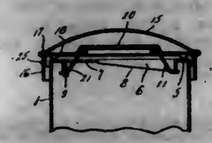
1,749,601. GRIPPING DEVICE. HERBERT W. ORNDOFF, New Orleans, La., assignor to The E. V. Benjamin Co., Inc., New Orleans, La., a Corporation of Louisiana. Filed June 18, 1928. Serial No. 286,886. 6 Claims. (Cl. 101—409.)



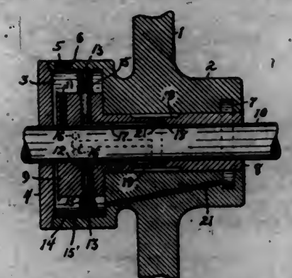
1. In a sheet handling machine having a cylinder and a receiving drum with driving means therefor, said drum being driven at a greater rotational speed than said cylinder, a gripping device carried by said drum and adapted to seize a sheet on said cylinder, said gripping device having a shaft, a gripping finger and a rock lever with a cam-engaging member fixed to said shaft, a cam lever, a cam mounted on said cam lever to rock into and out of the path of movement of said cam-engaging member, and means on the cylinder cooperating with said cam lever to rock said cam lever and cam to a position in which the cam-engaging member is moved by said cam to present said finger for seizing a sheet on the cylinder.

1,749,602. ELECTRICAL PROTECTIVE DEVICE. ALFRED J. A. PETERSON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 18, 1924. Serial No. 693,729. 8 Claims. (Cl. 200—106.)

1. In a relay, a pair of relatively movable contact members, a contact-supporting member, means for actuating the contact-supporting member to an advanced position, a latch member for automatically retaining the supporting member in its advanced position, a stop normally engaging the latch member to render the same inactive and means for removing the stop from the path of said latch member.



1,749,603. MECHANISM FOR THE AUTOMATIC TRANSFER OF MAIL AND BAGGAGE. CECIL N. PHELPS, Orange, N. J. Filed Sept. 27, 1924. Serial No. 740,153. 20 Claims. (Cl. 258—4.)



1. In combination, a track, a railway car thereon having a sliding side door, an armature connected to said door, a solenoid in engagement with said armature for effecting the automatic opening of the door at a given position, a machine located near the track on which the car travels and provided with means for holding a mail bag or other desired object and means for throwing said object into the car and electrical means for releasing said throwing means and adapted to be automatically operated by the movement of the car to cause the mail bag to be transferred to the car at the proper time.

1,749,604. SEALING GASKET FOR NECK AND CLOSURE STRUCTURES. JAMES S. REID, Cleveland, Ohio, assignor to The Eaton Axle and Spring Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 19, 1928. Serial No. 327,053. 5 Claims. (Cl. 220—46.)

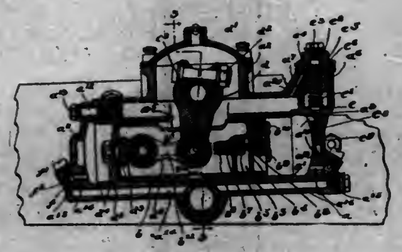
2. In combination with a tubular neck and a detachable bayonet-joint closure therefor, of a gasket for sealing cooperation with both said neck and said closure; said neck having a top transverse gasket-engaging wall and cam portions adjacent thereto; said closure having a transverse gasket-engaging wall and a surrounding depending skirt portion and also having resilient fingers for locking engagement with the cam portions of said neck; and said sealing gasket having an annular sealing portion upwardly arched in cross-section for cooperation with the transverse wall of said closure and annular sealing portion downwardly arched in cross-section for cooperation with the transverse wall of said neck and also having an inherently resilient outer portion of greater diameter normally than that of said closure skirt portion so that said gasket can be assembled with said closure, within the skirt portion thereof, only by forcing or jamming said gasket within said skirt portion, said inherently resilient gasket outer portion springing inwardly to permit such assembly.

1,749,605. LOOSE-PULLEY OILER. RAY E. RIBB and FRED R. KOVERMAN, Fort Wayne, Ind. Filed June 18, 1928. Serial No. 286,096. 3 Claims. (Cl. 308—109.)

1. An appliance of the class described, consisting of a pulley having in one end of its hub a closed chamber, and at a point spaced from its opposite end an internal annular recess, there being also a return duct connecting said recess and chamber; a shaft; a bushing fixedly mounted on said shaft and upon which bushing said pulley is loosely mounted, said bushing having a head disposed within said chamber, there being a series of radially disposed guide openings in said head, and also adjacent each guide opening an oil inlet opening, said bushing having also oil grooves exposed to the bearing surface of said hub, and ducts and corresponding ports connecting said oil inlet openings and said oil grooves; and a spring pressed rake member positioned in each guide opening, which rake bears outwardly against the wall of said chamber.

1,749,606. PROCESS FOR DETERMINING MOISTURE IN AGGREGATE. ROBERT E. ROBB, Evansville, Ind. Filed Aug. 17, 1928. Serial No. 300,235. 7 Claims. (Cl. 23—230.)

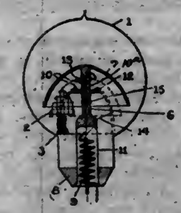
7. The process of determining the moisture content of aggregate which comprises introducing a measured quantity of aggregate into a measured quantity of liquid to establish a standard indication, then introducing a corresponding quantity of moist aggregate to be tested into such measured quantity of liquid, and determining the displacement of said liquid with relation to the standard indication.



1,749,607. METHOD OF DISPERSING RECLAIMED RUBBERS. REED P. ROSE, Jackson Heights, and HAROLD E. CUDE, Floral Park, N. Y., assignors to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Aug. 20, 1927. Serial No. 214,451. 1 Claim. (Cl. 134—1.)

A method of manufacturing aqueous dispersions of reclaimed rubber which comprises softening reclaimed rubber with spindle oil, plasticising the softened rubber, subjecting said plasticised softened rubber to mechanical action in water containing a water soluble rosin soap until a smooth dispersion is obtained.

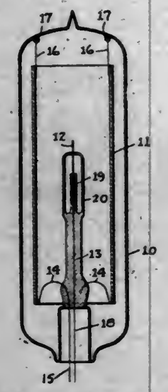
1,749,608. METHOD OF DISPERSING RUBBER. REED P. ROSE, Jackson Heights, and HAROLD E. CUDE, Floral Park, N. Y., assignors to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Aug. 20, 1927. Serial No. 214,452. 2 Claims. (Cl. 134—1.)



1. A method of manufacturing aqueous dispersions of rubber which comprises forming an emulsion of spindle oil in water containing alkaline sulphonated castor oil, and mixing reclaimed rubber with said emulsion until the rubber becomes dispersed therein.

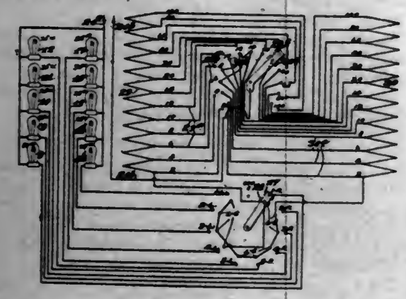
1,749,609. SHOCK ABSORBER. FREDERICK HENRY ROYCE, West Wittering, near Chichester, England, assignor to Rolls-Royce Limited, Derby, England. Filed Dec. 24, 1926, Serial No. 156,966, and in Great Britain Dec. 31, 1925. 8 Claims. (Cl. 188—88.)

1. A shock absorber comprising a hollow double-ended piston in a closed cylinder with a liquid compression chamber at each end of the cylinder, two conduits connecting the compression chambers each controlled by a one-way valve admitting liquid to the chambers respectively, a reservoir to contain a quantity of the compression liquid formed on the side of and extending to the bottom of, the cylinder, a gap or opening in the wall between the cylinder and the reservoir, two conduits from the bottom of such reservoir to the compression chambers respectively, each provided with a one-way valve admitting liquid to the compression chamber with which it is connected, and mechanism including a shaft, situate without, and in a plane passing through the centre of, and normal to the axis of the cylinder, rocking in bearings attached to the cylinder, a suitably shaped hole in the wall of the cylinder nearest to the shaft and evenly disposed on each side of the said plane, a like suitably shaped hole in the wall of the piston, a lever secured to the said shaft projecting through the said holes to the centre of the piston, a link hinged to the free end of such lever and to one end of the piston, another lever projected from the said shaft without the cylinder, and operatively connected to the "shocked" member, whereby movement of the "shocked" member causes the piston to move in one direction or the other.



1,749,610. GASEOUS CONDUCTION LAMP. OTTO SCHALLER, Berlin-Sudende, and FRITZ SCHRÖTER, Berlin-Schmargendorf, Germany, assignors to Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed July 22, 1920. Serial No. 398,273. 8 Claims. (Cl. 176—122.)

1. In a device of the class described, in combination, a vessel having a gaseous content at relatively low pressure,



a pair of electrodes mounted within said vessel one of which is subject to deterioration by the discharge therefrom of electrode particles, a reservoir containing metal of which said one electrode is formed, and means for vaporizing the metal within said reservoir to replenish said electrode comprising a current-limiting resistance in circuit with one of said electrodes and thermally related to said reservoir.

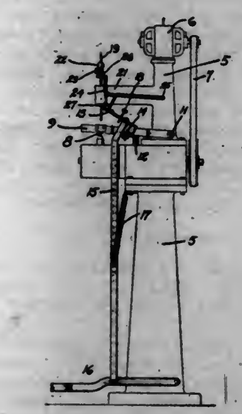
1,749,611. METHOD OF RECTIFYING ALTERNATING CURRENTS. FRITZ SCHRÖTER, Berlin, Germany, assignor to Safety Car Heating & Lighting Company, a Corporation of New Jersey. Filed Mar. 16, 1921, Serial No. 452,825, and in Germany Nov. 3, 1919. 2 Claims. (Cl. 250—27.5.)

1. In rectifying tubes of the gaseous conduction type having a metallic anode and a cathode, the method of preventing the permanent absorption of the gaseous content which consists in causing the metallic particles emanated from the anode to impinge upon the surface of the cathode whereby such particles are raised in temperature and are caused to emit gases absorbed thereby.

1,749,612. EYE-TESTING APPARATUS. CHARLIE B. SCOTT, St. Louis, Mo., assignor to M. E. Green Manufacturing Co., St. Louis, Mo., a Corporation of Missouri. Filed June 13, 1927. Serial No. 198,562. 3 Claims. (Cl. 175—312.)

1. In combination with a source of current supply, leads to and from the source of supply, a series of translating devices electrically connected with one of the leads in multiple with each other, a series of independent terminal-contacts for the translating devices, a resistance permanently in series with the other lead, a series of contacts for the resistance, there being one resistance contact in permanent pair-relation with each of the respective terminal-contacts, and a shiftable switch-member adapted for electrically connecting the respective pairs of terminal and resistance contacts for selectively energizing the translating devices.

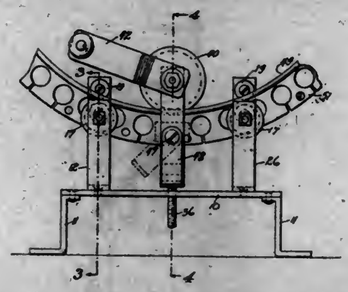
1,749,613. AMMONIUM-NITRATE EXPLOSIVE AND PROCESS OF MAKING IT. WALTER O. SNELLING, Allentown, and JOSEPH A. WYLER, South Whitehall Township, Lehigh County, Pa., assignors to Trojan Powder Company, New York, N. Y., a Corporation of New York. Filed Oct. 14, 1922. Serial No. 594,584. 6 Claims. (Cl. 52—11.)



1. The process which comprises heating together a mixture containing ammonium nitrate, water, lead, and nitrated toluene at a temperature in excess of 100° C. until a chemical reaction occurs characterized by a pronounced darkening of the mixture.

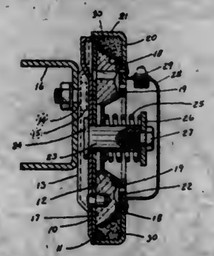
1,749,614. TONGS FOR SUGAR, CANDY, ETC. GUNHILDE M. SORENSEN, Weehawken, N. J. Filed Apr. 12, 1928. Serial No. 269,527. 1 Claim. (Cl. 294—115.)

A gripping device for small articles comprising a hollow body provided with an enlargement at one end and a triangular shaped hollow head at the other end, claws pivoted in the head, a push pin provided with a disc to operate the claws, and a spring surrounding the pin and within the body to hold the claws closed.



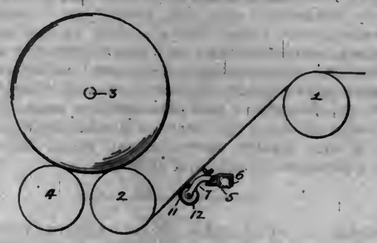
1,749,615. DEVICE FOR APPLYING BRAKE-BAND LININGS. ALBERT M. WALCH, Minneapolis, Minn. Filed July 3, 1924. Serial No. 724,159. 11 Claims. (Cl. 77—5.)

1. A device of the class described including a vertically arranged drill, a swingable work support yieldably held in raised position above the drill, a work clamp pivoted to said work support to engage work positioned over the drill and upon the support, and a manually operable connection pivoted to said pivoted clamp in such manner that upon movement of the connection in one direction the clamp is first brought to clamping position against the work, and continued movement holds the clamp and lowers the work during drilling.



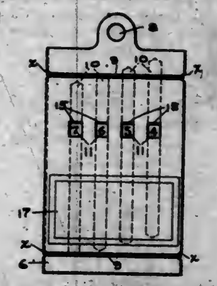
1,749,616. BENDING DEVICE. MONTE W. WALKUP, Chicago, Ill. Filed Aug. 26, 1927. Serial No. 215,576. 2 Claims. (Cl. 153—56.)

1. A device of the character described, including a base, U-members secured thereto, pairs of rollers secured to the corresponding vertical legs of said U-members, a single roller secured to the other leg of said U-members, and a



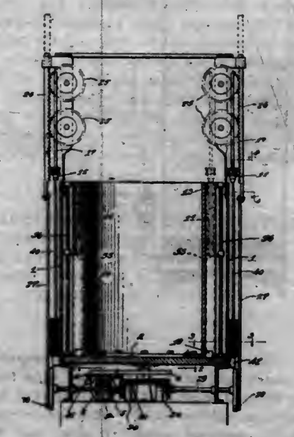
knurled roller supported from said base between said U-members and having its lowermost peripheral point below the interspace of said pairs of rollers.

1,749,617. STABILIZER FOR VEHICLES. HENRY E. WEBER, Indianapolis, Ind., assignor to Hassler Manufacturing Co., Inc., Indianapolis, Ind., a Corporation. Filed Oct. 3, 1927. Serial No. 223,600. 4 Claims. (Cl. 188—130.)



1. A stabilizer comprising a pair of friction elements, a sheet metal cover secured to one of said elements, and a sheet metal supporting plate secured to the other element, said plate being provided with a recess formed therein for receiving the head of a securing bolt and preventing the rotation thereof.

1,749,618. SEPARATOR FOR SLITTING MACHINES. JOSEPH ATWOOD WHITE, Melrose Park, Pa., assignor to The Moore & White Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 4, 1928. Serial No. 275,121. 5 Claims. (Cl. 164—65.)

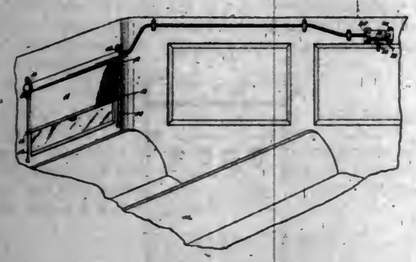


1. The combination in means for separating adjoining strips of paper, while the said paper is moving from one support to another, of two supports for the paper; means for moving the paper; and means located between the supports for alternately forcing the edges of the two adjoining strips out of alignment one with the other as the paper is moved from one support to the other.

1,749,619. RECORDING AND ADVERTISING DEVICE. FRED WIDOR, Omaha, Nebr. Filed Mar. 22, 1929. Serial No. 349,210. 7 Claims. (Cl. 40—65.)

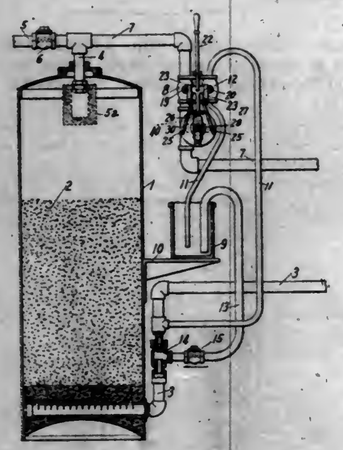
1. In a device for the purposes described, a leaf having a window, a second leaf pressed against the first leaf and provided with slots, a plurality of flexible approximately parallel strips each bearing numerals on its opposed sides and disposed on the second leaf with parts thereof engaging in said slots to exhibit a selected numeral on the second leaf and to exhibit a corresponding numeral at said window.

1,749,620. APPARATUS FOR ASSEMBLING SHIMS. IRVIN B. WINSLOW, Detroit, Mich. Filed Dec. 19, 1927. Serial No. 241,057. 17 Claims. (Cl. 29—84.)



1. A shim assembling machine, comprising in combination means for holding a plurality of magazines each containing shims of a given thickness, means for successively removing shims from the magazines and for assembling shims into groups each consisting of a predetermined number of shims of different thickness and in a predetermined arrangement as regards thickness.

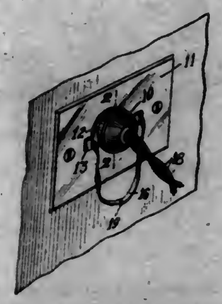
1,749,621. REAR-CURTAIN-OPERATOR DEVICE. GEORGE J. WRIGHT, Brookline, Mass. Filed Oct. 25, 1929. Serial No. 402,346. 8 Claims. (Cl. 156—28.)



1. An automobile rear-curtain operating-device comprising in combination a rear window curtain roller, a flexible drive shaft, a coupling between one end of said shaft and

said roller, a threaded stud rotatable with said shaft, a nut having threaded engagement with said stud, means

for preventing rotary movement of said nut, adjustable means for limiting the longitudinal movement of said nut and means for rotating said shaft.



1,749,622. WATER-SOFTENING APPARATUS. CLARENCE B. YOUNT, near Dayton, Ohio. Filed Mar. 8, 1928. Serial No. 259,983. 15 Claims. (Cl. 210—24.)

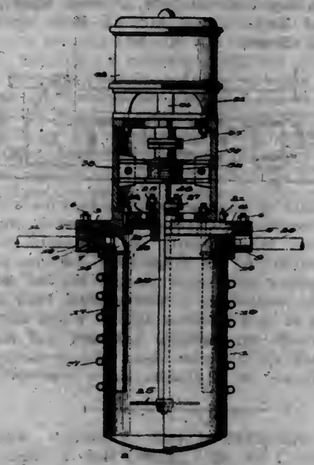
1. In a water softening apparatus comprising a container for water softening material, a pipe for supplying hard water to said container, a service pipe and a drain pipe leading from said container, and a valve in said drain pipe, manually operated means to open said drain valve, a motor adapted to be set in operation by the opening of said drain valve, means controlled by said motor to automatically close said drain valve after a predetermined interval, and means controlled by the opening and closing of said drain valve to supply regenerating solution and wash water to said container.

1,749,623. PLUG ATTACHMENT. ALBERT G. ZINMAN, Brooklyn, N. Y. Filed Feb. 14, 1929. Serial No. 339,778. 2 Claims. (Cl. 173—361.)

1. An attachment for electric plugs, comprising a disk, having a groove centrally thereof, an aperture on each side of said groove for the passage therethrough of the prongs of a plug, the disk being adapted to be positioned adjacent the base of the plug, an aperture at each extremity of said groove, and a ribbon positioned in said groove and having its ends passed through the apertures in said groove, the said ends being tied or knotted,

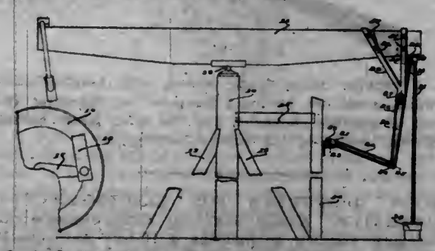
whereby the application of force to said ribbon is transmitted to the surface of the disk and to the plug, whereby the same may be displaced from a wall socket.

1,749,624. BRAKE MECHANISM. JONAS W. BATSON, Spartanburg, S. C. Filed Feb. 13, 1928. Serial No. 254,017. 2 Claims. (Cl. 188—78.)



1. A brake mechanism for motor vehicles and the like, comprising a brake drum, a plurality of brake shoes of segmental form mounted within said drum for cooperation with the inner peripheral wall thereof, means pivoting said brake shoes at one end for outward swinging movements to operative positions, a cam member mounted for rocking movements centrally of said drum, means operatively connecting said cam member to a usual brake operating lever, angled levers pivoted at one end in interposed relation between said brake shoes and said cam member for transmitting motion from the latter to the former, rollers carried by said levers for rolling contact with the elements of said cam member, means for automatically returning the parts to normal positions at the end of each braking operation, and means for checking free movements of said cam member.

1,749,625. APPARATUS FOR CARBONATING LIQUIDS. ALBERT E. BECKER, Ogden, Utah. Filed June 15, 1929. Serial No. 371,198. 3 Claims. (Cl. 261—93.)



1. In apparatus for carbonating liquids a container having its lower end closed, a plate closing the upper end of the container, a ring secured to the lower face of the plate clamping the upper end of the container therebetween and having inlet and outlet openings formed in it,

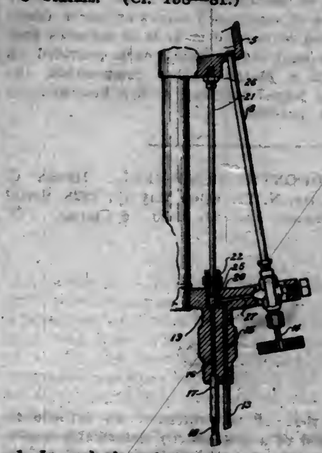
a shaft extending through the plate into the container provided with an agitator, means carried by the plate for

rotating said shaft, means for supplying liquid and gas to the inlet opening of the ring and delivery means connected to the outlet opening of the ring.

1,749,626. ROD GUIDE. CHARLES HENRY BROWN, Breckenridge, Tex. Filed July 5, 1928. Serial No. 290,620. 2 Claims. (Cl. 74—5.)

1. A device of the character described comprising a walking beam, a bracket depending from one end of said beam, a lever pivoted intermediate the ends thereof on the free end of said bracket, a post, a link having pivotal connection with the post and with one end of said lever, the other end of the lever being offset from the body of the lever, and a reciprocating rod having one end pivotally connected with the offset end of the lever, the greater portion of the lever depending below the pivotal point of said lever with the bracket.

1,749,627. SPRINKLER HEAD. HJALMAR G. CARLSON, Worcester, Mass., assignor to Rockwood Sprinkler Company of Massachusetts, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 7, 1928. Serial No. 252,596. 5 Claims. (Cl. 169—40.)



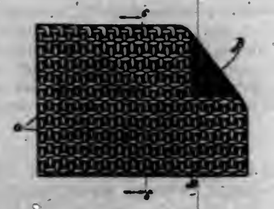
1. In a leverage system for a sprinkler head, the combination with a lever, a strut and a fusible link connected together to form a triangle to hold the system in place, normally preventing the flow of water, the said lever and strut of the leverage system having projections thereon arranged and positioned to engage a stationary part of the sprinkler head and force the lever and strut to assume a position at a considerable distance from the axis of the sprinkler head, for assisting in discharging them when the leverage system is broken by the melting of the fusible link.

1,749,628. TOWEL CABINET. JOHN R. CLOVER, Enid, Okla. Filed Jan. 23, 1929. Serial No. 334,470. 1 Claim. (Cl. 312—38.)

In a towel cabinet structure of the class described, a cabinet comprising an upper compartment adapted to contain a roll of unused toweling, and a lower receiving compartment adapted to receive and conceal the used end portion of the toweling, and a feed roller assembly in said cabinet and associated with said compartments and comprising a relatively fixed and positive corrugated operating roller, and a pair of complemental corrugated loop-forming rollers between which the toweling is adapted to be fed, all of said rollers being operatively connected together for simultaneous and positive rotation, whereby to unwind the toweling from the supply roll, to form and maintain a substantially uniform loop, and to feed the used end portion of the towel into the receiving compartment.

1,749,629. APPARATUS FOR BURNING FUEL. WILLIAM C. COLEMAN, Wichita, Kans., assignor to Coleman Lamp and Stove Co., Wichita, Kans., a Corporation of Kansas. Filed Dec. 30, 1927. Serial No. 243,656. 3 Claims. (Cl. 158—81.)

1. In a device of the class described, a font having a liquid space and an air space above the same to con-

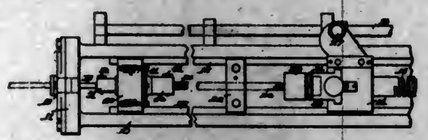


tain liquid fuel under pressure, a fitting in the wall of the font having a main port and two branch ports, one of which admits air to the main port and the other of which admits liquid to the main port, an air tube carried by the fitting, a mixing chamber at the top of the air tube, a burner carried by the mixing chamber, a valved generator communicating the main port with the mixing chamber, and a thermostatic valve for the air branch port responsive to heat from the burner to close the air port branch only under action of heat from the burner.

1,749,630. KEY HOLDER. EDWIN B. DONALDSON, Washington, D. C. Filed July 5, 1928. Serial No. 290,629. 3 Claims. (Cl. 59—97.)

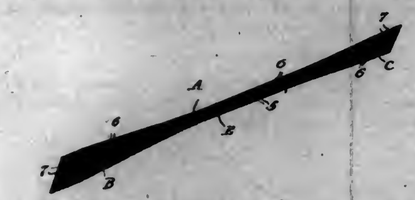
1. A key holder comprising a plate provided with an opening, a spring tongue carried by the plate and overlying a face thereof, said tongue having a free end portion provided with an arm disposed toward the plate and directed through the opening, and a head engageable with the free end portion of the arm at the side of the plate remote from the tongue.

1,749,631. BRAKE LINING. RICHARD J. EVANS, Huntington, Ind. Filed Dec. 8, 1928. Serial No. 324,716. 3 Claims. (Cl. 188—259.)



2. As an article of manufacture a brake lining strip composed of a series of superposed layers of woven fabric made of cords formed of twisted strands of asbestos fiber and fine wire, and said layers being each provided on one side only with a plastic rubber composition, the several layers being joined together with a homogeneous mass by heat and pressure.

1,749,632. ORTHODONTIC DUMB-BELL. HENRY C. FERRIS, Garden City, N. Y. Filed May 11, 1928, Serial No. 276,959. Renewed Jan. 21, 1930. 6 Claims. (Cl. 128—359.)

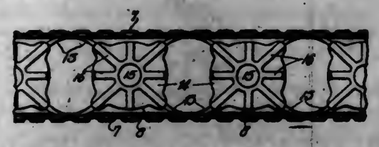


2. As a new article of manufacture, an orthodontic dumb-bell constructed of a temporarily deformable elastic material and comprising a cylindrical shank and an enlarged integral spherical knob at one end thereof.

1,749,633. MACHINE FOR BROACHING SPIRALS. ALBERT FORBERG, Hudson, Mass., assignor to The Lapointe Machine Tool Company, Hudson, Mass., a Corporation of Maine. Filed Jan. 27, 1928. Serial No. 250,056. 5 Claims. (Cl. 90—33.)

1. In a broaching machine, means to hold the work from rotation, a broach, a master screw, means to cause said screw to move longitudinally and to rotate in predetermined relation to its longitudinal movement, and means connecting said screw to said broach, said connecting means comprising a sliding cross head movable along guides in said machine and in which said screw and said broach have aligned bearings, and planetary gears mounted in said cross head and connecting said screw and broach in a definite speed relation.

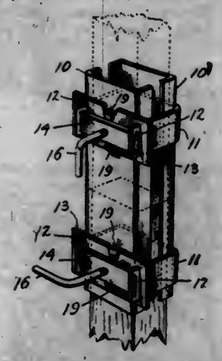
1,749,634. NECKTIE-LINING FABRIC. EDGAR K. FRANK, New York, N. Y. Filed Mar. 9, 1929. Serial No. 345,742. 14 Claims. (Cl. 139—426.)



1. A necktie lining fabric woven with longitudinally extending areas one having a warp of one character and a weft of another character and the other areas having warps and wefts of the same character.

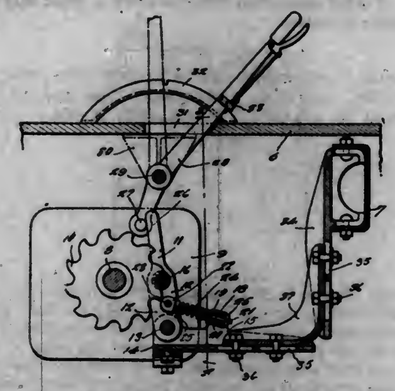
1,749,635. DIAPHRAGM FOR ELECTROACOUSTIC APPARATUS. ERWIN GERLACH, Berlin-Siemensstadt, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Mar. 14, 1928, Serial No. 261,680, and in Germany Mar. 12, 1927. 9 Claims. (Cl. 179—181.)

1. A diaphragm for electro-acoustic apparatus, having a plurality of elements each rigid in itself, the adjacent edges of said elements being straight, and a flexible connection following a straight-line hinge between the adjacent edges of such rigid elements.



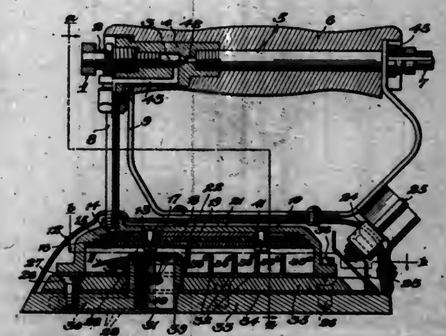
1,749,636. ANTISKID CROSS MEMBER. OLIVER F. KEISER, Barnesville, Pa. Filed Aug. 10, 1929. Serial No. 384,982. 1 Claim. (Cl. 152—14.)

An anti-skid device of the class described comprising a metallic skeleton frame including an outer frame member,



a centrally disposed ring within the frame member and spaced therefrom, radiating arms integrally connected, at their opposite ends, to the opposed edges of the frame member and the ring, and means radiating from the frame member for securing the skeleton frame in position on a tire, and comprising a covering of resilient material encasing the skeleton frame, including a centrally disposed annular flange projecting from the outer face of the covering above the ring and concentric therewith and providing a suction cup on the covering, and ribs formed on the outer face of the covering radiating from the annular flange and extending parallel with and above the arms of the skeleton frame toward the marginal edges of the covering.

1,749,637. SPLICE FOR POLES FOR SCAFFOLDING. FRANK G. KINGSTON, West Somerville, Mass., assignor to Builders' Patent Scaffolding Company, West Somerville, Mass., a Partnership composed of Frank G. Kingston, A. R. Kingston, C. C. Pimm, and Mabel G. Kitchen. Filed Feb. 27, 1928. Serial No. 257,518. 7 Claims. (Cl. 304—40.)

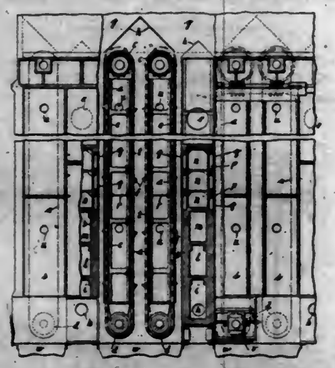


1. A pole splice comprising in a permanently assembled unit oppositely acting members adapted to engage opposite sides of pole sections placed between them and separate actuating devices spaced apart vertically to cause relative movement of said members towards one another, said actuating devices being permanently associated with said members and a portion of the latter extending between and joining said devices.

1,749,638. DEVICE TO PREVENT RETROGRADE MOVEMENT. WILLIAM LAVERY, Bloomfield, N. J. Filed Dec. 20, 1928. Serial No. 327,317. 1 Claim. (Cl. 188—80.)

A device of the class described comprising in combination, a vehicle propeller shaft, a ratchet wheel attached thereto, a pawl for said ratchet wheel, spring means normally urging the same into engaged position, a lever operable for moving the pawl out of engagement and an adjustable support for said pawl, said support comprising a plurality of bracket members including a horizontal member, a vertical member, an intermediate member, and means for adjustably securing said intermediate member with respect to each of said first named members.

1,749,639. STEAMING IRON. RENE LEPRESTRE, New York, N. Y. Filed Nov. 18, 1929. Serial No. 408,126. 19 Claims. (Cl. 68—26.)

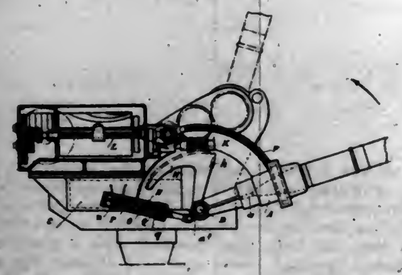


10. A steaming iron, comprising in combination, a dome having a steam chamber, water supply means connected to the dome, a base including steam outlet means communicating with the steam chamber of the dome, heating means in the base, and means forming passages in the top of the dome for conveying water at progressively lower levels toward the steam chamber and releasing the same therein.

1,749,640. FENCE POST. RICHARD DONALD MARTIN, Fort Smith, Ark. Filed Mar. 14, 1928. Serial No. 261,649. 1 Claim. (Cl. 256—57.)

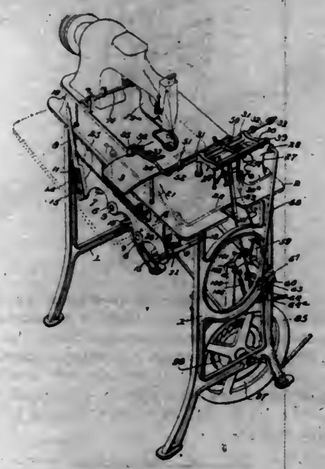
As a new article of manufacture, the portion of a concrete wire fence post which is above ground consisting of a hexagonal reinforced concrete body having the reinforce projecting from its lower end to permit it to be embedded in a base, the body being provided with a plurality of transverse openings spaced apart the distance the wires are to be spaced from one another, and with notches in the corners remote from the side to which the wires are to be attached, the notches being in circumferential alinement and in the same horizontal plane with each opening of the body.

1,749,641. APPARATUS FOR CARBONIZING OR DISTILLING MATERIALS. SAMUEL MCEWEN, London, England, assignor to Coal Oil Extractio Limited, Manufacturers, London, England. Filed July 11, 1929, Serial No. 377,372, and in Great Britain June 8, 1928. 4 Claims. (Cl. 202—108.)



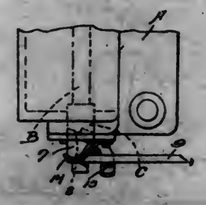
1. In a carbonization retort, a stationary heating wall, an endless chain grate conveyor, one run of which is substantially parallel to and spaced from said heating wall to provide a carbonization space, steam channels in the side of said heating wall which faces said chain grate, ports in said side of the heating wall communicating with the steam channels and with said carbonization space, a gas collecting chamber on the side of said run remote from the heating wall, and means for conveying gas through said run from the carbonization space to said gas collecting chamber.

1,749,642. MANUFACTURE OF CERAMIC WARE. JOSEPH WILLIAM MELLOR, Stoke-on-Trent, England. Filed Oct. 2, 1928, Serial No. 309,893, and in Great Britain Jan. 31, 1928. 4 Claims. (Cl. 25—157.)



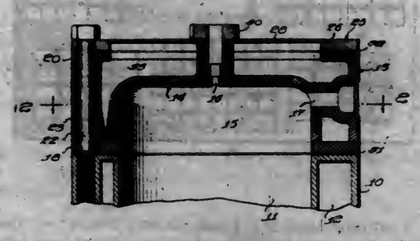
1. A body material for making ceramic ware which consists of normal body material, sodium-calcium silicate and combined boric oxide, so that the body matures at temperatures approximating to those normally employed for maturing glazes.

1,749,643. SETTING DEVICE FOR TIME FUSES. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed Apr. 29, 1929, Serial No. 359,090, and in France May 3, 1928. 3 Claims. (Cl. 86—23.)



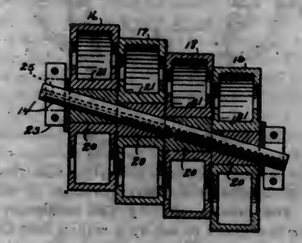
1. A setting device for time fuses which comprises, for producing the angular displacement, varying according to the range, of the movable time ring with respect to a fixed reference mark on the projectile, a fuse setter body in which is disposed a sleeve-box, one rotatable element of which is adapted to engage the movable time ring and is displaced by a gun server for rotating the said ring until the said sleeve encounters a stop which is displaced by a second gun server as a function of the setting to be obtained, characterized by the feature that the body (A) of the setting device is pivoted about a shaft (B), mounted upon the gun carriage; upon a wagon or upon any other suitable support (C) to which is secured a toothed sector (F) upon which the pivotal movement of the said fuse setter body causes a toothed crown (g), rigid with the rotatable element (G) of the sleeve-box, to travel for rotating the movable time ring, the abutment stop (h) limiting the rotation of this sleeve being carried by a toothed sector (H) loosely mounted upon the fixed pivot (B) of the body of the setting device and being displaced in the known manner through the medium of a transmission gear (H—K) controlled by the range indicating device.

1,749,644. CENTRALIZING MECHANISM FOR SEWING MACHINES. HENRY C. MILLER, Waterford, N. Y. Filed July 26, 1922. Serial No. 577,714. 43 Claims. (Cl. 112—75.)



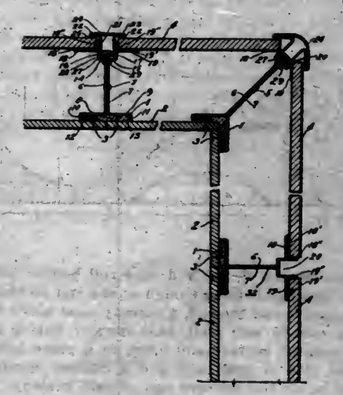
1. A centralizer, comprising a pair of swinging arms free at their ends to engage an article to be centered, and means operating on the arms at their pivotal points and free of other connection with the arms to cause said arms to swing in unison.

1,749,645. STARTING DEVICE FOR TRACTOR ENGINES. LEO NEAS, Tomah, Wis. Filed Aug. 18, 1928. Serial No. 300,529. 2 Claims. (Cl. 74—54.)



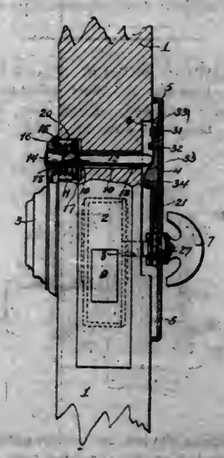
2. Starting means for a tractor comprising an internal combustion engine having a shaft on which is a ratchet, including in combination a collar loose on said engine shaft and having a ratchet opposed to that of the shaft and also having a shank, and arms mounted adjacent to the engine shaft for making and breaking connection between the collar and the engine shaft; one of said arms being adapted to engage and move the shank laterally inward on downward and forward movement of the shank, and the other arm being adapted to engage and move the shank laterally outward on upward and rearward movement of the shank.

1,749,646. CYLINDER HEAD FOR GAS ENGINES. JAMES S. NEWLON, Picher, Okla. Filed Aug. 19, 1929. Serial No. 386,988. 3 Claims. (Cl. 123—173.)



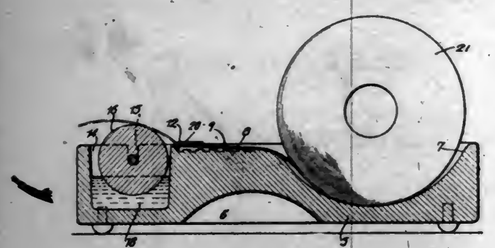
1. A cylinder head comprising a casting formed with upper and lower annular portions having bolt receiving openings therein and being further formed with bolt receiving tubes registering with said openings, the outer peripheries of said tubes being slightly spaced from the outer peripheries of said annular portions, said casting including a firing chamber adapted to communicate with the opening in a cylinder, a spark plug receiving opening communicating with said chamber and a valve receiving opening communicating with said chamber, an annular band secured between said upper and lower annular portions, and a cover plate arranged on the upper face of said upper annular portion and being provided with openings registering with said bolt receiving openings and said spark plug receiving openings respectively, said lower annular portion being provided with fluid receiving openings adapted to communicate with the cooling chamber of the cylinder when the head is secured thereto.

1,749,647. ASPHALT ROLLER. LEON A. POUJAUD, Atlanta, Ga. Filed Aug. 30, 1929. Serial No. 389,522. 3 Claims. (Cl. 94—50.)



1. In a machine of the class described, a front axle normally deflected with reference to a plane perpendicular to the normal path of the machine, mounting means for the axle, a plurality of rollers, and sleeves having deflected bores and mounting the rollers on said axle with the sides of the rollers in parallel relation, the axes of rotation of the rollers being perpendicular to the normal path of travel of the machine.

1,749,648. STRUCTURAL BUILDING. LOYD W. RAY, Wichita, Kans., assignor to The White Castle System, Inc., a Corporation of Kansas. Filed Apr. 29, 1929. Serial No. 358,808. 8 Claims. (Cl. 72—115.)

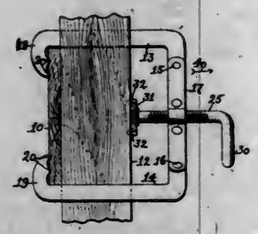


2. A studding for buildings comprising two sheets having their middle portions fastened together in parallel relation, the respective edges of the sheets having nailing strip engaging portions, wall clamping receiving portions, in combination with a nailing strip in the nail strip receiving portions, an adjustable wall engaging clamp, means for drawing the wall engaging clamp toward the clamp receiving portions, said means comprising bolts with heads in the clamps and nuts on the ends of the bolts.

1,749,649. INDICATOR FOR LOCKS. SAMUEL F. ROLPH, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Mar. 7, 1928. Serial No. 259,792. 5 Claims. (Cl. 70—6.)

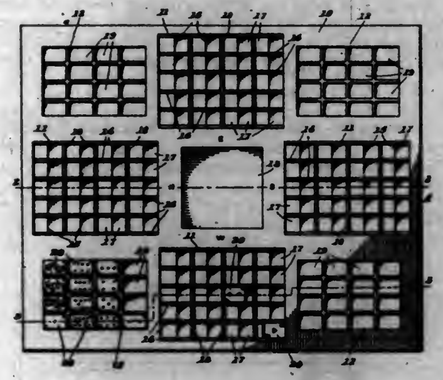
1. An indicator attachment for a lock of the type equipped with an inside bolt-throwing spindle, comprising an indicator plunger to be mounted in the door independently of the lock, an inside escutcheon plate, means independent of the lock carried by said escutcheon plate for operating said indicator plunger, and a cam adapted to be mounted on the inside bolt-throwing spindle for actuating the plunger operating means when the bolt is thrown.

1,749,650. TAPE HOLDER AND MOISTENER. HARRY J. TAYLOR, New York, N. Y. Filed Dec. 8, 1927. Serial No. 238,679. 3 Claims. (Cl. 91—14.5.)



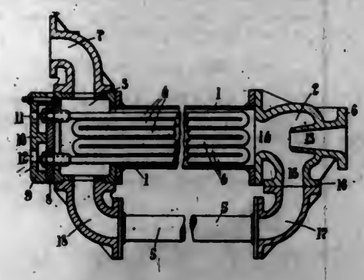
1. A moistening device and tape roll holder comprising a base, a tape roll holding trough at one end thereof, a well on the opposite end thereof, a runway over which the tape is drawn toward said well, said runway having a transversely serrated surface and being in a plane lower than the upper side of said base and a cutting member positioned adjacent the forward end of said runway.

1,749,651. METHOD OF PREPARING BITUMINOUS PAVING COMPOSITIONS. EDWIN C. WALLACE, Newton, Mass. Filed June 8, 1928. Serial No. 284,017. 8 Claims. (Cl. 106—31.)



5. The method of preparing bituminous paving composition of the coarse aggregate type which consists in coating well graded mineral particles from ¼" in size up to the desired maximum with bituminous cement of any desired consistency, then adding thereto a predetermined proportion of dust free, graded material ⅛" and smaller in size, then adding more bituminous cement sufficient in quantity to give desired bituminous content in the mixture and finally adding thereto a volume of mineral dust, substantially all of which passes 50 mesh sieve and 60% or more passes 200 mesh sieve, equal to one-half the volume of the bituminous cement and agitating the mass to effect distribution of the mineral dust substantially as described.

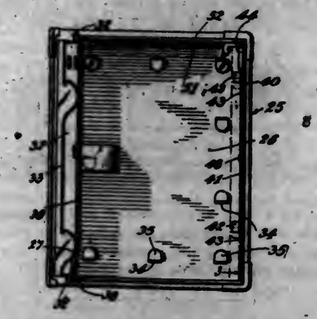
1,749,652. CLAMPING DEVICE. FRANK L. WELT, Somerville, Mass.; Howard L. Welt administrator of said Frank L. Welt, deceased. Filed Feb. 10, 1928, Serial No. 253,459. Renewed Jan. 22, 1930. 7 Claims. (Cl. 304—40.)



1. In a clamping device, in combination, a cross head provided with an internally threaded hub, arms pivoted to said cross head and provided with fingers having teeth for engagement with a ledger board, a screw-shaft extended through said threaded hub in engagement with the latter, and provided at its inner end with reduced portions of different diameters, washers mounted on said reduced portions, a toothed plate loosely mounted on the reduced portion of larger diameter between said washers, and a head on the end of the reduced portion of smaller diameter overlapping the washer on said smaller reduced portion.

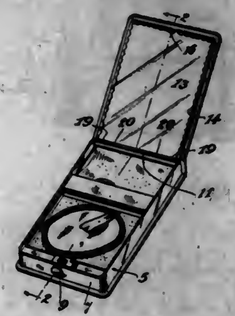
1,749,653. GAME APPARATUS. HARRY ANDERSON WINTER, St. Johns, Newfoundland. Filed May 13, 1929. Serial No. 362,761. 5 Claims. (Cl. 273—148.)

1. A solitaire game board comprising, a board, four piece-supporting sections arranged respectively at the four points of the compass thereon, each of said sections formed with a plurality of rows of upstanding inverted V-shaped racks, the apices of all the racks being parallel, and playing pieces adapted to be supported upon the racks, the length of each playing piece being greater than that of the inclined supporting surface of the rack so that when in supported position thereon the piece projects above the apex of the rack.



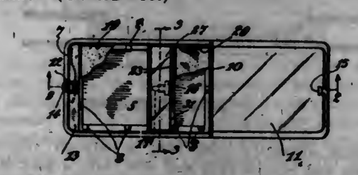
1,749,654. BOILER-FEED-WATER HEATER. JAMES NEWBY WYNDHAM and STEPHEN LEYSHON WYNDHAM, Cardiff, Wales. Filed Mar. 31, 1928, Serial No. 266,891, and in Great Britain July 29, 1927. 10 Claims. (Cl. 257—240.)

1. In a boiler feedwater heater, the combination of a casing forming a main conduit for the passage of the feedwater to the boiler, means for heating the feedwater in the casing, at least one auxiliary conduit in circuit with the casing, and means whereby the feedwater admitted to the casing is utilized to set up a return flow through the auxiliary conduit.



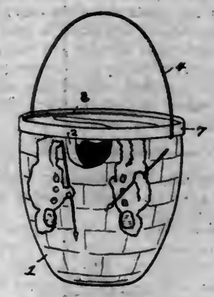
1,749,655. RECEPTACLE. DAVID H. ZELL, New York, N. Y. Filed Jan. 27, 1928. Serial No. 249,827. 8 Claims. (Cl. 232—4.)

1. A receptacle comprising a case, having a slot in one end, an inwardly extending guard tongue partially overlying the slot, a retractile coil spring secured to the case in alignment with the longitudinal axis of the slot and overlying the guard tongue, said spring co-operating with the tongue in preventing the extraction of coins from the case,



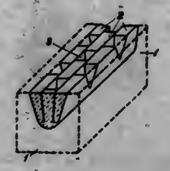
a cover hinged to the case, and a flange on the cover holding the spring in close contact with the guard tongue and against bowing.

1,749,656. VANITY CASE. DAVID H. ZELL, Brooklyn, N. Y. Filed Dec. 11, 1928. Serial No. 325,284. 3 Claims. (Cl. 132—83.)



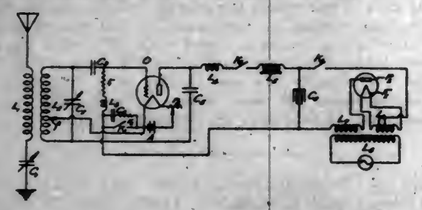
2. In a case or container, a body section having an end wall provided with a hinge knuckle, a cover for said body section including a cover plate, a continuous sheet of flexible material covering one side of the body section and extending over one side of said cover plate and having its edge portions inwardly turned upon the opposite side of said cover plate, a mirror plate superimposed upon the latter side of the cover plate and upon the inturned edges of said covering material, said mirror plate having spaced hinge knuckles on one end thereof, a hinge plate connecting said knuckles with the hinge knuckle on the body wall of the case, said cover plate having a latch tongue struck therefrom at the opposite end of said mirror plate and the mirror plate being provided with means for the co-operative engagement of said latch tongue therewith whereby said plates are securely held in attached relation to each other and for hinging movement as a unit with respect to the case body.

1,749,657. VANITY CASE. DAVID H. ZELL, Brooklyn, N. Y. Filed Dec. 11, 1928. Serial No. 325,285. 2 Claims. (Cl. 132—88.)



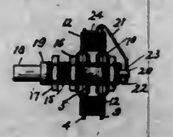
2. A vanity case including a case body adapted to receive cosmetic holding pans spaced apart longitudinally of said body, a channel shaped member adapted to be positioned transversely within the case body and having resiliently yieldable side walls to engage the spaced pans and frictionally resist their movement relative to the case body, said member adapted to receive and removably retain a lip stick holder within the channel thereof, and the body wall of the case and the bottom wall of said channel shaped member having means to coact with each other upon a bodily longitudinal movement of said member within the case to detachably lock said member in its applied position and retain the same within the case when the lip stick holder and the pans are removed therefrom.

1,749,658. ICE-CREAM CARRIER. VAN J. AULT, Fort Dodge, Iowa. Filed Mar. 9, 1926. Serial No. 93,530. 1 Claim. (Cl. 229—8.)



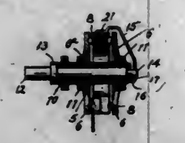
A toy igloo comprising a hollow substantially hemispherical shaped body having an open top, and adapted to be supported in an inverted position, said body having a substantially U-shaped door opening in one side and extended to the open top of the body, a piece of tearable material normally covering the door opening, and of a thickness considerably less than the material constituting the body, whereby the tearable material can be readily removed to uncover the door opening and a removable cap for said body.

1,749,659. PACKING FOR MAKING FLUID-TIGHT JOINTS BETWEEN PARTS OF ENGINES OR MACHINES HAVING RELATIVE MOVEMENT. GEORGE WILLIAM BELDAM and JOHN SMITH, Ealing, England, assignors to The Beldam Packing & Rubber Company Limited, London, England, a Limited Liability Company. Filed Aug. 21, 1926, Serial No. 130,634, and in Great Britain Jan. 1, 1926. 3 Claims. (Cl. 154—45.5.)



3. A packing comprising a carrier part or backing of flexible material, and a metal bar held within the same and tapering inwardly from its face to its base, said bar comprising three or more parallel layers of metal integrally connected and in surface contact with one another, each of the layers being formed with gaps, the gaps of each layer being transversely offset from the gaps of adjacent layers whereby to provide that the wearing surface of the bar presents a series of longitudinally arranged rows of blocks of solid metal with the blocks, the blocks of the respective rows being in staggered relation.

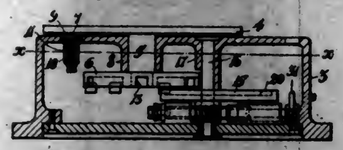
1,749,660. PLATE-CURRENT SUPPLY FOR VACUUM TUBES. HUGO BENIOFF, Pasadena, Calif., assignor to Carnegie Institution of Washington, Washington, D. C., a Corporation of the United States. Filed Aug. 7, 1926. Serial No. 127,924. 1 Claim. (Cl. 250—19.)



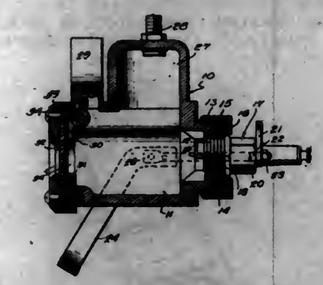
An oscillating transmitter comprising a vacuum tube, coupled grid and plate circuits therefor adapted to produce oscillations when the plate circuit is energized with direct current, said grid circuit including a grid leak connected to the grid of said tube and to the filament through a switch, a plate energizing circuit comprising a condenser connected between the plate of said tube and that terminal of said switch which is spaced from the filament, and means for charging said condenser.

1,749,661. RESISTOR. THEODORE C. BROWNE, Cleveland, Ohio. Filed Apr. 26, 1926. Serial No. 104,669. 5 Claims. (Cl. 201—55.)

1. In a resistor of the type described, a resistance element, insulating discs provided with a portion adapted to receive the peripheral portions of said element formed by inwardly extending central depressions, said discs extending beyond the periphery of said element, discs provided with a portion adapted to engage said insulating discs, the central portions being provided with outwardly extending depressions and the peripheral portions terminating short of the peripheral portions of said insulating discs, means for clamping said discs together to thereby support said element, a shaft mounted within said clamping means, and a contact arm having one end secured to said shaft, the other end engaging with said element.



1,749,662. RESISTOR. THEODORE C. BROWNE, Cleveland, Ohio. Filed Apr. 26, 1926. Serial No. 104,670. 7 Claims. (Cl. 201—55.)

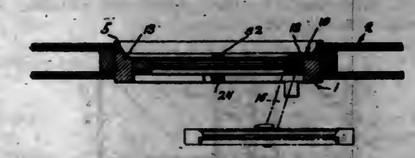


1. In a resistor of the type described, a resistance element, means for supporting said element, beads of insulating material interposed between the supporting means and said element, means for clamping said supporting means and said element together, and a contact arm carried by said clamping means and engaging with said element.

1,749,663. INTERMITTENT GEARING. EJNAR CHRISTIANSEN, Birmingham, England, assignor of one-half to Carl Oscar Ericsson, Birmingham, England. Filed Apr. 12, 1926, Serial No. 101,444, and in Great Britain Apr. 18, 1925. 3 Claims. (Cl. 74—41.)

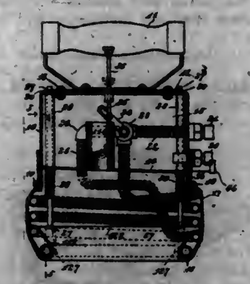
1. Means for intermittently moving a revolving table comprising a revolving driving member, a pin or roller carried thereby, a spindle on which the revolving table is mounted, a stationary table for the machine in which the spindle is journalled, spring pressed anti-friction members for resiliently supporting the revolving table on the stationary table, a disc having radial slots mounted on the said spindle with which slots the said pin or roller engages and means for holding the revolving table in a predetermined position during the stationary period.

1,749,664. SPARK-PLUG-TESTING DEVICE. WALTER N. CLOUSE, Tiffin, Ohio, assignor of one-half to Carey A. Lull, Tiffin, Ohio. Filed July 22, 1926. Serial No. 124,246. 3 Claims. (Cl. 175—183.)



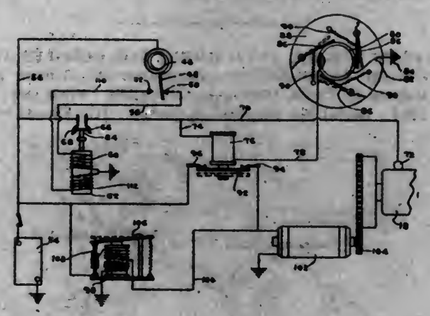
1. A device adapted to form an air tight connection between a spark plug and a casing of a testing device comprising a compressible gasket arranged against an opening in the casing and provided with an opening through which a portion of a spark plug is adapted to be inserted, a portion of the casing adjacent and concentric to said gasket being threaded, a cap engaging the threaded portion of said casing and contacting with said gasket whereby the latter may be compressed to vary the size of the opening therein, and means carried by said casing for clamping another portion of the spark plug against said gasket to form a closure for the opening therein.

1,749,665. CONSERVING STORAGE-BATTERY SOLUTION. CHARLES B. DILTZ, Frost, Tex. Filed Feb. 4, 1927. Serial No. 166,026. 1 Claim. (Cl. 136—154.)



A storage battery electrolyte containing a 1.25 solution in water of sulphuric acid to which has been added in each gallon ½ lb. of sodium carbonate, 1½ oz. of boric acid, 1½ oz. of tartaric acid, 1 oz. of carmine, and 2 ozs. of sodium silicate.

1,749,666. WINDOW. JAMES H. FENNESSY, Dayton, Ohio. Filed Mar. 21, 1928. Serial No. 263,428. 1 Claim. (Cl. 30—58.)

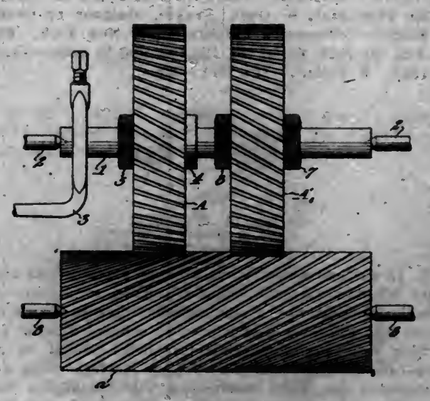


A window structure comprising a window frame including top and bottom rails and side rails, a sash within said frame including top and bottom bars and connecting side bars, supporting arms for the sash arranged between the top bar of the sash and the top rail of the frame and between the bottom bar of the sash and the bottom rail of the frame, means pivotally securing the outer ends of said arms directly to the inner faces of the top and bottom rails of the window frame adjacent to one side rail thereof, pivot bolts rotatably carried by the upper and lower bars of the sash having their shanks provided adjacent to their heads with polygonal portions, said arms having polygonal openings for receiving the polygonal portions of said shanks of the bolts, and a supporting bracket for the lower arm secured to the bottom rail of the window frame in transverse alinement with the pivot points of the arms, whereby the lower arm will rest upon said bracket when the arms are swung at right angles to the window frame.

1,749,667. HAT IRON AND STEAMER. DAVID FREEDLEIN, New York, N. Y. Filed Apr. 12, 1928. Serial No. 269,579. 10 Claims. (Cl. 223—28.)

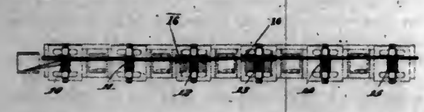
1. An iron and steamer, including a hollow body having a partition therein forming with the body a steam chamber, and a steam pipe extending into said chamber and passing downwardly through said partition below the chamber, said steam pipe being formed into a drying coil below the partition, the drying coil being collapsible in response to pressure exerted thereon in the use of the iron.

1,749,668. AUTOMATIC STOPPING AND STARTING DEVICE FOR GASOLINE ENGINES. KENNETH A. GRAVES, Fargo, ROBERT C. GRAVES, Doyon, and HENRY JUNBAU, Grand Forks, N. Dak. Filed June 8, 1926. Serial No. 113,519½. 4 Claims. (Cl. 290—35.)



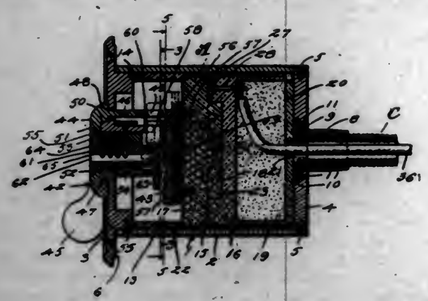
1. In an automatic stopping and starting device for gasoline engines, the combination of a thermostat located in a chamber whose temperature is to be controlled, said thermostat having a movable member and fixed maximum and minimum contact points, a battery connected to said movable member, a starter generator driven by the engine, a two-part electromagnetic device one side of which is connected to said maximum contact point to cause current to flow from said battery to the engine ignition and to said starter generator for starting the engine when the temperature in said chamber rises to a predetermined point, a throw-out device operated by the engine which cuts off the supply of current from said battery to said starter generator when the engine is fully started, and a connection between the second side of said two-part electromagnetic device and said minimum contact point whereby current to the engine ignition is cut off when the temperature in said chamber falls to a predetermined point.

1,749,669. HANGER FOR AIR CABLES. OTTO ANGELL GRÖNBERG, Oslo, Norway. Filed Dec. 11, 1926, Serial No. 154,152, and in Norway Dec. 22, 1925. 2 Claims. (Cl. 248—38.)



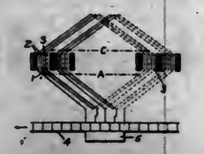
1. A hanger for air cables formed from a single strip of resilient metal comprising a medial portion, loops continuing from the ends of the medial portion and adapted for fitting a carrying wire and a cable respectively, end portions continuing from the loops and arranged adjacent the medial portion, and means for connecting each of the end portions independently with the medial portion, including tongues integral with and projecting from the lateral edges of one of said portions and engaging and gripping the lateral edges of the other adjacent portion.

1,749,670. METHOD OF AND APPARATUS FOR MAKING GEARS. WILLIAM E. HOKE, Baltimore, Md. Filed Mar. 15, 1928. Serial No. 261,874. 5 Claims. (Cl. 51—26.)



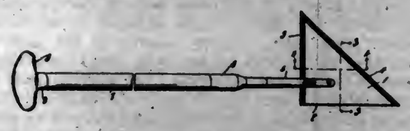
1. The method of forming a pair of precision, complemental gears which comprises forming a pair of complemental precision laps by lapping the same upon each other, and forming the gears of said pair by lapping the same with the respective laps of the complemental precision laps.

1,749,671. PROCESS FOR ROLLING METAL. WILLIAM T. MILLER, Bethlehem, Pa., assignor to Bethlehem Steel Company. Filed Feb. 11, 1925. Serial No. 8,877. 2 Claims. (Cl. 80—60.)



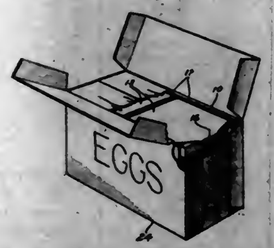
1. The process of rolling bars which consist in passing a billet through rolls which simultaneously twist and reduce the metal and then passing such twisted metal through a pass to reduce but not twist the metal.

1,749,672. LOCK-CONTROLLED IGNITION SWITCH. CHARLES W. MITCHELL, Nashville, Tenn. Filed Sept. 5, 1925. Serial No. 54,737. 4 Claims. (Cl. 200—44.)



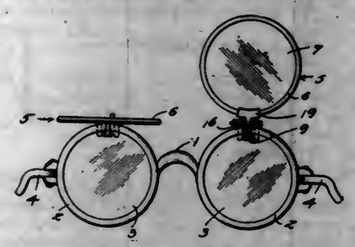
1. An electric switch comprising a movable circuit making and breaking member, a fixed member, a spring pressed movably mounted operating member for said first member, a spring pressed bolt carried by said first member and normally engaging said fixed member, a detent for engagement with said operating member, and a lock for moving the bolt into engagement with the operating member and holding the detent in position to engage said operating member.

1,749,673. DYNAMO-ELECTRIC MACHINE. JOSEPH M. PESTARINI, St.-Ouen, France, assignor to General Electric Company, a Corporation of New York. Filed Aug. 10, 1926, Serial No. 128,493, and in France Oct. 8, 1925. 6 Claims. (Cl. 171—228.)



1. In a dynamo electric machine, an armature, an armature winding thereon comprising main conductors and auxiliary conductors, a single commutator to which said main and auxiliary conductors are connected, coils comprising said auxiliary conductors being wound on said armature in the same direction as corresponding coils comprising the main conductors, and means for short circuiting coils comprising said auxiliary conductors when commutation of corresponding coils comprising said main conductors takes place and keeping said coils comprising said auxiliary conductors short circuited during commutation of said coils comprising said main conductors and until the current induced in said coils comprising said auxiliary conductors by the reversal of the load current in the corresponding coils comprising said main conductors has died out.

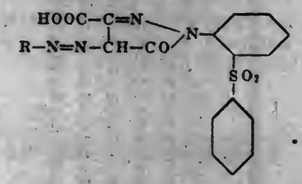
1,749,674. AGRICULTURAL IMPLEMENT. JOSEPH G. ROBERSON, Corcoran, Calif. Filed May 5, 1927. Serial No. 189,017. 1 Claim. (Cl. 97—68.)



An agricultural implement, comprising a handle, a flat plate secured to said handle and forming a cutting blade, said plate being in the shape of a right angled triangle and secured to an end of the handle and at an acute angle to the axis thereof, the side of said plate corresponding to the base of the triangle being arranged transversely of the axis of the handle and sharpened and forming the rear edge of the blade, the side of the plate at right angles to the rear edge comprising one side of the blade and being unsharpened, and the remaining side of the plate being sharpened and joining the other sides forming sharp points directed forwardly and laterally of the handle.

1,749,675. EGG-PROTECTING MEANS. PAUL A. A. ROUIS, Burlingham, N. Y. Filed Mar. 12, 1927. Serial No. 174,948. 2 Claims. (Cl. 217—3.)

1. The combination with a crate adapted to contain eggs, of a separate preformed outer protective covering adapted to be arranged on said crate to completely enclose the crate and being removable from the crate, and a separate preformed inner protective lining adapted to lie contiguous the adjacent walls of the crate and to completely enclose the eggs and being removable from the crate, said inner lining having an indicia bearing flap capable of being attached to the upper edge of one of the walls of the crate, and exposed to view with the outer protective covering on the crate.

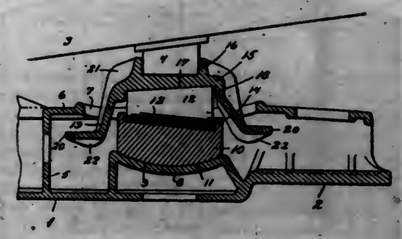


1,749,676. SHADE ATTACHMENT FOR GOGGLES AND OTHER EYEGLASSES. FREDERICK W. SADLER and ROBERT C. VEIRS, Oklahoma City, Okla. Filed Oct. 13, 1927. Serial No. 225,965. 7 Claims. (Cl. 88—41.)

1. An attachment for goggles comprising shades, means connecting the shades to the goggles for circumferential adjustment with respect to the glasses thereof, and means carried by said first means for securing the shades in adjusted angular positions relatively to the surfaces of said glasses.

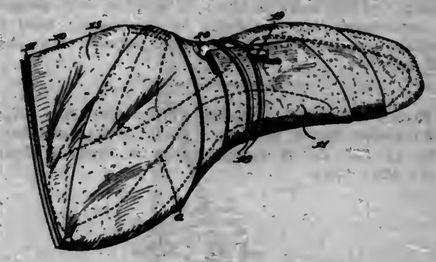
1,749,677. AMINODIARYLSULFONPYRAZOLONE AZO DYESTUFFS. HUGO SCHWEITZER, Wiesdorf, near Cologne, and WILHELM NEELMEIER, Leverkusen, near Cologne, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Jan. 5, 1926, Serial No. 79,476, and in Germany Jan. 8, 1925. Divided and this application filed Mar. 30, 1927. Serial No. 179,708. 8 Claims. (Cl. 260—87.)

1. As new products, the azodyestuffs having in the free state most probably the formula:



wherein R represents an aromatic group and in which the benzene nuclei attached to the sulphone group may be substituted or not, which dyestuffs are obtainable by coupling a corresponding aromatic diazo compound with a pyrazolone carboxylic acid of an amino-diarylsulphone.

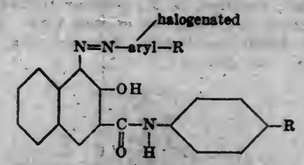
1,749,678. MANUFACTURE OF ALLOY STEELS. ARCHIBALD D. SHANKLAND, Bethlehem, Pa., assignor to Bethlehem Steel Company. Filed May 19, 1926. Serial No. 110,287. 9 Claims. (Cl. 75—45.)



1. A method of introducing an alloying element into a bath of steel by including scale containing said element in a furnace charge, which consists in, making a reduction mixture of the scale and a suitable reducing agent, charging the mixture into a furnace in such a manner as to be substantially surrounded by the ferrous metallic constituents of the charge, the portion of the latter underlying the reduction mixture having been previously heated to an impervious coalescence, and effecting fusion of the entire furnace charge in the normal manner.

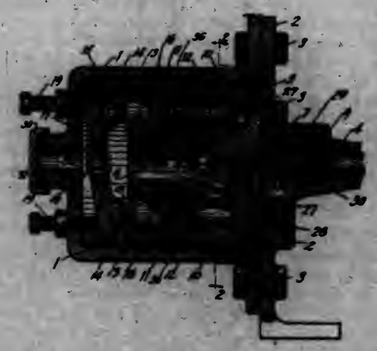
1,749,679. RAILWAY-TRUCK BOLSTER. THOMAS H. SYMINGTON and PERCY R. DRENNING, Baltimore, Md., assignors to T. H. Symington & Son, Inc., Baltimore, Md., a Corporation of Maryland. Original application filed Apr. 9, 1926, Serial No. 100,943. Divided and this application filed Mar. 17, 1927. Serial No. 176,128. 14 Claims. (Cl. 308—226.)

1. A railway truck bolster having a pocket therein, a support within the pocket, a roller movably mounted on the support, a bearing member resting upon the roller, and adapted to receive a depending bearing element on a body bolster for movement therewith, and equalizing means permitting automatic shifting of the support and tilting of the axis of the roller to establish straight line contact thereof with the support and the bearing member.



1,749,680. CONTAINER. GERTRUDE P. VISSCHER, Memphis, Tenn. Filed Aug. 23, 1927. Serial No. 214,962. 1 Claim. (Cl. 150—3.)

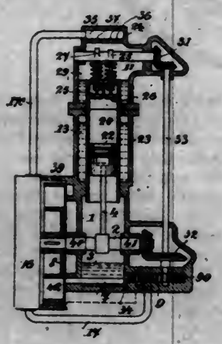
A device of the class described comprising a deformable body open at one side, a freely flexible closure flap extended at one side edge of the opening of said body and adapted to be wound about said body, said closure flap being cut away at one side and outwardly from the body on a line extending diagonally with respect thereto, whereby the flap is of maximum length at one side of the transverse center of the body, a flexible securing means for said flap and adapted to be encircled about the body and flap, and means carried by the free end of said flap for attaching said securing means thereto, said last-mentioned means being adapted to secure the free end of said securing means after the same has been encircled about the body and flap.



1,749,681. AZO DYESTUFFS AND PROCESS OF MAKING SAME. HERMANN WAGNER, Bad-Soden-on-the-Taunus, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Feb. 12, 1923, Serial No. 618,710, and in Germany Feb. 24, 1922. Divided and this application filed Dec. 23, 1925. Serial No. 77,390. 8 Claims. (Cl. 260—95.)

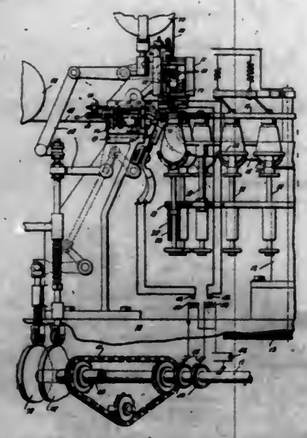
1. As new products azo-dyestuffs of the following constitution:

wherein R designates an alkyl or alkyloxy group.



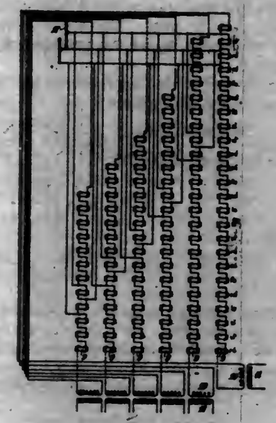
1,749,682. PUMP. ARTHUR SHELDON WELDY, Canton, Ohio. Filed Sept. 3, 1926. Serial No. 133,453. 10 Claims. (Cl. 103—162.)

1. In a pump of the character described, a rotor provided with a plurality of parallel disposed pumping cylin-



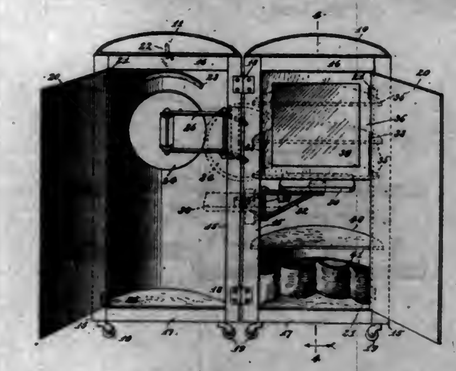
ders, a hollow shaft adapted to be placed in communication with said cylinders through passages angularly disposed to the axis of said shaft, and check valves in said passages having movable elements adapted to be actuated by centrifugal force developed by the moving rotor for normally cutting off communication between said shaft and cylinders.

1,749,683. INTERNAL-COMBUSTION ENGINE. HANS WINDHOFF, Berlin, Germany. Filed Oct. 14, 1926, Serial No. 141,555, and in Germany Aug. 20, 1926. 2 Claims. (Cl. 123—170.)



1. An internal combustion engine, comprising means for cooling the engine cylinder with the oil that is used for lubricating the working parts of the engine, a crank casing adapted to contain oil for splash lubrication, a fan arranged directly in front of one end of the crank casing, a radiator arranged in front of said fan and means for supplying warm oil from the crank chamber to the radiator to be cooled.

1,749,684. ELECTRIC SOLDERING MACHINE. DANIEL K. WRIGHT, Paterson, N. J., assignor to General Electric Company, a Corporation of New York. Filed Mar. 28, 1925, Serial No. 19,129. Renewed Aug. 21, 1929. 23 Claims. (Cl. 176—3.)



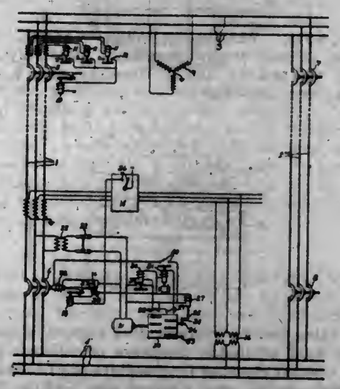
1. In a soldering machine, the combination of a movable work holder, a pair of electrodes mounted adjacent the path of said holder to make electrical contact with an object in said holder, actuating mechanism for bringing said electrodes and said holder into and out of operative relation to each other, and a solder feed device actuated by said mechanism to place solder in contact with the portion of said object heated by flow of current through it from one electrode to the other.

1,749,685. PROCESS FOR THE GENERATION AND SYNTHESIS OF SOUNDS. RAYMOND ZOUCKERMANN, Cherbourg, France. Filed Jan. 13, 1926, Serial No. 81,024, and in France June 2, 1925. 1 Claim. (Cl. 84—1.)

An electrical musical instrument comprising in combination; alternators constituted each by a toothed iron disc rotating in front of coils with a magnetized core, each coil corresponding to a fundamental sound (or a first harmonic) or to a harmonic of a given order of another fundamental; transformers of the same number as that of the harmonics to be combined for producing a resultant sound; means for connecting all the coils corresponding to a given order of harmonics, to the primary winding of the corresponding transformer; an amplifier connected to the secondary windings of the transformers; contacts short-circuiting the coils, each contact short-circuiting at the same time the various coils corresponding to a fundamental sound and to the harmonics of the latter, and means for independently regulating the ratio of transformation of each of the transformers and the resistance of their secondary circuit.

1,749,686. COMBINATION ARTICLE OF FURNITURE. THEODORE AGAZZI, Brooklyn, N. Y. Filed July 12, 1928. Serial No. 292,304. 1 Claim. (Cl. 312—152.)

The combination of a cabinet having a pair of hingedly connected sections, a horizontally disposed table swingably carried by one section for movement from a normally housed inactive position within said section to an exposed outwardly projecting active position, and a vertically disposed mirror swingably carried by the other section for movement from a normally housed inactive



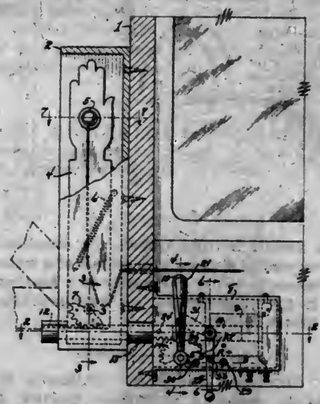
position within said section to an exposed active position over the table to render the cabinet useful as a dressing table, a drop-leaf swingably carried by the upper portion of one section and movable downwardly from a normally vertically disposed position to a horizontal position extending outwardly of the section, said leaf having a mirror on its outer side adapted to cooperate with the first mentioned mirror to obtain a double reflection when the leaf is in its normal vertical position.

1,749,687. DOOR AND LINTEL FOR SILOS. ADOLPH I. ANDERSON, Zumbrota, Minn. Filed May 4, 1928. Serial No. 275,110. 3 Claims. (Cl. 72—98.)

1. A lintel, comprising a thin metallic plate element and a relatively heavy body of reinforced concrete mechanically connected therewith, the plate being proportioned for support in a wall structure laterally of a frame for an opening therein.

1,749,688. AUTOMATIC RECLOSING CIRCUIT-BREAKER SYSTEM. ARVID E. ANDERSON, Lansdowne, Pa., assignor to General Electric Company, a Corporation of New York. Filed Feb. 8, 1929. Serial No. 338,584. 4 Claims. (Cl. 175—294.)

1. In combination, a polyphase source of current, a polyphase load circuit, a polyphase feeder connecting said source and circuit, an overload circuit breaker between said source and feeder, a circuit breaker between said feeder and circuit, fault responsive means for opening said last mentioned circuit breaker, means responsive to a single-phase voltage of said feeder for reclosing said last mentioned circuit breaker, and means for limiting the reclosures of said last mentioned circuit breaker to a predetermined number when a fault occurs which effects the opening of said last mentioned circuit breaker without effecting the opening of said overload circuit breaker and the deenergisation of the phase to which said reclosing means responds.

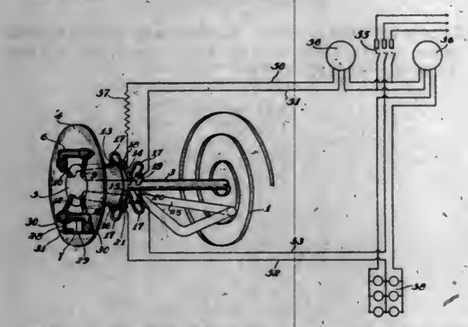


1,749,689. TOY TARGET. FRED T. BAUM, Marion, Ind. Filed Apr. 15, 1929. Serial No. 355,184. 3 Claims. (Cl. 273—102.)

1. A target comprising a support element having a horizontal row of apertures adjacent the upper edge thereof, a target swingably mounted on the edge of said support and in vertical alinement with each of said apertures, said target having a downwardly extended portion passing

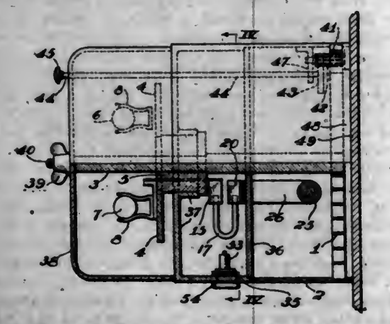
through its associated aperture, said portion having upon its reverse side a numerical value, adapted to be displayed upon rearward swinging movement of said target.

1,749,690. TURN SIGNAL. LAWRENCE M. BEARLAND, Missoula, Mont. Filed June 24, 1927. Serial No. 201,242. 1 Claim. (Cl. 177—327.)



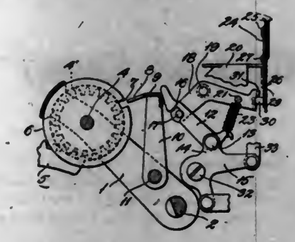
A signal for the purpose set forth, including a fixed casing having an outer open face, a signal arm in the casing, a pivot for the signal arm, a spring influencing the signal arm into the casing, a toothed segment on the pivot, a rack bar engaging the segment, a solenoid having a core fixed to the rack bar, a shaft, a segmental member freely mounted on the shaft engaging with the rack bar, a lug on said segmental member, a lever on the shaft, a pivotally supported spring influenced handle carried by the lever, a pivoted dog carried by the lever and slidable therethrough, said casing having three concentrically arranged equidistantly spaced openings to receive the dog therethrough, a finger fixed on the shaft and in the path of contact with the lug, spaced contacts in the circuit for the solenoid, a switch lever, a pivot to which the switch lever is connected and said switch lever being, also in the solenoid circuit and swingable to engage with the contacts, said lever having its inner face indented, spring influenced dogs to engage in the said indenture of the switch lever when the switch lever is swung to engage with the several contacts and a contact element on the pivot for the switch lever swingable in the path of the lug on the segment when the switch lever is swung to engage with any of the several contacts.

1,749,691. THREAD HOLDER AND CUTTER. ANNA ZENTZ BENNETT, San Diego, Calif. Filed Jan. 14, 1929. Serial No. 332,405. 3 Claims. (Cl. 242—126.)



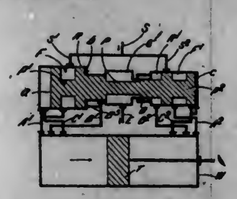
1. A thread cutting attachment for spools comprising a plate adapted to be attached to the end of a spool, a curved flange at one edge of the plate and adapted to extend along and be slightly spaced from the edge of the spool, said attachment being oppositely notched to provide outer thread engaging clamps and inner cutting edges.

1,749,692. ELECTRIC HEATING SYSTEM. CLARENCE E. BOGGS, Boise, Idaho, assignor to Edison Electric Appliance Company, Inc., a Corporation of New York. Filed Apr. 10, 1926. Serial No. 101,150. 10 Claims. (Cl. 219—20.)



1. In an electric heating system, the combination with a range connected in a three wire circuit of a water heater, and a thermostatic switch responsive to a heating element connected in the range neutral for automatically opening the water heater circuit.

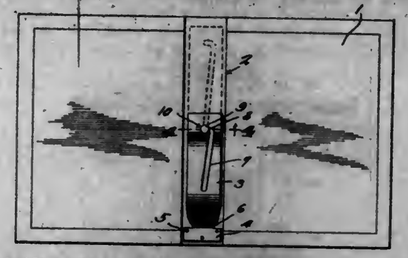
1,749,693. CONTROL SWITCH. CLARENCE E. BOGGS, Boise, Idaho, assignor to Edison Electric Appliance Company, Inc., a Corporation of New York. Original application filed Apr. 10, 1926, Serial No. 101,150. Divided and this application filed Oct. 5, 1926, Serial No. 139,629. Renewed Dec. 4, 1929. 8 Claims. (Cl. 200—122.)



1. A thermostatic switch comprising a bimetallic bar, an operating shaft secured to and adapted to be actuated by said bar, a plurality of mercury switches associated with and adapted to operate with the movement of said shaft, and a resistor element mounted adjacent said bar, said mercury switches being adapted for operation by the actuating characteristics of said bar responsive to the heat variations of said resistor element and one of said switches constituting a by-pass on said resistor element.

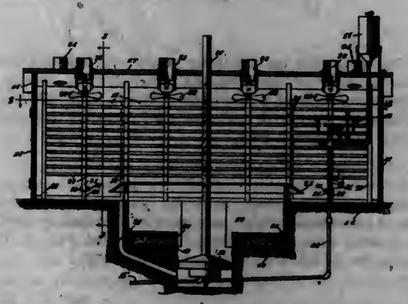
1,749,694. ADDING AND RECORDING MACHINE. CHARLES E. BROMAN, Grand Rapids, Mich., assignor, by mesne assignments, to Add-Index Corporation, a Corporation of Delaware. Filed Dec. 31, 1921. Serial No. 526,268. 6 Claims. (Cl. 235—60.)

6. In an adding and recording machine the combination of a movable accumulator, a shiftable support for a ribbon inked in a distinctive color, and means controlled by the movement of the accumulator for shifting the ribbon support to bring the distinctive part of the ribbon to printing position when the parts of the accumulator are at zero or clear position.



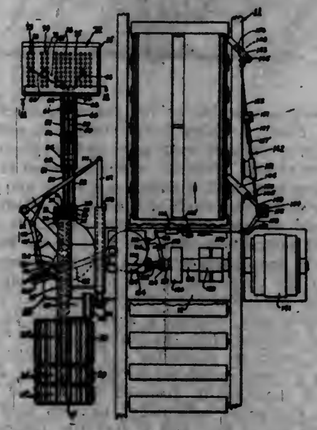
1,749,695. FLUID-ACTUATED VALVE. RAIMUND DRATH, Grunau, Berlin, Germany. Filed July 27, 1926, Serial No. 125,274, and in Germany Aug. 1, 1925. 1 Claim. (Cl. 121—150.)

In a valve gear for reciprocating engines, a casing having two fluid admission chambers of different diameters and an exhaust chamber intermediate the two fluid admission chambers, an open exhaust pipe leading therefrom, a control valve in the form of a differential piston having at each end two discs separated by a groove, one pair of discs being of a larger diameter than the other pair, the area of the small end face, together with an annular surface situated on the inner side of the larger pair of discs being greater than the area of the larger end face, a working cylinder, a piston located therein, three valve control conduits leading from each fluid admission chamber to the working cylinder at its ends respectively and adapted to be opened and closed by the differential piston substantially as shown.



1,749,696. DISPLAY DEVICE. JOHN C. DUKE, Washington, D. C. Filed July 14, 1928. Serial No. 292,705. 5 Claims. (Cl. 206—44.)

1. The combination with a container having a depression in the bottom thereof, of a resilient strip normally seated flat within the depression, means for fixedly attaching one end of said strip to the container, there being an obliquely disposed slot within the strip having a lateral extension adjacent the free end of the strip, and means carried by the container and extending through the slot

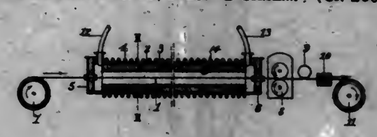


for holding the strip flat within the depression and for engagement with the free end portion of the strip to hold the strip bowed outwardly from the depression.

1,749,697. INCUBATOR. EDGAR EGAN, Meadow Grove, Nebr. Filed Aug. 10, 1928. Serial No. 298,805. 3 Claims. (Cl. 119—39.)

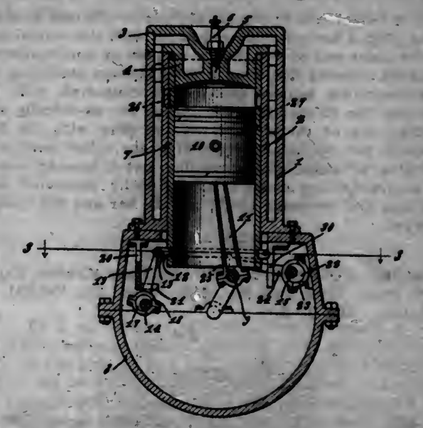
1. In an incubator, a housing having a pit, a heating element arranged within the pit, moisteners for the air emitted from said pit, a deflector having inclined surfaces and extended over the pit and elevated from the bottom of the housing, egg trays arranged within the housing, and fan members directing air currents upon the inclined surfaces of the deflector to cause circulation of the generated air around and about said trays.

1,749,698. AUTOMATIC BOX-STAMPING MACHINE. ERNEST E. EVANS, Riverside, Calif. Filed Nov. 23, 1927. Serial No. 235,187. 15 Claims. (Cl. 101—35.)



1. In combination with a conveyor, a printing member, means operated by an article on said conveyor to move said printing member against an article on said conveyor, said printing member including shiftable characters, and key operated selective means for moving said characters to printing position.

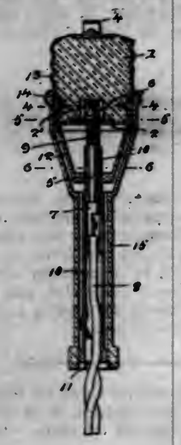
1,749,699. WEIGHTING OF SILK. ALBERT FEUBT., Krefeld, Germany. Filed Nov. 17, 1926, Serial No. 148,996, and in Germany Nov. 28, 1924. 14 Claims. (Cl. 8—13.)



1. In processes of weighting silk by means of salts of heavy metals, the step which consists in treating unweighted silk with a solution of a basic aluminum compound containing nitrate radicles.

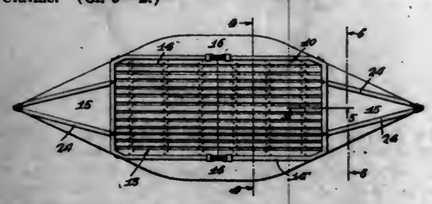
1,749,700. APPARATUS FOR THE CONTINUOUS TREATMENT OF METAL BODIES. MARCEL FOURMENT, Paris, France. Filed Dec. 22, 1926, Serial No. 156,424, and in France Dec. 29, 1925. 2 Claims. (Cl. 266—1.5.)

2. Apparatus for the continuous thermal treatment of metallic bodies comprising an air-tight tube of heat insulating material, the interior of this tube being provided with a facing of material conductive of electricity, said tube being surrounded by an inductor coil connected to a source of high frequency electricity, said coil being itself tubular and having means for leading a current of cooling fluid through said tubular coil.



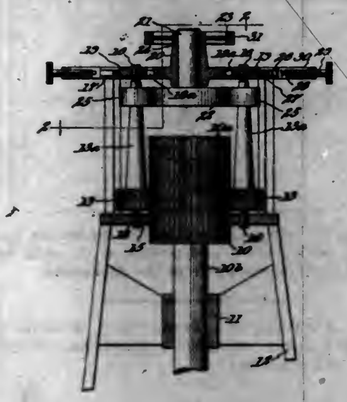
1,749,701. SINGLE-SLEEVE-VALVE ENGINE. EDWARD LESLIE GILBERT, Fort Bayard, N. Mex. Filed Apr. 18, 1928. Serial No. 269,775. 1 Claim. (Cl. 123—81.)

An internal combustion motor comprising a cylinder block, a head fitting thereon and having depending portions extending into the cylinders and spaced from the internal walls of the cylinders, a sleeve valve arranged in each cylinder with its upper end entering the space formed between the depending part of the head and the upper end of the cylinder, a crank case connected with the block, a crank shaft in the case, a piston slidably arranged in each sleeve valve, a rod connecting each piston with the crank shaft, a pair of shafts journaled in the crank case, means for connecting the shafts with the crank shaft, eccentrics on the shafts, rods connected with the eccentrics on one shaft, collars rotatably arranged on



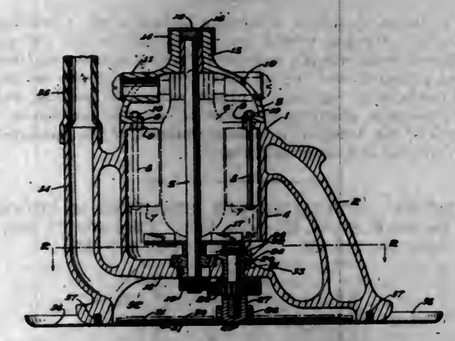
the sleeve valves and pivoted to said rods, projections on the lower end of each sleeve at opposite sides thereof, each projection having a rounded head, a pair of connecting rods having sockets at their inner ends receiving the heads of the projections on each sleeve, the outer ends of each pair of rods being connected with a pair of the eccentrics on the second shaft, a depending member in the crank case having a forked rightangular end, the prongs of which engage each rod which is pivotally connected with the collar for preventing side movement of said rod and a second forked member depending from a part of the crank case for engaging each rod connected with a projection on the sleeve for preventing side movement of said rod.

1,749,702. ELECTRIC SWIVEL. ELMA E. GOUCHER and RODNEY B. CUMMINGS, McMinnville, Oreg. Filed Aug. 25, 1928. Serial No. 301,970. 4 Claims. (Cl. 173—359.)



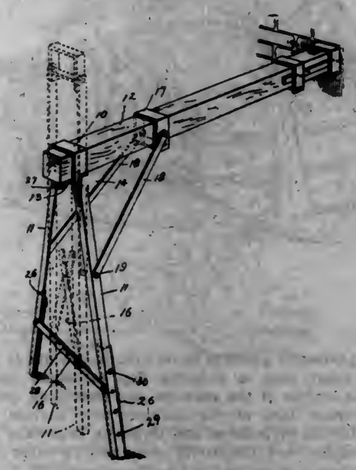
1. A swivel connection for electric conductors comprising a plug, a bar rotatably connected with the central part of the outer end of the plug, a member of non-conducting material covering the bar, a tubular member encircling the non-conducting member, conductors connected with the bar and the tubular member, means for electrically connecting one of the contacts of the plug with the bar, a brush for electrically connecting the other contact of the plug with the tubular member and a housing formed of non-conducting material mechanically connected with the plug and enclosing the brush, the bar and the tubular member.

1,749,703. COLLAPSIBLE BOAT. HANS HAUGEN, Fargo, N. Dak. Filed July 30, 1928. Serial No. 296,241. 3 Claims. (Cl. 9—2.)



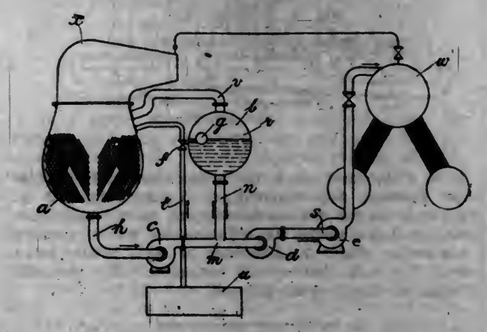
1. A collapsible boat comprising a main section, hollow buoyant end sections, hollow buoyant side sections, said end and side sections being adapted to be positioned within the main section when the boat is not in use, and means at the corners of the main section and common to the end and side sections to removably secure the end and side sections to the ends and sides of the main section upon the outside of the latter.

1,749,704. APPARATUS FOR FINISHING GEARS. WILLIAM E. HOKE, Baltimore, Md. Filed Jan. 11, 1924. Serial No. 685,684. 8 Claims. (Cl. 51—26.)



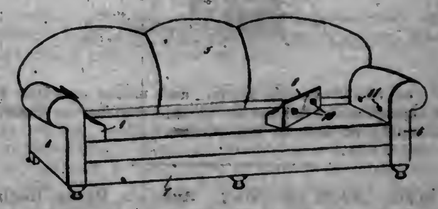
1. In apparatus for finishing gears, the combination of a central gear of considerable axial extent, means for revolubly supporting a plurality of gears to be finished in mesh relation therewith and means for reciprocating and for rotating the central gear.

1,749,705. ABRADING DEVICE. JOSEPH G. HUDSPITH, San Luis Obispo, Calif., assignor of one-half to Nathan S. Lewin, San Luis Obispo, Calif. Filed Feb. 6, 1928. Serial No. 252,212. 1 Claim. (Cl. 51—170.)



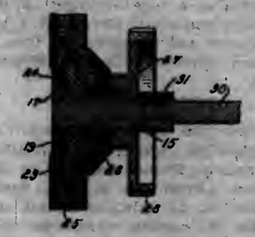
An abrading machine of the character described comprising a frame, a hollow body included in said frame, a shaft passing through said body and terminating below the bottom thereof, electrical means arranged in said body for rotating said shaft, a pinion carried by and fixed upon the lower end of said shaft, a bushing threadedly mounted within said bottom and vertically adjustable therein, a stub shaft journaled within the bore of the bushing and disposed in parallelism with the first mentioned shaft, a flange for the upper end of the bushing engageable with the bottom for limiting downward movement of the stub shaft within said bottom, a gear secured to said stub shaft and meshing with the pinion, a sleeve nut carried upon the lowermost depending end of the stub shaft and including a closed end socket portion therefor, an abrasive faced disk horizontally disposed within said bottom, a dove-tail connection established between said disk and closed end sleeve nut, and a centrally apertured guard carried by the frame adjacent the bottom to facilitate projection and rotation of the disk therein.

1,749,706. LEG FOR HORSES, ETC. FRANK G. KINGSTON, West Somerville, Mass., assignor to Builders Patent Scaffolding Company, West Somerville, Mass., a Partnership composed of Frank G. Kingston, A. R. Kingston, C. C. Pimm, and Mabel G. Kitchen. Filed Feb. 27, 1928. Serial No. 257,519. 4 Claims. (Cl. 304—5.)



1. A support for a horizontal member comprising a pair of member-engaging devices for separable connection with the member, a pair of legs connected to ons of said devices movable to diverge in opposite directions or towards one another and a pair of brace bars extending between the other device and the legs and pivoted to the legs for movement with said other device towards and from the legs.

1,749,707. STEAM-POWER PLANT WITH CLOSED FEED SYSTEM. CHARLES RUSSELL LANG, Cathcart, Glasgow, Scotland, assignor to G. & J. Weir, Limited, Glasgow, Scotland. Filed Feb. 11, 1928, Serial No. 253,778, and in Great Britain Feb. 26, 1927. 1 Claim. (Cl. 60—94.)

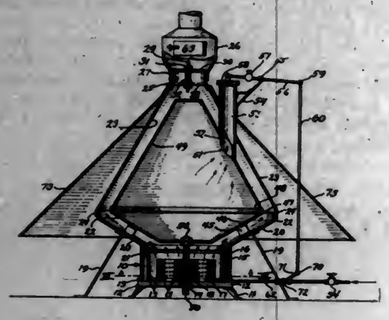


A steam power plant having the feed system arranged as a closed-feed system and including a boiler, a steam engine (which may be a turbine), a main condenser, a main feed conduit, a water-extraction pump which deals with the feed water obtained by condensation of the steam in the said condenser and discharges this feed water under a pressure above atmosphere into the said main feed conduit, a boiler feed pump which discharges the feed water from said main feed conduit into the said boiler, a reserve feed tank open to the atmosphere, an elevated feed reservoir, means for maintaining the said elevated feed reservoir under the same pressure as existent in the said condenser, a pipe connecting the said reservoir—below the water level therein—with the suction of the said water-extraction pump, this pipe serving as means for to-and-fro movement of feed water between the said reservoir and the suction of the said pump, a float in the said reservoir, a pipe connecting the said condenser with the said reserve feed tank, a valve on this last-mentioned pipe, and mechanism whereby the said valve is controlled by the said float so as to be closed with a high position of the float and opened by a fall of the float.

1,749,708. BED DAVENPORT. EMIL LEVY, Lima, Ohio. Filed Aug. 20, 1928. Serial No. 300,931. 1 Claim. (Cl. 5—12.)

In a bed davenport, a back, sides, having rigid arms, a folding spring structure normally confined between said sides below the arms, removable filler blocks normally overlying the folding spring structure at the ends thereof, removable cushions normally disposed on the folding spring structure between the filler blocks, and means for rigidly connecting the filler blocks with the arms to normally hold the folding spring structure in position positively against rising movement.

1,749,709. SANDPAPERING MACHINE. HAROLD A. LOVELAND, Honolulu, Territory of Hawaii. Filed Jan. 7, 1929. Serial No. 331,974. 2 Claims. (Cl. 51—197.)



1. In a machine of the character described, a head, a flexible abrasive disk of relatively large diameter mounted thereon and having its abrasive surface disposed beyond the transverse plane of the outer end of the head, a tension pad mounted upon the head behind the disk to yieldingly force the latter into engagement with the work, a locking ring removably mounted upon the outer end of the head for engagement by the disk, a compression ring mounted upon the head and bearing upon the tension pad to force the disk beyond the outer face of the locking ring, and means to force the compression ring into position.

1,749,710. CHICKEN-BROODER STOVE. LOUIS MADALENA, New York, N. Y. Filed May 1, 1929. Serial No. 359,505. 8 Claims. (Cl. 126—98.)

1. A chicken brooder stove comprising in combination a burner, a fuel supply line for said burner, an air

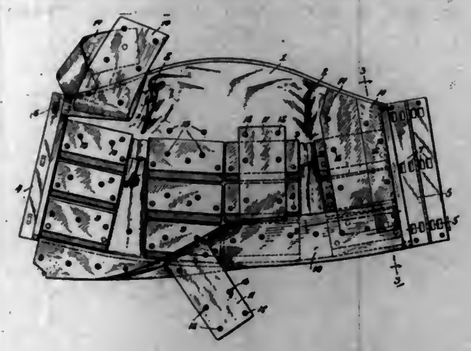
CARNEGIE LIBRARY OF ATLANTA

chamber above the burner, a second chamber surrounding said air chamber and communicating with the burner and the atmosphere so as to permit the escape of smoke

and the like from the burner, and means operated by the expansion of the air in the air chamber to control the supply of fuel to the burner.

1,749,711. RAFT OR BOAT. HERMANN MEYER, Berlin, Germany. Filed Sept. 26, 1927, Serial No. 222,063, and in Germany Oct. 11, 1926. 9 Claims. (Cl. 9—2.)

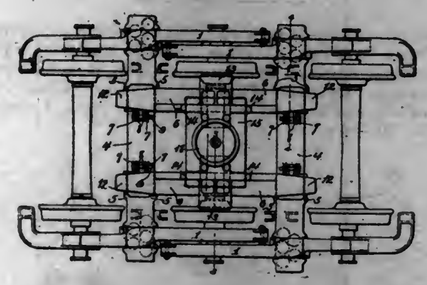
1. A raft of the class described, having an inflatable surrounding shell constituting the hull and provided with a plurality of spaced transverse walls dividing the shell into float compartments and inflating means for said compartments including a tube arranged on the surface of the shell, fixedly connected thereto at a point opposite each compartment and disconnected from and free to pass over such surface at points between each two compartments.



1,749,712. PROCESS FOR AUTOGENOUS WELDING OF MAGNESIUM AND ITS ALLOYS. GILBERT MICHEL, Bagneux, France, assignor to Hart O. Berg, Paris, France. Filed Feb. 5, 1925, Serial No. 7,158, and in France Dec. 23, 1924. 15 Claims. (Cl. 148—26.)

1. A process of welding magnesium and its alloys, consisting in heating the parts to be welded to a welding temperature, applying to the heated parts substances of the general character of those used in the autogenous welding of aluminum, and also a fluoride which acts as both a flux and dechlorinating agent, together with a substance acting as a reducing agent.

1,749,713. PROCESS FOR THE PROTECTION OF READILY-OXIDIZABLE METALS. GILBERT MICHEL, Bagneux, France, assignor to Hart O. Berg, Paris, France. Filed Aug. 13, 1925, Serial No. 50,140, and in France Mar. 20, 1925. 6 Claims. (Cl. 148—6.)

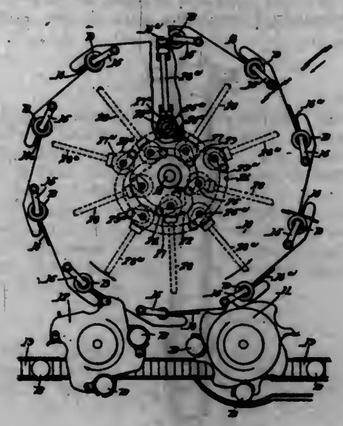


1. Process for the protection of objects made of readily oxidizable light metal containing magnesium, which comprises applying upon the surface thereof, a substance containing a phenol as a major component, which phenol is capable of readily reacting with magnesium to form a closely adherent protective layer on the surface of said article.

1,749,714. PROTECTIVE GARMENT. HERMAN A. NORTH, Bogota, N. J. Filed Nov. 15, 1928. Serial No. 319,669. 8 Claims. (Cl. 2—102.)

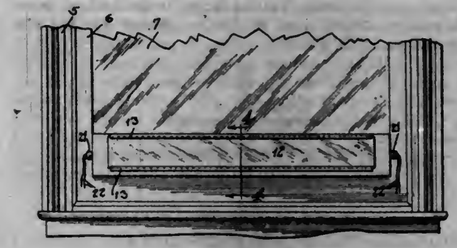
1. A protective garment having compartments or pockets on its inner face, a covering flap extending upwardly from the bottom of the garment and removably connected to the inner face of the garment over certain of the compartments or pockets, and strips on said flaps extending upwardly and removably connected to other of said compartments or pockets and to the garment.

1,749,715. SIX-WHEEL-TRUCK CONSTRUCTION. CLAUDE L. ORR, Columbus, Ohio, assignor to The Buckeye Steel Casting Company, Columbus, Ohio. Filed Aug. 24, 1928. Serial No. 301,863. 7 Claims. (Cl. 105—195.)



1. In a six-wheel truck, the combination of two transverse bolsters, two longitudinal bolsters mounted at their ends on the transverse bolsters, each longitudinal bolster having a medial recess in one side thereof forming a supporting shelf, the free ends of main bolster being carried by said shelves and extending only partially through the longitudinal bolsters.

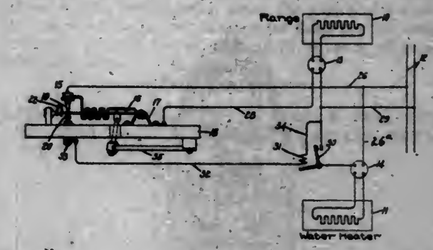
1,749,716. LABEL GRIPPER FOR DUPLEX LABELING MACHINES. CHARLES H. OSLUND, Worcester, Mass., assignor to The Liquid Carbonic Corporation, Chicago, Ill., a Corporation of Delaware. Filed Feb. 23, 1929. Serial No. 342,017. 8 Claims. (Cl. 216—13.)



1. In a labeling machine, the combination with a rotary table and a series of means on the table for clamping the articles to be labeled, of two series of label grippers arranged on the table in alternate relationship, a central vertical shaft on which the table is mounted, a pair of

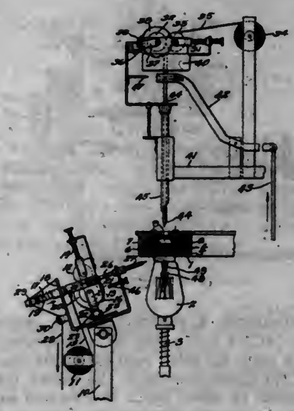
cams located in horizontal position around the shaft, one entirely inside the other, said cams having horizontal top

faces each provided with an open top cam groove and means connected with said cam grooves for operating the label grippers.



1,749,717. FLYTRAP. GEORGE PALMOS, Sacramento, Calif. Filed Jan. 17, 1929. Serial No. 333,121. 4 Claims. (Cl. 43—119.)

1. In a device of the character described, a box like structure, including top, bottom and end walls, a transparent plate slidably mounted between the top and bottom walls, forming the front wall of the box like structure, a pair of longitudinal strips mounted in spaced relation on the opposite side of said box like structure, one of said longitudinal strips having a longitudinal flange extending interiorly into the box like structure, whereby a baffle plate is formed to prevent the escape of insects from the interior of the box like structure, and illuminating means mounted in the box like structure for attracting flies and insects to the opening formed by the spaced longitudinal strips.

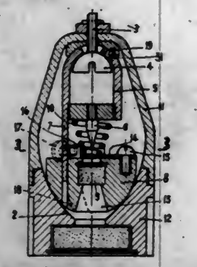


1,749,718. ELECTRIC SUPPLY SYSTEM. CHARLES P. RANDOLPH, Oak Park, and FRANCIS H. MCCORMICK, Glen Ellyn, Ill., assignors to Edison Electric Appliance Company, Incorporated, Chicago, Ill., a Corporation of New York. Filed Dec. 18, 1926. Serial No. 154,374. 16 Claims. (Cl. 219—20.)

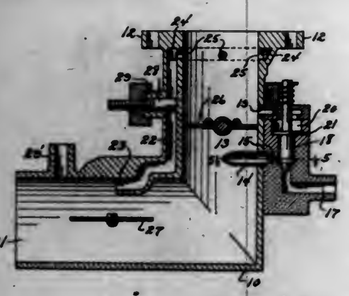
1. A system of control for a plurality of electrical devices constituting primary and secondary loads, comprising a thermostatic control device responsive to the amount of said primary load, and connections whereby said thermostatic control device reduces said secondary load when

said primary load exceeds a predetermined amount and reconnects said secondary load when said primary load is less than a predetermined amount.

1,749,719. ELECTRIC SOLDERING MACHINE. CASPAR REITER, Berlin-Treptow, and MAX STIGER, Berlin-Baumschulenweg, Germany, assignors to General Electric Company, a Corporation of New York. Filed Dec. 5, 1923, Serial No. 678,756, and in Germany Jan. 5, 1923. Renewed Dec. 24, 1928. 11 Claims. (Cl. 219—12.)



1. In a soldering machine for soldering a wire to a base terminal of a device comprising a glass vessel having a base with a metal terminal, the combination of a socket for receiving the base of said device to hold it with said terminal exposed and said wire adjoining said terminal, and means associated with said socket to electrically heat said base terminal, a solder feed device for feeding unmolten solder to said heated base at said exposed junction and actuating means for actuating said feed device while said terminal is hot.

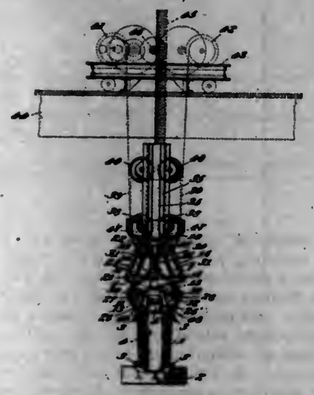


1,749,720. IMPACT IGNITION DEVICE. GREGORIO SCAGLIA, Turin, Italy, assignor to Societa Italiana Ernesto Breda, Milan, Italy, a Company of Italy. Filed May 23, 1927, Serial No. 193,590, and in Germany June 4, 1926. 13 Claims. (Cl. 102—39.)

1. An impact ignition device comprising a striker, a member carrying said striker, a primer, a second member carrying said primer, means interconnecting said members for respective movement with said striker and primer in aligned position, a supporting means for said members, means connecting one of said members with said supporting part for oscillatory motion with respect thereto, with freedom of oscillatory motion with respect

to said part, and means on said supporting part for effecting movement of the other one of said members to approach the first mentioned member on said interconnected members being displaced from their central position with respect to said supporting part, said first mentioned member being of less weight than the other one of said members.

1,749,721. CARBURETOR. JOSEPH STERBA, South Prairie, Wash. Filed Aug. 13, 1928. Serial No. 299,844. 2 Claims. (Cl. 261—46.)

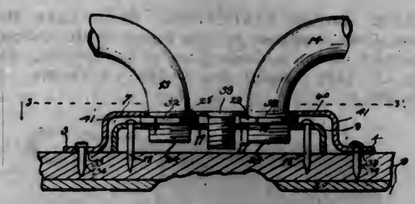


1. In a carburetor, a casing having a passage therethrough, open at its outer end for the admission of air and defining a main air inlet, said casing having its inner end adapted for connection with the intake manifold of an engine, means to admit liquid fuel to said passage for mixture with air passing through the passage, a throttle valve to control the feed of said mixture to the engine, means within the casing to provide an auxiliary air passage having its outer end opening into the outer end of the casing and its inner end opening into the inner end of the casing and beyond the throttle valve, and a valve positioned to close both the main and auxiliary air passages.

1,749,722. SUCKER-ROD ROTATOR. CLYDE STEVENS, Cotton Valley, La. Filed July 12, 1929. Serial No. 377,854. 2 Claims. (Cl. 74—14.)

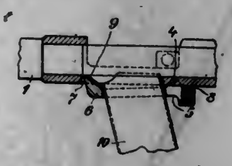
1. In combination with the beam and sucker rods of a well device, means whereby the strokes of the beam will impart a continuous rotary movement in the same direction to the rods, such means comprising a barrel having upper and lower diagonally arranged slots therein, a collar having rolls thereon engaging each slot, a piston member vertically movable in the barrel, means for connecting the lower end of the member to the sucker rods, means for connecting the upper end of the barrel to the beam, a pair of collars fastened to the piston member, one collar of the pair being arranged adjacent a collar of the other pair, said collars having intermeshing teeth thereon, the teeth of the upper pair extending in an opposite direction from the teeth of the lower pair, a spring engaging the upper collar which is fastened to the piston member and resting in the barrel whereby on the upward stroke of the beam, the weight of the rods and fluid will contract the spring and cause it to move the lower pair of collars into mesh and to cause the lower collar to move downwardly through the slots, thereby giving the piston member a turning movement, and on the down stroke the spring will be relieved of the weight of the rods and fluid so that it will move the upper pair of collars into mesh and move the upper collar upwardly through its slots to again rotate the piston member and the rods.

1,749,723. INGOT STRIPPER. RICHARD H. STEVENS, Westmont Borough, Pa., assignor to Bethlehem Steel Company. Filed Aug. 23, 1928. Serial No. 301,471. 29 Claims. (Cl. 22—95.)



18. In an ingot stripping machine, the combination with a ram, a reciprocating cradle mounted thereon, tongs comprising two pairs of oppositely opposed bell-crank main levers each having a comparatively long horizontal arm and a short vertical arm arranged to have their lower ends contact with the top of a mold, thimbles for spacing the bell-crank main levers apart, cheek-plates for connecting the two pairs of bell-crank main levers together and adapted to form a fulcrum therefor at the point of juncture between the horizontal and vertical arms around which the arms are rocked, links connecting the outer ends of the bell-crank main levers with the cradle, an auxiliary lever pivoted between each of the vertical short arms of the bell-crank main levers below their pivotal point and adapted to form a fulcrum therefor around which the said auxiliary arms may rock, ingot gripping bits formed on the inner ends of the auxiliary levers adapted to engage the ingot, link connections between the outer ends of the auxiliary levers and the ram, and means for raising the ram and cradles thereby exerting a downward pressure on the top of the mold and an upward force on the ingot.

1,749,724. PROCESS FOR TANNING HIDES AND SKINS. EDMUND GEORG STIASNY, Darmstadt, Germany, and BENZION JALOWZER, Paris, France. Filed Jan. 3, 1927, Serial No. 158,814, and in Germany Nov. 30, 1925. 14 Claims. (Cl. 149—5.)

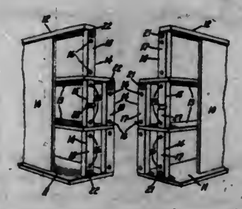


13. The process of tanning hides and skins, which comprises treating the material to be tanned with a bath comprising substances capable of forming complex ferric-sulphite compounds, containing several aliphatic carboxylic acid radicles.

1,749,725. CONDUIT SUPPORT. ALBERT UHL and PETER E. BAICKIE, Chicago, Ill. Filed Mar. 10, 1924. Serial No. 698,080. 16 Claims. (Cl. 247—21.)

7. The combination with an outlet box resting upon a concrete form member, of wire ducts extending into the box through the upper wall of the outlet box, each duct having a projection engaging the top of the said upper wall, a single rigid retaining member extending over the top of the outlet box between the ducts and engaging the upper faces of all of the said projections, and fastening members driven vertically downward through spaced portions of the retaining member and into the form member for securing the retaining member in its said disposition with respect to the said projections.

1,749,726. CARTRIDGE GUIDE FOR REPEATING GUNS. RUDOLF VON FROMMER, Budapest, Hungary. Filed Aug. 14, 1928, Serial No. 299,627, and in Hungary Aug. 24, 1927. 2 Claims. (Cl. 42—16.)

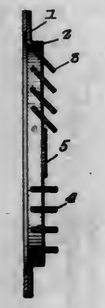


1. In a magazine fire arm, a breech casing, a breech movable in said casing, an elongated opening in the base of said casing, a cartridge magazine insertible in said opening from beneath the casing, a lever pivotally mounted on the under side of said casing adjacent its tail end and adjacent the rear end of said breech casing opening, said lever having a head portion positioned to enter the forward end of said opening and having an upwardly sloping cartridge guiding face, said head and tail portions being positioned at and beyond the opposite ends of said magazine and being connected by a laterally offset body portion positioned at and outwardly of one side of said magazine and providing with said head and tail portions a channel through which the upper end of said magazine is freely insertible to extend into said breech casing opening, and a spring acting downwardly upon the tail portion of said lever and normally maintaining its head portion extended upwardly in said breech opening in advance of said cartridge magazine.

1,749,727. LUBRICANT GUN. OSCAR U. ZERK, Chicago, Ill. Filed Nov. 27, 1929. Serial No. 410,216. 22 Claims. (Cl. 221—47.4.)

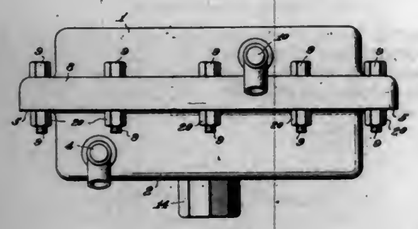
1. In a lubricant gun discharge nozzle, a nose, provided with a spherical socket, a nozzle piece, a spherical knob thereon universally oscillatable in the socket, a conduit through the nose and nozzle piece at all oscillated relative positions, the conduit including a tubular resilient coupling connecting the nose and nozzle piece.

1,749,728. SPLIT FRAME FOR DYNAMO-ELECTRIC MACHINES AND METHOD OF MAKING THE SAME. ALEXANDER P. WOOD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 7, 1928. Serial No. 268,336. 9 Claims. (Cl. 171—252.)



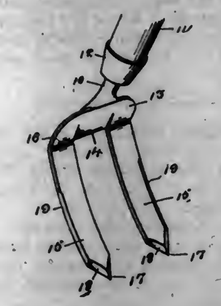
1. A split frame for dynamo-electric machines comprising a plurality of sectors having their ends spaced apart, and means forming a joint connecting said sectors including pairs of members separably secured together and having means for retaining them in a predetermined relation to each other when they are secured together.

1,749,729. ANTIGLARE DEVICE. ROY ZIGLER, Plymouth, Ohio. Filed Dec. 10, 1928. Serial No. 324,997. 1 Claim. (Cl. 240—48.4.)



A device of the class described comprising a ring-shaped supporting member, a transversely arranged strip of con-

siderable width extending across the central part of the opening and having its ends connected with the ring-shaped member, a number of diagonally arranged strips extending across the top part of the opening and sloping downwardly and outwardly and having their ends connected



with the supporting member and a plurality of horizontally arranged strips extending across the lower part of the opening and having their ends connected with the supporting member all of said strips being formed of opaque material and spaced apart.

1,749,730. FILTER DEVICE. FRANCIS L. M. KENNEY, Los Angeles, Calif. Filed June 22, 1928. Serial No. 287,433. 16 Claims. (Cl. 210—185.)

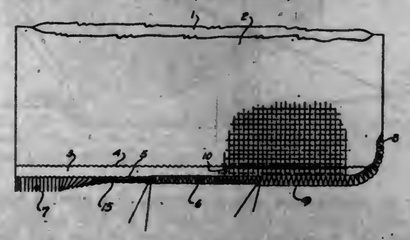
1. In a filter, a filter container divided into two major parts an upper part and a lower part, the upper part carrying a skirted flange on its lower marginal rim and the lower part carrying a flange on its upper marginal rim with suitable means for detachably associating said upper and lower parts together, an opening in lower part of container for ingress of liquid and another opening therein with faucet means for egress of non-filtered liquid and an opening in top part of container with adjustable faucet means therein for egress of filtered liquid, a filter element composed of porous material supported by grated metal means with gaskets intervening between filter element and container flanges and means for detachably securing filter element in place to and between upper and lower parts of container, detachable means for breaking force of liquid entering container and for spreading same over filter element and threaded means for associating filter with a supply line.

1,749,731. CULTIVATOR. HENRY MEHLIG, Corvallis, Oreg. Filed Apr. 9, 1928. Serial No. 268,740. 2 Claims. (Cl. 97—63.)

1. A cultivator comprising a plate member, tines carried by and offset therefrom and the outermost portions of the plate between the tines and the extremities of the tines being sharpened to effect penetration of the ground.

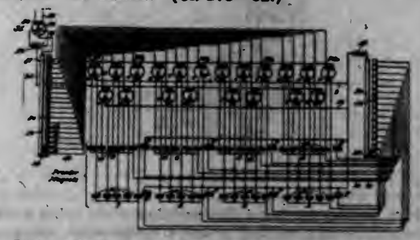
1,749,732. BRUSH STRUCTURE. HENRY CAVE, Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 1, 1926. Serial No. 85,108. 4 Claims. (Cl. 15—205.)

1. A brush structure including a channel-strip having sides forming a constricted mouth, and bristles secured and crossed within the channel and projecting through said mouth, the sides of said channel outside of and adjacent said mouth being flared outwardly to form a side support for bristles extending from the opposite side of the channel strip.



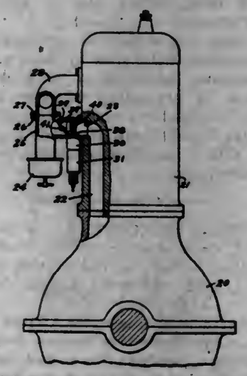
1,749,733. CORNER BRUSH. HENRY CAVE, Hartford, and CURTISS F. SMITH, West Hartford, Conn., assignors to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 13, 1927. Serial No. 239,787. 4 Claims. (Cl. 15—160.)

1. A corner brush including a head formed from a single strip of metal of trough shape with bristles tightly secured



therein, said head being "doubled" by a sharp bend at its outer end to form independent sides located close together, and a handle to which the ends of said sides are connected.

1,749,734. NETTED-CORD-FABRIC BAG. TIMOTHY J. KELLY, Passaic, N. J., assignor to Brighton Mills, a Corporation of New Jersey. Filed Mar. 28, 1928. Serial No. 265,442. 4 Claims. (Cl. 150—1.)

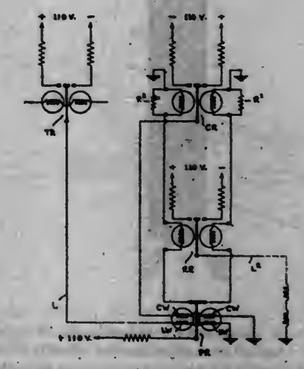


1. A tubular netted laundry bag having its closed end overcast, a line of stitching spaced from the overcast closure and the loose cord ends turned down into a dense compact edge within said overcast stitching.

1,749,735. MULTIPLEX TELEGRAPH SYSTEM. HAKON H. HAGLUND, Flushing, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed June 22, 1927. Serial No. 200,686. 32 Claims. (Cl. 178—52.)

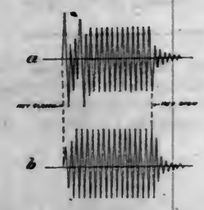
1. The method of operating a telegraph distributor which comprises associating the segments thereof with one set of printer magnets during a rotation thereof and with another set of magnets during the succeeding rotation thereof.

1,749,736. COINCIDENTAL LOCK. EDWARD V. RIPPINGILLE, Detroit, Mich., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 29, 1927. Serial No. 216,120. 8 Claims. (Cl. 70—90.)



1. A control device for an internal combustion engine having a cylinder block and crank-case, the cylinder block being provided with a passage communicating with the crank-case; a carburetor having a fuel mixture passage communicating with the combustion chamber of the engine; a by-pass providing communication between the fuel mixture and cylinder block passages; a throttle in said by-pass and a key controlled member for operating said throttle to control the operativeness of the engine.

1,749,737. FLOOR BRUSH. HENRY CAVE, Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 29, 1927. Serial No. 216,099. 4 Claims. (Cl. 15—205.)

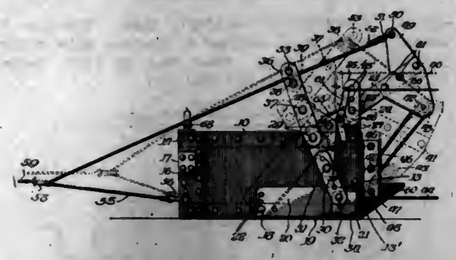


1. A brush including a frame formed of a plurality of frame members, one located within the other and each comprising an independent unit with brush material secured therein and projecting in one direction therefrom, spacers extending across said members and secured thereto to hold them in spaced relation, said spacers being mounted and located widely apart to provide substantially open frame work of said units and means for securing the handle to the back of said frame.

1,749,738. AUTOMATIC STROKE-CORRECTOR CIRCUIT. ALFRED J. FINN, Bloomfield, N. J., and PERCY L. MYER, Ozone Park, N. Y., assignors to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Sept. 19, 1928. Serial No. 307,039. 8 Claims. (Cl. 178—70.)

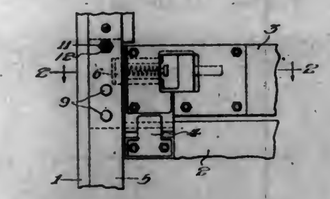
1. In a signaling system employing alternating current of a definite periodicity and subject to disturbing currents, the method of correcting the received signal for bias and other disturbing conditions, which consists in, receiving the transmitted signals, repeating the received signals to a repeating device, retarding the operation of the repeating device by substantially one-half the period of the alternating current, and supplying the signal from said repeating device to the receiving relay, whereby said relay is operated by the conjoint action of the received signal and the repeated delayed signal.

1,749,739. CARRIER-WAVE TELEGRAPHIC TRANSMISSION SYSTEM. WILLIAM G. FLUHARTY, Rockville Center, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Apr. 2, 1928. Serial No. 266,654. 12 Claims. (Cl. 178—66.)



1. A signal transmission system comprising an electric discharge relay having a cathode, an anode and a control electrode, a source of space current for said relay, an input circuit, a source of carrier waves to be repeated connected to the input circuit, a source of biasing potential for normally biasing the control electrode at such potential that the carrier waves are not effectively repeated by the relay, means for abruptly changing the potential of the biasing source in accordance with telegraphic signals to render said relay operative, and means for gradually changing the potential of the control electrode in response to the abrupt changes of the biasing source voltage.

1,749,740. INSULATED CONDUCTOR. OTTO A. FREDERICKSON, Wethersfield, Conn., assignor to The Wiremold Company, Hartford, Conn., a Corporation of Connecticut. Filed June 10, 1926. Serial No. 115,012. 1 Claim. (Cl. 173—264.)



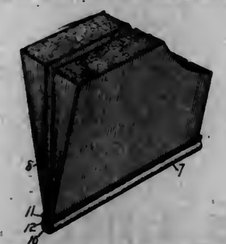
An article of manufacture comprising, in combination, an electrical conductor, a surrounding sheath of insulating material, a protecting jacket formed about said sheath and comprising an open tubular braid of light weight formed of a series of paraffin treated, twisted strands of paper that extend spirally about said sheath in one direction in spaced relation to each other and interbraided with a series of paraffin treated, twisted strands of paper that extend spirally about the sheath in the opposite direction in spaced relation to each other to form a tough, durable, open braid produced entirely of paper and having relatively large interstices between the strands, and a filling compound deposited in the interstices to form a wall of insulation compound surrounding said sheath and which is protected from mechanical injury by the open braid.

1,749,741. SCRAPER. LESLIE P. GREEN, Chicago, Ill., assignor, by mesne assignments, to Ira J. Wilson, Winnetka, Ill. Filed May 10, 1926. Serial No. 107,878. 19 Claims. (Cl. 37—147.)

1. In combination with a scraper, of a pivoted bottom for said scraper, a lever fulcrumed on said scraper and operatively connected to said pivoted bottom, and means connected with said scraper and operatively connected with said lever for actuating said lever to tilt said bottom about its pivot for dumping the contents of said scraper.

1,749,742. ADJUSTABLE-CATCH KEEPER. JULIUS MAKI, Chicago, Ill., assignor to The Whelco Engineering & Manufacturing Company, a Corporation of Illinois. Filed Jan. 9, 1929. Serial No. 331,382. 2 Claims. (Cl. 292—340.)

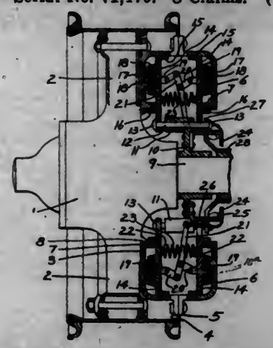
1. A member having a door opening, there being a catch-receiving pocket in said member beside said opening, a stationary piece on said member above said pocket, a keeper in the form of a spring plate underlying said stationary piece and fixed thereto at one end, the free end of said plate extending across said pocket, and a set screw extending through said stationary piece above the free end of said plate.



1,749,743. LINER AND METHOD OF TREATING THE SAME. LORIN B. SEBRELL, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 6, 1927. Serial No. 181,605. 7 Claims. (Cl. 154—2.)

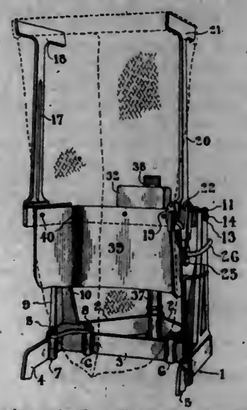
1. A unit consisting of plies of unvulcanized rubberized material alternating with plies of liner material treated with nitro cellulose containing an ester of phthalic acid.

6. A method of preventing adhesion between superposed plies of unvulcanized rubber compounds which comprises disposing therebetween sheets of fabric which have been coated with nitro-cellulose containing an aliphatic ester of phthalic acid.



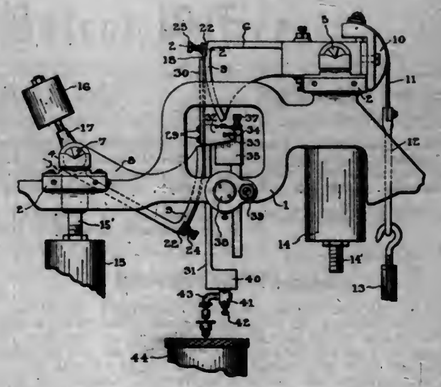
1,749,744. BRUSH STRUCTURE. JOHN J. THACHER, Wethersfield, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Feb. 1, 1926. Serial No. 85,086. 12 Claims. (Cl. 15—205.)

1. A brush structure comprising a sheet metal channel strip, a core strip separately formed from the channel strip and having a beaded edge spaced between the side edges of the channel strip, bristles substantially filling the channel strip and arranged on opposite sides of the core strip and spacing its beaded edge from said side edges, the sides of said channel strip being permanently set



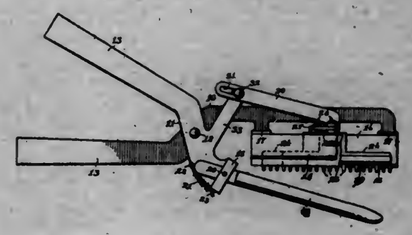
under pressure to bind the bristles against said core strip whereby the beaded edge of the latter spreads the bristles bound by the channel strip.

1,749,745. BRAKE DRUM. GEORGE WALTHER, near Dayton, Ohio, assignor to The Dayton Steel Foundry Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 25, 1925. Serial No. 71,470. 8 Claims. (Cl. 188—72.)



1. A device of the type described, comprising a drum attachable to a vehicle wheel and formed of two separable sections, each of which has a grooved inner side portion, and a pair of braking members formed with annular projections for entrance into the grooved portions of the drum when said members are moved apart, for the purpose specified.

1,749,746. LAUNDRY-BAG SCALE. GULDBRAND GULDBRANDSEN, Louisville, Ky., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed July 19, 1927. Serial No. 206,846. 14 Claims. (Cl. 265—51.)



1. In a device of the character described, a lever, means on said lever adapted to normally hold a bag open, and means actuated by said lever for releasing said holding means when a predetermined quantity of goods is deposited therein.

1,749,747. AUTOMATIC SCALE. HARLAN A. HADLEY, St. Johnsbury, Vt., assignor to E. and T. Fairbanks and Company, St. Johnsbury, Vt., a Corporation of Vermont. Filed Apr. 30, 1927. Serial No. 187,881. 24 Claims. (Cl. 265—62.)

1. In a scale, the combination with a counterbalancing means, of a tape pivotally connected thereto, a rack bar mounted on said tape, and guiding means for said rack bar.

1,749,748. HAIR-WAVING DEVICE. MARTHA A. TIBNKEN, New York, N. Y. Filed Mar. 5, 1929. Serial No. 344,464. 5 Claims. (Cl. 132—82.)

5. A hair waving device comprising a pair of handle members pivotally connected together, a group of waving members rigidly connected with one of said handle members side by side, a second group of waving members pivotally connected with the other handle member side by side, one group of waving members cooperating with the other group of waving members to wave the hair, when brought into clamping engagement therewith, by actuating said handle members, and contractile springs respectively acting on said pivoted waving members, and having a normal tendency to hold them so disposed that one end of each member will cooperate with its related members of the other group when engaged with the hair, to cause pivotal movement thereof into full clamping relation to said related waving members in response to the movement of said handle members.

Patents Nos. 1,749,749 to 1,750,616

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 392—No. 2 TUESDAY, MARCH 11, 1930 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

NOTICE

COPYING CLAIMS FROM PATENTS

Counsel prosecuting applications for patents are advised that in presenting any claim or claims copied or substantially copied from a previously issued patent there must be added a clear statement setting forth the origin of the claim or claims and the identifying data of the patent, since otherwise counsel may be deemed to be seeking, obviously improperly, to obtain a claim or claims to which the applicant is not entitled under the law without an interference, or the Examiner may be led into making an action different from what he would have made had he been in possession of all the facts. Examiners are directed to promptly call the personal attention of the Commissioner to any failure of counsel to follow the above indicated procedure.

THOMAS E. ROBERTSON,
Commissioner.

Adjudicated Patents

(C. C. A. N. Y.) Claude patent, No. 1,125,476, for system of illuminating by luminescent tubes, *Held* not infringed. *Claude Neon Lights* v. *B. Mechlett & Son*, 36 F. (2d) 574.

Interviews with Examiners

RULE 13. Interviews with Examiners concerning applications and other matters pending before the Office must be had in the Examiners' rooms at such times, within office hours, as the respective Examiners may designate; in the absence of the Primary Examiners, with the assistant in charge. Interviews will not be permitted at any other time or place without the written authority of the Commissioner. Interviews for the discussion of pending applications will not be had prior to the first official action thereon.

Disclaimers

1,696,875.—*Laurits W. Andersen*, Waterbury, Conn. CLINCH COLLAR FOR SHADES. Patent dated December 25, 1928. Disclaimer filed February 19, 1930, by the *patentee.*

Hereby enters this disclaimer to that part of the claims in said specification which is in the following words, to wit:

"3. In a device of the kind described, the combination with a shade, of a metallic ring fitted in the top opening of said shade, said ring comprising an outwardly extending flange adapted to engage the exterior face of the shade, an inwardly projecting flange and a plurality of integral bendable tongues adapted to be bent into engagement with the interior of the shade, a fiber ring held within the metallic ring and resting upon the inwardly projecting ring and an electric lamp having its threaded end passing through said rings, the fiber ring contacting with said electric lamp.

"4. The combination with a lipless shade, of a metallic collar adapted to engage the exterior of said shade, an insulating ring held in wedging engagement with said collar, said ring having a radial notch, said collar also having bendable tongues for engagement with the interior of said shade."

1,184,979.—*Henry C. Miller*, Milwaukee, Wis. FLEXIBLE BINDER POST FOR LOOSE-LEAF BINDERS. Patent dated May 30, 1916. Disclaimer filed February 24, 1930, by the assignee, *Stationers Loose Leaf Company.*

Hereby enters this disclaimer as follows:

Hereby disclaims from the scope of claim 3 any structure except when the post members are cylindrical in form and comprised of links so as to permit them to be flexed sufficiently sharp to make the right angle turn described within the hollow binder head.

Hereby disclaims from the scope of claim 5 any structure except when the flexible post members are cylindrical in form and comprised of links so as to permit them to be flexed sufficiently sharp to make the right angle turn described within the hollow binder head and are connected with the first binder head set forth by headed securing members screw connected axially to the flexible posts.

Condition of Applications Under Examination at Close of Business February 28, 1930

(Total number of applications awaiting action, excluding Trade-Mark Division, 116,826; Trade-Mark Division, 1,491. Oldest new case, Apr. 27, 1929; oldest amended, Apr. 27, 1929. The dates given are 1929 except where † indicates 1930.)

Room No.	Divisions, Examiners, and Subjects of Inventions	Oldest new application and oldest action by applicant awaiting office action: New	Amended	No. of applications awaiting action

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

BEIDLER *v.* CAPS AND LEININGER

No. 2,156. Decided December 19, 1929

1. INTERFERENCE—PRIORITY—DILIGENCE.

Evidence reviewed and *Held* to establish that B., who was the first to conceive the invention but the last to reduce it to practice, was not exercising due diligence in so reducing it from the time that C. and L. entered the field and that priority was properly awarded to the latter.

2. SAME—SAME—SAME.

"It is well settled that there is no general rule of what constitutes diligence applicable to all cases. Due diligence is reasonable diligence, and that is to be determined by the particular facts of each case."

3. SAME—SAME—SAME.

Where the evidence shows that the delay in reducing an invention to practice was caused by mere business considerations, "it can not be held that such delay does not constitute evidence of lack of diligence."

APPEAL from the Patent Office. Affirmed.

Mr. Frank S. Appleton and *Mr. Charles J. Williamson* for Beidler.

Mr. Edward H. Cumpston for Caps and Leininger.

LENROOT, *J.*:

This is an appeal from a decision of the Commissioner of Patents in an interference proceeding, affirming the unanimous decisions of the lower tribunals of the Patent Office awarding priority of invention to the senior parties, Caps and Leininger, appellees herein.

The invention in controversy relates to photographing apparatus, and more specifically to a film-holding means which is capable of holding the film in the focal plane of said apparatus, and in so mounting the means as to permit its movement while in the camera to present the two sides of the film (sensitized on both sides) alternately to the light-admitting means of the camera.

The subject matter in issue is more particularly defined by the counts, which read as follows:

1. The combination with a camera body and a support for a sheet of double coated sensitive material in the focal plane thereof, of means for rotating said support within the camera body to present first one side and then the other side of the sensitive material to exposure.

2. In a camera having a chamber and a lens, a member for holding film in the focal plane of the lens, and means for mounting the holder for movement in situ whereby the sides of the film are successfully exposed to light admitted by the lens.

3. In a photographic camera, the combination with the casing and lens, of a frame mounted on the casing to rotate on an axis transverse to the optical axis of the lens, means carried by said frame for supplying photographic material, and means carried by said frame and projecting into the casing across the optical axis of the lens for reversibly positioning such photographic material in the focal plane of the lens.

The application of appellant was filed on April 4, 1924; appellees filed on May 25, 1923. Appellees therefore are the senior parties, and the burden was upon appellant to establish by a preponderance of evidence a date of conception prior to that of appellees, and a reduction to practice thereafter with reasonable diligence from on or about May 25, 1923, when appellees entered the field.

Both parties introduced testimony. All of the interference tribunals of the Patent Office united in finding the following: That appellant was the first to conceive and disclose but the last to reduce the invention to practice; that there was not the requisite proof of conception or reduction to practice by appellees prior to their filing date of May 25, 1923, and therefore said filing date must be held to be the date of conception and a constructive reduction to practice; that appellees actually reduced the invention to practice between September 20 and October 1, 1923; that appellant reduced the invention to practice in March, 1924; that appellant failed to exercise due diligence in reducing the invention to practice; that appellant failed to establish that he had disclosed the invention to the party Leininger, as charged, prior to appellees' date of conception; that appellees were joint inventors of the invention; that by reason of lack of due diligence upon the part of appellant in reducing the invention to practice priority should be awarded to appellees, the senior parties, although appellant's date of conception and disclosure was prior to that of appellees.

The findings of fact of the three tribunals of the Patent Office, being unanimous, will not be disturbed by this court unless manifestly wrong. *Leonard* v. *Everett*, 304 O. G. 232; 281 Fed. Rep. 594; 52 App. D. C. 90; *Greenawalt* v. *Dwight*, 266 O. G. 138; 49 App. D. C. 82. Under this rule we must accept the findings of the Patent Office that appellant did not disclose the invention to Leininger, and that appellees were joint inventors of the invention in issue, as set out in their application, for clearly the evidence and the law warranted such findings.

As to joint invention by appellees, the rule is that an application in due form, made by two persons claiming to be joint inventors, is prima facie evidence that they were such. *Lemp* v. *Randall*, 146 O. G. 255; 53 App. D. C. 430.

As to the alleged disclosure of the invention by appellant to Leininger, the evidence was sharply contradictory, and we find no ground upon which to hold that there was manifest error in finding that the alleged disclosure was not made.

Another contention of appellant is that the Commissioner erred in not finding that the invention in issue was known and discussed by the officials of the Cameragraph Company (a corporation of which appellees were employees, prior to its acquisition by the Photostat Corporation, of which appellees are now employees) prior to May 25, 1923, appellees' date of conception. The Commissioner held that the evidence did not support such a finding, and an examination of the record fully sustains the Commissioner in this respect. Furthermore,

it has been held that the question of whether a senior party to an interference may be entitled to priority as against all persons is not an issue in an interference proceeding, but the question is whether the junior applicant has sustained the burden of establishing his own priority over that of his opponent. *Prindle* v. *Brown*, 112 O. G. 957; 24 App. D. C. 114.

There are certain other errors alleged by appellant, which even if found by us to exist would not warrant a reversal of the decision of the Commissioner because such errors clearly did not affect the conclusion reached. The principal error of this character charged is a finding by the Commissioner that appellant was chargeable with diligence in reducing the invention to practice from the date of his conception thereof, whereas in law he was so chargeable only from the time that appellees entered the field, or from May 25, 1923. Appellant is correct in this, but we think it clear from the Commissioner's decision that he found there was lack of diligence by appellant from immediately prior to May 25, 1923, when his duty of diligence began to run. However this may be, we shall discuss the proof of diligence later.

Another error alleged by appellant is that the Commissioner found that appellant had actual knowledge of the law requiring diligence in reducing his invention to practice. It is immaterial whether he had such actual knowledge or not. Ignorance of the law would not affect the measure of diligence required.

Another error charged is that the Commissioner found that appellees conceived the invention on December 10, 1922. It is true that the Commissioner was in error in so holding, for there was no corroborative proof of such conception as the law requires, but the error was immaterial for it in no wise affected the conclusion reached, and the result would have been the same had be held, as did the other tribunals of the Patent Office, that the date of conception by appellees was May 25, 1923. We would further observe that we do not think the Commissioner intended to hold that there was a conception and disclosure by appellees in December, 1922.

This leaves but a single question remaining, and that is, did the appellant submit such proof of diligence in reducing the invention to practice that there was error on the part of the Commissioner in holding that he did not? The burden was upon appellant to show such diligence by a preponderance of evidence.

[1] Appellant is president of the Rectigraph Company, of Rochester, N. Y., and has for many years controlled its activities, giving to it his undivided attention. Said company has for over 20 years been engaged in the photocopying art. Appellant was a creator of this art and has had many patents issued to him relating to copying machines. He conceived and disclosed the invention here in issue in the fall of 1909, but did nothing toward reducing the same to practice until March, 1923. The Rectigraph Company, of which he was president and general manager, was engaged in the manufacture of photocopying machines of the simplex type, that is, photographing upon one side of the film only, and also in the manufacture of sensitized paper for use in photograph copying machines.

The evidence shows that for some time prior to February 1, 1923, the Rectigraph Company did not have a mechanical expert employed, but shortly before said date appellant made application to the Masonic Employment Bureau of Rochester for such an expert; that on February 1, 1923, upon the recommendation of said bureau, he employed one John A. Smith to take charge of the mechanical department of the Rectigraph factory and to build a number of machines, one of which was a machine embodying the invention here in issue, but did not at that time disclose to him the details of such a machine. He did, however, tell him that he would have to work on said machine as he found time, as there were other matters to be attended to first, particularly the building of a new coating machine, rewinding machine, rebuilding machine, and other apparatus which he named. The evidence further shows that about two weeks later appellant made a full disclosure to said Smith of the invention and gave him instructions as to its construction; that the first work that Smith did was to build a coating machine, which took about four months to complete; that about the 1st of April, 1923, Smith temporarily stopped work on the coating machine and built an experimental model of the machine here involved; that he finished the same during the said month of April and did nothing to it thereafter except to place some of the parts which were in the model in his finished machine. After finishing the coating machine Smith worked on a rewinding machine, and thereafter he built a number of machines, having no relation to the matter here in controversy. He completed said last-named machines about January 1, 1924. It does not appear that either appellant or Smith did anything toward reducing the invention to practice between May 23, 1923, the date of appellees' application, and January 1, 1924. On said last-named date the machine which constituted appellant's reduction to practice was started and it was completed in March following. That appellant was diligent from January 1, 1924, until the completion of the machine is established by the evidence.

The question therefore is: Does the evidence establish that there was reasonable diligence in reducing the invention to practice between May 25, 1923, and January 1, 1924, and that the Commissioner of Patents was manifestly wrong in finding lack of such diligence?

Appellant in his brief urges as a reason and excuse for his nonactivity between May 25, 1923, and January 1, 1924, that—

> Smith after building the parts, Beidler Exhibits Nos. 1 and 2, by March or April, 1923, was compelled to suspend work on the duplex machine to take up vitally urgent work on machines required in the Rectigraph plant for carrying on the regular business of the Rectigraph Company upon which its life depended. It was not until January, 1924, that this other urgent work was done and out of the way, and Smith was able to resume work in the completion of the machine, Beidler Exhibit No. 3.

Assuming without deciding that the doing of urgent and necessary work upon other machines in the Rectigraph plant, "upon which its life depended," would excuse nonactivity on the machine here involved between May 23, 1923, and January 1, 1924, if Smith, the mechanic, was the only person who could build the machines required for the operation of the factory, or who could be trusted with the building of the machine here involved, we would observe that there is no evidence tending to show that other mechanics could not have been employed to build the machines necessary for the Rectigraph factory, or that no other mechanic could be found who could be trusted with knowledge of appellant's invention and build it. It appears from the evidence that Smith was a skilled mechanic who, prior to his employment by Beidler, had been employed as an expert mechanic by a check writer concern, by a pump factory, and by an elevator works in the same capacity. It does not appear that he had ever had any experience in building photographic machines of any character. It does not appear, therefore, that Smith had any qualifications for the building of the machines referred to that any expert mechanic in general machine construction would not possess.

In order to warrant a finding of diligence under the facts in this case, it should appear at least that appellant made efforts to secure other mechanics to do the necessary work required by the factory, leaving Smith free to carry out appellant's invention by the construction of a machine with reasonable promptness after May 25, 1923. There is no such evidence in the case.

Were this invention intricate and complicated, requiring extraordinary skill in building a machine to reduce it to practice, and requiring study and continued thought in planning the building of it, a different situation might exist. But it was not such a machine. Appellant in his brief states:

> While the improvement is of great importance, the apparatus, especially as defined in the three counts of the interference, is exceedingly simple. It requires with a camera otherwise of old construction merely a rotatable holder for the double coated paper, so that a photograph being taken first on one side of the sheet, by turning the sheet through a half turn, the opposite side of the sheet may receive a photograph. In other words, instead of the nonrotatable paper holder of the old simplex machine, the paper holder is rotatable.

It is plain from this description that the work of constructing the machine to embody the ideas of the invention was of a character that could be performed by any skilled mechanic under the supervision of appellant, just as it was performed by Smith, but even had it been shown that one could not have been procured who could have been trusted not to disclose the invention to others until it had been reduced to practice, this would not excuse the delay of seven months between May 25, 1923, and January 1, 1924, when no work was done upon the machine, unless it was also shown that no mechanic could have been secured to perform the other work in the factory that Smith performed during that time. Of course, it was not necessary in order to constitute diligence that appellant or his mechanic should have been constantly at work upon the machine, but it was necessary that during that period some time should have been devoted to it, or a reason valid in law shown for not doing so. The fact that Smith alone could not have done the necessary work of the factory if he had devoted a part of the time between May 25, 1923, and January 1, 1924, to constructing the machine in question is not enough. There is no evidence that appellant had not ample means to employ other mechanics to work in the factory, or that they could not have been secured.

Appellant contends that the evidence in this case brings it within the rule laid down in *Courson* v. *O'Connor et al.*, 227 Fed. Rep. 890, and *Roe* v. *Hanson*, 90 O. G. 2550; 19 App. D. C. 559, and that under the decisions of these cases diligence has been shown by him in reducing this invention to practice.

In *Courson* v. *O'Connor et al.* there was involved the question of diligence upon the part of appellant in preparing and filing a patent application, his invention not having been actually reduced to practice. In its opinion the court said:

> In considering the question of diligence, the circumstances surrounding the inventor must be taken into account. Courson was at the head of a large and important shop, in charge of nearly 3,000 men. His time was not his own. Unless he gave up his position, he could ordinarily devote only his own, not his employer's, time to his inventions. He could go to Pittsburgh, not when he desired, but when the work at the shop made it convenient.

Here the personal attention of the inventor was necessary, and it was shown that he could not have devoted time belonging to his employer to his invention without endangering his employment and consequent loss of means of livelihood. Nothing of this character is involved in the case at bar. Appellant's entire difficulty was in the employment of a mechanic to construct a machine embodying his invention. As has been said, there is no evidence that a mechanic could not have been employed either to do the necessary work upon the machine in question or to do the other work in the factory that was performed by Smith, leaving him free to work upon said machine. There is no evidence or claim that appellant was so employed that he could not have supervised the work of the mechanic, had one been employed, upon the machine during the period in question. Furthermore, it may be noted that in the case above cited the only period during which diligence was involved was from November, 1908, the date of conception of the invention by his opponent, to January 19th, 1909, when the appellant executed his application, or a period of less than three months.

In *Roe* v. *Hanson*, *supra*, relied upon by appellant, his counsel in his brief states that the "court held Roe to be diligent though he was occupied at the time in the restoration of a mill for his company which had been destroyed in June of the previous year.'" An examination of the opinion in this case shows that the language quoted had nothing to do with the decision of the case. The statement was made as a reason why Roe had not made a commercial test of his invention, the Patent Office having held that the construction of the machine embodying the invention did not constitute a reduction to practice and that there was lack of diligence in testing the machine by commercial use after its construction. The court held that the construction

of the machine under the facts proved did establish a reduction to practice and reversed the Patent Office for that reason. Therefore, no question of diligence while Roe was building a mill for his company was involved.

[2] It is well settled that there is no general rule of what constitutes diligence applicable to all cases. Due diligence is reasonable diligence, and that is to be determined by the particular facts of each case. *Croskey* v. *Atterbury*, 76 O. G. 163; 9 App. D. C. 208.

[3] In the case at bar the evidence shows that the delay of appellant in reducing the invention to practice was caused by mere business considerations; therefore it can not be held that such delay does not constitute evidence of lack of diligence. *Paul* v. *Hess*, 115 O. G. 251; 24 App. D. C. 462; *Wickers* v. *McKee*, 129 O. G. 869; 29 App. D. C. 4.

We are entirely clear that the evidence does not disclose any valid reason for appellant's nonactivity in reducing the invention to practice from May 25, 1923, to January 1, 1924, and that the Commissioner and the other tribunals of the Patent Office were abundantly justified in finding that there was a lack of due diligence upon the part of appellant in reducing his invention to practice.

The decision of the Commissioner is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

CLANCY *v.* DE JAHN

No. 2,172. Decided December 19, 1929

1. INTERFERENCE—PRIORITY—CONCURRENT DECISIONS OF PATENT OFFICE—WEIGHT OF.

"Unless material error is shown, the findings of fact of the three tribunals of the Patent Office, being unanimous, will not be disturbed by this court."

2. SAME—SAME—DILIGENCE.

Evidence reviewed and *Held* to establish that appellee, who was the first to conceive the invention, was diligent in reducing it to practice from April, 1921, when appellant entered the field, until August, 1921, when such reduction to practice was made.

APPEAL from the Patent Office. Affirmed.

Mr. Perley H. Plant for Clancy.

Mr. Hans V. Briesen for De Jahn.

LENROOT, *J.:*

This is an appeal from a decision of the Commissioner of Patents in an interference proceeding, in which priority of invention was awarded to appellee by all of the Interference tribunals of the Patent Office.

The invention in controversy is a process of purifying the nitrogen-hydrogen gas mixture in the synthetic production of ammonia. It is unnecessary to detail the various successive processes by which synthetic ammonia is produced. Most of them constitute what is known as the Haber process, for which a United States patent was granted in 1916. The gist of the invention here in issue consists broadly in passing the gases to be synthesized into contact with liquid anhydrous ammonia before said gases enter the catalyst chamber. This process is new and constitutes invention, each party hereto claiming to be the inventor and entitled to a patent thereon. An interference was duly declared by the Patent Office.

There are 18 counts in the interference, of which the following are typical:

2. In a process of purifying gases for use in the synthesis of ammonia the steps comprising, passing the elemental gases into contact with one or more agents for removing therefrom substances injuriously affecting an ammonia synthesis catalyst, and then passing the gases through substantially anhydrous liquid ammonia at a low temperature to remove traces of moisture therefrom prior to the effectuation of the synthesizing operation.

6. In conditioning gas to render it suitable for use in catalytic ammonia synthesis, that improvement which comprises bringing gas which is to participate in said synthesis into effective contact with liquefied ammonia.

15. The process of preparing a gas mixture containing nitrogen and hydrogen in the relation of 1:3, subjecting said mixture to pressure and under said pressure removing the major part of the constituents of the gases other than nitrogen and hydrogen, and then, while the gases still contain traces of water impurities and of carbon compound, but no ammonia catalytically produced from said gases, introducing said gases into the stream of gas which has passed through an ammonia catalyst, then passing the thus compounded mixed gases through an ammonia liquefier and leading the gases from said liquefier through the catalyst to produce the stream of catalyzed gases to which additional quantities of the gas mixture first referred to are constantly introduced between the catalyst and the liquefier.

The application of appellant, who is a chemist, was filed on April 16, 1921. Appellee filed May 12, 1923. Appellant therefore is the senior party and the burden was upon appellee to establish by a preponderance of evidence a date of conception prior to that of appellant and a reduction to practice thereafter with diligence from the time appellant entered the field.

Both parties filed preliminary statements, but appellee alone introduced testimony.

The three tribunals of the Patent Office, namely, the Examiner of Interferences, Examiners in Chief, and the Commissioner, united in finding the following: That appellant's filing date of April 16, 1921, is the date of his conception, and his application was a constructive reduction to practice; that appellee established a conception of the invention at least as early as April 15, 1920; reduced it to practice in August, 1921, and was diligent in so doing; that priority of invention should be awarded to appellee, the junior party.

[1] Unless material error is shown, the findings of fact of the three tribunals of the Patent Office, being unanimous, will not be disturbed by this court. *Greenawalt* v. *Dwight*, 266 O. G. 138; 49 App. D. C. 82; 258 Fed. Rep. 982, and cases cited.

Appellant does not deny that appellee was the first to conceive the invention, but he contends that appellee was not diligent in reducing it to practice, and further that the proof does not show that it has ever been reduced to practice by appellee or his assignee, the Atmospheric Nitrogen Corporation, of which appellee was an employee.

The evidence fully establishes that the invention was reduced to practice by appellee and his assignee on or about August 10, 1921, and this is so clear that it requires no discussion.

[2] Therefore, the only question for us to consider is whether the record contains proof of diligence in reducing his conception to practice.

The evidence shows that appellee is a chemist and conceived the invention here in issue in December, 1919, while in the employ of the General Chemical Company; that about that time said company organized the Atmospheric Nitrogen Corporation and appellee entered its employ, and has so continued to the present time; that while so employed, and some time in January, 1920, he disclosed his invention to Dr. B. C. Hesse, who was also a chemist, in the employ of the General Chemical Company as a specialist in chemical patent matters. Said Hesse testified that he was instructed by his superiors in the General Chemical Company to cooperate in the ammonia situation just as though the Atmospheric Nitrogen Corporation was the General Chemical Company. Appellee further testified that in making such disclosure to Dr. Hesse he prepared a sketch of his invention which Dr. Hesse dated and signed, which was the usual procedure in such cases; said sketch was offered in evidence and received. Appellee testified also that some time in 1919 the General Chemical Company decided to construct a plant for the manufacture of synthetic ammonia, and the Atmospheric Nitrogen Corporation was formed, as above stated, for the purpose of carrying on the synthetic ammonia branch of the chemical business; that actual construction of the plant was commenced about June 1, 1920 at Syracuse, N. Y.; that from the time that construction began until its completion the process conceived by appellee was made a part of the plans and designs for the construction of said plant; that the construction of said plant proceeded with very great expedition and it was completed in August, 1921; that there was expended in its construction approximately $4,000,000; that in July, 1929, appellee secured a patent for a process, the object of which was the same as the object of the process here in issue; that said process is known as the sodium amide process; that in the construction of said plant at Syracuse, apparatus was installed for the use of said process, but it was never utilized or connected up, and the only purpose of its installation was to have available another means for purifying the gases if the process here in issue should not prove successful; that the process here involved having proved successful, the said sodium amide process was never utilized in said plant. Appellee further testified that the General Chemical Company maintained a laboratory at Laurel Hill, N. Y., from 1919 until June, 1921, for the purpose of testing catalysts; that this laboratory was available to appellee during all of the time here in question. Appellee testified that it would have been very expensive and complicated to have installed the necessary apparatus at the Laurel Hill laboratory to test the process here in issue; that among other things, it would have been necessary to install a small refrigerating machine to keep the liquid ammonia purifier cold, and that the Fire Department of New York city insisted that such a machine would have to be installed in a separate fireproof brick building, which would have had to be erected.

There is no testimony as to the time that would have been required after April 16, 1921, to have equipped the Laurel Hill laboratory for the purpose of testing the process here in issue. Appellee also testified that a proper test could not have been made in any event in this laboratory, and that it required the production of nitrogen-hydrogen gases upon a large scale to make a proper test, which could only be done at the plant being erected at Syracuse.

Appellant contends that the Commissioner and other tribunals of the Patent Office entirely misconceived the facts in the case. He points out that the appellee testified that one of the great advantages of his process was that it required no additional apparatus or chemical to put it into operation, but merely required a connection subjecting the gases to treatment with ammonia in its liquefied state immediately prior to the introduction of the gases into the ammonia catalyst, whereas the Commissioner found that diligence was evidenced by the installation of cold transferrers and other devices for the purpose of carrying out the process of the invention in issue as early as April 23, 1921. We may assume that the Commissioner was in error in this respect, and that the only change that was necessary to carry out the process here in issue in said Syracuse plant was the making of connections in a different way than would have been made if said process was not a part of the plant. The fact remains, however, that the plans did provide for such special connections for carrying out the said process long before appellant's conception of the invention or his constructive reduction to practice. If the plans for the construction of the Syracuse plant were being carried out in good faith to include the process here in issue, and they clearly were, we hold that this constitutes diligence, unless appellee or his assignee could have tested the process in some other way subsequent to April 16, 1921, and substantially earlier than August 10, 1921. Appellee testified that this could not have been done. With regard to appellant's contention that the test could have been made at the Laurel Hill laboratory, we must accept as a fact that, granting that this were so, it could only have been done by the installation of additional apparatus and the erection of a new brick building. Inasmuch as appellee was chargeable with diligence only from April 16, 1921, we can not say that the construction and apparatus necessary in the Laurel Hill laboratory could have been completed and installed substantially earlier than August 10, 1921, when the process was reduced to practice at Syracuse.

Appellee was chargeable with diligence for only a period of a little less than four months. We think the evidence establishes that diligence was exercised by appellee and his assignee.

Appellant also makes a point that appellee testified that he had never disclosed his invention to any of the officers of his assignee, and therefore the assignee knew nothing about the process, and that the conduct of the assignee is controlling upon the question of diligence; that inasmuch as appellee's assignee had decided upon the erection of the plant at Syracuse prior to the conception of the invention by appellee and the plant would have been constructed if the invention in issue had never been made, lack of diligence by appellee's assignee

has been shown. The answer to this contention is that the disclosure was made to the chemical specialist in patents, acting for the assignee; that the plans did provide, from a date prior to appellant's conception, for the use of appellee's process in the plant to be constructed, and the presumption is that the officers of the assignee did know what was contained in the plans which had been adopted by them.

The rule is that as between one who has actually reduced an invention to practice and one who has only constructively so reduced it by filing an application, indulgence should be extended to him who actually reduced it in good faith. *Laas* v. *Scott*, 161 Fed. Rep. 122. We do not think it necessary to apply that rule in this case for we think that the period of less than four months in which diligence was required to be exercised was not an unreasonable time in which to reduce the invention to practice under the circumstances here shown.

The decision of the Commissioner is affirmed.

Affirmed.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,575,603, W. T. Powell, Automatic telephone system, decided January 27, 1930, claims 9 and 11.

Pat. 1,617,413, L. A. Mortimer, Telephone system, decided January 31, 1930, claims 9 and 10.

Pat. 1,635,221, F. C. Pearson, Hydraulic brake system for motor vehicles, claims 8 and 9.

Pat. 1,667,481, C. H. Lange and E. W. Vollert, Game, decided February 19, 1930, claims 2, 4, 5, 6, and 11.

Pat. 1,674,793, T. A. Peebles, Furnace, decided February 17, 1930, claim 15.

Pat. 1,721,674, Wm. A. Smith, Blowing device, decided January 31, 1930, claims 1 and 2.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 11, 1930

[VOL. 392. No. 2]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 294,525. HADENSA GESELLSCHAFT M. B. H., Berlin-Lichterfelde, Germany. Filed Jan. 8, 1930.

Varixsa

For Salve for Treating Ulcers of the Leg.
Claims use since June 3, 1922.

Ser. No. 294,526. HADENSA GESELLSCHAFT M. B. H., Berlin-Lichterfelde, Germany. Filed Jan. 8, 1930.

Lichensa

For Preparation for Treating Eczema.
Claims use since June 3, 1922.

Ser. No. 294,545. ROZ-IN-IZE, INC., Boston, Mass. Filed Jan. 8, 1930.

S-O-X

For Preparation for Treating Cut Soles to Produce Longer Life.
Claims use since Oct. 4, 1929.

Ser. No. 294,623. COTY, INC., Wilmington, Del., and New York, N. Y. Filed Jan. 10, 1930.

CARNADINE

For Nail Polish.
Claims use since Dec. 20, 1929.

Ser. No. 294,668. LEO G. GARSKE, Minneapolis, Minn. Filed Jan. 11, 1930.

LEO'S

For Preparations for the Treatment of Ailments in the Stomach.
Claims use since first part of March, 1927.

Ser. No. 294,778. CHARLES M. ROSENBAUM, doing business as C. M. R. Mfg. Co., New York, N. Y. Filed Jan. 14, 1930.

C.M.R.

For Medicinal Preparations for the Treatment of Coughs, Colds, Indigestion, Bronchitis, Dyspepsia, and Gas on the Stomach.
Claims use since Oct. 23, 1925.

Ser. No. 294,779. CHARLES M. ROSENBAUM, doing business as C. M. R. Mfg. Co., New York, N. Y. Filed Jan. 14, 1930.

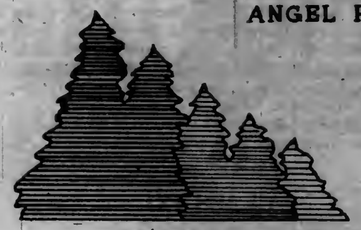
C.M.R.

For Medicine for the Relief of Indigestion, Dyspepsia, and Gas on the Stomach.
Claims use since Oct. 23, 1925.

Ser. No. 294,825. A. H. PAUITT, doing business as A-P Laboratories, Wichita, Kans. Filed Jan. 15, 1930.

A-P

For Lice Powder to Control Lice on Poultry and Livestock and Fleas on Dogs and Cats, Tablets for Purifying the Drinking Water for Poultry, and Worm Capsules for Tape and Round Worms in Poultry.
Claims use since July 12, 1929, on worm capsules for poultry; Dec. 31, 1929, on remainder of goods.



Ser. No. 294,871. DAVICE CORPORATION OF AMERICA, New York, N. Y., and Elizabeth, N. J. Filed Jan. 17, 1930.

"HIDRI"

For Carbon Dioxide (CO_2) in Solidified Forms, Mixtures, and Compounds.
Claims use since Aug. 14, 1929.

Ser. No. 294,875. LEOPOLD GRANITZ, doing business as Continent Import Co., New York, N. Y. Filed Jan. 17, 1930.

ANGEL PINE

ANGEL PINE

The drawing is lined to indicate blue although the color lining indicating the color blue is disclaimed as a part of the mark. The word "Pine" is disclaimed apart from the mark shown in the drawing.
For Pine-Needle Extract Combined with Bath Salts.
Claims use since Jan. 1, 1930.

Ser. No. 295,010. BORIS BOROWIKOW, doing business as Borowikow Laboratories Co., Brooklyn, N. Y. Filed Jan. 21, 1930.

ZENOL

For Creams for Disorders of the Skin.
Claims use since Oct. 1, 1928.

Ser. No. 295,087. SOCIETE ANONYME M. NAEF & CIE., Geneva, Switzerland. Filed Jan. 22, 1930.

JASMANTHEME

For Artificial and Synthetic Perfumes, Essential Oils.
Claims use since Sept. 30, 1909.

Ser. No. 295,089. SOCIETE ANONYME M. NAEF & CIE., Geneva, Switzerland. Filed Jan. 22, 1930.

JESSAMEA

For Artificial and Synthetic Perfumes, Essential Oils.
Claims use since Nov. 20, 1929.

Ser. No. 295,226. KLEER-A-KOLD CO., Milwaukee, Wis. Filed Jan. 25, 1930.

KLEER A KOLD

For Pharmaceutical Preparation for the Treatment of Colds.
Claims use since Nov. 1, 1928.

Ser. No. 295,243. ABBOTT LABORATORIES, Chicago, Ill. Filed Jan. 27, 1930.

METAPHEDRIN

For Nose and Throat Spray Having Antiseptic and Shrinking Action in Cases of Infection and Congestion.
Claims use since Jan. 1, 1928.

Ser. No. 295,248. BLUE RIBBON CHEMICAL CO., Kansas City, Mo. Filed Jan. 27, 1930.

VAPOL

For Liquid Medicine for Relief of Nasal and Sinus Troubles.
Claims use since Dec. 5, 1929.

Ser. No. 295,289. AMERICAN SUNDRIES CO., INC., Brooklyn, N. Y. Filed Jan. 28, 1930.

Vapozoin

For Medicinal Preparation Used in the Treatment of Common Head Colds, Acute Coryza and Rhinitis, Spasmodic Croup, and Congestive Conditions of the Upper Respiratory Tract When Due to Common Colds, Laryngitis, Whooping Cough, Bronchitis, Hay Fever, and Asthma.
Claims use since Dec. 16, 1929.

Ser. No. 295,311. GEORGE H. WERFELMAN, doing business as Industrial Gasket and Packing Co., Los Angeles, Calif. Filed Jan. 28, 1930.

Radorite

For Radiator-Cleaning Compound and Rust Preventive.
Claims use since Jan. 15, 1926.

Ser. No. 295,897. STANDARD BRANDS INCORPORATED, Dover, Del.; Cincinnati, Ohio; and New York, N. Y. Filed Jan. 30, 1930.

PHOS-FO-LAC

For Phosphate and Lactate Mixture Suitable for Use with Sodium Bicarbonate for the Same Purpose as Baking Powder.
Claims use since Dec. 26, 1929.

Ser. No. 295,493. RUTH PASKIN, doing business as Maison de Paris, New York, N. Y. Filed Feb. 1, 1930.

À JAMAIS

For Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity Creams, Refreshing Creams, Obesity Astringents, Dry Rouges, Liquid Rouges, Face Bleaches, Face Packs, Eyebrow and Eyelash Grower, Eyedrops, Hand Lotions, Skin Lotions, Aftershaving Lotions, Pomades, Face Powders, Talcum Powders, Sachets, Hair Salves, Hair Elixirs, Dandruff Preparations, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Bath Salts, Smelling Salts, Lip Sticks, Incense, Tooth Powders, Mouth Washes, Dentifrices, Tooth Pastes, Nail Powders, Nail Creams, Nail Bleaches, Witch-Hazel, Peroxide, Petroleum Jellies, Witch-Hazel Salves, Camphor Creams, Foot Powders, Corn Salves, Deodorants, Disinfectants, Bay Rum, Perfumes, and Toilet Waters.

Ser. No. 295,511. EXCLUSIVE CHEMICALS, INC., Dallas, Tex. Filed Feb. 3, 1930.

GARGASOL

For Mouth Wash and Gargle.
Claims use since Jan. 20, 1930.

CLASS 10

Fertilizers

Ser. No. 292,542. THE MCQUEEN BACTERIA COMPANY, Baltic, Ohio. Filed Nov. 18, 1929.

HARDY LITTLE WORKERS
IN THIS PACKAGE OF
[redacted]
INOCULATOR

The surname constituting a part of the mark shown in the drawings is a facsimile of the name "McQueen" in the handwriting of one Jacob McQueen, president of the applicant's corporation. No claim is made to the exclusive appropriation of the expression "In This Package of," the notation "Dust-Kote," the word "Inoculator," or the abbreviated expression "Reg."
For Soil and Seed Inoculator.
Claims use since June, 1929.

CLASS 12

Construction Materials

Ser. No. 287,147. WILLIAM H. LUTTON COMPANY, Jersey City, N. J. Filed July 15, 1929.

SOLAR

For Greenhouses and Constructive Parts of Greenhouses—Namely, Glazing Bars, Rafters, Purlins, Sills, Gutters, Headers, Ridges, and Castings and Fittings for Joining These Various Parts Together; Glass Enclosures for Swimming Pools, Tennis Courts, and Solariums and Constructive Parts Thereof—Namely, Glazing Bars, Rafters, Purlins, Sills, Gutters, Headers, Ridges, and Castings and Fittings for Joining These Various Parts Together.
Claims use since Mar. 18, 1929.

Ser. No. 288,616. HOLDFAST MFG. COMPANY, Philadelphia, Pa. Filed Aug. 16, 1929.

WORLD'S BEST
FIRE-BRICK CEMENT

Applicant disclaims exclusive rights to all words appearing on the mark as applied for except in the association shown.
For Fire-Brick Cement.
Claims use since Nov. 6, 1928.

Ser. No. 292,862. BECKMAN-DAWSON ROOFING CO., Chicago, Ill. Filed Nov. 25, 1929.

CED-A-ROC
CEDAR + ASPHALT + ROCK

Applicant makes no claim to the words "Cedar, Asphalt, Rock" apart from the mark as shown.
For Coated Wooden Shingles.
Claims use since about Oct. 20, 1928.

Ser. No. 293,085. MANCHESTER ENGINEERING & WELDING CO., INC., Manchester, N. H. Filed Nov. 29, 1929.

MEWCO WELD

Applicant disclaims the word "Weld" apart from the trade-mark.
For Metal Stairs, Fire Escapes, Pipe Railings, Ornamental Railings, Grille Work, and Gratings.
Claims use since Nov. 1, 1929.

Ser. No. 293,558. HARRY C. SCHLOSSER, San Jose, Calif. Filed Dec. 11, 1929.

ONYXITE

For Imitation Marble.
Claims use since about May, 1927.

Ser. No. 294,378. AMIESITE ASPHALT COMPANY OF AMERICA, Camden, N. J., and Philadelphia, Pa. Filed Jan. 4, 1930.

Amatite

For Paving Material Comprising a Mineral Aggregate Intimately Mixed with a Bituminous Binder.
Claims use since on or about Dec. 28, 1929.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 290,943. FAGLEY & HALPEN, Philadelphia, Pa. Filed Oct. 11, 1929.

BABY GRAND

For Combination Utensils Having the Function of Dishwashers, Steam Cookers, and Cold-Pack Canners.
Claims use since Sept. 11, 1929.

Ser. No. 293,028. CONSOLIDATED FACTORIES, LTD., Santa Ana, Calif. Filed Nov. 29, 1929.

BROCK
TRADE MARK

No claim is made to the words "Trade Mark" apart from the mark shown in the drawing.
For Glass Drawer Knobs, Glass Drawer Pulls, and Glass Door Knobs.
Claims use since January, 1922.

Ser. No. 293,880. HOOKLESS FASTENER COMPANY, Meadville, Pa. Filed Dec. 19, 1929.

Applicant disclaims the representation of a tag per se and the words, "This Article Fitted with Guaranteed, Slide Fastener," and "Reg. U. S. Pat. Office" and "Always Works Cannot Rust" apart from the mark as shown on the drawing.
For Separable Fasteners of the Slider-Controlled Type.
Claims use since Sept. 26, 1929.

Ser. No. 294,321. W. A. RUSSELL & CO., New York, N. Y. Filed Jan. 2, 1930.

FREVENT

For Air Valves for Steam Radiators.
Claims use since Oct. 1, 1929.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 294,335. BAKER & COMPANY, INC., Newark, N. J. Filed Jan. 3, 1930.

EVERADIANT

For Metals of the Platinum Group.
Claims use since January, 1928.

CLASS 15

Oils and Greases

Ser. No. 293,390. UNITED STATES REFINING COMPANY, Los Angeles, Calif. Filed Dec. 7, 1929.

PURR PULL

For Oils and Greases or Petroleum Products Such as Gasoline, Motor Fuel Oils, and Lubricating Greases.
Claims use since June, 1929.

Ser. No. 294,058. E. T. CRITTENDEN, Denver, Colo. Filed Dec. 26, 1929.

TRADE MARK
GOLDEN
ARROW
MOTOR OIL

The words "Trade Mark" and the words "Motor Oil" are disclaimed apart from the mark as shown.
For Gasoline, Lubricating Oils, and Greases.
Claims use since Sept. 26, 1929.

Ser. No. 294,472. THE CANFIELD OIL COMPANY, Cleveland, Ohio. Filed Jan. 7, 1930.

Wm. Penn

For Lubricating Oils.
Claims use since about Dec. 1, 1928.

Ser. No. 294,831. THE TEXAS COMPANY, Wilmington, Del., and New York, N. Y. Filed Jan. 15, 1930.

LOVIS

For Petroleum Products—Viz, Lubricating Oils.
Claims use since July 25, 1929.

Ser. No. 294,973. HUEGEL-NUGENT PETROLEUM COMPANY, Chicago, Ill. Filed Jan. 20, 1930.

Old Faithful

For Lubricating Oil.
Claims use since Sept. 1, 1929.

CLASS 16

Paints and Painters' Materials

Ser. No. 271,463. ELLING O. WEEKS, doing business as Nu-Rex Products Co., Milwaukee, Wis. Filed Aug. 23, 1928.

Nu-Rex

For Surface Refinishing Liquids which are Compounds in the Nature of a Varnish or Lacquer.
Claims use since about July 1, 1928.

Ser. No. 287,440. ERWIN Z. FRANDS, doing business as Frands Sales Agency, Chicago, Ill. Filed July 22, 1929.

FRANCO

For Polish and Cleaner for Painted, Varnished, and Lacquered Surfaces.
Claims use since Mar. 1, 1929.

Ser. No. 294,083. OZARK SMELTING & MINING COMPANY, Chicago, Ill. Filed Dec. 26, 1929.

PERM-O-LITH

For Lithopone and Combinations of Lithopone with Zinc Oxide, White Lead, and Leaded Zinc Oxide, for Use in Paints.
Claims use since Oct. 22, 1929.

Ser. No. 295,028. HARRY W. HERWIG, doing business as Craftone Manufacturing Company, Boston, Mass. Filed Jan. 21, 1930.

CRAFTONE

For Plastic Paint.
Claims use since Jan. 17, 1930.

CLASS 19

Vehicles, Not Including Engines

Ser. No. 283,553. CHRYSLER CORPORATION, Detroit, Mich. Filed May 6, 1929.

IMPERIAL

For Automobiles and Their Structural Parts.
Claims use since Oct. 27, 1928.

Ser. No. 292,161. F-S MFG. CO. INC., New Holstein, Wis. Filed Nov. 8, 1929.

SNOW BIRD

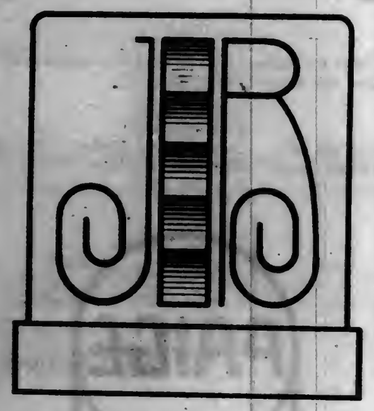
For Sled-Propulsion Attachments for Automobiles.
Claims use since Nov. 6, 1926.

Ser. No. 294,421. GRAHAM-PAIGE MOTORS CORPORATION, Dearborn, Mich. Filed Jan. 6, 1930.

PAIGE
COMMERCIAL
CAR

Applicant makes no claim to the words "Commercial Car" apart from the mark as shown.
For Commercial Motor Cars, Chassis, and Constructive Parts.
Claims use since about Dec. 31, 1929.

Ser. No. 295,371. HARLEY-DAVIDSON MOTOR COMPANY, Milwaukee, Wis. Filed Jan. 30, 1930.



MOTOR
HARLEY-DAVIDSON
CYCLES

No claim made to the words "Motor Cycles" apart from the remainder of the mark. Applicant is owner of trade-mark registrations No. 98,504, No. 124,714, No. 127,187, No. 135,864, and No. 264,802.
For Motor Cycles.
Claims use since May 6, 1910.

CLASS 21

Electrical Apparatus, Machines, and Supplies

Ser. No. 268,910. BOUY INCORPORATED, New York, N. Y. Filed June 30, 1928.

For Electric Floor Lamps, Table Lamps, and Ceiling Fixtures.
Claims use since Aug. 29, 1927.

Ser. No. 277,198. BURNDY ENGINEERING COMPANY, INC., New York, N. Y. Filed Dec. 26, 1928.

BURNDY

For Electrical Conductor Tube, Copper Conductor Cable, T-Connectors, Couplers, Elbows, Terminals, Braces, Corona Bells, Studs, Clamps, Clips, Bus Supports, Groundalls, Expansion Joints, Bolts, Nuts, Turnbuckles, and Pole-Line Hardware, All for Use in Connection with Electrical Equipment.
Claims use since 1924.

Ser. No. 278,924. THE BALDWIN COMPANY, Cincinnati, Ohio. Filed Feb. 6, 1929. Under section 5b of the act of 1905 as amended in 1920.

HAMILTON

Applicant is owner of trade-mark registration No. 47,072.
For Radio Receiving Sets and Loud-Speakers, Antennæ, Transformers, Induction Coils, Tube Sockets, Resistance Units, Rheostats, Condensers, and Loading Coils, Choke Coils, Inductances; and Resistance Devices, Inductive and Noninductive for Use in Connection Therewith.
Claims use since Jan. 28, 1929.

Ser. No. 289,304. RODALE MANUFACTURING COMPANY, New York, N. Y. Filed Sept. 3, 1929.

For Electrical Wiring Devices, Electrical Specialties and Electrical Heating Devices Known to the Trade as Electrical Switches, Plugs, Push Buttons, Outlets, Pendant Switches, Camp Fixtures, Lamp Sockets, Lighting Fixtures, Connectors, Resistance Units as Used in Rheostat and Radio Apparatus; Heating Units as Utilized in Electric Toasters, Ovens, Radiators for Industrial and Domestic Purposes; Transformers; Moulded Articles Known as Electric Wall Plates, Buttons, Shields, Cord Adjusters, and Moulded Members Forming Parts in Electric Wiring Devices.
Claims use since May 8, 1928.

Ser. No. 289,425. TIME-O-STAT CONTROLS COMPANY, Elkhart, Ind. Filed Sept. 6, 1929.

TIME-O-STAT

For Automatic Electric Temperature, Pressure, Float, and Time Responsive Devices and Replacement Parts Thereof for Controlling Gas, Oil, and Coal Burners and for Controlling Electric Refrigerators, Mechanical Stokers, Furnace Fans, Industrial Ovens, Ice Machines, Unit Heaters, and Water Heaters; Also Sign Flashers, Mercury Switches, Electric Air Heaters for Maintaining Substantially-Uniform Temperature in Pipe-Organ and Other Chambers, Electric Motors, Magnetically-Operated Gas Valves, Magnetically-Operated Oil Valves, and Relay Switches.
Claims use since June 16, 1928.

Ser. No. 291,175. PRESTO ELECTRIC ROASTER COMPANY, Pittsburgh, Pa. Filed Oct. 17, 1929.

PRESTO

For Electric Meat Roasters.
Claims use since on or about May 1, 1929.

Ser. No. 291,371. WILLIAM P. VERDON, Sr., Hoboken, N.J. Filed Oct. 21, 1929.

LEMONLITE

For Electric Nonglare Fog-Penetrating Lights.
Claims use since Oct. 7, 1929.

Ser. No. 292,838. SELECTRIC PHONOGRAPH AND RADIO CORPORATION, Grand Rapids, Mich. Filed Nov. 28, 1929.

The Selectric
"It's almost human"

For Radio Receiving Sets Adapted for Combination with Phonographs.
Claims use since July 15, 1929.

Ser. No. 293,388. THOMSON-GIBB ELECTRIC WELDING COMPANY, Lynn, Mass. Filed Dec. 7, 1929.

THOMSON
PRODUCTION WELDERS
GIBB

Applicant disclaims the right to the exclusive use of the words "Production Welders" apart from the mark shown in the drawing.
For Electric Metal-Working Apparatus—Namely, Machines and Devices for Electric Welding, Heating, Forging, Riveting, Brazing, Soldering, and Shaping of Metals; and Also Transformers, Reactive Coils, Switches, and Parts for Such Apparatus.
Claims use since Nov. 1, 1929.

Ser. No. 293,810. AVIATION ACCESSORIES CORPORATION, San Francisco, Calif. Filed Dec. 17, 1929.

Thermo-Pete

For Device for Heating the Oil in Internal-Combustion Engines in Circulating Electric Heaters.
Claims use since Apr. 16, 1929.

Ser. No. 294,897. SOCIÉTÉ DES MAGNÉTOS R. B., Paris, France. Filed Jan. 17, 1930.

RESERWATT

For Electric Battery for the Ignition of Combustion Engines.
Claims use since Mar. 14, 1929.

Ser. No. 295,258. GENERAL MOTORS CORPORATION, Detroit, Mich. Filed Jan. 27, 1930.

GM

For Radio Receiving Sets and Parts Thereof.
Claims use since Nov. 20, 1929.

Ser. No. 295,280. SEARS, ROEBUCK AND CO., Chicago, Ill. Filed Jan. 27, 1930.

CONQUEROR

For Electric Sadirons.
Claims use since June 1, 1929.

Ser. No. 295,294. DEWEY & ALMY CHEMICAL COMPANY, North Cambridge, Mass. Filed Jan. 28, 1930.

DAREX

For Separator Plates for Storage Batteries.
Claims use since Jan. 18, 1930.

CLASS 22

Games, Toys, and Sporting Goods

Ser. No. 294,261. JAKOPEC-SAMU COMPANY, Chicago, Ill. Filed Dec. 31, 1929.

The Comet
Self-Figuring Magic Cards

No claim being made to the words "The New Self-Figuring Magic Cards" apart from the mark shown.
For Game Consisting of Self-Figuring Magic Cards or Fortune-Telling Cards.
Claims use since Dec. 21, 1929.

Ser. No. 295,309. THE UNITED STATES PLAYING CARD CO., Norwood, Ohio. Filed Jan. 28, 1930.

Sentinel

For Playing Cards.
Claims use since Dec. 5, 1929.

CLASS 23

Cutlery, Machinery, and Tools, and Parts Thereof

Ser. No. 287,600. TWIN COUPLER COMPANY, INC., Poughkeepsie, N. Y. Filed July 24, 1929.

Pure Juice

The drawing is lined to indicate the color orange. No claim is made to the expression "Pure Juice" apart from the mark as shown on the drawing.
For Fruit-Juice Extractors of the Hand-Operated Type.
Claims use since May 25, 1929.

Ser. No. 289,468. THE MACLEOD MANUFACTURING CO., INC., Chicago, Ill., assignor to A. F. Dormeyer Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 7, 1929.

WIZARD ON GLASS

The words "On Glass" are disclaimed apart from the mark shown.

For Scrapers for Glass, Wood, Metal, Paint, and Other Materials, and in General, Cutlery of the Type Comprising a Razor Blade and a Detachable Handle or Support.

Claims use since Apr. 29, 1922.

Ser. No. 290,506. FERGUS & PALMER, Cleveland, Ohio. Filed Oct. 2, 1929.

SAMARITAN

For Coin-Controlled or Slug-Controlled Merchandise-Dispensing Devices and Parts of Such Devices.

Claims use since Sept. 14, 1929.

Ser. No. 290,647. THE BILLINGS & SPENCER COMPANY, Hartford, Conn. Filed Oct. 4, 1929.

BILLINGS

B

The word "Billings" is disclaimed apart from the mark shown in the drawing.

For Tools and for Machinery, Including All Kinds and Types of the Following Goods: Wrenches, Tongs, Clamps, Dogs, Pliers, Vises, Wrench Sockets, Punches, Chisels, Screw Drivers, Drifts, Drill Sockets, Reamer Holders, Ratchet Drills, Hammers, Handles, Cotter-Pin Tools, Nurling Tools, Cutting-Off Tools and Holders, and All Combinations of Such Tools, Drop Hammers, Die-Sinking Machines, Trimming Presses, Milling Machines, Trimming Millers.

Claims use since Apr. 1, 1926.

Ser. No. 292,548. ONSRUD MACHINE WORKS, INC., Chicago, Ill. Filed Nov. 18, 1929.

No claim is made to the machine element shown in the drawing apart from the mark as shown.

For Woodworking Machinery—Namely, Automatic Shapers, High-Speed Shapers, High-Speed Buck Shapers, Heavy-Duty Routers, Portable Routers, Spindle Carvers, Automatic Scarfers, Automatic Rosette Machines, Bending Presses, Pneumatic Clamp Tables, Pneumatic Turbines.

Claims use since November, 1927.

Ser. No. 293,924. KELLER MECHANICAL ENGINEERING CORPORATION, Brooklyn, N. Y. Filed Dec. 20, 1929.

KELLERFLEX

For Portable and Flexible Shaft Bench Grinders and Parts Thereof.

Claims use since Aug. 1, 1927.

Ser. No. 294,694. STAR CAN OPENER COMPANY, San Francisco, Calif. Filed Jan. 11, 1930.

DEL MONTE

For Can Openers.

Claims use since Dec. 31, 1929.

Ser. No. 295,305. ROYAL TYPEWRITER COMPANY, INC., New York, N. Y. Filed Jan. 28, 1930.

For Typewriting Machines and Parts Thereof.

Claims use since October, 1911.

CLASS 26

Measuring and Scientific Appliances

Ser. No. 293,834. HYDE MANUFACTURING COMPANY, Southbridge, Mass. Filed Dec. 18, 1929. Under section 5b of the act of 1905, as amended in 1920.

I. P. HYDE

For Plumb Bobs, Straightedges, Rules, and Chalk Lines.

Claims use since Aug. 22, 1928.

Ser. No. 294,960. EASTMAN KODAK COMPANY, Rochester, N. Y. Filed Jan. 20, 1930.

BROWNIE

For Photographic Cameras, Photographic Film, Photographic Developing Boxes, Printing Frames, Photographic Safe Light, Photographic Safe-Light Lamps, Photographic Carrying Cases, Photographic Finders, and Photographic Tripod Adapters.

Claims use since Jan. 1, 1901.

CLASS 28

Jewelry and Precious-Metal Ware

Ser. No. 276,807. THE DELTA CHI FRATERNITY, Iowa City, Iowa. Filed Dec. 5, 1928.

DELTA CHI

For Fraternity Lapel Buttons of Precious Metal.

Claims use since February, 1916.

Ser. No. 287,256. KESTENMAN BROS. MFG. CO., Providence, R. I. Filed July 17, 1929.

HANDI-FOLD

No claim is made to exclusive right to the use of the word "Fold" apart from the mark shown.

For Wrist-Watch Bracelets.

Claims use since Feb. 12, 1927.

Ser. No. 290,664. J. ROGERS SILVER CO., New York, N. Y. Filed Oct. 4, 1929.

1901 ROGERS 1901

For Silver-Plated Articles of Hollow or Flat Ware for Domestic Table Use.

Claims use since July 1, 1901.

Ser. No. 292,804. GREAT COUNCIL OF THE UNITED STATES OF THE IMPROVED ORDER OF RED MEN, Philadelphia, Pa. Filed Nov. 23, 1929.

For Badges, Emblems, Finger Rings, Ornamental Pins, Lapel Buttons, Watch Charms, and Other Insignia of the Improved Order of Red Men, All Made of or Plated with Precious Metal.

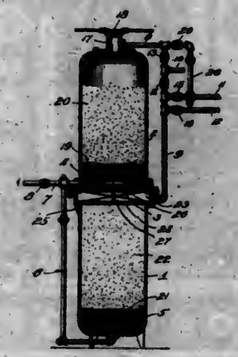
REISSUES

MARCH 11, 1930



17,620. CAP. DANIEL J. CREMEN, Blackwood, N. J. Filed Dec. 13, 1929. Serial No. 413,909. Original No. 1,682,004, dated Aug. 28, 1928, Serial No. 166,884, filed Feb. 9, 1927. 4 Claims. (Cl. 2—200.)

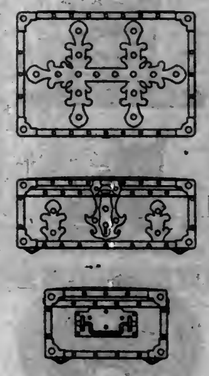
1. A cap provided with an upstanding continuously extending substantially circular brim comprising a relatively flexible fabric facing and a relatively stiff fibrous lining intimately united by an adhesive, and a ventilating crown of loosely woven material, one of the peripheral ends of said lining terminating short of the adjacent peripheral end of the flexible fabric, the unlined portion of the said flexible material being loosely disposed within the brim and constituting the sole means to which the crown is secured for connecting the latter to the brim.

17,621. COMBINED FILTER AND UPFLOW WATER SOFTENER. WILLIAM J. KENNEY, Chicago, Ill. Filed Nov. 26, 1928. Serial No. 322,043. Original No. 1,685,818, dated Oct. 2, 1928, Serial No. 193,100, filed May 21, 1927. 7 Claims. (Cl. 210—24.)

1. In an apparatus of the character described, a tank divided into an upper chamber and an independent lower chamber, a filtering bed in and only partially filling the upper chamber, a bed of zeolitic material arranged in and extending to within a short distance from the top of the lower chamber, a screen above the zeolitic material, a conduit connecting the bottoms of the chamber together,

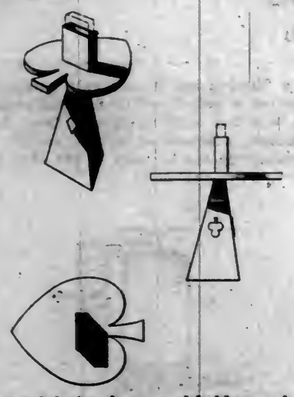
a second conduit connecting the upper ends of the chambers together; a service pipe, a drain pipe, and a water supply pipe connected to said conduit; valves in said service and said drain pipe; and valves in said second conduit on opposite sides of said supply pipe.

DESIGNS



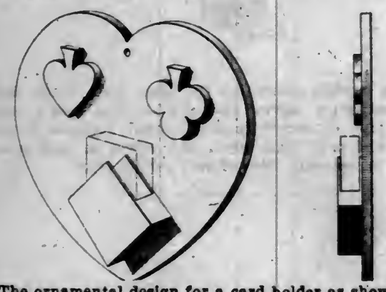
MARCH 11, 1930

80,666. LIGHTING FIXTURE. HARRY AGLOW, Philadelphia, Pa., assignor to Gill Glass and Fixture Company, a Corporation of Delaware. Filed Oct. 4, 1929. Serial No. 32,945. Term of patent 3½ years.



The ornamental design for a lighting fixture substantially as shown and described.

80,667. BOX OR SIMILAR ARTICLE. JOSEPH E. BERGER, Bloomfield, N. J., assignor to Scovill Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 1, 1928. Serial No. 29,078. Term of patent 7 years.



The ornamental design for a box or similar article as shown.

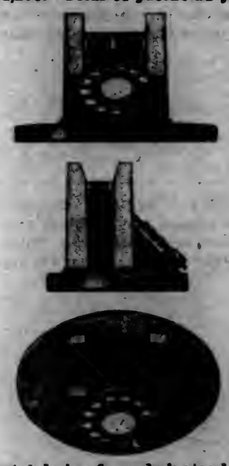
80,668. CARD HOLDER. ALEX A. BEYER, Torrington, Conn. Filed June 12, 1929. Serial No. 31,652. Term of patent 14 years.

The ornamental design for a card holder as shown.

80,669. CARD HOLDER. ALEX A. BEYER, Torrington, Conn. Filed June 12, 1929. Serial No. 31,653. Term of patent 14 years.

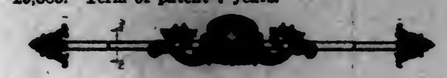
The ornamental design for a card holder as shown.

80,670. DESK STAND FOR A HAND TELEPHONE. NELSON BLOUNT, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 25, 1930. Serial No. 34,292. Term of patent 14 years.



The ornamental design for a desk stand for a hand telephone, as shown.

80,671. DESK STAND FOR A HAND TELEPHONE. NELSON BLOUNT, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 25, 1930. Serial No. 34,294. Term of patent 14 years.



The ornamental design for a desk stand for a hand telephone, as shown.

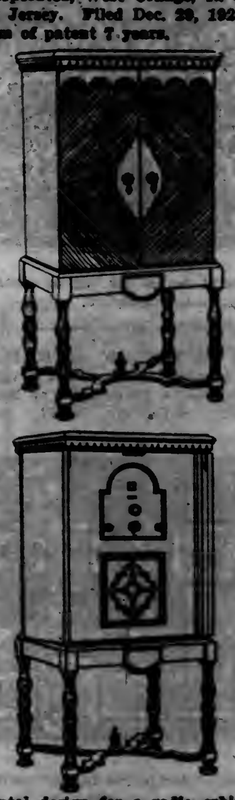
80,672. DESK STAND FOR A HAND TELEPHONE. NELSON BLOUNT, Maplewood, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 25, 1930. Serial No. 34,296. Term of patent 14 years.

The ornamental design for a desk stand for a hand telephone, as shown.

80,673. CURTAIN AND PORTIÈRE ROD. JAMES H. BOYD, Chicago, Ill. Filed Feb. 2, 1929. Serial No. 29,885. Term of patent 7 years.

The ornamental design for a curtain and portière rod, as shown.

80,674. CURTAIN ROD OR SIMILAR ARTICLE. JAMES H. BOYD, Chicago, Ill. Filed Dec. 28, 1929. Serial No. 33,969. Term of patent 7 years.

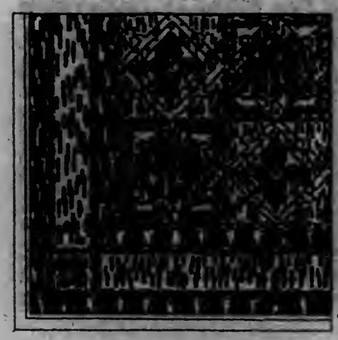


The ornamental design for a curtain rod or similar article, as shown.

80,675. DAVENPORT OR LIKE ARTICLE. WILLIAM FREDERICK CHRISTIANSEN, Chicago, Ill., assignor to The Zangerle and Petersen Company, a Corporation of Illinois. Filed Dec. 16, 1929. Serial No. 33,802. Term of patent 3½ years.

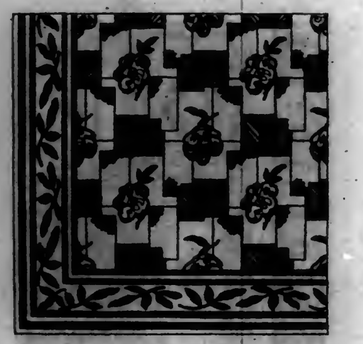
The ornamental design for a davenport or like article, as shown and described.

80,676. RADIOCABINET OR SIMILAR ARTICLE. NOEL S. DUNBAR, New York, N. Y., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a Corporation of New Jersey. Filed Dec. 20, 1928. Serial No. 29,453. Term of patent 7 years.



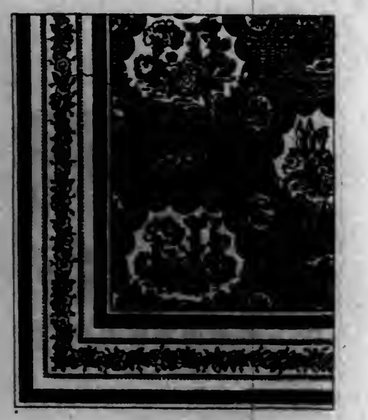
The ornamental design for a radio cabinet or similar article, as shown.

80,677. RUG OR SIMILAR ARTICLE. GUSTAVE M. FAUBER, Ardsley-on-Hudson, N. Y., assignor to Congoleum-Nairn, Inc., a Corporation of New York. Filed Dec. 12, 1929. Serial No. 33,771. Term of patent 7 years.



The ornamental design for rug or similar article substantially as shown and described.

80,678. RUG OR SIMILAR ARTICLE. GUSTAVE M. FAUBER, Ardsley-on-Hudson, N. Y., assignor to Congoleum-Nairn, Inc., a Corporation of New York. Filed Dec. 12, 1929. Serial No. 33,772. Term of patent 7 years.

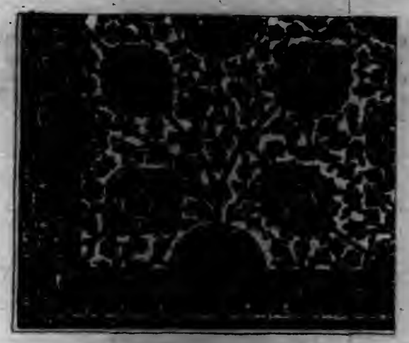


The ornamental design for rug or similar article substantially as shown and described.

80,679. RUG OR SIMILAR ARTICLE. GUSTAVE M. FAUSER, Ardsley-on-Hudson, N. Y., assignor to Congoleum-Nairn, Inc., a Corporation of New York. Filed Dec. 12, 1929. Serial No. 33,773. Term of patent 7 years.

The ornamental design for rug or similar article substantially as shown and described.

80,680. RUG OR SIMILAR ARTICLE. GUSTAVE M. FAUSER, Ardsley-on-Hudson, N. Y., assignor to Congoleum-Nairn, Inc., a Corporation of New York. Filed Dec. 12, 1929. Serial No. 33,774. Term of patent 7 years.

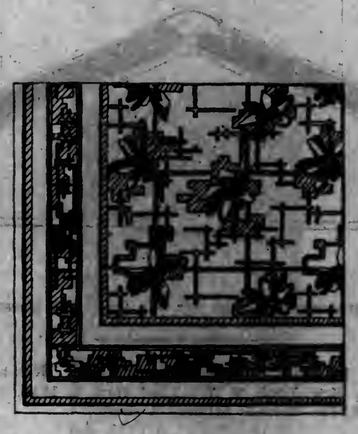


The ornamental design for rug or similar article substantially as shown and described.

80,681. RUG OR SIMILAR ARTICLE. GUSTAVE M. FAUSER, Ardsley-on-Hudson, N. Y., assignor to Congoleum-Nairn Inc., a Corporation of New York. Filed Dec. 12, 1929. Serial No. 33,775. Term of patent 7 years.

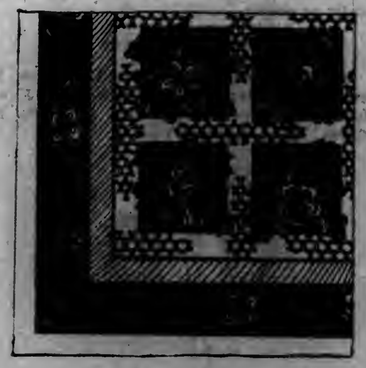
The ornamental design for rug or similar article substantially as shown and described.

80,682. RUG OR SIMILAR ARTICLE. GUSTAVE M. FAUSER, Ardsley-on-Hudson, N. Y., assignor to Congoleum-Nairn Inc., a Corporation of New York. Filed Dec. 12, 1929. Serial No. 33,776. Term of patent 7 years.



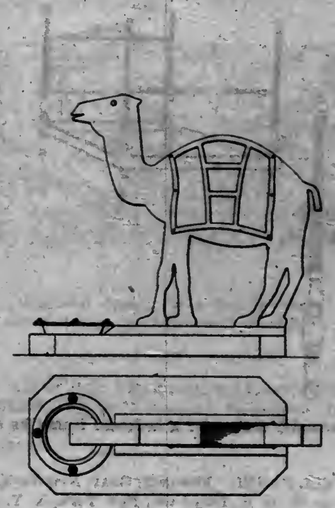
The ornamental design for rug or similar article substantially as shown and described.

80,683. RUG OR SIMILAR ARTICLE. GUSTAVE M. FAUSER, Ardsley-on-Hudson, N. Y., assignor to Congoleum-Nairn, Inc., a Corporation of New York. Filed Dec. 12, 1929. Serial No. 33,777. Term of patent 7 years.



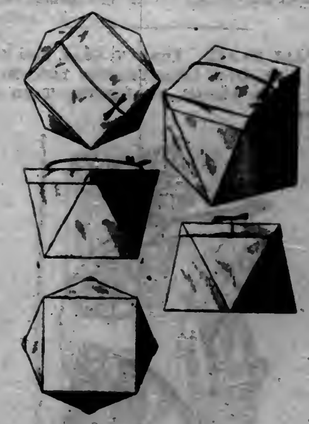
The ornamental design for rug or similar article substantially as shown and described.

80,684. RUG OR SIMILAR ARTICLE. GUSTAVE M. FAUSER, Ardsley-on-Hudson, N. Y., assignor to Congoleum-Nairn, Inc., a Corporation of New York. Filed Dec. 12, 1929. Serial No. 33,778. Term of patent 7 years.



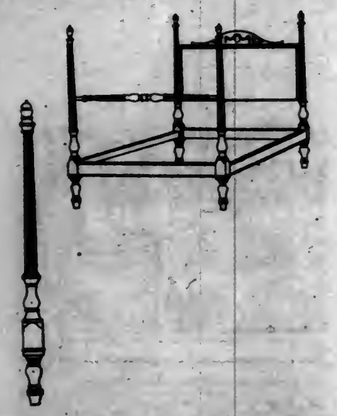
The ornamental design for rug or similar article substantially as shown and described.

80,685. RUG OR SIMILAR ARTICLE. GUSTAVE M. FAUSER, Ardsley-on-Hudson, N. Y., assignor to Congoleum-Nairn, Inc., a Corporation of New York. Filed Dec. 12, 1929. Serial No. 33,779. Term of patent 7 years.



The ornamental design for rug or similar article substantially as shown and described.

80,686. COMBINED CIGARETTE HOLDER AND ASH RECEIVER. LOUIS E. FORD, Borger, Tex. Filed July 17, 1929. Serial No. 32,094. Term of patent 14 years.



The ornamental design for a combined cigarette holder and ash receiver, as shown.

80,687. BOX. ALFRED FRIED, Chicago, Ill. Filed Oct. 23, 1929. Serial No. 33,142. Term of patent 3½ years.

The ornamental design for a box as shown.

80,688. BEDSTEAD FRAME. WILLIAM A. FRENCH, Minneapolis, Minn., assignor to Wm. A. French Furniture Co., Minneapolis, Minn. Filed Apr. 8, 1929. Serial No. 30,737. Term of patent 3½ years.

The ornamental design for a bedstead frame, as shown.

The ornamental design for a wall panel, as shown.

80,690. WALL PANEL. EDWIN T. GRAY, New York, N. Y., assignor to W. H. S. Lloyd Co., New York, N. Y. Filed Apr. 27, 1929. Serial No. 31,033. Term of patent 3½ years.

The ornamental design for a wall panel, as shown.

80,691. BAG FRAME. WILLIAM C. HEMING, Newark, N. J., assignor to J. H. Morgott Co., Newark, N. J., a Corporation of Delaware. Filed Oct. 28, 1929. Serial No. 33,189. Term of patent 3½ years.

The ornamental design for bag frame, as shown.

80,692. BUTTON OR SIMILAR ARTICLE. WILLIAM W. HOBB, New York, N. Y. Filed Nov. 2, 1929. Serial No. 33,272. Term of patent 3½ years.

The ornamental design for a button or similar article substantially as shown.

80,693. BUCKLE. WILLIAM L. MYERS, Newark, N. J., assignor to L. A. Myers Jr., Inc., Newark, N. J., a Corporation of New Jersey. Filed Sept. 27, 1929. Serial No. 32,886. Term of patent 7 years.

The ornamental design for a buckle, as shown.

80,694. TEXTILE FABRIC OR SIMILAR ARTICLE. BENJAMIN S. NASH, Short Hills, N. J., assignor to The Stearns & Foster Company, Lockland, Ohio, a Corporation of Ohio. Filed Sept. 23, 1929. Serial No. 32,840. Term of patent 3½ years.

The ornamental design for a textile fabric or similar article substantially as shown and described.

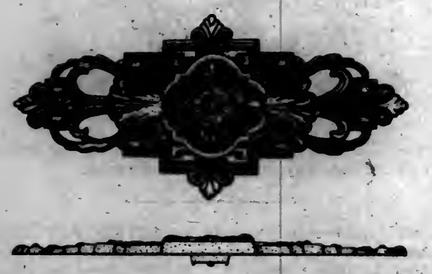
80,695. BOTTLE. JOHN B. O'HARA, Dallas, Tex., assignor to Dr. Pepper Company, Dallas, Tex. Filed July 15, 1929. Serial No. 32,059. Term of patent 14 years.

The ornamental design for a bottle as shown.

80,696. TEXTILE FABRIC OR SIMILAR ARTICLE. ETHEL M. PARSONS, New York, N. Y., assignor to The Stearns & Foster Company, Lockland, Ohio, a Corporation of Ohio. Filed Nov. 21, 1929. Serial No. 33,518. Term of patent 7 years.

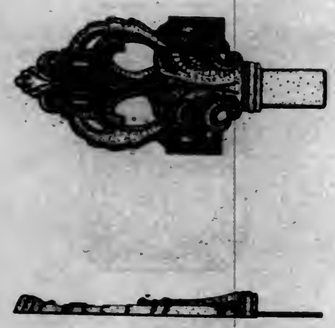
The ornamental design for a textile fabric or similar article substantially as shown and described.

80,697. GRIP FOR GEAR-SHIFT LEVERS FOR AUTOMOBILES. ALLEN L. SHIRLEY, Panhandle, Tex. Filed May 1, 1929. Serial No. 31,065. Term of patent 3½ years.



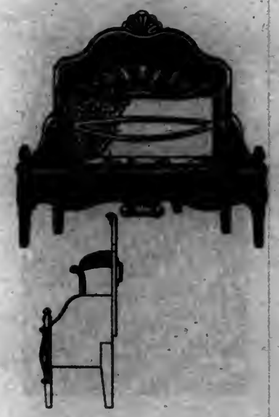
The ornamental design for a grip for gear-shift levers for automobiles, as shown.

80,698. COASTER. THEODORE H. SLOAN, Charleroi, Pa. Filed Jan. 11, 1930. Serial No. 34,106. Term of patent 7 years.



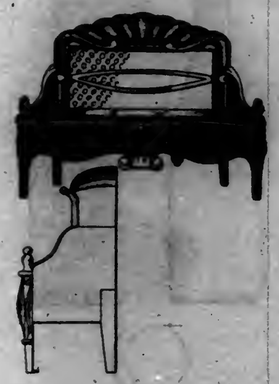
The ornamental design for a coaster, as shown.

80,699. CENTER ORNAMENT FOR DRAPERY RODS OR THE LIKE. WALTER E. SMITH, Providence, R. I., assignor to Kenney Manufacturing Company, Cranston, R. I., a Corporation of Rhode Island. Filed Jan. 10, 1930. Serial No. 34,086. Term of patent 7 years.



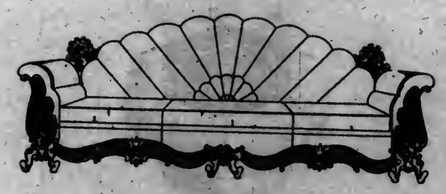
The ornamental design for a center ornament for drapery rods or the like, as shown.

80,700. END ORNAMENT FOR DRAPERY RODS OR THE LIKE. WALTER E. SMITH, Providence, R. I., assignor to Kenney Manufacturing Company, Cranston, R. I., a Corporation of Rhode Island. Filed Jan. 10, 1930. Serial No. 34,087. Term of patent 7 years.



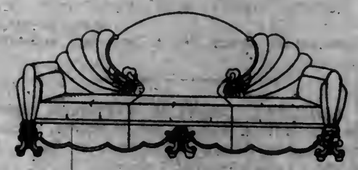
The ornamental design for an end ornament for drapery rods or the like, as shown.

80,701. GAS RADIANT HEATER. ADOLF STEFFEN, Pittsburgh, Pa., assignor to Adams Bros. Mfg. Co., Inc., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 1, 1929. Serial No. 31,069. Term of patent 7 years.



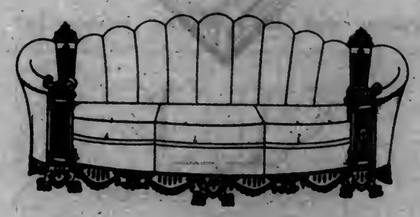
The ornamental design for a gas radiant heater, as shown and described.

80,702. GAS RADIANT HEATER. ADOLF STEFFEN, Pittsburgh, Pa., assignor to Adams Bros. Mfg. Co., Inc., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 1, 1929. Serial No. 31,070. Term of patent 7 years.



The ornamental design for a gas radiant heater, as shown and described.

80,703. SETTEE OR SIMILAR ARTICLE. CHARLES STOLL, Rockaway Beach, N. Y., assignor to Central Furniture Frame Co. Inc., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 24, 1929. Serial No. 32,857. Term of patent 3½ years.



The ornamental design for a settee or similar article, as shown.

80,704. SETTEE OR SIMILAR ARTICLE. CHARLES STOLL, Rockaway Beach, N. Y., assignor to Central Furniture Frame Co. Inc., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 24, 1929. Serial No. 32,858. Term of patent 3½ years.

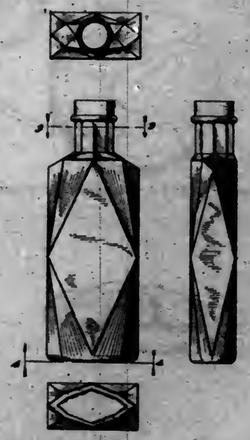
The ornamental design for a settee or similar article, as shown.

80,705. SETTEE OR SIMILAR ARTICLE. CHARLES STOLL, Rockaway Beach, N. Y., assignor to Central Furniture Frame Co. Inc., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 24, 1929. Serial No. 32,860. Term of patent 3½ years.

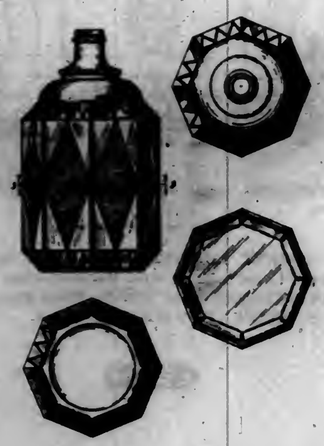
The ornamental design for a settee or similar article, as shown.

80,706. SETTEE OR SIMILAR ARTICLE. CHARLES STOLL, Rockaway Beach, N. Y., assignor to Central Furniture Frame Co. Inc., Brooklyn, N. Y., a Corporation of New York. Filed Sept. 24, 1929. Serial No. 32,861. Term of patent 3½ years.

The ornamental design for a settee or similar article, as shown.



80,707. POCKET LIGHTER. HERBERT S. STRAUSSER, Chicago, Ill., assignor to Otis Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 11, 1929. Serial No. 33,419. Term of patent 7 years.

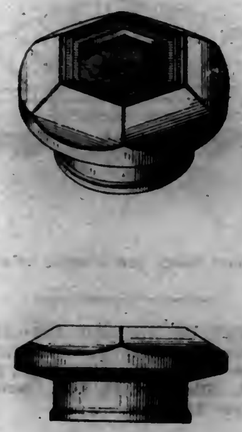


The ornamental design for a pocket lighter, substantially as shown.

80,708. BOTTLE OR SIMILAR CONTAINER. WALTER D. TEAGUE, Forest Hill, N. Y., assignor to Turner Glass Corporation, Terre Haute, Ind., a Corporation of Indiana. Filed Dec. 26, 1929. Serial No. 33,924. Term of patent 14 years.

The ornamental design for a bottle or similar container as shown.

80,709. BOTTLE OR SIMILAR CONTAINER. WALTER D. TEAGUE, Forest Hill, N. Y., assignor to Turner Glass Corporation, Terre Haute, Ind., a Corporation of Indiana. Filed Dec. 26, 1929. Serial No. 33,925. Term of patent 14 years.



The ornamental design for a bottle or similar container as shown.

80,710. HUB CAP. MILLARD H. TONCRAY, Detroit, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 16, 1929. Serial No. 33,477. Term of patent 14 years.

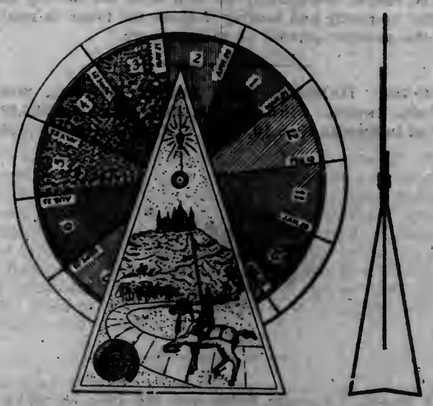
The ornamental design for a hub cap, substantially as shown.

80,711. HUB CAP. MILLARD H. TONCRAY, Detroit, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 16, 1929. Serial No. 33,478. Term of patent 14 years.

The ornamental design for a hub cap, substantially as shown.

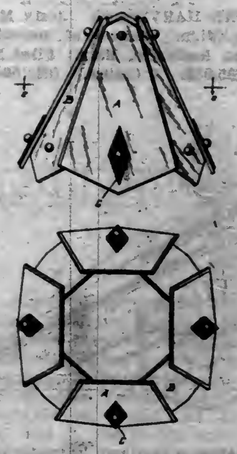
80,712. ASH TRAY. FRANK E. WAKEFIELD, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a Corporation of Illinois. Filed Dec. 20, 1929. Serial No. 33,865. Term of patent 7 years.

The ornamental design for an ash tray, as shown.



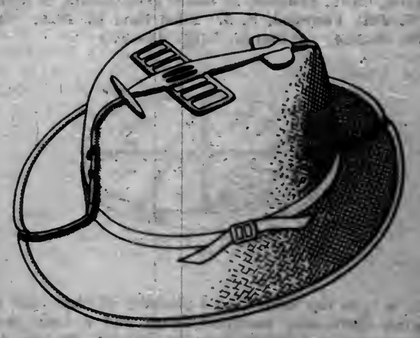
CARNEGIE LIBRARY OF ATLANTA

80,713. ADVERTISING SIGN. JOSEPH A. WESLEY, Chicago, Ill., assignor to Lu-Mi-Nus Signs, Inc., Chicago, Ill., a Corporation of Illinois. Filed Nov. 29, 1929. Serial No. 33,583. Term of patent 7 years.



The ornamental design for an advertising sign, as shown.

80,714. GAME DEVICE. OLGA H. WHITE, New York, N. Y. Filed June 18, 1929. Serial No. 31,741. Term of patent 14 years.



The ornamental design for a game device as shown.

80,715. LAMP SHADE. LOUIS ZWEIG, Brooklyn, N. Y., assignor to Sun Rise Lamp Mfg. Co., Inc., a Corporation of New York. Filed Dec. 27, 1929. Serial No. 33,959. Term of patent 3½ years.

The ornamental design for a lamp shade substantially as shown and described.

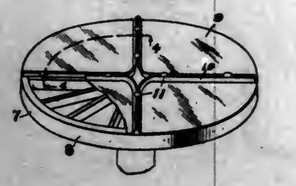
The ornamental design for a hat as shown and described.

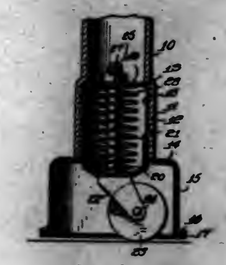
PATENTS



GRANTED MARCH 11, 1930

1,749,749. CORN HARVESTER. JOHN M. BAIER, Olmsted County, Minn., assignor of one-half to William H. H. Greene, Rochester, Minn. Filed Nov. 26, 1927. Serial No. 235,985. 7 Claims. (Cl. 56—466.)

1. In combination with a corn harvester having a frame and elevating-chains, said corn harvester also having a walled binder-deck, a crank-shaft mounted in the frame and means for driving the same through the medium of one of the elevating-chains, a stalk-pushing plate pivotally connected to the crank, and a bundle-pushing plate pivotally connected to the forward end of said stalk-pushing plate and extending backwardly so as to rest upon the binder-deck and also against the side wall thereof.



1,749,750. TABLE TOP. HOWARD C. BAILEY, Los Angeles, Calif., assignor, by mesne assignments, to Richard W. Tull, Fanwood, N. J. Filed Nov. 16, 1925. Serial No. 69,354. 2 Claims. (Cl. 45—81.)

1. A table top comprising a plurality of trays each having an upstanding marginal flange and a body having plane upper and lower faces, a support, for the table top, constructed of openwork, and devices upstanding from the openwork for dividing its area to receive only a predetermined number of the trays of the table top, there being an unobstructed space above said trays when they are supported upon said table top to adapt the table for diner's use.

1,749,751. FURNITURE CASTER. JOHN BRIGSTEN, Redondo Beach, Calif. Original application filed Feb. 25, 1928, Serial No. 256,986. Divided and this application filed Nov. 19, 1928. Serial No. 320,462. 2 Claims. (Cl. 16—44.)

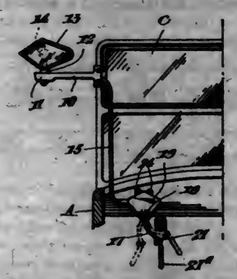
1. A device of the character described comprising a support having a cylindrical portion adapted to be arranged in a socket formed in the lower end of a leg of an article of furniture and provided with a head at its upper end, a cup slidable in the lower end of said cylindrical portion, a stem carried by said cup and projecting upwardly through said head, a caster carried by said cup and arranged therebeneath, a spring surrounding said stem between the bottom of said cup and said head and normally urging said caster downwardly, said support being provided with a depending annular portion having

its lower extremity normally arranged above the bottom of said caster, the upper end of said stem being threaded, and a nut arranged on the upper end of said stem and contacting with the upper face of said head to limit the downward movement of said caster, said nut being adapted to be turned downwardly on said stem for moving said caster upwardly and holding it above the lower extremity of the annular portion of said support.

1,749,752. HANDLE. ERIK AUGUST BOLINDER, Stockholm, Sweden. Filed June 18, 1928, Serial No. 286,321, and in Sweden Nov. 16, 1927. 1 Claim. (Cl. 16—120.)

A handle for range doors and the like, including a spindle and a wire member surrounding the spindle and having the body portion thereof in the form of a helix, and the terminal coils of the helix being extended inwardly within the body portion and attached to the outer end of the spindle said outer end of the spindle terminating within the body portion to prevent contact of the hand therewith when the handle is grasped.

1,749,753. LAMP CHANGER. CARL C. CAUFFIELD, Niles, Ohio. Filed June 2, 1928. Serial No. 282,404. 1 Claim. (Cl. 294—33.)

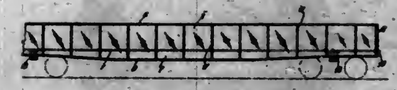


In a device of the class described, a handle member having a recess in one end thereof; a metallic cap over the recessed end of the member and having an opening in alignment with the recess, a gripping member formed of a single wire folded on itself to constitute a shank, said shank being adapted to be secured in said recess,

two arms extended outwardly from said shank, said arms having divergent portions, coiled portions, and mutually parallel portions, said parallel portions of said arms ter-

minating in opposed spaced circular loops having outwardly flared upper portions and rubber covered lower portions to facilitate, respectively, insertion and gripping of an electric bulb.

1,749,754. DIRECTION INDICATOR. FREDERICK AUGUST DARCHSEL, Ottawa, Ontario, Canada. Filed June 2, 1925. Serial No. 34,386. 1 Claim. (Cl. 116—46.)



A direction signal for automobiles comprising a turnably mounted casing adapted to be turned through 180 degrees, positioning means comprising a ball and spring mounted in a socket for releasably holding said casing in mid position, a Bowden wire having one end operatively connected with the casing, a substantially S-shaped lever pivoted intermediate of its length, the other end of the Bowden wire being connected to one end of said lever, and equalizing springs operatively connected with opposite sides of the lever whereby it is normally maintained in mid position.

1,749,755. SCREEN PATCH. DAVID DOWNER, Cimarron, Kans. Filed July 13, 1928. Serial No. 292,549. 1 Claim. (Cl. 156—14.)

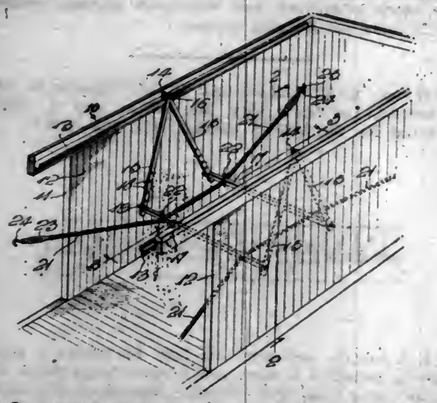
A repair patch for screens, including a substantially wide metallic ring member, spurs formed integral with the ring member and disposed adjacent to the outer edge of the ring member, said spurs adapted to be extended through the mesh of the wire screen to which the patch is secured, and wire mesh material welded to the wide metallic ring member.

1,749,756. CAST-METAL CAR BODY. ALBERT W. ALBRECHT, University City, Mo. Filed May 3, 1929. Serial No. 360,082. 9 Claims. (Cl. 105—406.)

1. A unitary cast-metal car body comprising a single casting including a floor, two integral longitudinal side walls rising from and extending throughout the length of said floor, end walls rising integrally from the ends of the floor and integrally connected with the ends of said side walls, integrally formed means on the under face of the floor adjacent to each end thereof for connecting the car body to the trucks, and means under the ends of said floor for receiving coupling devices.

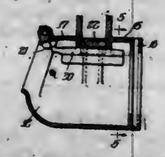
2. A unitary cast-metal car body comprising a single casting including a floor, two integral longitudinal side walls rising from and extending throughout the length of said floor, end walls rising integrally from the ends of the floor and integrally connected with the ends of said side walls, means under the ends of said floor for receiving coupling devices, bosses integral with the under side of the floor forming abutments for coupling devices, and longitudinal flanges integral with the under side of the floor and with said bosses.

1,749,757. METAL FUSELAGE OR BODY. EDMUND BURKE CARNS, New York, N. Y., assignor to Cairns Development Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 5, 1927. Serial No. 173,086. 3 Claims. (Cl. 244—30.)



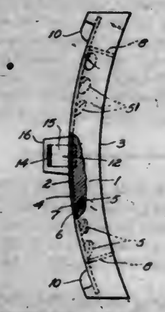
1. A fuselage for aircraft, substantially triangular in cross section and made of three preformed sides, each side having a convex curvature from one end to the other and having a continuous convex transverse curvature at all points along its length, whereby each side is longitudinally and transversely arched, such arched assembly of the three sides being substantially rigid in all dimensions.

1,749,758. LOADING OR DECKING DEVICE FOR AUTOMOBILES IN FREIGHT CARS. ALFRED COPONY, Mount Clemens, Mich., assignor to Copony Auto Loading Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 21, 1927. Serial No. 162,641. 13 Claims. (Cl. 105—368.)



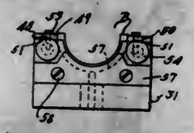
1. In a vehicle decking device for freight cars, the combination with vehicle supporting means of means permitting movement of said supporting means within the

freight car whereby the vehicles may be loaded at a single point in the car and then moved to selected points of storage.



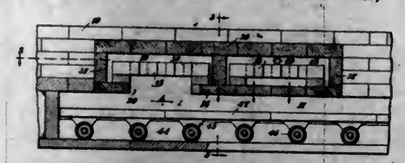
2. In a vehicle decking device for freight cars, the combination of vehicle supporting means with means permitting movement of said supporting means longitudinally of the freight car whereby vehicles may be loaded at a single point in the car and then moved to selected points of storage.

1,749,759. JOURNAL-BOX CONSTRUCTION. HARRY C. DREIBUSS, St. Louis, Mo., assignor to Scullin Steel Co., St. Louis, Mo., a Corporation of Missouri. Filed Mar. 23, 1928. Serial No. 264,191. 12 Claims. (Cl. 105—205.)



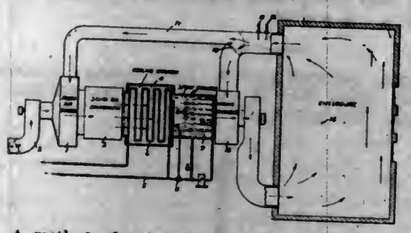
1. In combination, a side frame having tension and compression members and a journal box integral therewith having a wedge-engaging bearing member disposed within said journal box and integral therewith, the roof of said journal box both inwardly and outwardly of said tension and compression members being at a higher level than said wedge-engaging member, the wedge member in said journal box engaging said first mentioned member, one of said members being convex on the surface thereof which engages the other of said members.

1,749,760. BRAKE SHOE. WILLIAM M. DUNCAN, Alton, Ill. Filed Apr. 2, 1928. Serial No. 266,520. 1 Claim. (Cl. 188—258.)



A device of the kind described, comprising a cast metal brake shoe provided with a reinforcing back, said back including a curved member at the rear face of the shoe and legs surrounded by the cast metal and extending from said curved member to the face of the cast metal shoe to serve as chaplets in making the casting.

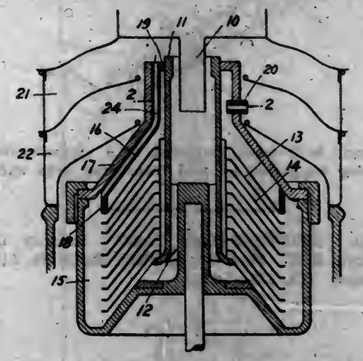
1,749,761. BROACHING MACHINE. CHARLES W. EGGENWEILER, Detroit, Mich., assignor to Bohn Aluminum and Brass Corporation, Detroit, Mich., a Corporation of Michigan. Filed July 7, 1925. Serial No. 42,005. 13 Claims. (Cl. 90—59.)



1. In a work holder for use with a broaching machine, a block formed with a recess for receiving a bearing or like section, and adjustable sections constituting portions of the wall of said recess for adjusting the parting edges of said bearing relative to each other.

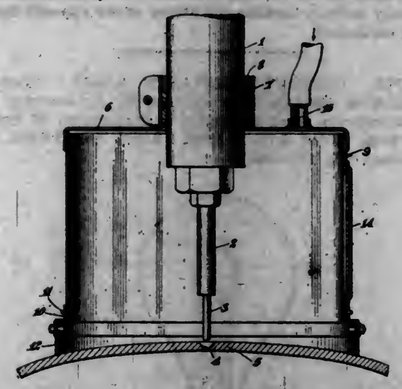
1,749,762. TUNNEL KILN AND METHOD OF OPERATING THE SAME. FRANCIS A. J. FITZ GERALD, Niagara Falls, N. Y., and JAMES KELLEHER, Chippawa, Ontario, Canada, assignors to Harper Electric Furnace Corporation, a Corporation of New York. Filed June 10, 1925. Serial No. 36,086. 16 Claims. (Cl. 266—1.5.)

1. In an electric kiln furnace, a chamber through which material to be heated to a high temperature is moved, a resistor exposed to the atmosphere of said chamber and adapted to heat such material to a temperature less than said high temperature, and an enclosed resistor adapted to heat said material from said second-named temperature to said high temperature.



1,749,763. METHOD AND MEANS FOR REDUCING TEMPERATURE BY DEHYDRATION. WALTER L. FLEISHER, New York, N. Y., assignor to The Cooling & Air Conditioning Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 8, 1928. Serial No. 298,213. 20 Claims. (Cl. 62—176.)

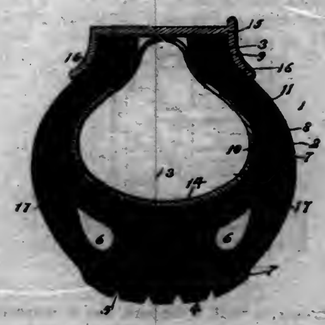
1. A method of reducing the temperature of air consisting in dehydrating the air and saturating it.



1,749,764. CENTRIFUGAL SEPARATOR. ERIK AUGUST FORSBERG, Stockholm, Sweden, assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 6, 1928, Serial No. 252,177, and in Sweden Feb. 12, 1927. 13 Claims. (Cl. 233—28.)

1. The combination with a centrifugal separator bowl and the hood thereof, and a distributor adapted to discharge the mixture to be separated into the separating chamber of the bowl, of means providing outflow passages for the heavier and lighter components respectively, the first passage being in communication with the peripheral part of the bowl and the second passage being in communication with the part of the bowl relatively near its

axis, an upstanding neck on the hood, said passages extending within said neck and the first passage extending substantially above the discharge of the second passage, and a hollow regulating screw projecting through said neck and providing a discharge for the second passage and extending substantially further from the axis of the bowl than the discharge end of the first passage.

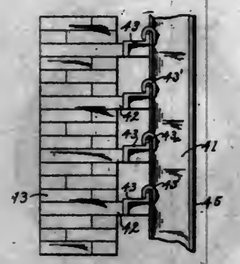


1,749,765. APPARATUS FOR ELECTRIC WELDING. JOHN B. HENDRICKSON, Philadelphia, Pa., assignor to Welding Engineers Incorporated, a Corporation of Delaware. Filed Mar. 13, 1926. Serial No. 94,880. 5 Claims. (Cl. 219—14.)

4. In welding apparatus the combination with means for supplying a rod of material to the weld on the article being welded, of a casing supported by the apparatus and enclosing the rod and the point of welding of the article, said casing having an edge closely adjacent the surface of the said article, and means for supplying to the interior of said casing at a point comparatively remote from the point of welding, an inert gas under pressure tending to exclude air, said inert gas having no deleterious effect on the metals during welding.

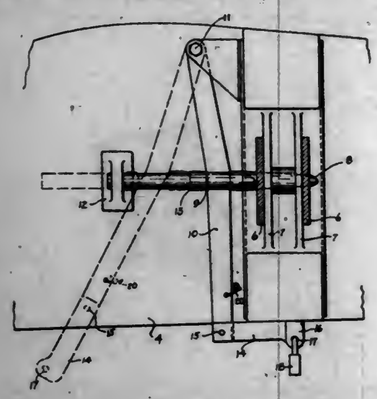
1,749,766. TIRE. JOSEPH C. HITCHNER, Philadelphia, Pa., assignor to Hitchner Tire Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed Aug. 11, 1928. Serial No. 298,997. 2 Claims. (Cl. 152—10.)

1. In a tire, an annular resilient body having its tread portion extending inwardly into proximity to the transverse diameter of the tire and provided with spaced textile reinforcements extending in arch formation across the tread and through the side walls to the terminal seatings, said tread having intermediate its depth at opposite sides



an annular chamber, the side walls being split from said chamber through the terminal seatings, and the outer of said side walls being inwardly bulged at the inner portion of a juxtaposed side chamber to maintain said side chambers closed at such locations when the tire is under load.

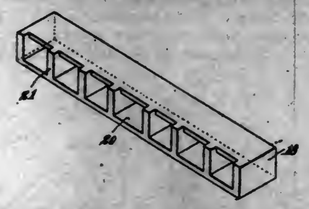
1,749,767. PICTURE-GRAPH MACHINE. LEWIS H. HUTCHINSON, South Portland, Me. Filed Mar. 27, 1929. Serial No. 350,330. 3 Claims. (Cl. 46—87.)



3. In a device of the character described comprising a box, a cover for said box, an aperture in said cover, a sleeve fixed in said box, a turning-plate adapted to lie flatwise against and revoluble on the exposed edge of said sleeve, a plurality of spokes in said turning-plate, a shaft extending through said turning-plate and said box, a crank handle on said shaft, a picture disc fixed on said turning-plate and having imprinted thereon groups of pictorial sketches arranged in separated relation and representing the same subject but of different views thereof, relatively, an arcuate rail in said box concentrically disposed with respect to said shaft, and having one end cut on an incline and the other end cut square, a drive-plate fixed on said shaft, one end thereof adapted to ride said rail, a pawl on said drive-plate adapted to engage, successively, each of the said spokes, said engagement being accomplished once during each revolution of said shaft and effective to bring into register with said aperture, one of the pictorial sketches on said picture disc, and a washer disposed interjacent said cover and said picture disc and serving as a brake to arrest the rotary movement of said picture disc when said pawl becomes disengaged from said turning plate.

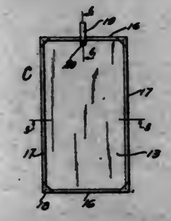
1,749,768. FURNACE WALL. DAVID S. JACOBUS, Jersey City, N. J., assignor, by mesne assignments, to Fuller Lehigh Company, a Corporation of Delaware. Original application filed Jan. 31, 1924, Serial No. 689,610. Divided and this application filed June 30, 1925. Serial No. 40,487. 13 Claims. (Cl. 72—101.)

1. In a furnace, a wall, a support, and a connection between said wall and support comprising a member having substantially parallel legs joined by a portion of approximately semi-cylindrical shape.



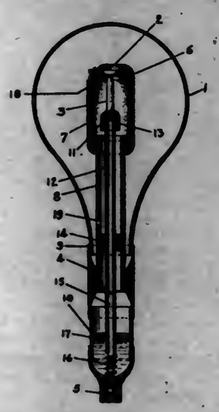
1,749,769. AIRPLANE-WING CONNECTION. CORYDON MILTON JOHNSON, Farmingdale, N. Y., assignor to Fairchild Airplane Manufacturing Corporation, New York, N. Y. Filed Mar. 31, 1927. Serial No. 179,931. 6 Claims. (Cl. 244—12.)

1. In an airplane having a folding wing section, a support, a detachable connection for the inner end of the wing section comprising a pair of inter-fitting connections, one on the wing section and one on the support, a pin inter-connecting said connections, and a manually operated downwardly extending lever connected to said pin and located adjacent thereto, for quickly manually moving the pin to release the section, said lever having a handle portion movable thereon to a position flat against the lower wing surface.



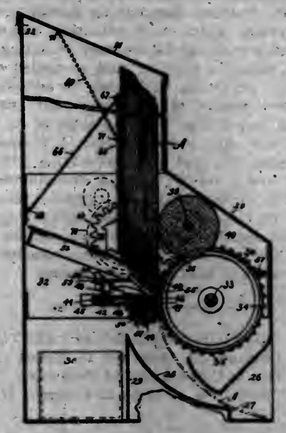
1,749,770. MOLD AND CORE FOR LINE-CASTING MACHINES. ERIK W. JOHNSON, Chicago, Ill., assignor of one-half to Leon A. Kamradt, Chicago, Ill. Filed Sept. 24, 1927. Serial No. 221,671. 3 Claims. (Cl. 101—402.)

1. An integral slug of a cellular type of construction having a bottom, an overhanging top and an imperforate back, a plurality of transverse webs coextensive in length with the bottom, said overhanging top co-acting with said webs, bottom and imperforate back in forming cells, said



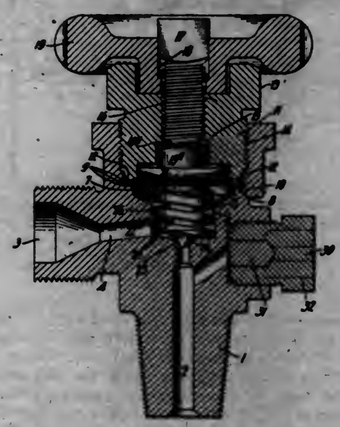
imperforate back when employed as a character-bearing shelf being supported by said transverse webs and said bottom.

1,749,771. SHIRT-DISPLAY CARD. HERMAN LEVEY, Brooklyn, N. Y. Filed Oct. 6, 1928. Serial No. 310,698. 3 Claims. (Cl. 223—18.6.)



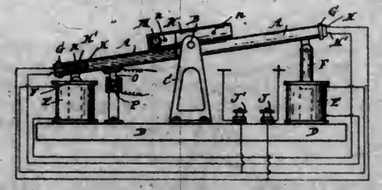
1. A shirt display card comprising a corrugated cardboard having substantially straight edges, and a thin metallic strip embracing said edges, said strip being of V cross section forming thin, smooth edges for the cardboard at the apex of the V, the said metallic strip lying substantially entirely between the planes of the opposite faces of the cardboard.

1,749,772. CONTACT-RESISTANCE LAMP. CHARLES FREDERICK LORENZ, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Aug. 1, 1924. Serial No. 729,463. 7 Claims. (Cl. 176—28.)



7. A contact resistance lamp comprising a container, a plurality of electrodes therein having surfaces in contact, means for partially enclosing the contact portions of said electrodes, one of said electrodes cooperating with said means to completely enclose the said contacting portions, and means for equalizing the pressure at opposite sides of said enclosing means.

1,749,773. VENDING MACHINE. GEORGE H. MATCHETT, Cleveland, Ohio. Filed Sept. 5, 1925. Serial No. 54,603. 5 Claims. (Cl. 312—54.)



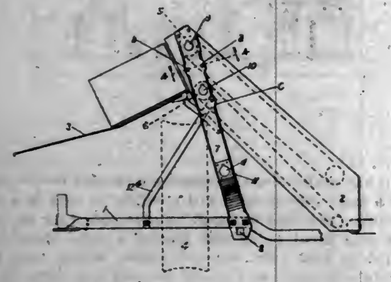
1. In a machine of the character described, the combination of an inclined platform for supporting sheets or the like on edge, means for maintaining the sheets in upright position, extrusion means adjacent the lower edge of said platform for withdrawing sheets therefrom in succession, and means operatively associated with said extension means for vibrating said platform.

1,749,774. VALVE. WILLIAM F. MCKAY, Newark, N. J., assignor to International Oxygen Company, a Corporation of New Jersey. Filed Sept. 19, 1928. Serial No. 306,822. 2 Claims. (Cl. 251—139.)

1. A valve having a valve chamber comprising a cylindrical portion having an inlet opening at one end and an outlet opening at one side adjacent said end, and a portion of greater diameter at the end of the chamber farthest from the inlet opening; an imperforate diaphragm closing the large end of said chamber; a valve element including a stem, a relatively blunt cone portion engaging in the inlet opening and a broad base portion abutting against but unattached to said diaphragm; and means for centering and retracting said valve element including a flat ended helical spring, of rectangular cross-section, the interior of which approximately fits over the valve stem and the exterior of which approximately fits said cylindrical portion having the inlet and outlet openings, in combination with means for operating the valve element including external means for forcing the diaphragm inward against the pressure of said spring.

1,749,775. AUTOMATIC ELECTRIC-CIRCUIT-CONTROLLING DEVICE. THOMAS LEWICE MINFORD MILLAR, Hamilton, New Zealand. Filed Mar. 14, 1925, Serial No. 15,453, and in New Zealand Oct. 29, 1924. 4 Claims. (Cl. 200—90.)

1. An automatic electric circuit controlling device comprising a main tube pivoted at its middle to rock in a vertical plane, a solenoid disposed beneath said tube on each side of said pivot point and having a core operatively connected to said tube, contact means within each end of said tube adapted to connect the solenoid disposed on the other side of said pivot point therefrom in circuit with a source of electrical energy, a metallic ball movable in said tube and adapted to close the circuit of the contact means at each end of said tube when such end is lowered, means in said tube for restraining the movement of said ball, said means being adapted to be varied to vary the time of travel of said ball through said tube and a movable weight mounted on said tube and capable of movement across said pivot point as each end of said tube is lowered but adapted to be restrained on one side thereof, whereby the end of said tube on the same side of said pivot point as said weight is caused to drop back to its lowest position immediately after it has begun to rise.

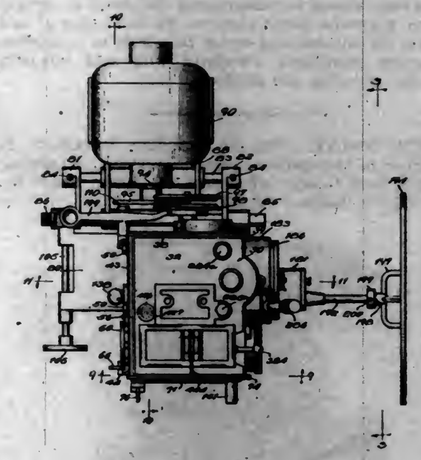


1,749,776. HAM BAG. LOUIS A. O'LENA, Brooklyn, N. Y. Filed Apr. 25, 1928. Serial No. 272,770. 2 Claims. (Cl. 150—52.)

1. A bag or cover for purposes described, consisting of a unitary, seamless, knitted tube, one portion of which is

relatively tightly knitted and another portion relatively loosely knitted, whereby the respective portions are adapted to conform to small and large portions of a ham or other meat-joint, the upper end of the tightly knitted portion having its margins connected by side-seams, providing a restricted opening to accommodate a suspension cord connected to the ham-shank, when the bag is applied thereto.

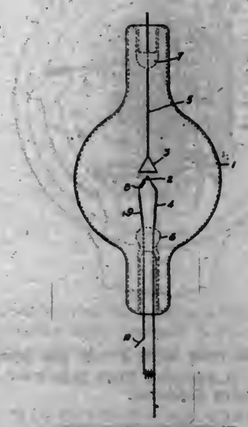
1,749,777. HARVESTER BINDER. LOUIS A. PARADISE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Feb. 23, 1927. Serial No. 170,081. 4 Claims. (Cl. 56—1.)



1. In a grain harvester and binder, the combination with the main frame and the front elevator support, of a channel bar having both ends flattened and rigidly secured respectively to said support and the main frame, said bar being provided with a plurality of bearing supporting openings.

1,749,778. REGISTER LOCK. JOSEPH V. PETRELLI, New Rochelle, N. Y. Filed Feb. 18, 1928. Serial No. 255,217. 3 Claims. (Cl. 98—110.)

1. The combination with a grating, of a housing on one side of and connected to said grating, and provided with an opening substantially coaxial with said grating, shutters pivotally mounted to said housing and controlling the passage of gas through said grating, slidable means for actuating said shutters from the side of said grating opposite the shutters, the grating having an elongated opening through which said actuating means projects, and threaded means carried by said actuating means for cooperation with the sides of said elongated opening for clamping said actuating mechanism in adjusted position, said threaded means comprising a nut non-rotatably mounted for cooperation with the sides of said elongated opening on one side, a headed bolt in threaded engagement with said nut, and also cooperating with said slidable means, and a washer member beneath the bolt head and shaped to enclose the projecting end of said actuating means and fit into said elongated opening and also engage its sides opposite the nut in such manner that tightening the bolt clamps said washer member and nut against the sides of said elongated opening.

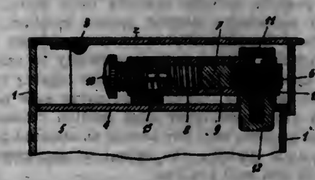


1,749,779. MOTION-PICTURE APPARATUS. JOHN PROKSA, Chicago, Ill., assignor to Helios Corporation, Chicago, Ill., a Corporation of Delaware. Filed Mar. 21, 1925. Serial No. 17,336. 15 Claims. (Cl. 88—17.)

1. In apparatus of the kind described and in combination, film advancing means, an electric motor, means including a plurality of relatively movable friction disks for operatively connecting the motor to the film advancing means, said disks being arranged in parallel planes and common means for displacing the motor and one of said disks to change the speed at which the film is advanced.

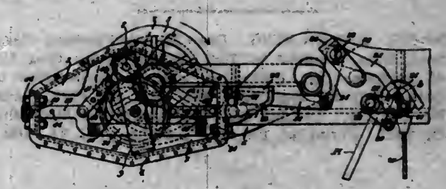
5. In apparatus of the kind described and in combination, a frame having a light projecting aperture, a shutter, a centrifugally operated means for bringing said shutter into and out of alignment with said aperture, said centrifugally operated means comprising a tube rigidly secured in the frame, a pin slidably journaled in the tube, a member rotatably journaled on the tube and provided with two sets of gear teeth, weights pivotally mounted on said member and operatively connected to the pin, means operatively connecting the pin to the shutter, means meshing with one set of gear teeth for driving said member, a film-advancing sprocket, and means meshing with the other set of gear teeth for driving the sprocket.

1,749,780. INCANDESCENT-CATHODE DEVICE. HARVEY CLAYTON RENTSCHLER, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Jan. 31, 1922. Serial No. 533,105. 6 Claims. (Cl. 250—27.5.)



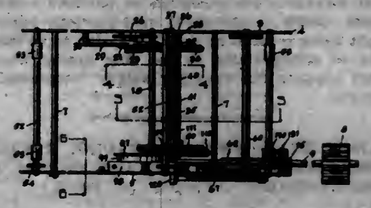
6. A rectifier comprising a large iron anode, a small thorium cathode and a tungsten heating coil in series with said cathode.

1,749,781. METHOD OF OBTAINING LEAD OXIDE IN A STATE OF HIGH DISPERSION. LUDWIG SCHERTEL and WILLI LÖTY, Essen, Germany, assignors to the Firm Th. Goldschmidt A.-G., Essen, Germany. Filed Feb. 4, 1925, Serial No. 6,894, and in Germany Feb. 8, 1924. 3 Claims. (Cl. 23—146.)



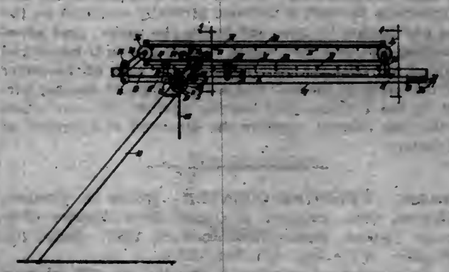
1. A method of obtaining lead oxide in a state of high dispersion from a hot gas medium carrying lead oxide vapors comprising suddenly cooling said gas medium and subjecting the cooled gas medium with the fine particles of lead oxide suspended therein to dust precipitating means.

1,749,782. POCKET LIGHTING DEVICE. THEODER SCHILD, Grenchen, Switzerland. Filed June 18, 1927, Serial No. 199,712, and in Switzerland Apr. 6, 1927. 2 Claims. (Cl. 67—7.1.)



1. A pocket lighting device, comprising a flat container substantially rectangular in cross section and having a horizontal supporting wall adjacent one of its ends, a vertical stud fixed in said wall, a tubular casing rotatable in a horizontal plane about said stud parallel to said supporting wall, a friction wheel also rotatable about said stud and partly enclosed in said tubular casing, and a spring pressed pyrophoric element in said casing and adapted to adjustably engage said friction wheel.

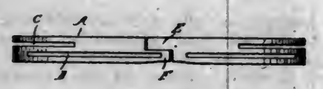
1,749,783. REVERSE-CONTROLLED OPERATING MECHANISM. DELMAR C. SHERMAN, Chattanooga, Tenn., assignor to Williamsport Wire Rope Company, a Corporation of Pennsylvania. Filed Sept. 27, 1928. Serial No. 308,864. 14 Claims. (Cl. 105—242.)



1. The combination with a carrier including a track sheave, of a movable member supported by the carrier, a slide operated by the sheave when the direction of movement of the carrier is reversed, and means operated by the slide for shifting said member.

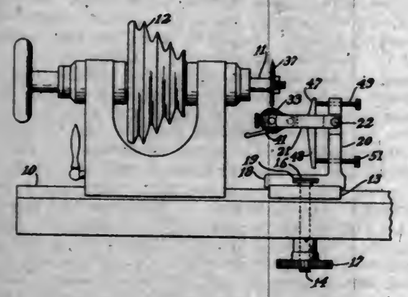
1,749,784. MECHANISM FOR ADVERTISING DEVICES. DAVID SLOTSKY, Cleveland, Ohio. Filed July 16, 1928. Serial No. 292,952. 2 Claims. (Cl. 40—31.)

1. In a display mechanism, sheet material having display matter contained thereon, a pair of rolls for rolling up the sheet material, and a plurality of collars located in spaced relation for operating on the sheet material and to locate the sheet material in position to be displayed, a pair of burrs, means for pressing the sheet material against the burrs, a driving mechanism and a driven mechanism for operating the collars and the burrs, the driving mechanism having means for intermittently operating on the driven mechanism for short periods of time separated by longer periods of time to move the sheet material to expose parts thereof, the driven mechanism having means for reversing the movement of the collars, and a means for operating the rolls to produce a surface movement of the rolls greater than the surface movement produced by the collars, and a frictional release between said last named means and the rolls to maintain the sheet material taut in the vicinity of the rolls.



1,749,785. HAY LOADER. WILLIAM O. SMITH, Cuyahoga Falls, Ohio. Filed Apr. 15, 1927. Serial No. 183,968. 9 Claims. (Cl. 198—89.)

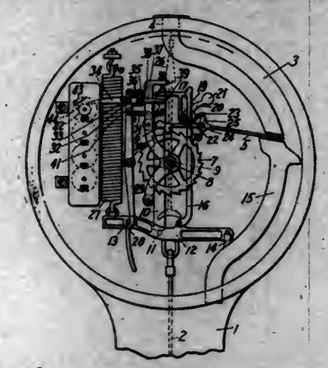
7. The combination with a hay loader of a hay distributing conveyor arranged to receive hay from the



loader, said conveyor comprising a frame slidable on said loader, telescoping members supported by the loader and the forward end of the frame over which the hay is conveyed, and conveyor rakes mounted on the frame for moving the hay over said telescopic members.

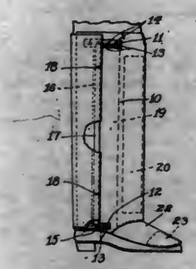
1,749,786. PISTON RING. DEAN M. SOLENBERGER, Cleveland, Ohio, assignor to The Simplex Piston Ring Co. of America, Inc., Cleveland, Ohio, a Corporation of Ohio. Original application filed Apr. 16, 1923, Serial No. 632,290. Divided and this application filed Mar. 28, 1927. Serial No. 179,122. 1 Claim. (Cl. 74—109.)

A sealing ring comprising a trans-split ring member having a normal axial dimension in excess of that of the ring groove and provided with overlapping series of circumferentially extending slots rendering all portions of said ring with the exception of portions adjacent to the split axially compressible, said portions adjacent to the split being reduced in axial dimension to be insertable in and to substantially fit the ring groove when said portions opposite the slots are axially compressed to fit the groove.



1,749,787. GEAR-WHEEL-ROUNDING APPARATUS. THOMAS STAARUP, Birmingham, Ala. Filed Oct. 1, 1928. Serial No. 309,628. 2 Claims. (Cl. 90—8.)

1. In a gear wheel rounding up attachment for lathes having a rotary mandrel and a bed, an indexing cutter mounted on the mandrel, a base adjustably mounted on the lathe bed and adapted to be moved longitudinally and transversely thereof, a U-frame pivotally mounted on the base and having its open end facing the cutter, gear wheel mounting and centering means carried by the U-frame and adapted to position a gear wheel in the path of the cutter and transversely thereof, and a pivoted guard member carried by the U-frame and bearing against the gear wheel on the side thereof opposite the direction of approach of the cutter.

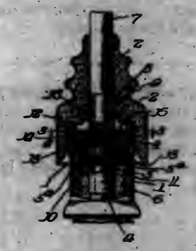


1,749,788. WEIGHING COUNTER. BRUCE H. TINGLEY, Dayton, Ohio, assignor to Ohmer Fare Register Company, Dayton, Ohio. Filed June 27, 1927. Serial No. 201,570. 4 Claims. (Cl. 194—35.)

1. In a weighing machine, a counter, an arm whereby said counter may be actuated, a lever to actuate said arm, a pin and slot connection between said arm and lever, means to actuate said lever each time a weight is placed on said machine, and means to prevent the actuation of

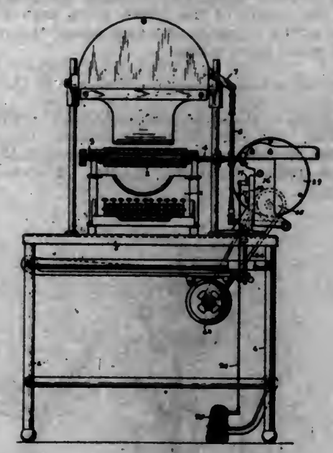
said arm by said lever until a coin has been deposited, said pin sliding in said slot when said lever is actuated without a coin being deposited.

1,749,789. FIREPROOF LEGGING. EDISON L. WHEELER, Evanston, Ill. Filed May 23, 1928. Serial No. 280,063. 6 Claims. (Cl. 36—2.)



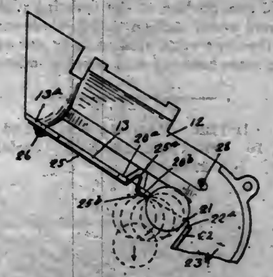
1. In a legging, the combination of a sheet of flexible material for encircling the leg of the user with one vertical edge portion overlapping the opposite edge portion, metal pockets secured to the outer surface of the inner one of said edge portions adjacent the upper and lower edges of said sheet, said pockets opening towards each other, means holding said pockets in desired spaced relation, and a flexibly resilient metal bar secured to the outer one of said edge portions and extending vertically to enter and engage said pockets at its ends with the legging in place on the leg of the user, whereby springing said bar outwardly away from said inner edge portion releases said bar from said pockets, said bar having shouldered portions adjacent its ends limiting the extent of engagement between its ends and said pockets.

1,749,790. ELECTRICAL CONNECTER. PAUL F. WILLIAMS, Chicago, Ill., assignor to G & W Electric Specialty Co., Chicago, Ill., a Corporation of Illinois. Filed June 17, 1922. Serial No. 568,054. 9 Claims. (Cl. 173—353.)



1. The combination with plug and socket members of a sleeve arranged to be interposed between said members, said sleeve being exteriorly threaded and the socket member being interiorly threaded to cooperate with the exterior

of the sleeve, and said sleeve being also provided with a threaded bore and the plug member having a correspond-

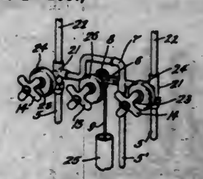


ingly threaded portion to cooperate with said bore, and said plug member being adapted to extend down to and make contact with the bottom of said socket member.

1,749,791. WORK-FEEDING MECHANISM FOR TYPEWRITING MACHINES. HARRY L. WOOD, Lakewood, Ohio, assignor to David W. K. Peacock, Cleveland, Ohio. Filed Sept. 2, 1925. Serial No. 54,000. 2 Claims. (Cl. 197—130.)

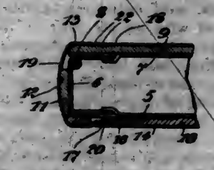
2. The combination of a typewriting machine, having a carriage and a platen; a work feeding device adapted to supply work members successively to said machine, of an electrically driven motor for driving the feeding device, reciprocating and rotating means connected with the typewriter carriage and with said feeding device so as to actuate the latter, said reciprocating means being arranged so as to effect the actuation of said feeding means during one stroke and the rotation of the typewriter platen during its other stroke; a clutch interposed between the motor and the feeding device and means operable by the operator to set the reciprocating means in motion to feed the work to the typewriter platen.

1,749,792. CHECK DETECTOR. HAROLD B. WOODS, Arlington, Mass., assignor, by mesne assignments, to Consolidated Automatic Merchandising Corporation, a Corporation of Delaware. Filed Feb. 5, 1927. Serial No. 166,045. 20 Claims. (Cl. 194—103.)



20. In a mechanism for testing a circular check, a check passage, a magnet placed adjacent said passage to test checks for their magnetic properties, a weight and size testing device so placed in the said passage as to strip any checks off the magnet that adhere thereto.

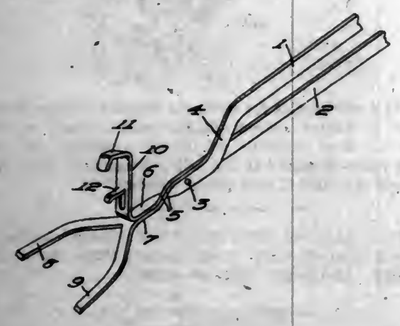
1,749,793. GARAGE CONSTRUCTION. HENRY L. WOOLFENDEN, Detroit, Mich. Filed May 31, 1928. Serial No. 281,659. 12 Claims. (Cl. 20—1.13.)



1. In combination, a pair of substantially level superposed vertically spaced floors, a ramp extending between said floors comprising a straight portion and curved end portions, the inner edge of the path of travel of said curved end portions terminating at each floor in the plane thereof and the outer edge of the path of travel of said curved end portions terminating at each floor at a superelevation with respect thereto, the floor adjacent to each of said ramp ends being warped to merge into said ramp ends.

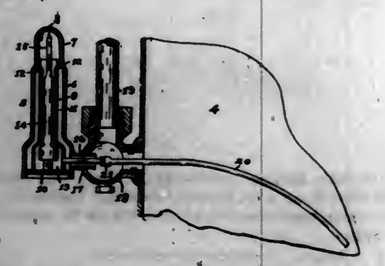
1,749,794. BATH-FIXTURE LUG. WILLIAM J. WOOLLEY, Chicago, Ill. Filed July 1, 1929. Serial No. 375,187. 8 Claims. (Cl. 4—199.)

1. A bath fixture, comprising a flow valve operating device having an arm formed integrally therewith, and a waste valve operating device adapted to be supported by said arm.



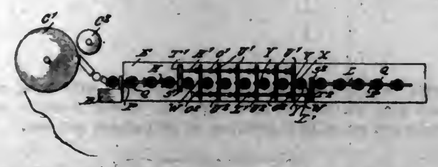
1,749,795. DECORATIVE COVERING FOR VANITY CASES, COIN BANKS, AND OTHER RECEPTACLES. DAVID H. ZELL, Brooklyn, N. Y. Filed Apr. 25, 1929. Serial No. 357,891. 4 Claims. (Cl. 282—4.)

1. A book form structure including a body having a back or rear edge and a cover member hingedly mounted thereon,



an ornamental flexible facing sheet covering the side wall of said body, an ornamental flexible covering sheet secured upon said cover member and having a free portion projecting beyond the hinge line of the cover member and around the rear edge of said body, and means connected with the edge of said free portion of the covering material to maintain the same under tension and in close snug fitting contact with the rear edge of said body during the opening and closing movements of said cover member.

1,749,796. LIFTER. HJALMAR AHLIN and AXEL AHLIN, Chicago, Ill. Filed Feb. 16, 1928. Serial No. 254,756. 2 Claims. (Cl. 294—29.)

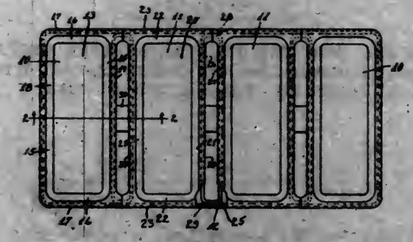


1. In a lifter, a pair of flat bars pivotally connected together and disposed edgewise at one end to form a handle, said bars beyond their pivot, with respect to said handle, being twisted to form cooperating flat jaws disposed at right angles to said handle, the free end of one bar beyond its flat jaw being bifurcated and the resultant prongs spread apart, the other bar beyond its flat jaw being bent at right angles thereto and terminating in a hook, and a tongue struck from the said bent portion.

1,749,797. AUTOMATIC AIR CONTROL FOR WATER-SUPPLY SYSTEMS. JOHN A. ANDERSON, Pittsburgh, Pa., and WILLIAM H. ELMES, Toronto, Ontario, Canada. Filed July 16, 1927. Serial No. 206,231. 1 Claim. (Cl. 137—68.)

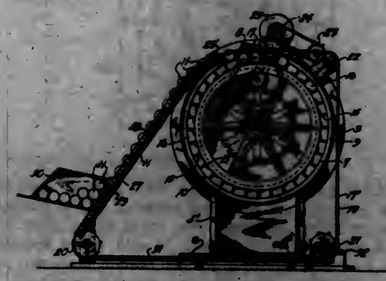
In combination, an automatic air control for a water supply system of the character described including a pressure tank, comprising an air valve consisting of an outer casing having its lower end communicably connected with said pressure tank, said outer casing having a reduced upper end provided with an air vent at the top thereof, an inner casing providing a valve chamber and mounted in said outer casing, said inner casing having an open upper end fixed in said reduced portion of said outer casing, said outer casing having a removable bottom constituting a bottom for said valve chamber, said inner casing being formed with a plurality of air ports which are disposed adjacent to the upper end thereof and establishing communication between said outer casing and said valve chamber, a valve float mounted for vertical movement in said valve chamber, a valve pin carried at the upper end of said valve float and adapted for seating in said air vent for closing the latter, and a siphon tube having one end thereof connected with the lower end of said inner casing and communicating with said valve chamber, said siphon tube extending into the pressure tank and having the free end thereof disposed below the plane of its connection with the lower end of said inner casing.

1,749,798. MANUFACTURE OF GLASS SHEETS. LOUIS BOUDIN, St.-Gobain, France, assignor to Societe Anonyme des Manufactures des Glaces & Produits Chimiques de Saint-Gobain, Chauny & Cirey, Paris, France. Filed Apr. 8, 1927, Serial No. 182,111, and in France Apr. 15, 1926. 6 Claims. (Cl. 49—8.)



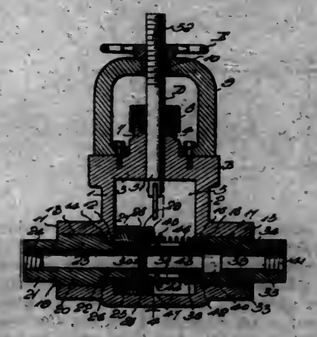
6. The combination with an intermittent sheet glass forming machine, and with a lehr to receive the sheet as formed, of at least five groups of rollers arranged along the length of the lehr, means for driving the rollers of the first group at substantially the speed of sheet formation, means for engaging and disengaging rollers of the second group with and from the drive of the first group, means for driving the rollers of the fifth group at a substantially constant speed, and means for engaging and disengaging the rollers of the fourth group with and from the drive of the rollers of the fifth group, the rollers of the third group being idlers.

1,749,799. ADJUSTABLE ELECTRIC PORTABLE CLUSTER. MICHAEL B. BOWEN, Decatur, Ill., assignor to Faries Manufacturing Company, Decatur, Ill. Filed Apr. 20, 1928. Serial No. 271,501. 2 Claims. (Cl. 240—78.)



1. In an adjustable electric portable cluster, substantially as described, the combination of an annular band or frame, a pair of pivotally operating oppositely disposed sides having annular recesses or seats to fit said band or frame, a nozzle on each of said sides for the attachment of an electric socket, means in said sides for maintaining the snug pivotal operation thereof.

1,749,800. BAKING-PAN UNIT. ELMER H. CHANDONIA, Dayton, Ky., assignor to Lockwood Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 15, 1927. Serial No. 199,106. 4 Claims. (Cl. 53—6.)

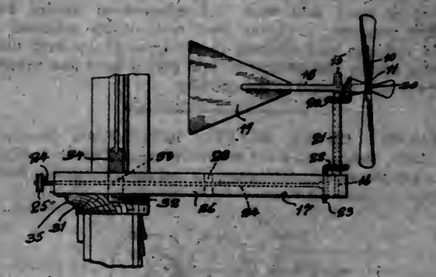


1. A multiple pan unit comprising a plurality of pans arranged in the form of substantially a rectangular unit, the pans having flanges on each of their edges, a flat, rigid strap member surrounding the rectangular unit and having the adjacent flanges of the several pans turned about it, the said flanges of the pans having integral means for abutment one with the other whereby to provide uniform spacing between adjacent pans in the unit, and elongated links having opposed ends abutting the strap and the remaining flanges of adjacent pans turned thereabout for strengthening said edges of the pans and means to preclude lateral collapse of the links.

1,749,801. AUTOMATIC FEEDING DEVICE. FRANK D. CHAPMAN, Berlin, Wis., assignor to Berlin Chapman Company, Berlin, Wis., a Corporation of Wisconsin. Filed Oct. 1, 1927. Serial No. 223,344. 7 Claims. (Cl. 198—108.)

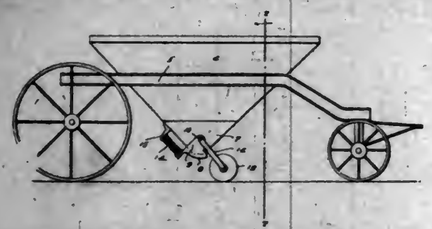
1. The combination with a cooker tank having an inlet opening and a spiral member and an inner rotary member provided with can receiving pockets, of an automatic feeding device therefor, comprising an endless carrier member extending in a line parallel to the spiral member and at an oblique angle to the axis of the tank and over the tank directly adjacent the inlet opening and having can receiving spaces, and means for moving the carrier at a speed in timed relation to the speed of rotation of the inner rotary member to aline the can spaces of the carrier with the pockets of the rotary member.

1,749,802. METERING VALVE. THADDEUS W. CULMER and WILLIAM K. MARSEY, Robinson, Ill. Filed Feb. 1, 1929. Serial No. 336,804. 8 Claims. (Cl. 137—75.)



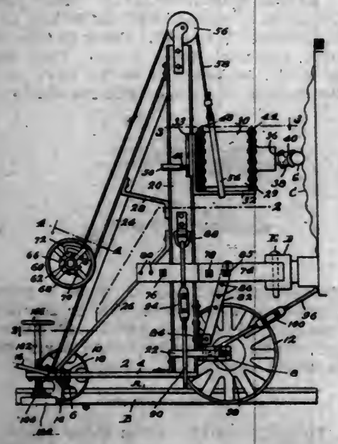
1. In combination, a casing, a fluid inlet, an outlet, an iris diaphragm mounted on said outlet, means for adjusting the diaphragm, a sleeve, and means for resiliently holding the sleeve against the diaphragm.

1,749,803. MEANS FOR DERAILING TUBS, TRUCKS, AND THE LIKE, IN THE EVENT OF THEIR ATTAINING AN EXCESSIVE SPEED. COLIN OLIVER DEACON, Welgedacht, Transvaal, South Africa. Filed Mar. 20, 1929, Serial No. 348,581, and in the Union of South Africa Oct. 5, 1928. 6 Claims. (Cl. 238—121.)



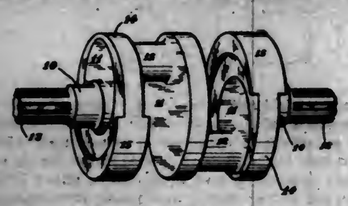
1. A railway permanent way or track, a portion of which is constructed with a transverse or lateral set or bend and an incline co-operating with said set or bend, whereby the vehicles are derailed when they acquire an excessive or uncontrollable speed, as set forth.

1,749,804. TOY WINDMILL. HUGH GATES DUGAN, Hinsdale, Ill. Filed Nov. 12, 1928. Serial No. 318,678. 6 Claims. (Cl. 170—80.)



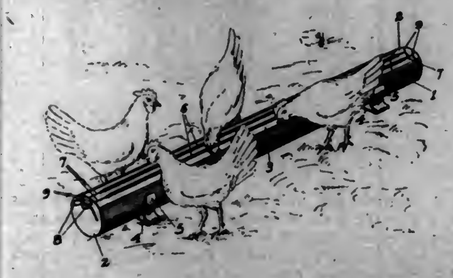
1. In a toy wind mill device, the combination of a wind wheel provided with a tail blade, a vertical mounting therefor, a horizontally extending frame upon which the vertical mounting is supported, said frame being adapted for support upon the sill of a window, a pulley located at the inner end of the frame, and power transmission connections between the wind wheel and the pulley, for imparting rotation to the pulley.

1,749,805. ROAD SURFACER. OTTO L. ELLIOTT, Westville, Okla. Filed June 10, 1929. Serial No. 369,908. 3 Claims. (Cl. 94—39.)



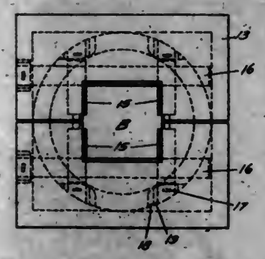
1. In a device of the class described, a wheeled hopper, a spout depending from the hopper, a valve plate movable over the opening of the spout, a pair of wings straddling the spout, means for rockably mounting the wings on the spout, pins projecting outwardly from the wings, a pair of arms, means for rockably mounting the arms on the spout one to each side thereof, a wheel having an axle journaled in the arms, said pins being in the path of swinging movement of said arms for opening the valve plate.

1,749,806. PORTABLE POWER APPLIANCE. PIUS A. FISHER, Kansas City, Mo. Filed May 26, 1928. Serial No. 280,929. 16 Claims. (Cl. 254—93.)



1. An appliance of the character described consisting of a truck, a mast mounted upon said truck, a cylinder mounted upon said mast and adapted to receive fluid under pressure, a piston head reciprocably mounted in said cylinder and adapted to be actuated by said fluid, and a piston rod secured to said piston head and projecting through one end of the cylinder.

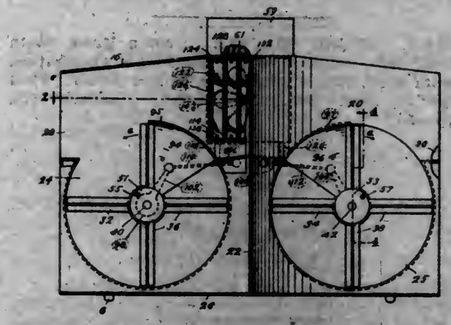
1,749,807. CRANK SHAFT. HENRY FORD, Dearborn, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Filed Apr. 22, 1926. Serial No. 103,953. 2 Claims. (Cl. 74—38.)



1. In a crank shaft assembly, a pair of oppositely extending crank arms, a ring secured to each of said crank arms having the axes of their outer edges coinciding with the main axis of the crank shaft, and a weight secured to each side of each ring diametrically opposite to the crank arms, so that the crank shaft may be placed in static balance by machining material from the weights on one ring while rotating on the main crank shaft axis and then placed in dynamic balance by machining equal amounts of material from one of the weights on each ring while the crank shaft is rotating on its main axis.

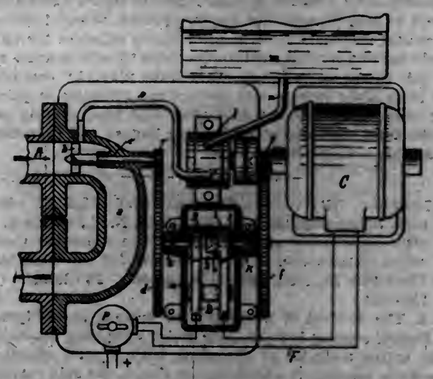
1,749,808. POULTRY FEED AND WATER TROUGH. OSCAR H. GREENE, San Jose, Calif. Filed Feb. 4, 1928. Serial No. 251,859. 2 Claims. (Cl. 119—61.)

1. A poultry feed device comprising a trough member having a longitudinal opening, and a helical tension spring extending lengthwise along the opening from end to end thereof and disposed in transversely spaced and parallel relation to the side edges of the opening.



1,749,809. DRIVE BUSHING FOR ROTARY DRILLING MACHINES. EDGAR E. GREVE, Bellevue, Pa. Filed Dec. 24, 1925. Serial No. 77,672. 4 Claims. (Cl. 308—6.)

4. A drive bushing for rotary well drilling machines having a central stem receiving opening and a plurality of roller receiving openings, two roller drive stem contacting members carried thereby in said roller receiving openings, and each having a portion thereof projected into the stem receiving opening, one member arranged at right angles with the other member, and means for securing the contacting members in the roller receiving openings of the bushing including a detachable pin entered in a pocket of the bushing.

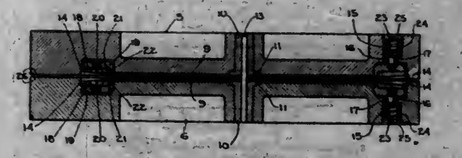


1,749,810. ROTARY SNOWPLOW. JAMES H. GRIFFIN and ELLSWORTH E. TIBBS, Clay Center, Kans. Filed May 21, 1927. Serial No. 192,319. 8 Claims. (Cl. 37—43.)

1. In a machine of the character described, a housing having inlets and oppositely-disposed discharge chutes communicating with said inlets, a rotor associated with each inlet, a valve associated with each inlet for partially closing communication between the latter and either of said discharge chutes, and independent mechanisms for operating each valve.

7. In a machine of the character described, a housing having an inlet and a discharge chute communicating with said inlet, means for forcing a blast of air through said discharge chute, and a container for discharging a lubricant into said air blast.

1,749,811. METHOD AND APPARATUS FOR MIXING FLOWING MEDIA IN EQUAL PROPORTIONS. HANS GROECK and FRANZ JORDAN, Berlin, Germany, assignors to Groeck Wasserverediung G. m. b. H., Berlin. Filed Mar. 8, 1928, Serial No. 260,210, and in Germany Mar. 11, 1927. 2 Claims. (Cl. 210—22.)



1. An apparatus for positively mixing always in the same relation two media one of which controls a motor determining the quantity of the second medium, comprising in combination with a motor having a starting circuit and with a conduit for the principal medium, a vane wheel in said conduit, and a switch mechanism in said starting circuit adapted to produce the proportionality between said vane wheel and said motor, said switch mechanism being opened after the closing of the circuit either by said motor or by said vane wheel influenced by said principal medium.

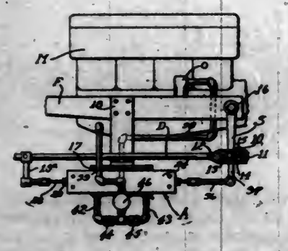
1,749,812. PROCESS FOR PULVERIZING MOUNTAIN-ASH BERRIES. PAUL GRUBE, Breslau, Germany. Filed Apr. 26, 1928, Serial No. 273,145, and in Germany Apr. 16, 1927. 2 Claims. (Cl. 167—50.)

1. A method for converting berries of the mountain-ash into a lasting powder-state, consisting in drying the berries in the air, rasping the same, exposing them to a temperature of about 70 to 80° C., cooling the material rapidly to a temperature of about 0° C. and grinding the material in a mill cooled to about 0° C.

1,749,813. PRESSING OR MOLDING MEANS AND METHOD. ERIC V. HAFFLING, Stratford, Conn., assignor to Columbia Phonograph Company, Inc., Bridgeport, Conn., a Corporation of New York. Filed June 4, 1928. Serial No. 282,519. 14 Claims. (Cl. 18—5.8)

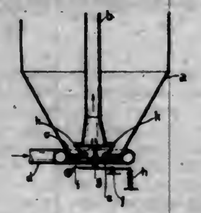
7. In combination, a die having an annular groove in one face, a matrix on said face, clamping means for said matrix, said clamping means disposed to enter said groove, sockets in the other face of said die, said sockets equally spaced and arranged in alignment with said annular groove, bolts extending from said sockets and engaging said clamping means to prevent its separation from the die, and coil springs disposed in said sockets and bearing against said bolts to resist movement of the clamping means toward the bottom of said annular groove.

1,749,814. PYROTECHNIC ARTICLE. FRANK S. HAMILTON, Boston, Mass. Filed Feb. 24, 1928. Serial No. 256,772. 7 Claims. (Cl. 102—20.)



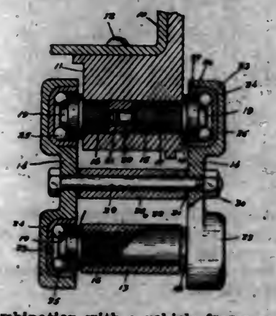
1. A pyrotechnic article comprising a body of hardened plastic cementitious material containing a flame coloring chemical.

1,749,815. PROPELLING MECHANISM FOR SHIPS. SIMSON HAMMERSTEIN, Rotterdam, Netherlands. Filed July 9, 1928, Serial No. 291,414, and in the Netherlands July 11, 1927. 2 Claims. (Cl. 115—39.)



1. In ship's propelling mechanism, a longitudinal tunnel located in the bottom of the hold of a ship; a series of funnel-shaped suction tubes disposed in axial alinement within the tunnel and coacting with the latter to define a series of funnel-shaped water spaces intermediate the tunnel and the suction tubes, said spaces having inlets to permit entrance of outboard water; sets of turbine elements between adjacent ends of the tubes; a turbine shaft extending axially through said tubes and to which certain elements of the turbine sets are connected; and a propeller fixed to said shaft within the rearmost tube adjacent the rear end of the latter to act on the water which has already exerted work on the turbines, said propeller exhausting the water at the stern of the ship during normal forward movement of the ship.

1,749,816. STEERING MECHANISM. WILLIAM R. HENDAIX, Pacific Palisades, Calif., assignor of one-half to Howard Anderson Hyde, Santa Monica, Calif. Filed July 20, 1927. Serial No. 207,263. 15 Claims. (Cl. 180—79.2.)

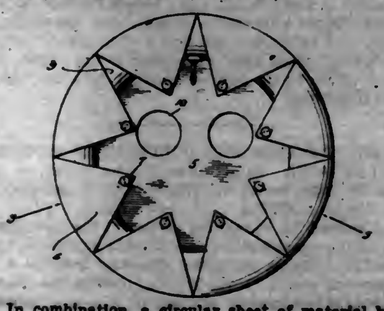


1. In combination, a steering mechanism for vehicles including a drag link and a steering arm operatively connected to the link for a limited relative movement between the two, an oil pump, and an actuating unit comprising a cylinder in circuit communication with the pump, a piston in the cylinder operatively connected to the drag link for moving the latter to effect steering of the vehicle, an inlet valve in the cylinder operatively connected to the piston for movement therewith and having a pair of ports through which oil from said pump is admitted to the cylinder at opposite sides of the piston, an outlet valve in the cylinder having a port controlled and normally closed by the piston, through which oil at one side or the other of the piston is adapted to be discharged according as the outlet valve is moved in one direction or the other to open its port to the cylinder at one side of the piston or the other, and an element for controlling the ports of the inlet valve and normally occupying a position in which the ports are open, the outlet valve and control element being operatively connected to the steering arm for movement thereby and responsive to movement of the arm to respectively close one of said inlet valve ports and open the outlet valve port so that oil from the pump will be free to enter the cylinder through the other inlet valve port to act against one side of the piston, while oil at the other side of the piston will be free to discharge from the cylinder through the outlet valve port, whereby the piston will be moved to actuate the drag link and will continue to actuate the latter so long as the outlet valve port and one of the inlet valve ports are maintained open by continued movement of the steering arm.

1,749,817. APPARATUS FOR SUPPLYING POWDERED FUEL TO FURNACES. EWALD HERMSDORF, Brunswick, Germany. Filed Oct. 3, 1928, Serial No. 310,053, and in Germany Sept. 7, 1927. 7 Claims. (Cl. 302—52.)

1. An apparatus for delivering finely divided material such as powdered fuel comprising a container, a conduit having an intake in the container, means for supplying air under low pressure directly below said intake including a port underneath the intake with its marginal edges in an inclined plane corresponding approximately to the angle of repose of the material being delivered, said port being far enough from the margin of said intake to permit only a thin layer of such material to flow across said port.

1,749,818. SPRING SHACKLE. GEORGE HUNT, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Nov. 21, 1927. Serial No. 234,693. 5 Claims. (Cl. 267—54.)

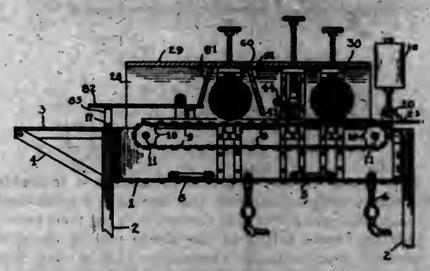


1. The combination with a vehicle frame and spring, of means connecting said spring to said frame comprising a spring hanger secured to and depending from said frame and having a transverse opening therein, a pair of pins extending into said opening at opposite sides of said hanger, one of said pins having a central cylindrical recess formed in its inner end, an integral central dowel formed on the inner end of the other of said pins, said dowel being telescopically received by said recess to insure axial alignment of said pins in said hanger opening, integral circumferential shoulders formed on said pins adjacent the outer ends thereof to abut against the sides of said hanger, and a pair of spaced complementary links pivotally connected at their lower ends to said springs and pivotally supported at their upper ends by said pins, said pins spacing said links from the sides of said spring hanger and preventing transverse movement thereof.

1,749,819. DRY-CHARGED BATTERY PLATE. WILLIAM SCOTT HUTCHINSON, Scarsdale, N. Y., assignor, by direct and mesne assignments, to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Filed July 13, 1925. Serial No. 43,405. 26 Claims. (Cl. 136—33.)

1. The method of preparing for storage and shipment a formed storage battery plate which comprises contacting the active material of the plate with a solid adsorbent material capable of adsorbing the liquid, the said material being of such character as not to stick to the plate.

1,749,820. BUOYANT BATHING DEVICE. HENRY A. JOHNSON, Northfield, Mass. Filed May 27, 1929. Serial No. 366,214. 3 Claims. (Cl. 9—17.)



1. In combination, a circular sheet of material having a pair of openings and a plurality of triangular tabs extending outwardly from the periphery thereof, and an inner tube over which the tabs are adapted to be folded, and means for fastening the apexes of the tabs to the sheet.

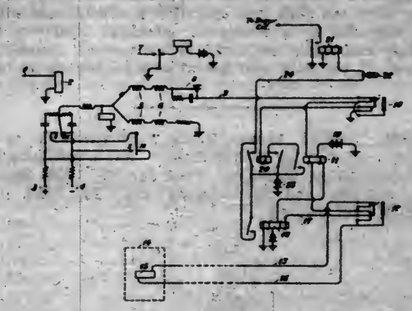
1,749,821. LIFE-SAVING DEVICE FOR SUNKEN SHIPS. JOHN KARDOS, Perth Amboy, N. J., and DEZSO FISCHER, Jamaica, N. Y., assignors of one-fourth to Herman Fischer, Perth Amboy, N. J. Filed Feb. 10, 1928. Serial No. 253,288. 3 Claims. (Cl. 61—69.)

1. In a life saving device for sunken ships, a container capable of holding several persons, a plurality of bushings rotatively mounted on the inner face of the top of the container, handles projecting from the bushings to facilitate manual turning by persons within the container, rods threadedly engaged thru the bushings extending from the container interior to the exterior, supporting cables attached on the outer ends of the rods, and flanges on the inner ends of the rods for manually preventing rotation so that the rods may be adjusted by persons within the container for changing its inclination.

1,749,822. METHOD OF CLEANING ELECTROTYPE PLATES. WILLIAM RENDELL LAKEMAN, Rochester, N. Y. Original application filed Mar. 23, 1922, Serial No. 546,302. Divided and this application filed Feb. 11, 1924. Serial No. 691,880. 7 Claims. (Cl. 87—5.)

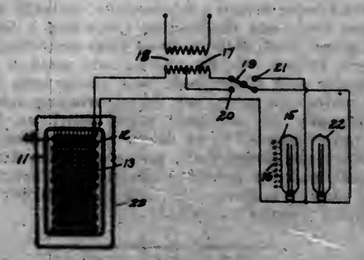
6. The method of cleaning electrotype plates coated with wax which consists in subjecting the plate, while it is in substantially the hot condition it is received from the casting pan, to kerosene, combining such kerosene with a flushing water after the kerosene has been utilized for cutting the wax on the heated plate, conveying the heated plate after it has been treated by the kerosene to a scrubbing point and through a heated area, scrubbing the plate while hot at this point, conveying the plate through a heated area from the scrubbing point to a flushing point, heating the flushing water with the kerosene therein, flushing the heated plate with said heated flushing solution, conveying the plate through a heated area to a second scrubbing point, and scrubbing the plate, flushing the plate and drying it thereafter.

1,749,823. GLASS AND METHOD OF PRODUCING IT. BERNARD LONG, Paris, France, assignor to Société Anonyme des Manufactures des Glaces & Produits Chimiques de Saint-Gobain, Chauny & Cirey, Paris, France. Filed June 14, 1928, Serial No. 285,503, and in France July 2, 1927. 4 Claims. (Cl. 106—36.1.)



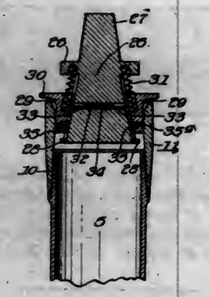
1. A violet-colored phosphate glass containing a relatively small percentage of titanium dioxide and being substantially free from silica.

1,749,824. METHOD OF BONDING RUBBER AND ARTICLES PRODUCED THEREBY. HUGH C. LOEB, Erie, Pa. Filed Apr. 5, 1923. Serial No. 630,178. 9 Claims. (Cl. 154—40.)



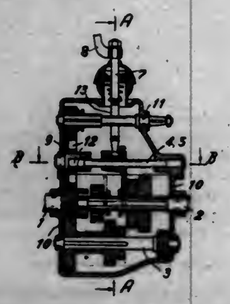
1. The method of bonding rubbers which consists in interposing between two layers of rubber of different qualities a plurality of layers made up of mixtures of the two different qualities of rubber and with a preponderance of each equality of rubber in the layers nearest that quality.

1,749,825. TELEGRAPH SYSTEM. DONALD P. LOYE, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 24, 1928. Serial No. 280,270. 3 Claims. (Cl. 178—2.)



1. A telegraph line terminating at a central office, a loop circuit for extending said line, relay means in said loop circuit at said central office normally unoperated by the transmission of signals over said loop circuit but responsive to a change in the direction of current flow in said loop circuit, and signaling means at said central office controlled by said relay means.

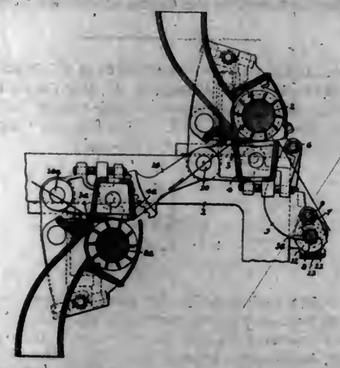
1,749,826. ELECTRIC HYGROMETER. WALTER LUBACH, Berlin, Germany. Filed June 7, 1927, Serial No. 197,197, and in Germany June 8, 1926. 9 Claims. (Cl. 175—183.)



1. A moisture measuring device, including a pair of spaced conductors, and non-conducting material connecting the conductors, said material being impervious to moisture but upon which moisture can collect.

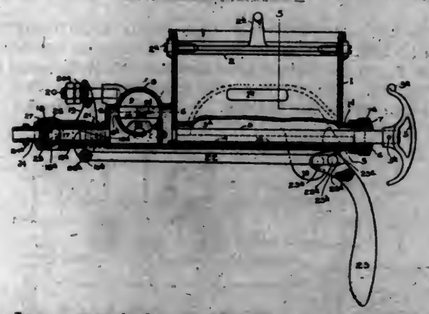
1,749,827. LETTING-IN TOOL. PATRICK H. MACK, Bradford, Pa., assignor to Oil Well Supply Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 1, 1923. Serial No. 655,017. 5 Claims. (Cl. 294—96.)

1. A letting-in tool for lowering devices into earth borings comprising a body having an upwardly tapered lower portion, means at the upper end of the body for attachment to a suspending means, slips slidably carried on the tapered lower portion of the body, means normally tending to move the slips into operative positions, said slips being expanded by a downward movement relatively to the body and being contracted by an upward movement relatively to the body, and lateral stop projections on the slips.



1,749,828. GEAR. ALBERT MAIER, Friedrichshafen, Germany, assignor to Zahnradfabrik Aktiengesellschaft, Friedrichshafen, Germany. Filed Jan. 18, 1929, Serial No. 333,361, and in Germany Jan. 26, 1928. 3 Claims. (Cl. 74—7.)

1. In a motor vehicle the combination of an ordinary change speed gear with an additional power shaft, said power shaft being situated substantially centrally above said speed gear, said combination comprising a driving shaft, a driven shaft, ordinary speed gears connecting said two shafts, striker rods for shifting said gears, a lever for operating said striker rods, said striker rods being situated above said gears, said lever extending substantially vertically, an additional power shaft, an intermediate wheel adapted to be driven by said speed gear and to drive said power shaft, said wheel being situated substantially opposite to said striker rods and having indentures adapted to receive the ends of said striker rods when shifted towards said wheel.



1,749,829. CLOTH-SHEARING MACHINE. ARTHUR C. MASON, Hawthorne, N. J. Filed May 20, 1929. Serial No. 364,511. 3 Claims. (Cl. 26—15.)

1. The combination of supporting means, coactive cloth-shearing and cloth-guiding instrumentalities therein, one of said instrumentalities being adjustable toward and from the other, an adjusting member for said one of said

instrumentalities arranged in said means, and a toggle connection connecting said member and the movable one of said instrumentalities.

1,749,830. GREASE FEEDER. WILLIAM L. MORRIS, Chicago, Ill. Filed Aug. 7, 1916, Serial No. 113,658. Renewed Feb. 11, 1929. 35 Claims. (Cl. 221—47.4.)

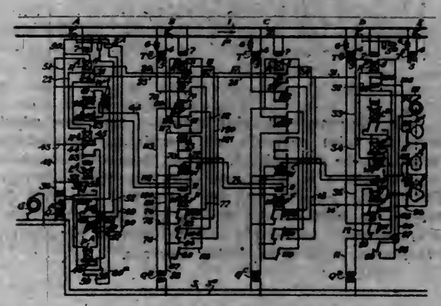
3. In a grease feeder; a grease receptacle, a rotatable slotted sleeve open at one end and having a longitudinal slot to communicate at the side thereof with the receptacle; and ejecting means fitting in the sleeve and in the slot and movable longitudinally therein so that it will discharge grease from the end of the sleeve when the slot is rotated out of register with the receptacle and to withdraw grease from the receptacle through the slot when it is rotated to open thereinto and the ejecting means is reversely moved.

1,749,831. PISTON RING. ALLEN W. MORTON, Baltimore, Md., assignor to The American Hammered Piston Ring Company, Baltimore, Md., a Corporation of Maryland. Filed May 14, 1928. Serial No. 277,672. 6 Claims. (Cl. 74—109.)

1. As a new article of manufacture a piston ring having oil drainage openings extending therethrough from its outer

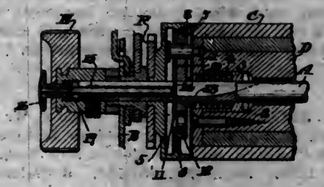
to its inner face and a pair of grooves extending circumferentially of the ring, one groove to each side of the drainage openings and free of connection therewith, and inward of the respective side faces of the ring, the outer marginal corners of said openings and grooves forming scraping edges.

1,749,832. PISTON RING. ALLEN W. MORTON, Baltimore, Md., assignor to The American Hammered Piston Ring Company, Baltimore, Md., a Corporation of Maryland. Filed Dec. 7, 1928. Serial No. 324,461. 8 Claims. (Cl. 74—109.)



1. A piston ring structure comprising two resilient split ring elements, one ring encircling the other with their splits staggered, the inner ring having an outwardly projecting flange and the outer ring having an inwardly projecting flange, said flanges overlapping, and one only of said flanges engaging the body of the other ring.

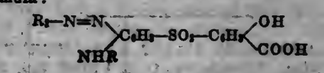
1,749,833. PROCESS OF PRODUCING GUM FROM LOCUST BEANS. ADOLF MÜLLER, Munich, Germany, assignor to Sigismund Neuman, Zurich, Switzerland. Filed Nov. 28, 1928, Serial No. 322,592, and in Germany Oct. 8, 1928. 2 Claims. (Cl. 87—28.)



1. A process of manufacturing gum from locust-beans consisting in mixing the albumen of the beans with alkylised naphthalene sulphacid, and dissolving the mixture in water.

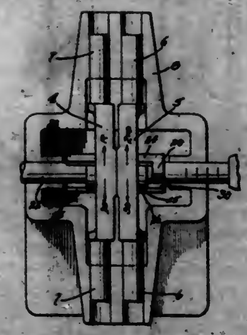
1,749,834. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. JOHN R. MYERS, Elizabeth, N. J., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 14, 1928. Serial No. 261,665. 8 Claims. (Cl. 246—39.)

5. Railway traffic controlling apparatus comprising a block of railway track having a plurality of successive track sections, a track relay for each section, a line relay, a source of energy, a pair of line wires controlled by a front contact of each said track relay normally connecting said source with said line relay, a device controlled by said line relay for governing traffic through said block, means effective when a train occupies the block for supplying train controlling current to each section in advance of said train over at least a portion of said line wires, and means for supplying track circuit current to the rails of each section in rear of said train.



1,749,835. TYPEWRITING MACHINE. LEWIS C. MYERS, Freeport, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 10, 1927. Serial No. 225,323. 6 Claims. (Cl. 197—123.)

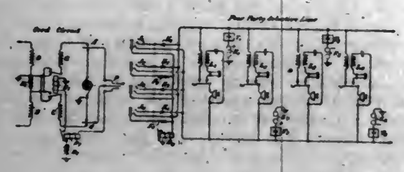
1. In a fractional line spacing mechanism for typewriting machines, the combination with an axle, of a platen freely journaled on said axle and including a head, a line space ratchet wheel journaled on the axle, and means for clutching the platen and wheel comprising studs immovably fixed to the platen head, a clutch member movable with the ratchet wheel and having a plurality of clutch-teeth, a clutch plate surrounding the axle and mounted on the studs for relative sliding movement thereon and provided with teeth for engaging the teeth of the clutch member, a single coil spring surrounding the axle and located between the platen head and the clutch plate for yieldably retaining said plate in clutched engagement with the clutch member, and manually operable means for moving the clutch plate against the tension of the single spring for disengaging said plate from the clutch member.



1,749,836. AZO DYESTUFFS DERIVED FROM AMINO-ACYLAMINO-SALICYL-DIPHENYLSULPHONES. WILHELM NEELMEIER, Leverkusen, and WINFRID HENTRICH, Wiesdorf, near Cologne-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 5, 1926, Serial No. 146,558, and in Germany Jan. 13, 1925. 4 Claims. (Cl. 260—90.)

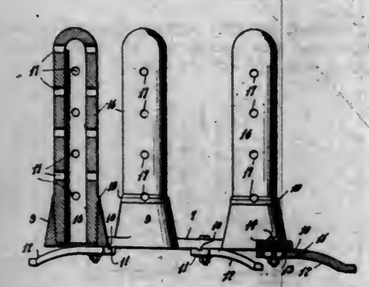
1. As new products the mordant dyestuffs of the general formula:

in which R stands for hydrogen or an acidyl group, R_2 stands for a residue of a coupling compound, and the hydroxyl and carboxyl groups stand in ortho position to each other.



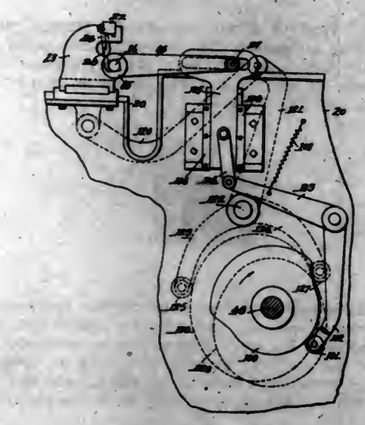
1,749,837. GEAR SHIFT. ARTHUR CORNWALL NICKELL, Jr., Waukesha, Wis. Filed Apr. 27, 1928. Serial No. 273,333. 3 Claims. (Cl. 74—58.)

1. In an automatic gear shifting mechanism, the combination with a shaft, of a selective device carried thereby,



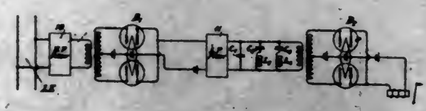
a clutch operating means including a clutch pedal for actuating the device, said device comprising two gear shifting slides, a selector, a cam carried by said selector for moving said slides into neutral positions, lugs carried by said selector for moving said slides into gear shifting positions, and flanges carried by said selector for positively holding said selector against movement of said slides into a reverse speed position when said slides have been moved into second or third speed positions.

1,749,838. SELECTIVE SYSTEM. ELIOT W. NILES, Bloomfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 24, 1929. Serial No. 357,753. 6 Claims. (Cl. 179—86.)



5. A line for a telephone system including a source of alternating current, two oppositely directed rectifiers, two oppositely polarized ringers, one corresponding to each rectifier, means for selectively transmitting current of said source through either of the rectifiers to operate its corresponding ringer, a battery, and means for connecting said battery to the line in one direction when one of the ringers becomes operated and for connecting said battery to the line in the opposite direction when the other ringer becomes operated.

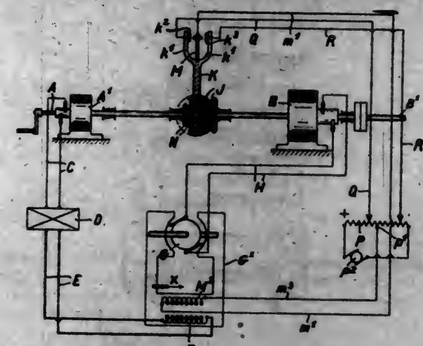
1,749,839. AUXILIARY DRAFT ATTACHMENT. WILLIAM A. NOEL, Washington, D. C. Filed Jan. 5, 1927. Serial No. 159,095. 9 Claims. (Cl. 110—75.)



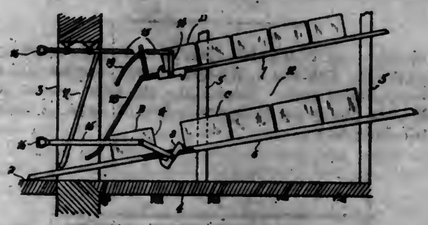
1. In a device for conducting and discharging air into a fuel bed, a base centrally cut away to leave a marginal portion, a plurality of draft conducting members carried by said marginal portion, and a plurality of radially projecting legs connected to the base.

1,749,840. LOOM FOR WEAVING FIBER REED. GUSTAF E. NORDSTROM, Gardner, Mass., assignor to American Fibre Corporation, Gardner, Mass., a Corporation of Massachusetts. Filed Aug. 17, 1928. Serial No. 300,342. 8 Claims. (Cl. 139—127.)

1. In a loom for weaving relatively stiff filling, a beat-up device comprising two relatively movable members, the upper member being fixed in said device and the lower member being movably mounted therein and being movable into and out of engagement with said upper member to form a filling guide.



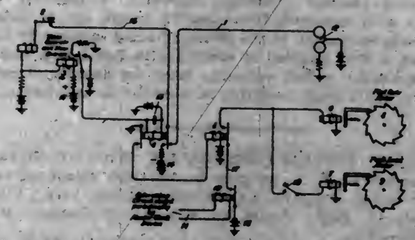
1,749,841. VOICE-OPERATED RELAY EQUIPMENT. HARRY NYQUIST, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 2, 1926. Serial No. 120,215. 4 Claims. (Cl. 179—171.)



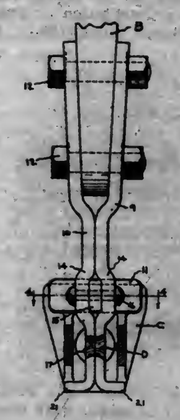
1. In a voice-operated relay circuit, a path over which alternating voice currents and continuous alternating currents may be transmitted, tandem detectors associated with said path, a relay controlled by the second detector, a transformer for coupling the output of the first detector to the input of the second, and means to render said transformer responsive only to currents corresponding to the envelope of the voice currents.

1,749,842. ELECTROMAGNETIC CONTROLLING APPARATUS. JAKOB PFRETZSCHNER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed May 8, 1928, Serial No. 276,187, and in Germany Jan. 12, 1927. 12 Claims. (Cl. 172—293.)

4. A controlling system having a controlling member adapted to perform a motion with low expense of power, a controlled member, a Leonard drive comprising a generator having a magnetic frame and an electric motor supplied by said generator for imparting a motion to said controlled member analogous to the motion of said controlling member, speed regulating means comprising an exciting winding on said magnetic frame and means for feeding said winding with a current proportional to the speed of said controlling member, and additional regulating means comprising a switch, a source of voltage and a circuit associated with said exciting winding and including said switch and said source of voltage for generating an additional induction in said magnetic frame, said switch being adapted to disconnect said source of voltage when the distances traversed by said controlled and controlling members are in proportional accordance and to connect said source of voltage upon a deviation of said distances.

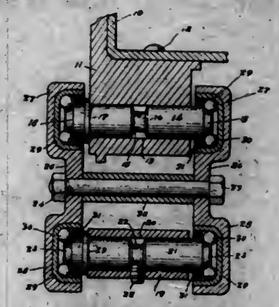


1,749,843. ICE-DELIVERY DEVICE. ROBERT HENRY ROARK, Waco, Tex., assignor to The Perfection Ice Scoring Machine Company, Waco, Tex. Filed Jan. 27, 1928. Serial No. 250,051. 5 Claims. (Cl. 193—40.)



1. In an ice delivery apparatus having a plurality of superimposed inclined gravity chutes, with a common delivery passage; a movable slide for delivering ice from the lower end of the upper chute to the common passage, the lower end of said slide normally extending into the path of ice blocks on the lower chute, and capable of being raised by ice blocks passing out from the lower chute.

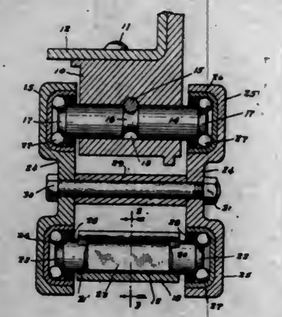
1,749,844. SYSTEM FOR FURNISHING INTERMITTENT TELEGRAPH SERVICE. LELAND C. ROBERTS, Towaco, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 12, 1928. Serial No. 269,428. 5 Claims. (Cl. 178—2.)



1. A telegraph line, a subscriber's circuit, a telegraph transmitter in said subscriber's circuit, means operated by the actuation of said telegraph transmitter for connecting said subscriber's circuit to said telegraph line, and a metering device controlled by the operation of said last mentioned means.

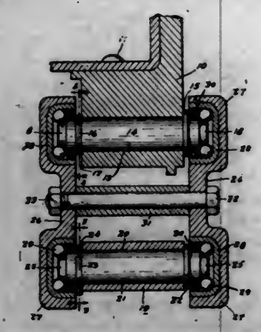
1,749,845. AUTOMATIC TRAIN-PIPE COUPLING. JOSEPH ROBINSON, New York, N. Y. Filed Apr. 26, 1926, Serial No. 104,765. Renewed Jan. 15, 1929. 8 Claims. (Cl. 285—58.)

7. A bracket for automatic train pipe connectors, comprising two complementary portions rigidly secured together, a cross bar secured between said portions intermediate their lengths, each of said portions below said cross bar being rounded on its front edge, whereby a curved seat is formed on the front edge of the bracket.



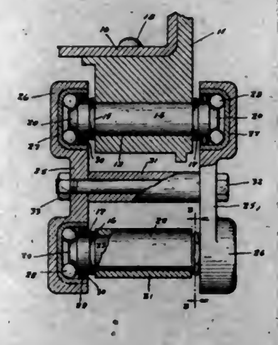
1,749,846. SPRING SHACKLE. DELMAR G. ROOS, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Nov. 11, 1927. Serial No. 232,584. 1 Claim. (Cl. 267—54.)

The combination with a vehicle frame and spring, of means connecting said spring to said frame comprising, a bracket having a portion positioned beneath the lower flange of said frame and having a portion contacting with the vertical web of said frame, means for securing said bracket to the vertical web and lower flange of said frame, an upper pin having a central portion of reduced diameter and having a flange formed thereon extending through said bracket with said flange in engagement with a side of said bracket, a tapered plug extending through said bracket and engaging the side walls of the reduced portion of said pin to restrain said pin against longitudinal movement, a pair of links enclosing the ends of said pin pivotally supported thereon, a lower pin having a central portion



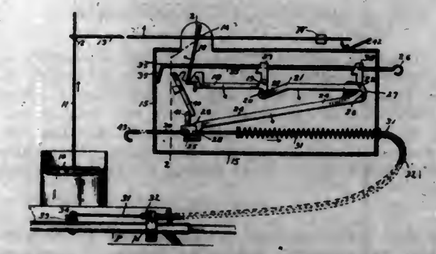
of reduced diameter extending through an eye in said spring pivotally supported by the lower ends of said links, the ends of said pin being enclosed by said links, and a tapered plug extending through said spring and engaging the side walls of the reduced portion of said lower pin to restrain said spring against longitudinal movement of said lower pin.

1,749,847. SPRING SHACKLE. DELMAR G. ROOS, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Nov. 11, 1927. Serial No. 232,585. 4 Claims. (Cl. 267—54.)



1. In a shackle for connecting a vehicle spring to a frame member, a pair of spaced links pivotally connected at their upper ends to said frame member, a shackle pin pivotally supported at its ends by the lower ends of said links, a longitudinal depression in said pin providing a flat face, and an eye formed in an end of said spring, a portion of the metal forming said eye being bent downwardly into said depression to abut against said flat surface for anchoring said pin against rotational and longitudinal movement whereby said links are restrained against frictional engagement with the sides of said spring.

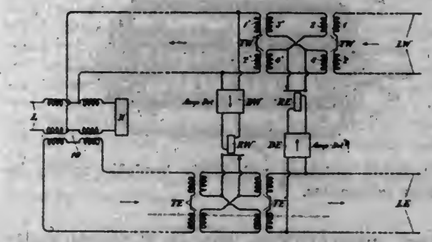
1,749,848. SPRING SHACKLE. DELMAR G. ROOS, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Nov. 11, 1927. Serial No. 232,586. 7 Claims. (Cl. 267—54.)



1. A spring shackle for connecting a vehicle spring to a frame spring hanger, comprising shackle pins extending through said spring and spring hanger, each of said pins having a transverse groove therein at one end and having an integral abutment at the other end thereof, clips seated in said grooves and abutting against adjacent sides of said spring and hanger, said abutments abutting against the other sides of said spring and spring hanger, and a pair of spaced links connecting said pins, said clips and said abutments anchoring said pins against movement transversely of said spring and spring hanger to restrain said shackle links from engaging said spring and hanger.

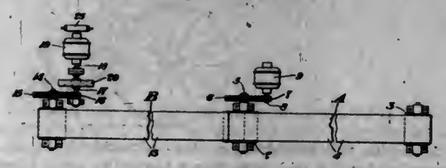
1,749,849. SPRING SHACKLE. DELMAR G. ROOS, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of Indiana. Filed Nov. 11, 1927. Serial No. 232,587. 5 Claims. (Cl. 267—54.)

1. In a shackle for connecting a vehicle spring to a frame spring hanger, shackle pins extending through said spring and said spring hanger, said pins being provided with circumferential grooves adjacent the sides of said spring hanger and spring, a pair of complementary links pivotally connecting the ends of said pins, said links being spaced from the sides of said hanger and spring, a plurality of curved keys positioned in said grooves, and clamping means for holding said keys in said grooves, said keys anchoring said shackle pins against longitudinal movement to restrain said links from frictional engagement with the sides of said hanger and spring.



1,749,850. AUTOMATIC HEAT-MEDIUM-CONTROL DEVICE. THEODORUS WILLEM ALBERT RUSCHE, Oosterbeek, Netherlands. Filed Jan. 22, 1929, Serial No. 334,297, and in the Netherlands Dec. 31, 1927. 1 Claim. (Cl. 126—42.)

A float-operated shut-off device comprising the combination of means for controlling a heating medium, a spring-actuated member connected therewith, a plurality of levers with releasable interengaging means, one of which prevents movement of the spring-actuated member by the spring, a float adapted to contact with liquid in a vessel to be heated, a float releasing latch for another of said levers, and a single resetting member for all said levers.



1,749,851. CIRCUIT CONTROLLER. HAROLD C. SILENT, Larchmont, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 18, 1928. Serial No. 255,480. 8 Claims. (Cl. 178—44.)

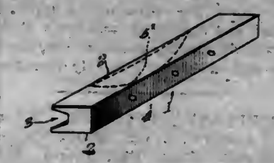
2. In a transmission circuit, a circuit controller therefor, said circuit controller including a plurality of transformer windings in said transmission circuit and a contact adapted to assume either an open or closed condition, and circuit connections for said transformer windings

and said contact to establish mutually aiding transmission paths through said windings with said contact closed and to establish said windings in opposing relation when the contact is open.

1,749,852. CONVEYER-DRIVING MECHANISM. FRANK E. SMITH, Scottdale, Pa. Filed June 14, 1929. Serial No. 370,873. 3 Claims. (Cl. 198—203.)

1. In combination a delivery conveyer unit and a receiving conveyer unit having more lift than said delivery unit, means for driving both of said units at substantially the same speed, and means connected with said receiving conveyer unit for storing energy during the operation of said units whereby said receiving unit will continue in motion at least as long as said delivery unit upon failure of the power for any reason.

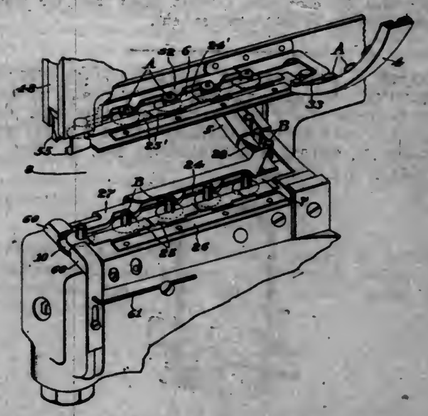
1,749,853. COMBINED SALT AND PEPPER SHAKER. GARLAND B. SMITH, Oconomowoc, Wis. Filed Sept. 28, 1928. Serial No. 309,045. 4 Claims. (Cl. 65—57.)



1. A combined salt and pepper shaker comprising a hollow body portion, a partition in said body portion dividing the same into a central compartment open at both ends and a surrounding compartment open only at its upper end, a top closure for said body portion forming a seal between said compartments, apertures in said closure forming a discharge for one of said compartments, and a valve controlled discharge opening at the bottom of said other compartment.

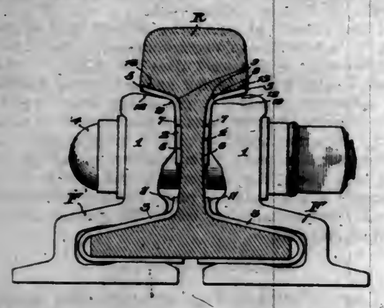
CARNEGIE LIBRARY OF ATLANTA

1,749,854. MANUFACTURE OF ANHYDROUS MAGNESIUM CHLORIDE. KARL STAIB, Bitterfeld, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Firm. Filed May 6, 1926, Serial No. 107,269, and in Germany May 9, 1925. 10 Claims. (Cl. 23—91.)



1. In the process of producing anhydrous magnesium chloride by interaction of magnesium oxide and chlorine, the improvement which comprises the steps of mixing magnesium oxide with a binder and a reducing substance and a substance capable of producing, when heated, a porosity corresponding at least to the increase in volume caused by the transformation of said magnesium oxide to solid magnesium chloride, forming pieces of said mixture, heating said pieces to a temperature sufficient to produce said porosity and causing the pieces to react with chlorine at a high temperature but below the melting point of magnesium chloride.

1,749,855. MEANS AND METHOD FOR MAKING PRINTERS' METAL FURNITURE. ASHTON G. STEVENSON, Chicago, Ill. Filed Oct. 8, 1928. Serial No. 311,188. 8 Claims. (Cl. 199—55.)

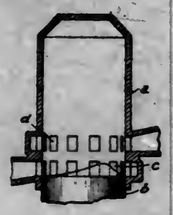


1. The herein described improvement in metal molds for producing hollow type furniture or base material having parallel side faces, which consists in making the mold slot wider at its rear middle portion than at its ends.

1,749,856. FASTENER-SETTING MACHINE. RAYMOND D. TAYLOR, Winnetka, Ill., assignor, by mesne assignments, to United-Carr Fastener Corporation, Cambridge, Mass., a Corporation of Massachusetts. Filed Sept. 22, 1927. Serial No. 221,224. 8 Claims. (Cl. 218—6.)

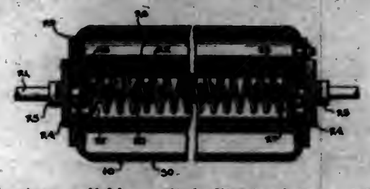
1. In a machine for setting fasteners, the combination of a setting mechanism, a track adapted to receive and guide a series of fastener members toward said mechanism, a raceway for conducting said fastener members to said track, said raceway meeting said track laterally at an abrupt angle, a reciprocating feeder for advancing a series of said members along said track step by step, operating mechanism for said feeder, and means arranged to be actuated by said operating mechanism for controlling the transfer of the fastener members from said raceway to said track.

1,749,857. INSULATED RAIL JOINT. WILLIAM PATON THOMSON, New York, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed May 6, 1929. Serial No. 360,956. 9 Claims. (Cl. 238—165.)



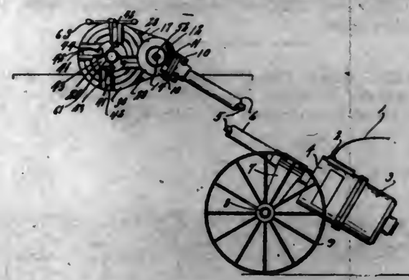
1. An insulated rail joint including the rail, the joint bar, and interposed insulating material having throughout its length less operative resistance to compression starting at the top of the radius of the upper inner corner of the joint bar and extending outwardly therefrom than has the adjacent insulating material starting at the top of said radius and extending inwardly therefrom.

1,749,858. AIRPLANE APPLIANCE. RICHARD E. S. TOOMEY and JAMES C. EVANS, Miami, Fla., assignors to S. Grover Morrow, Miami, Fla., trustee. Filed Apr. 24, 1928. Serial No. 272,472. 2 Claims. (Cl. 244—31.)



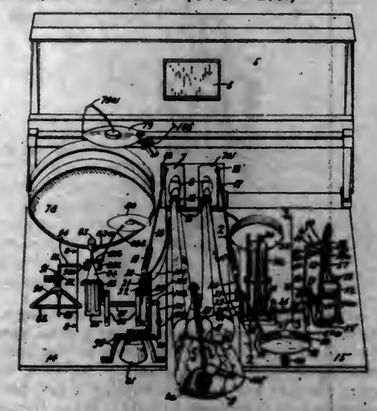
1. The combination with an airplane, of a heat transmitting chamber associated with the forward edge of the wing of said airplane, a compartment in advance of said chamber and in restricted communication with the latter, and means for conveying exhaust gases from the motor of said airplane to said compartment.

1,749,859. TWO-STROKE INTERNAL-COMBUSTION ENGINE. WILHELM ULRICH, Kiel, Germany, assignor to Deutsche Werke Kiel Aktiengesellschaft, Kiel, Germany, a Corporation of Germany. Filed Jan. 11, 1928, Serial No. 246,051, and in Germany Dec. 19, 1924. 2 Claims. (Cl. 123—65.)



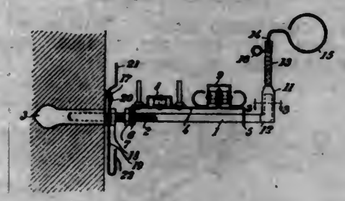
2. In a two stroke internal combustion engine, a cylinder, a piston in said cylinder, a plurality of annular scavenging air ports in said cylinder, a plurality of annular exhaust ports in said cylinder in a plane above said intake ports, an air supply channel surrounding said intake ports, said channel being disposed unsymmetrically of the cylinder axis, a baffle on said piston, said baffle being disposed unsymmetrically of the cylinder axis, by which unsymmetrical disposition of said air supply channel and of said piston baffle said scavenging air rises in the cylinder obliquely to the axis of the latter.

1,749,860. STONE BUFFER. ALFRED VAN DE SANDT, Los Angeles, Calif. Filed Feb. 27, 1926. Serial No. 91,128. 7 Claims. (Cl. 51—170.)



1. A stone polishing roll bodily bendable axially between its extremities.

1,749,861. PIPE CUTTER. WILLIAM W. VOSPER, Toledo, Ohio, assignor to The Toledo Pipe Threading Machine Co., Toledo, Ohio, a Corporation of Ohio. Filed Mar. 26, 1927. Serial No. 178,227. 2 Claims. (Cl. 81—190.)

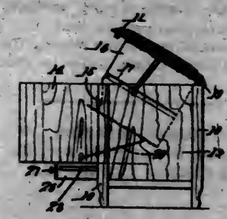


1. A pipe tool embodying a pipe embracing frame as a mounting for the tool, said frame having an arm, a pair of gears housed in said arm, a driving connection to one side of said gears, there being clutch connection between said gears, a control for said clutch connection from the opposite side of the arm from said drive connection, said frame providing a bearing radially of the gears and thereabout, a cutter carrier clear of said bearing and engaging one of said gears, and a cutter actuator on the bearing and providing a bearing carrying the carrier, said cutter actuator being in mesh with the other gear and extending past the carrier engaged gear and maintained clear thereof by the carrier as therebetween.

1,749,862. ONE-MAN ORCHESTRA DEVICE. FRANK WANEK, Doran, Minn. Filed June 17, 1926. Serial No. 116,628. 2 Claims. (Cl. 84—170.)

1. A dual musical instrument playing device for simultaneously playing a stringed instrument and a snare drum; said string instrument mounted in upright position, a snare drum mounted in proximity thereto in angular position, said device comprising a foot operated pedal, a rock shaft operatively connected to said pedal and having at one end an arm swingable across the strings of the string instrument, a string picker having resilient connection with the arm, a stand near the string instrument, a combined ratchet wheel and cam mounted on a stud in the stand and having a spring retarding their rotation, a pawl pivoted on the rocker arm holding the picker and operating the ratchet wheel, a pivoted arm in contact with the cam, a rod extending from the pivoted arm, and a string pressing device opened and closed alternately by the said rod and cam; said pressing device being slidably held by a set screw on an upright post back of the string instrument, and further means operated by said rock shaft to sound the snare drum.

1,749,863. SUPPORT FOR CURTAINS AND PORTIÈRES AND FOR THE RODS FOR THE SAME. KARL WERNER, Mannheim, Germany. Filed Nov. 1, 1928, Serial No. 316,433, and in Germany Nov. 4, 1927. 1 Claim. (Cl. 156—22.)



A support for curtains or portières, comprising in combination a strong hook having a threaded portion on the rear part of its horizontal arm designed to be screwed into a wall, a box of band iron removably and adjustably mounted on said horizontal arm by means of downwardly bent arms one at each end and having each a central hole for the curtain hook, the hole in the rear arm being internally threaded to be screwed on the threaded portion of said curtain hook, a counter nut on said threaded portion designed to secure said box in the adjusted position, sets of pulleys mounted on said box, a sleeve removably mounted on the vertical front end of said curtain hook, rearwardly directed claws on the lower end of said sleeve adapted to bear from the right and left against said curtain hook, the upper part of said sleeve being flattened, an eye for holding the curtain rod, a vertical shaft of said eye inserted into the upper flat part of said sleeve, a clamping screw for securing said shaft in the adjusted position, a bar having a hole near its inner end placed over the threaded portion of said curtain hook, a nut on said threaded portion for clamping said bar against the wall, a vertical bar adjustably fixed on the outer end of said horizontal bar, said vertical bar having a pointed offset upper end and a U-shaped lower pointed end bent forward and upward, said two ends adapted to hold the outer edge of a curtain close to the wall.

1,749,864. SHOE CONSTRUCTION. JOSEPH WEISS, Chicago, Ill. Filed June 4, 1929. Serial No. 368,240. 5 Claims. (Cl. 36—36.)

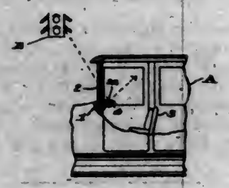
1. A device of the type described comprising a body portion, a heel, means for removably securing said heel to said body portion, said means comprising a stationary frame secured to said body portion, and a movable frame arranged to receive said heel and pivotally secured to said stationary frame.

1,749,865. SHOE AND HOSIERY BENCH. CURTIS F. WELLINGTON, Leominster, Mass. Filed Feb. 18, 1929. Serial No. 340,709. 3 Claims. (Cl. 312—174.)

1. As an article of manufacture, a bench-like structure having a top pivoted at one side to swing upwardly, a rack secured to the underside of the top and having stripe across it near the front to constitute a shoe rack, a pair of doors pivoted to the front of the structure and rods pivotally connected with said rack and with the two doors for opening the doors when the top and rack are swung upwardly.

1,749,866. CONTINUOUS KILN. CHARLES BURTON WINKES, Clapham, London, England. Filed Mar. 28, 1929, Serial No. 350,569, and in Great Britain Mar. 8, 1928. 4 Claims. (Cl. 25—142.)

1. In a continuous kiln, the combination of an annular rotary tunnel having a combined loading and discharge opening in its outer wall; driving means for said tunnel; means for heating the interior of the tunnel; an upper and a lower stationary annular platform enclosed in superposed relation within the confines of the tunnel, the upper platform embodying a circular series of sections capable of individual movement radially through said opening; an annular track encircling the tunnel in proximity to its outer wall; and a platform mounted opposite the said opening to travel with the tunnel along said track, each section of the upper platform adapted to support a removable goods carrier which is withdrawn with the corresponding section through said opening onto the travelling platform.

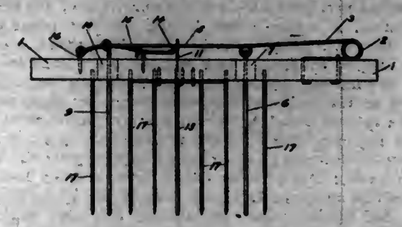


1,749,867. EXAMINING TABLE. HARRY S. ALLISON, Indianapolis, Ind., assignor to William D. Allison, Indianapolis, Ind. Filed Apr. 20, 1927. Serial No. 185,132. 2 Claims. (Cl. 45—50.)

1. The combination of a table and a head rest hinged to the table, with head plates secured to the under side

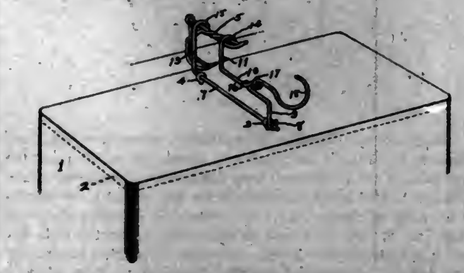
of the head rest, fixed arms on each plate extending substantially at right angles thereto to form stops by contact with the end of the table said arms curving thence in arcs of circles having their centers at the pivot axes of the hinges, the inner sides of the curved arms having ratched notches sloping toward the table, guide plates secured to the end of the table and extending below in the plates of the curved arms and having holes through which the respective arms pass; pawls pivoted to the guide plates having springs which press them normally into engagement with the ratchet teeth and manually operated means for moving the pawls out of engagement with the ratchet teeth to release the head rest for lowering.

1,749,868. AUTOMOBILE MIRROR. WILLIAM K. ANDERSON, Cleveland, Ohio. Filed Apr. 21, 1926. Serial No. 103,427. 2 Claims. (Cl. 45—97.)



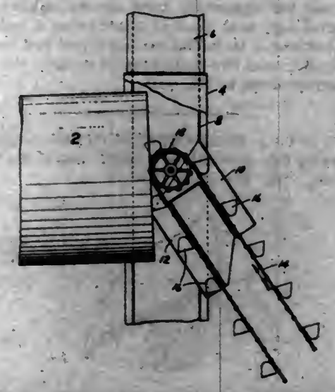
1. A device of the character described, including a supporting plate having a circular opening therein, a bracket arranged under the opening, a mirror plate, a hollow semispherical bearing member projecting from the mirror plate and extending partially through the opening in the supporting plate, said bearing member having an enlarged opening in the end thereof, a tension spring extending through the opening of the hollow bearing member and yieldably connecting the mirror plate directly to the bracket, whereby the bearing member is held in a frictional direct engagement with the edges of the opening in the supporting plate and has a universal adjustment therein, and a mirror on the mirror plate.

1,749,869. FISHING TOOL. ALBERT G. BAUMBACH, Anaheim, Calif. Filed Oct. 29, 1928. Serial No. 315,710. 3 Claims. (Cl. 294—106.)



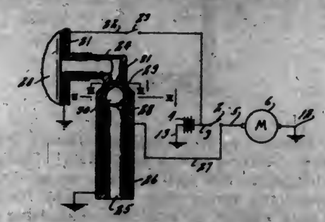
1. A fishing tool including a stem having a rack portion, opposed gripping jaws meshing with the rack portion, and a mount in which the jaws are pivoted spring acting on the mount to close the jaws, and bolts in the mount to engage the stem.

1,749,870. COMBINED MOLE AND RAT TRAP. CHARLEY M. BEGGS, Rock Falls, Ill. Filed June 12, 1929. Serial No. 370,195. 2 Claims. (Cl. 43—86.)



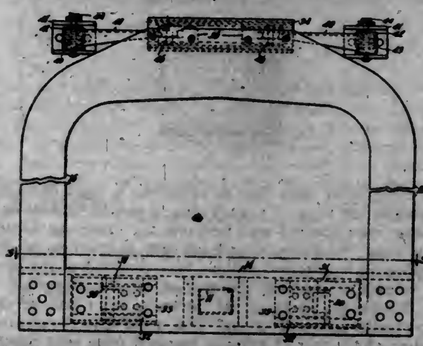
1. A combined mole and rat trap, comprising a base, a spring actuated loop supported from said base, means for holding said loop in depressed position, and a trigger, adapted for releasable connection with said means, and convertible from a position for a swinging movement transversely of the trap to a position for swinging longitudinally thereof.

1,749,871. COMPOUND HOOK. CHARLES W. BLISS, South Bend, Ind. Filed Mar. 5, 1929. Serial No. 344,545. 7 Claims. (Cl. 312—4.)



4. A wire hanger of the character described comprising a tongue element, a leg element above said tongue and integral therewith, said leg being provided with an integral hook and a second separate element suspension hook swivelly connected therewith, and an integral tongue detent depending from said leg element.

1,749,872. ELEVATOR. FRANK A. BROWNE, Wayne, Pa., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Feb. 18, 1928. Serial No. 253,963. 2 Claims. (Cl. 198—108.)



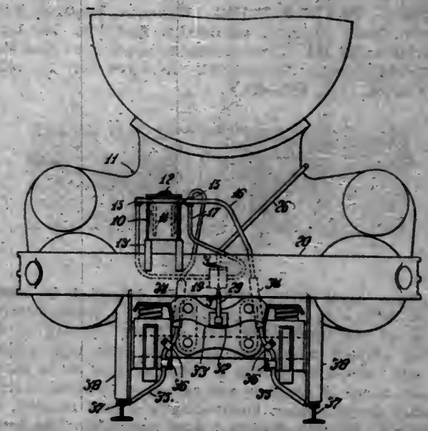
1. In combination, a casing, a drum, a plurality of tunnels forming passages into the casing, and a flexible bucket carrying member arranged to carry buckets through one of said tunnels into the casing and through the other of said tunnels out of the casing and adapted to raise material from a supply and discharge it within the drum.

1,749,873. CARBURETOR AIR CONTROL. WALTER P. COUSINO, Detroit, Mich. Filed Dec. 2, 1926. Serial No. 152,237. 8 Claims. (Cl. 123—179.)

1. A carburetor having an air supply, a normally closed closure therefor operable by motor suction draft in the carburetor, and a solenoid acting upon said closure for resisting opening thereof.

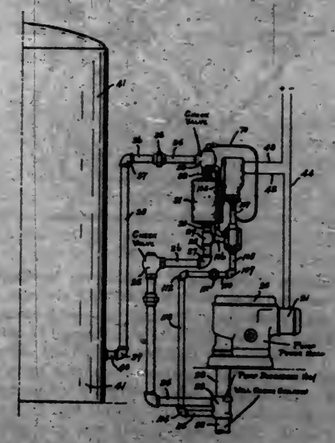
1,749,874. CAR CONSTRUCTION. GEORGE E. COUTANT, Decatur, Ill. Filed Dec. 5, 1928. Serial No. 323,807. 10 Claims. (Cl. 105—10.)

1. In a railway car, the combination with a buffer platform and a diaphragm face plate; top and bottom pairs of arms for supporting said platform and face plate; means for pivotally supporting each pair of arms on the car proper for swinging movement in reverse directions; and means pivotally connected to said top arms, having a sliding connection with the face plate, and means pivotally connected to the bottom pair of arms having sliding connection with the platform.



2. In a railway car, the combination with a buffer platform member and a diaphragm face plate member; of arms connected to the car proper for pivotal movement in horizontal planes, said arms having a sliding pivotal connection with said members.

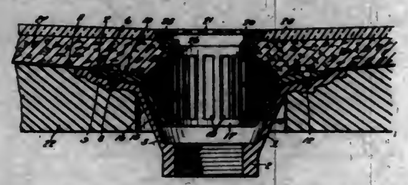
1,749,875. VALVE-LIFTING DEVICE. ELI S. DAVIS, Kansas City, Mo. Filed Dec. 8, 1926. Serial No. 152,867. 7 Claims. (Cl. 29—86.3.)



2. A tool comprising semi-tubular hinged members having cleft ends and a semi-tubular lever having fixed pivotal mounting in one of the members and provided with freely movable means for bearing frictionally against the other member adjacent its cleft end to space the members, the lever being seatable on the surface of one of the members for limiting the pivotal movement of the lever.

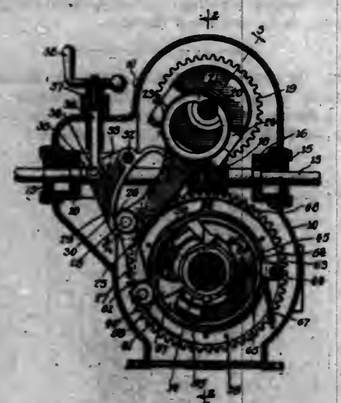
1,749,876. RAIL AND WHEEL FLANGE OILER. CLYNE L. EMERSON, Oak Park, and PAUL E. BURTRELL, Maywood, Ill. Filed Oct. 5, 1928. Serial No. 310,484. 7 Claims. (Cl. 184—3.)

1. A rail and wheel-flange oiler comprising, in combination with a locomotive-truck frame, a lubricant holding reservoir, a chambered member arranged in communication with a pressure medium supply and having a pair of ports provided with valves closing in the direction of medium flow, conduits between the ports and track rails and having communication with the reservoir adapted to withdraw the lubricant therefrom when the pressure medium flows through said conduits, and means pivotally secured to said member to swing laterally and having portions adapted to separately move the valves off their seats and having yielding operative relation with the truck frame to be oscillated thereby.



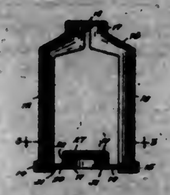
1,749,877. WATER SYSTEM. HARRY G. FISHER, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Nov. 24, 1925. Serial No. 71,211. 8 Claims. (Cl. 103—6.)

1. A water system comprising, in combination, a pump, a pressure storage tank, a motor for operating the pump,



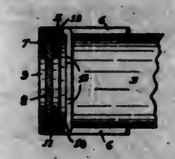
an auxiliary air receiving tank connected between the pump and storage tank, means for causing the motor to operate and stop in response to certain low and high pressures, respectively, in the storage tank, and valve mechanism directly controlled by said means for causing the auxiliary tank to be drained and to receive air while the pump is idle, and for causing the auxiliary tank to be connected only with the pump and storage tank when the pump is operating.

1,749,878. DRAIN FITTING. WELLS S. FLEMING, Portland, Oreg. Original application filed Feb. 10, 1926, Serial No. 87,281. Divided and this application filed May 17, 1926, Serial No. 109,492. Renewed Oct. 11, 1928. 2 Claims. (Cl. 182—81.)



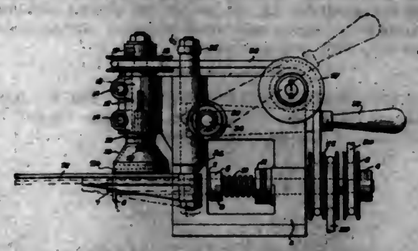
1. In a drain fitting of the class described, in combination with a basin-body provided with a circumferential flange at the top and having a drain opening at the bottom adapted to be connected with a drain pipe, a cover for said basin-body having a flange adapted to be seated on said flange of the body and having an integral, central, tubular, perpendicular, longitudinally slotted member, extending to the predetermined floor level above the cover, the cross section of the interior of the tubular member corresponding to the opening of the drain body, and a flat grille plate closing the top of said member and substantially flush with the surface in which the drain is fitted.

1,749,879. TRANSMISSION MECHANISM. RAY C GODDARD, Wheaton, Ill., assignor, by direct and mesne assignments, to Combustioneer, Inc., Chicago, Ill., a Corporation of Illinois. Filed Feb. 13, 1928. Serial No. 253,832. 10 Claims. (Cl. 74—53.)



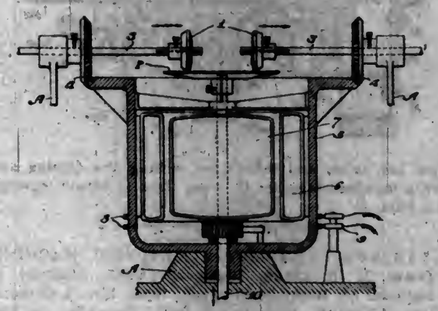
1. A unitary transmission mechanism having, in combination, an enclosing casing, a driving element, a driven element, said elements extending into said casing, an eccentric having an arm operatively connected to said driving element, a reciprocatory member operatively connected to said driven element for rotating the latter upon being reciprocated, said member being pivotally connected to said arm, and a fixed link having an arcuate slot for guiding the movement of the pivot between said arm and said member, said link being adjustable to dispose the slot at different angles to said member so as to vary the component of the thrust from said arm along said member.

1,749,880. CASTER. WALTER F. HEROLD, Upper Montclair, N. J., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 5, 1927. Serial No. 237,661. 4 Claims. (Cl. 16—39.)



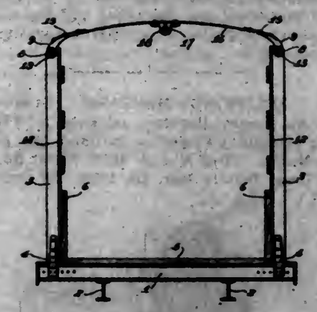
1. In a support, a floor engaging element including a pintle, pintle receiving means adapted to be secured to a furniture leg or the like and including an apertured base, a pintle retaining spring ring, and means for retaining said ring with respect to said base comprising a pocket forming element secured to said base and adapted to confine said ring laterally, and a series of retaining lugs bent inwardly from said element and adapted to confine said ring axially.

1,749,881. LUMINOUS ELECTRIC-LIGHT SWITCH. MARCUS HOLCOMB, Coraopolis, Pa. Filed Nov. 14, 1927. Serial No. 233,121. 1 Claim. (Cl. 200—167.)



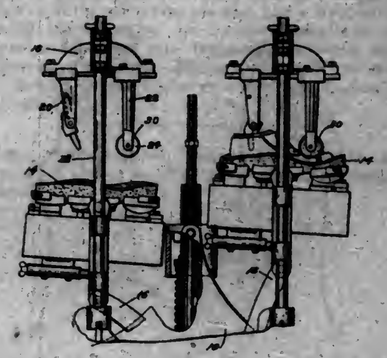
In an electric light switch including a light operating member in the form of a push plug, a slotted thimble open at both ends thereof and adapted for clamping engagement with the forward end of said push plug, a disk provided with a luminous front face mounted in the outer end of said thimble a transparent member mounted in said thimble for covering the luminous front face of said disk, means for spacing said disk from said transparent member, and a pair of tongues stamped from said thimble in the formation of the slots in the latter and bent to engage said disk for securing the latter and said transparent member in position in said thimble.

1,749,882. TRIMMING MACHINE. PENROSE R. HOOPER, Hartford, Conn., assignor to Essex Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Feb. 26, 1926, Serial No. 90,724. Renewed Aug. 14, 1928. 7 Claims. (Cl. 164—63.)



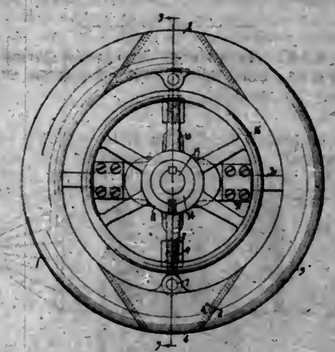
1. In a trimming machine, in combination, a disk having a circular cutting edge lying in its outermost periphery, said disk being mounted for rotation on an axis perpendicular to a plane through said cutting edge, a cup having a circular cutting edge lying in its inner periphery, said cup being mounted for rotation on an axis perpendicular to a plane through said cutting edge, said cup and disk being so mounted with respect to each other that said planes intersect in a line which forms a chord of both circular cutting edges.

1,749,883. ROLLING-MILL-DRIVING SYSTEM. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 20, 1926. Serial No. 149,703. 5 Claims. (Cl. 80—19.)



4. In a rolling mill comprising oppositely disposed rolling elements between which the work of rolling is carried out, a driving system comprising a prime mover having a pair of elements, both free to move and between which a propulsive effort is exerted, and connecting means between each one of said rolling elements and a corresponding driving element.

1,749,884. VEHICLE TOP STRUCTURE. WILLIAM G. MAYER, Pittsburgh, Pa. Filed Jan. 14, 1927. Serial No. 161,171. 2 Claims. (Cl. 296—104.)

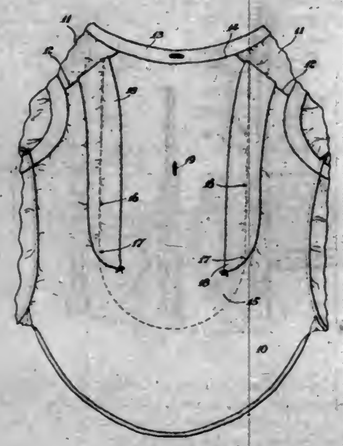


1. In a vehicle body structure, a frame, a plurality of structural section side braces secured to the frame at spaced intervals along the sides thereof, the braces on each side being provided adjacent their upper ends with openings aligned longitudinally of the frame, top brackets each having a slotted portion engaging said structural section and provided with an opening aligned with that of the brace, readily removable tubular members disposed in said openings for connecting the brackets to the braces, and top braces connected to said brackets extending inwardly from each side over the body.

1,749,885. SHOE-PRESSING MACHINE. JAMES W. NASH, Newark, N. J., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 12, 1925. Serial No. 36,654. 7 Claims. (Cl. 12—127.)

1. A sole-pressing machine having, in combination, a sole pressing pad, and a shoe upper engaging member provided with a cover arranged to creep on the said member under the pressure of the shoe upper.

1,749,886. COLLAPSIBLE TIRE-BUILDING FORM. JOHN E. PALMER, Akron, Ohio, assignor to The Summit Mold & Machine Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 23, 1927. Serial No. 221,483. 12 Claims. (Cl. 154—9.)



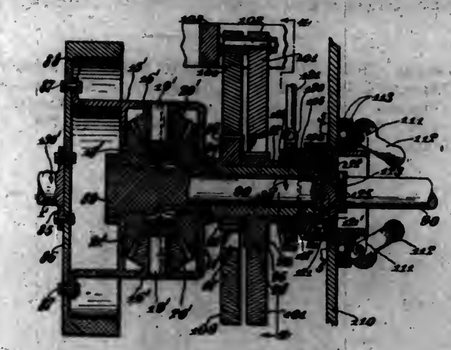
1. A collapsible tire building form, comprising an endless form body divided into a plurality of sections, certain of said sections being major sections and other sections being key sections and tapered outwardly of the form, the sections having permanent end sliding and interlocking connections, and mechanism at the center of the form to withdraw the key sections, the major sections being moved toward the axis of the form by the inward movement of the key sections.

1,749,887. DRESS SHIRT. EDWARD J. QUIGLEY, Newark, N. J. Filed May 17, 1927. Serial No. 191,976. 1 Claim. (Cl. 2—115.)

A shirt comprising a body piece extending continuously across the front of the shirt, shoulder sections stitched to the upper end of the body piece at the sides thereof, a bosom section on the outside of the body piece and having its side edges stitched to the body piece by stitching terminating above the lower end of said bosom piece whereby

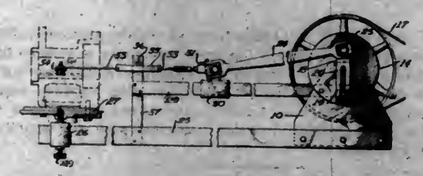
the lower part of the bosom piece is free from the body piece, separate reinforcing strips each stitched to the reverse side of a respective shoulder piece and extending downward and terminating above the bottom of the bosom piece, said reinforcing strips lying flat on the underside

of the body piece and extending on opposite sides of the respective bosom stitch lines, said bosom stitch lines extending through said reinforcing strips, and stitching extending around the side and bottom edges of the reinforcing strips and connecting said strips to the body piece independently of the bosom stitch lines.



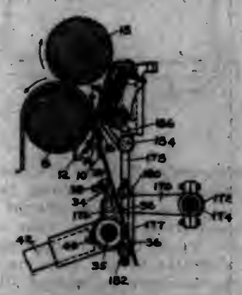
1,749,888. HAMMOCK. ELIZABETH GRIMM REEDER, Chicago, Ill. Filed Nov. 7, 1927. Serial No. 231,424. 4 Claims. (Cl. 5—122.)

1. A hammock construction comprising a hammock, a casing, a roller rotatively mounted in said casing, means maintaining said roller under a yieldable tension normally acting to rotate it in one direction, flexible supporting means for one end of the hammock, and means connecting the other end of the hammock with said roll, so that upon release by a forward pull, of the first mentioned end of the hammock said roll will be automatically rotated to wind the hammock upon it.



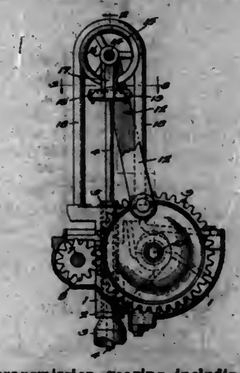
1,749,889. DIFFERENTIAL TRANSMISSION MECHANISM. EDWARD C. REID, Philadelphia, Pa. Filed June 12, 1928. Serial No. 284,785. 21 Claims. (Cl. 74—34.)

1. The combination of a driving member, a member to be driven, power transmission means interposed between the two, the said means including an element rotatable relatively to the said members, means including members oscillatable by the rotation of said element whereby relative rotation of said element is adapted to create a reactive force to impose a force upon the member to be driven to



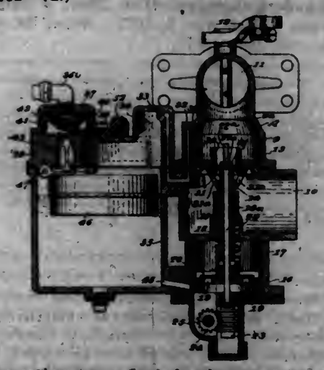
drive the same, and means for locking the driving and driven members together to cause them to rotate together as a unit.

1,749,890. TRIPLE-VALVE-LAPPING MACHINE. JAMES R. RICKETTS, Richmond, Calif., assignor to National Air Brake Service, Inc., Reno, Nev., a Corporation of Nevada. Filed Dec. 5, 1927. Serial No. 237,959. 11 Claims. (Cl. 51—57.)



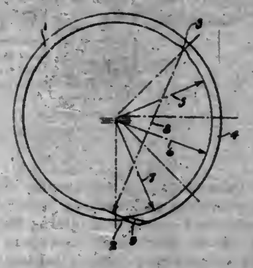
1. A machine of the character described comprising a revoluble crank, means for supporting a triple valve in operative position relative to the crank, a lapping tool engageable with the slide valve seat in the triple valve, an operative connection between the crank and the lapping tool for reciprocating the latter over the slide valve seat in contact therewith, and means for shifting the lapping tool laterally in opposite directions at opposite ends of its stroke.

1,749,891. SPLITTING MACHINE. GUSTAV ADOLF SCHETTLER, Leeds, England, assignor to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed Mar. 4, 1927, Serial No. 172,754, and in Great Britain Mar. 26, 1926. 35 Claims. (Cl. 149—11.)



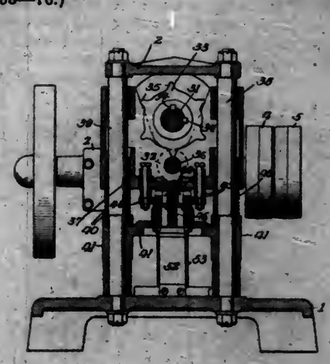
34. In a machine for cheeking hides and skins, a cutter, a bed roll for supporting a hide or skin for operation by the cutter, means for pressing the hide or skin against the bed roll operative for smoothing and spreading the hide or skin prior to the action of the cutter, said means comprising a member having a concave surface corresponding to the convex surface of the bed roll but so located that its upper end is nearer to the bed roll than its lower end, whereby the hide or skin is subjected to gradually increasing pressure as it passes upwardly between the bed roll and the pressing means.

1,749,892. POWER-TRANSMISSION GEARING. DANIEL R. SCHOLES, Chicago, Ill., assignor to Aermotor Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 10, 1928. Serial No. 325,034. 8 Claims. (Cl. 74—14.)



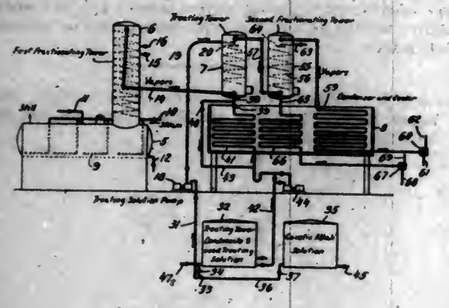
1. Power transmission gearing including two rotating members; two co-extensive and symmetrically related pitmen, each rotating member having a pitman individual thereto and in pivotal connection at one end therewith; a cross-head common to both pitmen and having pivotal connection therewith at the other ends thereof; a peripherally grooved sheave assembled with the cross-head and co-axial with the ends of the pitmen that have pivotal connection with the cross-head; guide rods received in the peripheral groove of the sheave, there being lateral clearance between the rods and the sides of the groove permitting canting of the sheave and permitting relative movement of the latter pitmen ends in the general upright plane of their movement without impairing the guiding function; and a load rod extending along and between the pitmen and having flexible connection with said cross-head defining an axis of relative movement between the load rod and cross-head that is angular to the general upright plane of movement of the latter pitmen ends.

1,749,893. CARBURETOR. WILLIAM SCOTT, Medford, Mass. Filed Nov. 2, 1927. Serial No. 230,639. 3 Claims. (Cl. 261—72.)



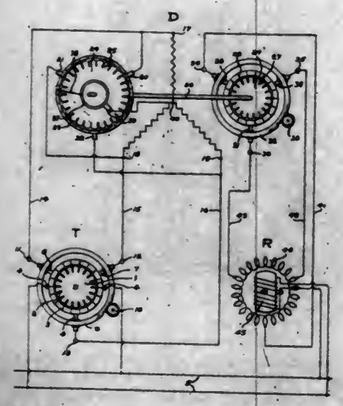
1. In a carburetor, a float chamber, a mixing chamber, a suction passage from the mixing chamber to the top of the float chamber for maintaining a partial vacuum in the latter by engine suction, an air intake passage, a movable air valve interposed between said intake passage and mixing chamber, a fuel nozzle carried by said air valve and having its discharge orifice above the level of fuel in said float chamber, an air port or ports leading through said air valve from the air intake passage, and a Venturi tube carried by the air valve and communicating with said air ports, said Venturi tube surrounding the fuel nozzle and constructed to provide during operation of the engine greater suction at said discharge orifice than in said suction passage.

1,749,894. PISTON RING. JASPER H. STANFIELD, Muskegon, Mich. Filed Sept. 30, 1929. Serial No. 396,069. 3 Claims. (Cl. 74—109.)



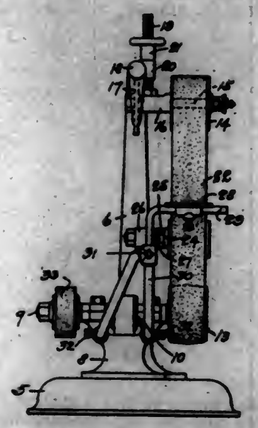
1. A piston ring of substantially circular form, including one ring segment having a common radius and a second ring segment integral with and extending from the first ring segment of a varying and increasing radius, said piston ring having a parting at one side at the free end of said second named segment of the ring, said parting being in the arc of a circle having a center about which said second segment of the ring bends when the ring is compressed to circular form for entrance into a cylinder.

1,749,895. PISTON-RING-SPRING MACHINE. OTTO E. SEEKELY and RUSSELL H. JOHNSON, Holland, Mich. Filed Sept. 23, 1927. Serial No. 221,440. 14 Claims. (Cl. 153—76.)



1. A machine for making piston ring springs comprising a base, a frame, rollers in said frame for feeding material to the machine, means for rotating one of said rollers, a forming roller, means driven by said first named means for driving the forming roller, an upper movable die, a stationary lower die, an operating roller cooperating with said forming roller for reciprocating said upper die, and means arranged in said upper die for cutting the material after it has been crimped.

1,749,896. MANUFACTURE OF LUBRICATING OIL. GEORGE H. TABER, Jr., Rye, N. Y., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Original application filed Jan. 14, 1925, Serial No. 2,262. Divided and this application filed May 26, 1928. Serial No. 280,790. 2 Claims. (Cl. 196—36.)

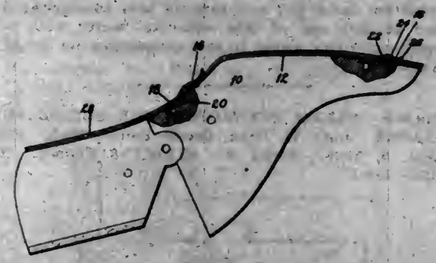


1. In the manufacture of lubricating oils the improvement which comprises continuously vaporizing lubricating oil constituents from a stock containing the same, continuously taking off the lubricating oil vapors and subjecting them as such to treatment with a caustic alkali solution, maintaining the temperature in this treatment to condense a minimum of lubricating oil constituents, continuously taking off lubricating oil vapors from this treatment free from alkali, and condensing a lubricating oil fraction from the vapors taken off from the alkali treatment, whereby said condensed lubricating oil fraction is subjected to the alkali treatment in the vapor phase but condensed out of contact with the alkali.

1,749,897. REDUCING HYSTERESIS EFFECTS IN ELECTRICAL APPARATUS. HARRY L. TANNER, Brooklyn, N. Y., assignor to Ford Instrument Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed May 12, 1926. Serial No. 108,582. 14 Claims. (Cl. 172—239.)

1. In means for reducing the effects of hysteresis in electrical apparatus having relatively moving elements, normal connections between said elements and to a source of electromotive force, and successive additional connections between said elements whereby a varying additional electromotive force is impressed upon successive portions of one of said elements.

1,749,898. ABRADING MACHINE. WALTER B. WARD, Memphis, Tenn. Filed Apr. 17, 1926. Serial No. 102,604. 2 Claims. (Cl. 51—135.)

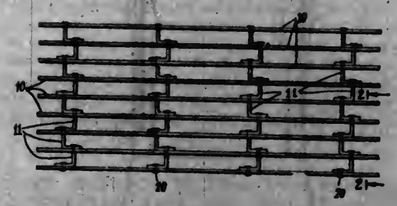


1. An abrading machine, comprising a shaft bearing bracket belt abrading mechanism disposed above said bracket, arms mounted in said base and adjustably extending laterally therefrom at right angles to the line of said shaft bearings, each of said arms being bent upward substantially at right angles to said lateral portion thereof, one of said upward extensions being hollow and vertically disposed, and the other thereof inclined toward said vertical one and secured to the same near the upper end thereof as a brace, a rod disposed in said vertical extension and longitudinally adjustable with reference thereto, means for locking said rod with reference to said extension, a lateral extension from said rod, and a steady rest mounted on said extension.

1,749,899. REENFORCEMENT FOR TIRE BEADS. STERLING W. ALDERFER, Akron, Ohio, assignor to National Standard Company, Niles, Mich., a Corporation of Michigan. Filed Apr. 5, 1927. Serial No. 181,096. 1 Claim. (Cl. 245—1.5.)

A bead construction for pneumatic tires comprising a body of rubber, and a reenforcement comprising a plurality of independent parallel, longitudinal wires embedded therein and unconnected except for the rubber, each of said wires being arranged in a plurality of spaced convolutions about the bead.

1,749,900. INSOLE-HOLDING DEVICE. MAURICE VINCENT BRESNAHAN, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 19, 1928. Serial No. 293,911. 5 Claims. (Cl. 12—141.)

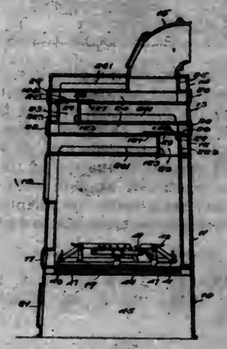


1. A last having a resilient insole holding member attached by its rear end to the bottom of the last, and extending forwardly along the last bottom.

1,749,901. EXPANDING BRAKE. NELSON R. BROWNYER, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed Dec. 5, 1927. Serial No. 237,721. 6 Claims. (Cl. 188—234.)

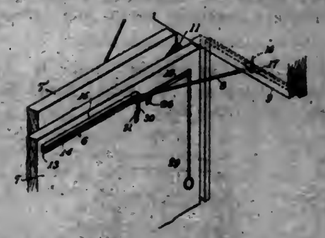
1. In an expanding brake, a pivoted brake shoe having transverse shoulders, a brake block, transverse cleats resting against said shoulders having portions that overlap the end portions of said block, lugs secured to said shoe inwardly of said block and having portions that overlap the ends of said cleats.

1,749,902. FLOOR GRATING. HERBERT H. BUNKER, Jersey City, N. J., assignor to Kerlow Steel Floor Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 4, 1929. Serial No. 352,443. 7 Claims. (Cl. 94—30.)



1. A floor grating comprising a plurality of longitudinal girders and members laterally spacing the girders from each other, there being a plurality of lateral rows of spacing members with the successive spacing members of each lateral row connected together, each of said spacing members having a projection engaging with a contiguous girder and the next succeeding spacing member in the same lateral row.

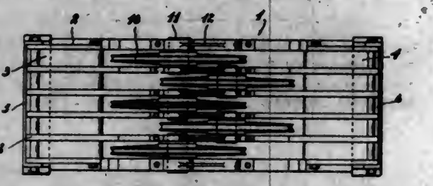
1,749,903. SHEET-METAL FASTENING. CHARLES D. CANNON, Cleveland, Ohio. Filed May 12, 1928. Serial No. 277,234. 2 Claims. (Cl. 85—41.)



1. A sheet metal fastening, comprising a screw-threaded metallic element having a tool-engaging head and having a thread starting at the point with a very steep pitch, the pitch decreasing toward the head to provide a spacing between threads equal to sheet metal gauge.

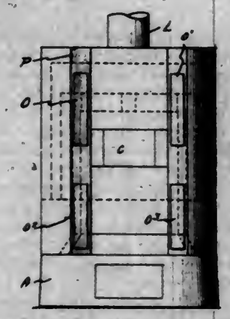
1,749,904. HEATER. THOMAS D. CASSELLY, Chicago, Ill., assignor to Weil-McLain Company, Michigan City, Ind., a Corporation of Delaware. Filed Apr. 9, 1928. Serial No. 268,515. 1 Claim. (Cl. 122—156.)

In a boiler, the combination with horizontal water-containing sections having horizontal flues therebetween and provided with cleanout doors, said sections being provided with flue openings alternately disposed on diametrically opposite sides of the boiler, each flue opening being of arcuate formation concentric with the center of the boiler; and detachable baffle plates, insertable through the cleanout doors for said flue openings, each said plate being also of arcuate formation and arranged to cover the innermost side of each arcuate flue opening whereby to leave relatively narrowed flue openings at the maximum distance from the centers of the sections and thereby insure more uniform distribution of the products of combustion back and forth between the sections.



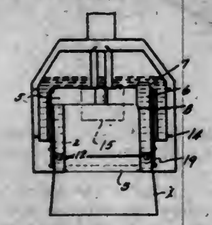
1,749,905. DOOR HOLDER. CHARLES COMSTOCK, New Hyde Park, N. Y. Filed Nov. 10, 1927. Serial No. 232,292. 6 Claims. (Cl. 292—272.)

1. A door holder comprising a channel iron having a rear web adapted to be secured to a door, a bottom flange adapted to support the tip of a holder arm, a front flange serving to guide the tip of the holder arm, and a top flange serving to keep the holder in the channel formed by the bottom flange and the top flange, a holder arm adapted to be pivoted to the underside of the top of a door



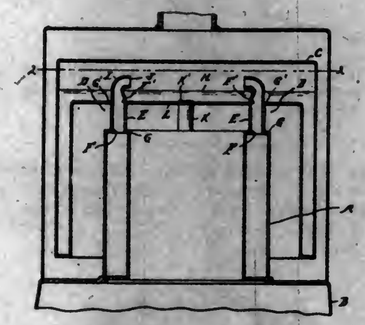
frame and having a downwardly extending tip guided in the channel, said channel having a hole in its lower flange at one end to receive and interlock with said holder tip and a releasing lever adapted to be pivoted to the door and provided with an operating chain, said lever having one end located immediately below the hole in said channel and a spring secured to said lever for normally retracting it and an anchor for securing one end of said spring to the door.

1,749,906. CROWN BLOCK. GUSTAVE J. CORMIER, Seminole, Okla. Filed June 28, 1928. Serial No. 289,018. 3 Claims. (Cl. 254—190.)



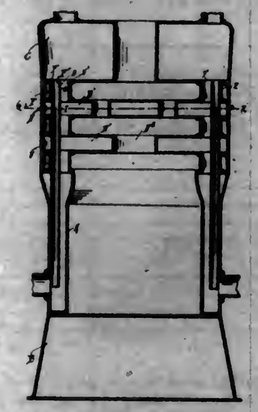
1. A crown block comprising a plurality of beam plates, spacing blocks positioned between adjacent plates, bolts extending through the plates and spacing blocks, sheaves mounted between adjacent pairs of plates, a pin upon which each sheave is journaled, and clamps extending over the pins and secured to the top of the beam plates, and angle plates positioned at both ends of the beam plates in which said beam plates are adapted to rest, and bolts extending through the beam plates and angle plates.

1,749,907. FURNACE. JOHN W. DYAR, Detroit, Mich. Filed Apr. 27, 1925. Serial No. 26,238. 7 Claims. (Cl. 122—160.)



1. In a boiler furnace, the combination with a boiler section forming the fire pot and combustion chamber, of a downwardly flaring portion at the lower end of said section, and means for supporting grates of different areas at different elevations within said flaring portion.

1,749,908. BOILER FURNACE. JOHN W. DYAR, Detroit, Mich. Filed Apr. 27, 1925. Serial No. 26,239. 10 Claims. (Cl. 122—160.)



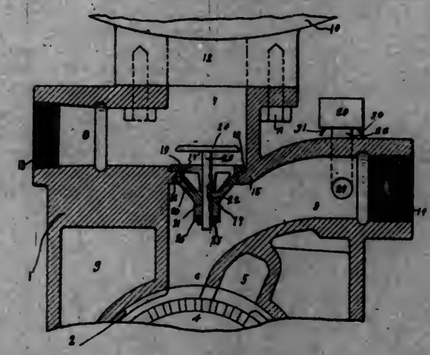
1. In a boiler furnace, the combination with an annular boiler section forming the fire pot and combustion chamber, of a top section extending across the upper end of said annular boiler section and connected thereto, a segmental water wall depending from the top section and surrounding a portion of said annular boiler section in spaced relation thereto to form a passageway for the combustion gases, and a closure for said passageway disposed at each end of said segmental water wall, said closure permitting access to said passageway for cleaning the same.

1,749,909. STEAM CONNECTION FOR BOILER FURNACES. JOHN W. DYAR, Grosse Pointe, Mich. Filed Apr. 5, 1926. Serial No. 99,974. 3 Claims. (Cl. 122—160.)

1. A nipple for boiler furnaces comprising a tubular member having tapered portions adapted to engage adjacent sections thereof, said tubular member being formed with a continuation of reduced diameter adapted to extend beyond one of the tapered portions into one of said sections and terminating in a laterally bent discharge portion.

1,749,910. NIPPLE CONSTRUCTION FOR BOILER FURNACES. JOHN W. DYAR, Detroit, Mich. Filed Apr. 5, 1926, Serial No. 99,976. Renewed July 1, 1929. 10 Claims. (Cl. 122—218.)

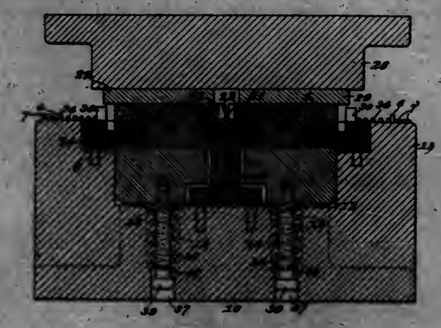
1. In a boiler furnace, the combination with a boiler section and a steam dome normally having water in the lower portion thereof, of a nipple connecting said dome and boiler section, a partition wall within said nipple



dividing the same into two separate passageways, one of said passageways being extended above the normal water line in said dome and the other terminating below said water line, the latter passageway being extended directly into said boiler section.

1,749,911. FLUSH VALVE. STEPHEN P. ENRIGHT, Philadelphia, Pa. Filed Feb. 20, 1929. Serial No. 341,383. 6 Claims. (Cl. 4—29.)

1. A flush valve comprising a casing having a valve seat therein, a valve member including a skeleton body, a head and a cross piece, trunnions carried by the body for slidably mounting the same in inclined guideways in the casing, means to temporarily latch the valve member in an open position and a valve plug on the head for coaction with the seat.



1,749,912. PUMPING APPARATUS. GALE L. FERGUSON, Cleveland, Ohio, assignor, by mesne assignments, to Auto Prime Pump Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 12, 1927. Serial No. 239,868. 2 Claims. (Cl. 103—2.)

1. Pumping apparatus comprising a casing providing a pump chamber, an inlet and an outlet for said chamber, pumping mechanism arranged in said chamber, said outlet comprising a storage branch, a service branch, and a fresh water branch all formed in said casing, a check valve mounted in said casing between said fresh water branch and said storage and service branches, and means for driving said pumping mechanism.

1,749,913. METHOD AND APPARATUS FOR SHAPING SHEET-METAL ARTICLES. OTTO JOHN GROSSE, Grosse Pointe Park, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 10, 1927. Serial No. 239,222. 11 Claims. (Cl. 153—13.)

1. In an apparatus for shaping previously bent sheet metal, the combination of a member for supporting said bent metal, a die movable in a path inclined to the supporting surface of said member, and means for moving said die to press the metal against said member to bend said metal along a line of previous bend and a line spaced therefrom.

11. The method of shaping sheet metal previously bent with parallel flanges which comprises supporting the body of the metal between said flanges, bending said flanges in one direction along the line of the previous bend and in the opposite direction along a line spaced from said previous line of bend to bring the same together and against the body of the metal by pressure applied to said flange along a path inclined to said body and intersecting said second line of bend.

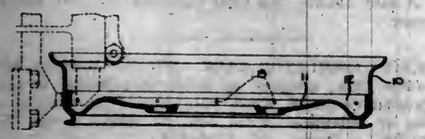
1,749,914. GAS MIXER. CHARLES T. HOWSON, Silver Creek, N. Y., assignor to Walter M. Buchholtz and Albert B. Chapman, Silver Creek, N. Y. Filed Oct. 13, 1924. Serial No. 743,303. 6 Claims. (Cl. 48—180.)

1. A gas mixer, comprising a mixing chamber having an outlet at one end, a hollow head at its other end, and an internal flange at the junction of said hollow head and mixing chamber having its inner peripreral wall tapered inwardly toward said mixing chamber, an air nozzle axially adjustable in said hollow head and having an externally-tapered portion and an internal flaring portion at its inner end, the surface of said externally-tapered portion being parallel with the inwardly-tapered wall of said internal flange and being spaced therefrom to form an annular inwardly-tapered inlet, a gas inlet pipe opening into said hollow head, and a cone within said air nozzle spaced from the internally flared portion thereof and forming between the two an annular inwardly-flared air passage through which an annular film or body of air is adapted to pass to intersect an annular film or body of gas at said annular gas inlet traveling into said mixing chamber.

1,749,915. INSULATOR RACK. WILLIAM D. KYLE, Milwaukee, Wis., assignor, by mesne assignments, to Line Material Company, South Milwaukee, Wis., a Corporation of Delaware. Filed Jan. 29, 1927. Serial No. 164,606. 3 Claims. (Cl. 173—321.)

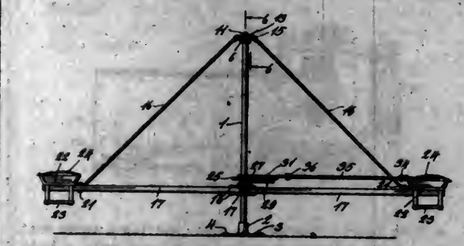
3. A device of the character described comprising a base member adapted to be secured to a support, an in-

sulator having a transverse opening through which a line wire may be inserted to be supported by the insulator and having longitudinal bores extending through the insulator at each side of the transverse opening, the outer ends of the bores being counter-bored, and securing screws



passed through the longitudinal bores with their heads positioned within the counter-bores and their ends threaded in apertures in the base member to secure the insulator to the base member, whereby breakage of the insulator permits the line wire to drop.

1,749,916. CORN POPPER. JOHN G. LE PERE, Decatur, Ill., assignor to U. S. Manufacturing Corporation, Decatur, Ill., a Corporation of Illinois. Original application filed Jan. 6, 1925, Serial No. 822. Divided and this application filed Feb. 18, 1927. Serial No. 169,272. 13 Claims. (Cl. 53—4.)

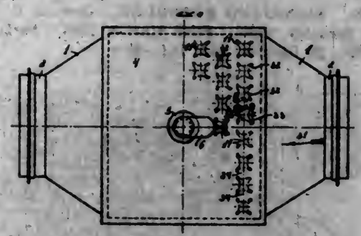


1. A device of the character described including, in combination, a basket or receptacle having a handle attached thereto, a lid or cover for said basket or receptacle including a one piece member forming a marginal frame for the lid or cover extending around the edges thereof and having an operating member, said operating member extending along said handle and being formed with means to slidably engage said handle.

1,749,917. METHOD OF WELDING WHEEL PARTS. JOSEPH W. MEADOWCROFT, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 21, 1928. Serial No. 263,230. 2 Claims. (Cl. 219—10.)

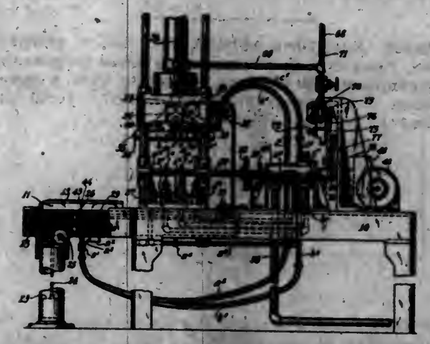
1. The method of welding metal wheel bodies to rims which consists in peripherally flanging the body to fit said rim, outwardly forming spuds on said flange and thereby destroying said fit, forcing said spudded body into said rim and thereby resiliently stressing said body, and thereafter spot welding the spuds to the rim thereby relieving the stress, restoring the fit of the flange in the rim and autogenously joining it thereto.

1,749,918. AMUSEMENT DEVICE. MAJOR MCLENNAN, McCamey, Tex. Filed Oct. 29, 1928. Serial No. 315,638. 1 Claim. (Cl. 272—33.)



A hand operated amusement device comprising, in combination, a vertical mast, a thrust bearing secured to the upper end of said mast, a plurality of radially extending arms rotatably connected with the mast, a supporting rod extending from the free end of each arm to the thrust bearing, a seat secured to the outer end of each arm, a ratchet wreel nonrotatably secured to the mast, a lever having one end rotatably connected with the mast, a brace member having one end connected with the lever and the other end rotatably connected with the mast, a spacer block located between the lever and the brace, said block having an opening, a pawl reciprocable in said opening, a spring means associated with the pawl for urging it towards the ratchet, a second lever mounted for oscillation about a pivot located adjacent the free end of one of the arms, one end of said second lever extending over the seat and a link connecting the other end of the second lever with the free end of the first lever.

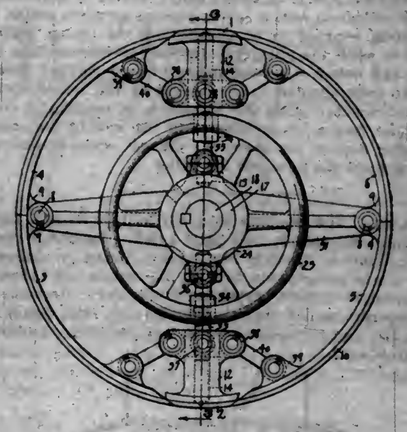
1,749,919. OPERATING CURETTE. IRA C. MIERLEY, Denver, Colo., assignor to Ida B. Mierley, Denver, Colo. Filed Aug. 27, 1928. Serial No. 302,271. 6 Claims. (Cl. 128—305.)



1. An aspirating curette comprising: a tube, said tube being relatively straight for the majority of its length; a gently curved portion on one extremity on said tube; and an obliquely placed operating edge on the extremity of said curved portion.

1,749,920. APPARATUS FOR REMOVING DUST FROM GASES. ANDRÉ MODAVE, Brussels, Belgium, assignor of fifty per cent to Ateliers Haares Societe Anonyme, Monceau sur Sambre, Belgium, a Company. Filed Sept. 8, 1927, Serial No. 218,191, and in Belgium Sept. 13, 1926. 4 Claims. (Cl. 183—21.)

1. In an apparatus for removing dust from gases a chamber having an inlet and outlet thereto, baffle elements having concave outer surfaces arranged in said chamber between said inlet and outlet in successive rows, said elements of one row being staggered with respect to those of the adjacent rows and being arranged to provide narrow restricted passages between the edges of said elements and relatively wider passages between the surfaces of said elements, and means for distributing water over the outer surfaces of said elements.

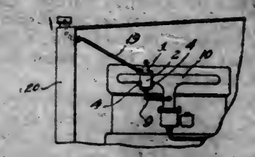


1,749,921. APPARATUS FOR COATING DEFINED AREAS OF FABRIC ELEMENTS. ANDREW B. MULLIN, Kenmore, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 24, 1927. Serial No. 177,972. 7 Claims. (Cl. 91—18.)

1. Coating apparatus comprising a pair of members adapted to embrace a piece of sheet material between them, said members being formed with registering portions adapted to compress the work to limit the spread of coating material thereon and with adjacent surfaces adapted to permit the flow of coating material thereover along the face of the work, the said members being perforated for the passage of coating material therethrough in the regions of the said surfaces, and means for forcing a coating material through the perforations of the said members.

7. Coating apparatus comprising two die members mounted for movement substantially parallel with their work-engaging faces into and out of coating position, two other die members mounted for movement substantially normal to their work-engaging faces into and out of coating position, each of the first-mentioned die members being adapted to mate with one of the second-mentioned die members to embrace a piece of sheet material between them at coating position, means for actuating the two pairs of mating die members, and means for applying coating material to the die members.

1,749,922. COLLAPSIBLE TIRE-BUILDING FORM. JOHN E. PALMER, Akron, Ohio, assignor to The Summit Mold & Machine Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 23, 1927, Serial No. 221,484. Renewed Jan. 22, 1930. 16 Claims. (Cl. 154—9.)

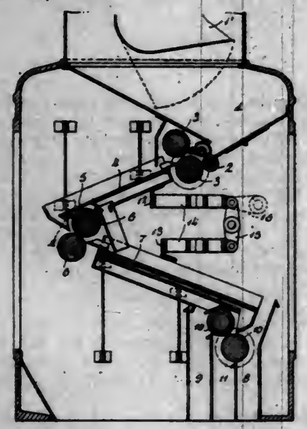


1. In a collapsible tire building form, the combination of a form body composed of a plurality of sections, certain of the sections being tapered outwardly of the form and arranged oppositely of one another, the remaining sections being arranged in pairs hinged together and located betwen the first named sections, a collapsing mechanism at the center of the form and connected directly with the first named sections, and means to rock the remaining sections about their pivots as the first named sections are moved toward and from the axis of the core.

1,749,923. COATING COMPOSITION. JOSEPH VINCENT REARDON, St. Louis, Mo., assignor to The Reardon Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 9, 1926. Serial No. 147,382. 19 Claims. (Cl. 91—68.)

1. A water paint characterized by the facts that it attaches itself firmly to structural substances of mineral character, becomes practically wear- and weather-proof, contains a mineral base having a binder in which each of the ingredients, lime and cement, is present in major proportions, and consists of about half its weight of water adapting it to painting by brush or spray.

14. A paint base comprising a lime-cement binder which includes not over about 50 parts hydraulic cement and not over about 50 parts lime accompanied by a small amount of salt, a small amount of soap and a small amount of sugar.

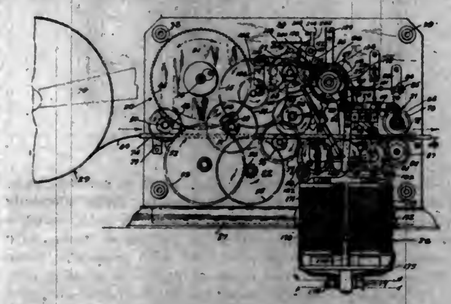


1,749,924. FUEL-CHARGE MOISTENER. ARTHUR C. RUNGE and ERNEST C. BADGER, Detroit, Mich.; said Badger assignor to said Runge. Filed Jan. 5, 1929. Serial No. 330,472. 6 Claims. (Cl. 128—25.)

1. In a fuel charge moistener for an internal combustion engine having a water circulating radiator, a cylinder, an inlet for the cylinder connected to the radiator above the

water level therein, an outlet for the cylinder opening into the intake manifold of the internal combustion engine, a plunger movable longitudinally of the cylinder to close the inlet or the outlet, a stem secured to the plunger and extending through the top of the cylinder, an adjusting nut threaded onto the end of the stem, a coiled spring about the stem adapted to be placed under tension by adjustment of the adjusting nut, a spring pressed member, means on the stem adapted to be engaged by the spring pressed member when the plunger is in position intermediate the inlet and outlet, a second spring pressed member, means on the stem adapted to be engaged by the second spring pressed member when the plunger is in position to close the inlet, and a bypass formed in the wall of the casing allowing flow of air about the plunger when in position intermediate the inlet and the outlet.

1,749,925. APPARATUS FOR GRINDING GRAIN INTO CRUSHED MALT AND THE LIKE. JOSEF SCHAEFER, Frankfort-on-the-Main-Bockenheim, Germany, assignor, by mesne assignments, to Miag Muhlenbau und Industrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed May 19, 1925, Serial No. 31,276, and in Czechoslovakia May 24, 1924. 4 Claims. (Cl. 83—12.)

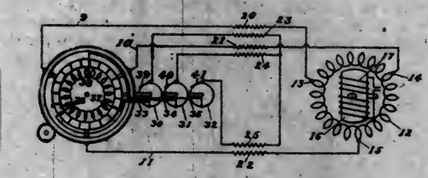


1. In an apparatus for grinding grain, the combination of a pair of bladed cutting rolls, the blades of which operate to cut the single grains longitudinally into halves, a sieve to which the products are fed from said cutting rolls, a pair of smooth rolls at one end of said sieve and distanced a space a little less than the thickness of a halved grain, another sieve receiving the products from said smooth rolls, a second pair of bladed rolls to which particles are fed from the smooth rolls and having their blades rotated at different speeds so that said blades act more than once on every particle of the grain produced by said pair of smooth rolls, and means for diverting portions of the products from the first named sieve past said smooth rolls and on to the second named sieve.

1,749,926. PROCESS OF MAKING SHOES. CHARLES B. SPALSBURY, St. Louis, Mo., assignor to Johnson-Stephens & Shinkle Shoe Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 18, 1928. Serial No. 300,445. 16 Claims. (Cl. 12—142.)

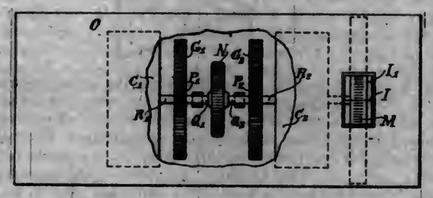
1. In the art of making shoes, the process comprising, lasting an upper over a last and temporarily fastening the same, holding the lasted upper while the temporary fastenings are withdrawn, placing a sole on and temporarily tacking the same to the lasted upper while the latter is so held and permanently securing the tacked sole and upper together.

1,749,927. SIGNALING RECORDER. OSWALD G. STEINITZ, Berkeley, Calif. Filed Mar. 8, 1927. Serial No. 173,688. 29 Claims. (Cl. 164—89.)



1. A recording apparatus of the type described, including in combination, an actuating-drum, gear trains actuated thereby, a punch-mechanism including independently operable punches and a tape-feeding mechanism, said gear trains operatively connecting said mechanisms for their simultaneous operation, a clutch mechanism coactively associated with said punch-mechanism and providing means for the selective or simultaneous actuation of its punches, and electro-magnetic means for controlling said clutch mechanism.

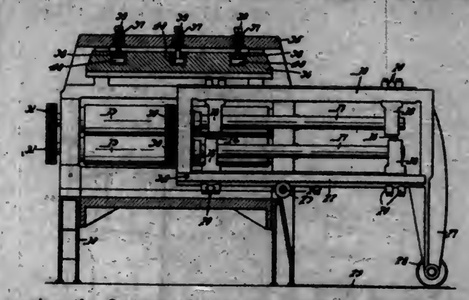
1,749,928. SOUNDING APPARATUS. BIRD R. STEPHENSON, Ponca City, Okla., assignor, by mesne assignments, to Continental Oil Company, Ponca City, Okla., a Corporation of Delaware. Filed Oct. 7, 1927. Serial No. 224,741. 1 Claim. (Cl. 137—18.)



A sounding apparatus comprising, in combination, a container, oppositely disposed openings formed within the container, valves for closing the oppositely disposed openings, the stems of the valves being arranged in telescopic relation with each other, resilient means tending normally to close the valves, and means for maintaining the valves in an open position, the latter named means being operative from a point remote from the container to permit closing of the valves.

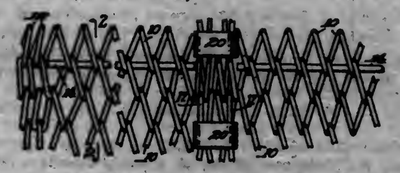
1,749,929. REDUCING THE EFFECTS OF RESIDUAL MAGNETISM IN ELECTRICAL APPARATUS. HARRY L. TANNER, Brooklyn, N. Y., assignor to Ford Instrument Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Nov. 6, 1924. Serial No. 748,295. 3 Claims. (Cl. 172—239.)

1. In a transmission system, a transmitter comprising a power driven armature, a commutator connected thereto, a set of movable brushes coacting with the commutator, means for adjusting the position of said brushes to vary the potential conditions thereat, a receiver motor, conductors between said brushes and the field of the receiver motor, means associated with said conductors for introducing a fluctuating electromotive force thereto to reduce the effect of residual magnetism in the field of the motor, and an armature for said motor relatively movable to said field in accordance with the electromotive force produced by said transmitter.



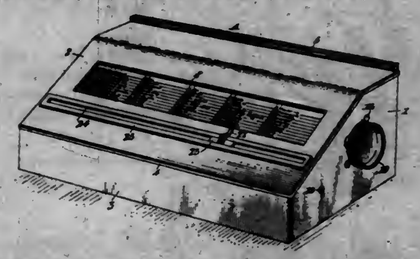
1,749,930. VARIABLE-CIRCUIT ELEMENT FOR RADIO RECEIVING SETS. FREDERICK K. VREELAND, Montclair, N. J. Filed Apr. 15, 1926. Serial No. 102,142. 5 Claims. (Cl. 250—40.)

1. In a radio signaling system and in combination with a plurality of tunable circuits, variable instrumentalities one at least thereof being included in each of said circuits for tuning said circuit, an instrument panel having apertures therethrough, a rotatable shaft mounted adjacent said panel, means for rotating said shaft exposed through one of said apertures of said panel, an indicating dial mounted on said shaft and positioned opposite the other of said apertures in said panel, and connections between said shaft and said tuning elements whereby said tuning elements are simultaneously operated by said rotating means and said indicating dial is positioned opposite its aperture to indicate the adjustment of said tuning elements when said shaft is rotated.



1,749,931. SUPPORT FOR ROTARY SLITTERS. GEORGE A. WALL, Wilmington, Mass., assignor to Shaw Crane-Putnam Machine Company, Inc., Fitchburg, Mass., a Corporation of Delaware. Filed Aug. 27, 1928. Serial No. 302,190. 7 Claims. (Cl. 164—61.)

1. In a slitting or cutting machine for metal sheets, the combination with a pair of shafts having slitting cutters thereon and means for driving them, of a frame carrying said shafts, a stationary frame on which the first-named frame is movably mounted, and means for

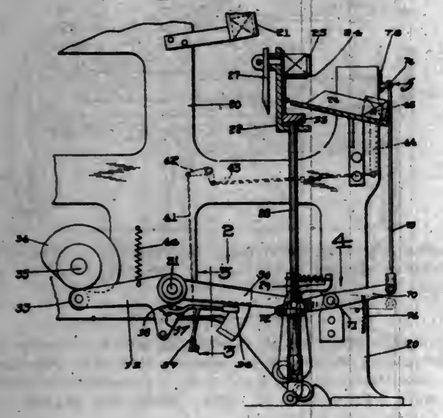


moving the first-named frame outwardly in a horizontal direction parallel to the axes of the shaft to permit of access to the cutters.

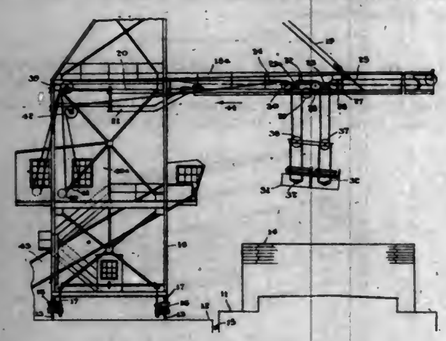
1,749,932. SECTIONAL CONVEYER BELT. FRANCIS N. WOODMAN, Clinton, Mass., assignor to Wickwire Spencer Steel Company, New York, N. Y., a Corporation of Delaware. Filed July 27, 1928. Serial No. 295,809. 4 Claims. (Cl. 198—193.)

1. A sectional wire conveyer belt comprising a plurality of relatively narrow belt sections, each section being formed of interlaced spiral wire coils and having the end turns of the wire coils compressed laterally to form reinforced selvage edge portions, and means to secure said edge portions together.

1,749,933. APPARATUS FOR SELECTIVE VERBATIM CODING AND DECODING. HARRY R. BARNETT, Denver, Colo. Filed June 25, 1925, Serial No. 39,577. Renewed July 30, 1929. 9 Claims. (Cl. 35—13.)



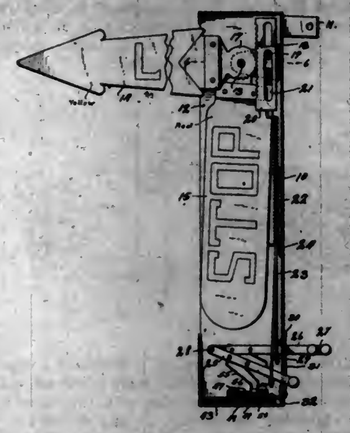
1. Apparatus for coding and decoding comprising a plurality of parallel and longitudinally shiftable code strips, each of said code strips having a plurality of transversely disposed lines of words and phrases arranged thereon in alphabetical groups and code designations preceding each line.



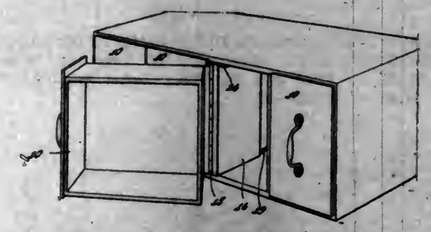
1,749,934. TRANSFER AND FEELER CONTROL MECHANISM FOR SHUTTLE-CHANGING LOOMS. AUGUSTIN J. CHEVRETTE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 2, 1928. Serial No. 258,557. 5 Claims. (Cl. 139—229.)

1. In a shuttle changing loom, weft detecting mechanism at one side of the loom, shuttle changing mechanism

at the other side of the loom, and separate actuating cams for said two mechanisms, said cams being relatively positioned to delay the shuttle change until after the second flight of the shuttle to the shuttle changing side of the loom.



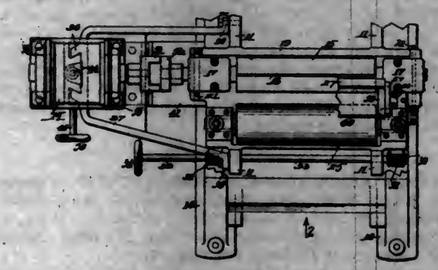
1,749,935. UNLOADING DEVICE. DANIEL W. COE and CECIL E. THOMPSON, Montreal, Quebec, Canada. Filed Oct. 10, 1927, Serial No. 225,284, and in Canada Dec. 15, 1926. 8 Claims. (Cl. 212—79.)



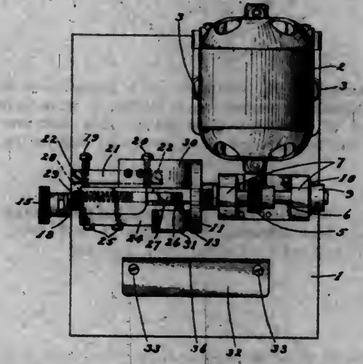
1. In an unloading mechanism, a travelling trolley, a skip, flexible means suspending the skip from said trolley and affording a vertically adjustable support for the skip, a track for said trolley, said track being at one part formed into a double track at different elevations to cause the trolley and the skip suspended therefrom to be angularly disposed to the horizontal at said part.

1,749,936. AUTOMOBILE SIGNAL. NEWTON W. COFFEY, El Paso, Tex. Filed Nov. 11, 1924. Serial No. 749,238. 1 Claim. (Cl. 200—5.)

A signal control switch comprising a plurality of switch sections each embodying a contact element movable in one direction to open a circuit and a second contact element movable in the same direction to close a second circuit, the first named contacts of the sections being connected in series and an operating element for each section coacting with the contact elements of the section to simultaneously shift the same in said direction.

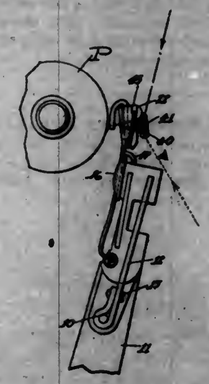


1,749,937. DRAWER. LOUIS F. DETTENBORN, Hartford, Conn. Filed Apr. 30, 1925. Serial No. 27,043. 2 Claims. (Cl. 45—95.)



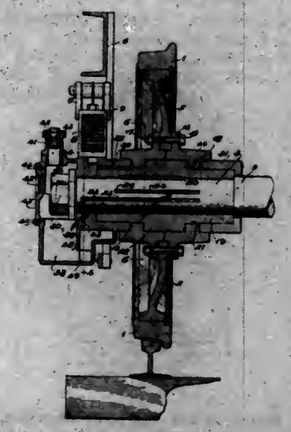
1. A cabinet having a drawer receiving compartment and a curved guide extending along one side and across the back of the compartment, a single drawer supporting follower engaging the guide in said compartment, said follower adapted for movement forwardly on the guide into contact with said side to brace the follower thereagainst, and a drawer hingedly connected at one inner edge to said follower to admit swinging of the drawer when withdrawn from the compartment to one side thereof.

1,749,938. DOUBLE-CYLINDER PLANER. WALTER H. HALL, Winchendon, Mass., assignor to Goodspeed Machine Company, Winchendon, Mass., a Corporation of Massachusetts. Filed Feb. 23, 1926. Serial No. 89,834. 3 Claims. (Cl. 144—117.)



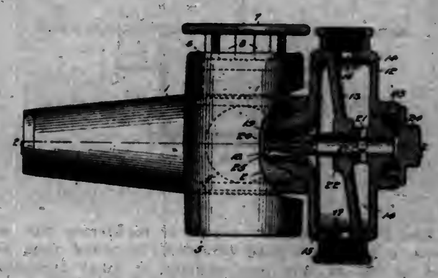
1. In a wood planer, a work table, a cutter cylinder, a presser bar for said cylinder, a stand on which said bar is pivoted, means to press said bar yieldingly upward in said stand, means to limit such upward movement, and means to adjust said stand vertically relatively to said work table, said latter means comprising a double wedge member slidable beneath said stand.

1,749,939. INSULATION-REMOVING PROCESS. HARLEY H. HELLER, Riverside, Conn., assignor to Ford Instrument Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Jan. 2, 1926. Serial No. 79,011. 6 Claims. (Cl. 29—1.)



2. The process of stripping insulating coating from wire which consists in applying a combined rolling and rubbing action to the wire and slightly flattening the wire at the region where such action is applied.

1,749,940. THREAD GUIDE FOR SPOOLING AND WINDING MACHINES. LEWIS T. HOUGHTON, Worcester, Mass.; John M. Houghton and Olive M. Lambert, executors of the estate of said Lewis T. Houghton, deceased, assignors to John M. Houghton and Olive M. Lambert, Worcester, Mass. Filed July 18, 1925. Serial No. 43,072. 11 Claims. (Cl. 242—157.)

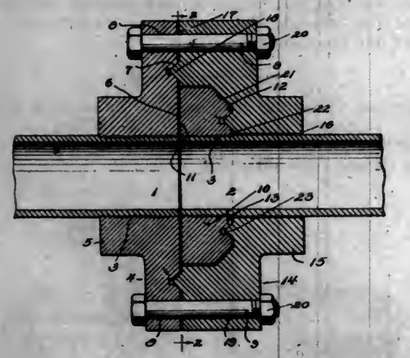


1. As an article of manufacture, a V-shaped guide of round wire for the purpose described having a flat inclined surface at the bottom for guiding the thread or yarn and having flat side surfaces extending upwardly therefrom and spaced apart substantially in vertical position and connected by said inclined surface, which forms the bottom of the V, said round wire diverging on the two sides of the V gradually beyond the two flat surfaces.

1,749,941. LUBRICATING DEVICE. ALBERT HUGUENIN, Paris, France. Filed Sept. 20, 1928. Serial No. 307,150. 9 Claims. (Cl. 308—79.)

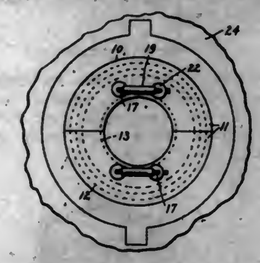
5. In combination, an axle and a wheel, a lubricant reservoir, said axle being formed with longitudinally disposed inter-communicating grooves arranged in substantially diametrically opposed relation, said reservoir having ducts leading from the opposite sides of the same and communicating, individually, with the grooves, a bearing sleeve for the wheel, a second bearing sleeve fixedly mounted upon said axle having slots therein communicating with and corresponding to said grooves, thrust bearing means on each of said sleeves inter-engaging with each other, and means on the opposite side portions of the axle bearing sleeve thrust bearing means cooperable with the adjacent sides of the thrust bearing portions of the wheel bearing sleeve whereby with rotation of the wheel bearing sleeve to effect the drawing of lubricant from the reservoir through certain of said ducts into and from that groove communicating therewith and discharging the lubricant onto contacting surfaces of said bearing sleeves, then returning the residue of said lubricant through the remaining slots and grooves into the remaining duct and then into the reservoir.

1,749,942. BURNER. CAMPBELL M. HUNTER and HAROLD P. PHILPOT, London, England. Filed May 24, 1927, Serial No. 193,888, and in Great Britain Sept. 7, 1926. 6 Claims. (Cl. 158—11.)



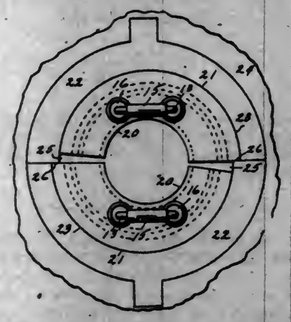
1. In a burner of the fluid fuel type, the combination of a mixing chamber, means for conducting gaseous fuel to said chamber, and a plurality of jets arranged in concentric spaced relation one within the other for conducting fluids to said chamber, the space between said jets forming the nozzle for a motive fluid and increasing in cross sectional area in the direction of flow of said motive fluid.

1,749,943. REVERSIBLE PLACARD HOLDER FOR TANK CARS. SYLVESTER L. JOINER, McGregor, Tex. Filed Sept. 8, 1928. Serial No. 304,666. 5 Claims. (Cl. 40—28.)



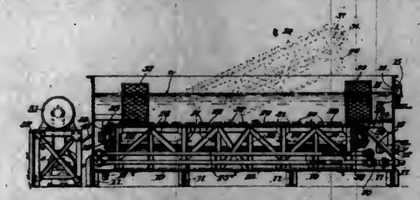
1. In a device of the character described, a bracket, a placard holder supported on the bracket and including front and rear leaves connected by a web portion, each leaf being substantially rectangular and having flanges on three sides forming guides and a support for a placard against each leaf, the front leaf carrying signalling indicia, and a placard carrying different signalling indicia on its opposite faces and adapted to be supported interchangeably on the leaves in the respective guides and supports and when supported on the front leaf concealing the signalling indicia on the latter.

1,749,944. PIPE COUPLING. ALBERT KALO, Columbus, Ohio, assignor of one-half to Joseph D. Cox, Columbus, Ohio. Filed Aug. 16, 1928. Serial No. 299,938. 1 Claim. (Cl. 285—138.)



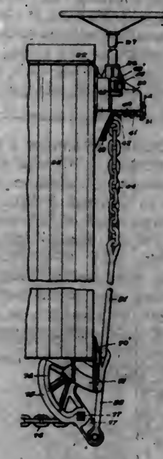
The combination with a pair of registering pipe sections, a stationary head threadedly mounted upon one end of one of said pipe sections, a collar threadedly mounted upon the complemental end of the other of said pipe sections, a movable head slidably mounted upon said last named pipe section, a circular rib provided upon one of said heads and receivable within a circular groove formed in the other of said heads, a corresponding rib and groove construction between said movable head and said collar, and clamping means for maintaining said heads in stationary clamped and secured relationship.

1,749,945. SECTIONAL WEDGE SLIP. JOSEPH W. KAOUGH, near Houston, Tex. Filed June 7, 1928. Serial No. 283,590. 14 Claims. (Cl. 24—263.)



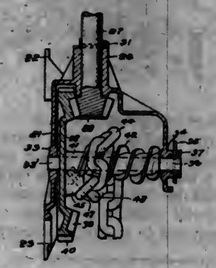
1. A sectional slip composed of a plurality of superposed segmental members each having a work gripping face, and a connector upon which said members are mounted for independent axial movement relative to each other.

1,749,946. WEDGE SLIP FOR ROTARIES. JOSEPH W. KAOUGH, near Houston, Tex. Filed June 7, 1928. Serial No. 283,591. 8 Claims. (Cl. 24—263.)



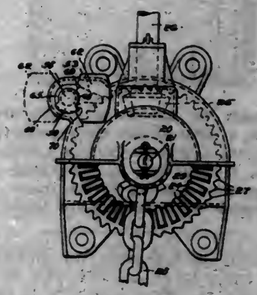
1. In a wedge slip device for rotaries, a slip member having a gripping face concentric to the axis of the slip and an outer wedge face formed eccentric to said gripping face, an enclosing member having an eccentric face corresponding to the eccentric face upon the slip and means for imparting rotary movement to said member to shift the same upon the outer slip face.

1,749,947. DISH-STERILIZING APPARATUS. FREDERICK F. KAUFFMANN, Camden, N. J., assignor to The Insinger Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 21, 1926. Serial No. 110,713. 7 Claims. (Cl. 167—3.)



1. A machine of the class described comprising a tank to contain a sterilizing bath, an endless conveyor to support and move articles being sterilized in the bath, a frame carrying said conveyor, a drive wheel for said conveyor, a shaft on which said wheel is rigid, said shaft being journalled on said frame and permitting the latter to be swung about the axis of said shaft.

1,749,948. RAILWAY-CAR HAND BRAKE. AUGUSTUS F. KLASING, Chicago, Ill. Filed Aug. 23, 1927, Serial No. 214,916. Renewed Jan. 20, 1930. 3 Claims. (Cl. 74—112.)

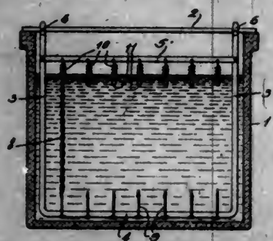


1. In a railway car hand brake, a winding drum mounted at the end of the car and having its axis of rotation extending longitudinally away from the car, a flexible element connected with the drum to be wound thereon, means to guide the flexible element in its winding movement upon the drum so that it travels toward the outer end of drum and away from the end of the car, a power transmitting unit mounted upon the car beneath the drum and having a part connected with the flexible element and adapted when moved upwardly by the flexible element to travel longitudinally away from the end of the car whereby a substantially vertical pull is transmitted to said part, and means adapted to connect the power transmitting unit with brake rigging.

1,749,949. WINDING MECHANISM. AUGUSTUS F. KLASING, Chicago, Ill. Original application filed Aug. 23, 1927, Serial No. 214,916. Divided and this application filed Sept. 1, 1928, Serial No. 303,536. Renewed Jan. 20, 1930. 3 Claims. (Cl. 74—112.)

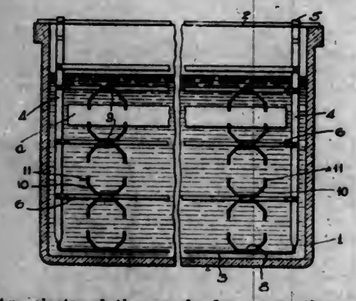
1. In a railway car brake, a support, a winding drum mounted thereon and said drum having a spiral supporting rib and a spiral guiding rib extending radially beyond the supporting rib, a chain attached to the drum near one end of the ribs, said chain having alternate links inclined in opposite directions to contact with the periphery of the drum between the ribs, and means to rotate the drum.

1,749,950. WINDING MEANS. AUGUSTUS F. KLASING, Chicago, Ill. Original application filed Aug. 23, 1927, Serial No. 214,916. Divided and this application filed Sept. 1, 1928, Serial No. 303,536. Renewed Jan. 20, 1930. 3 Claims. (Cl. 188—81.1.)



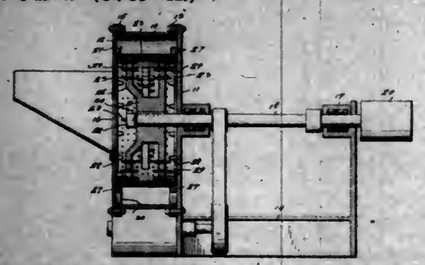
1. In a railway car hand brake, a housing provided with a bearing having a radial notch, a pawl adapted to be arranged with the housing and having a tubular hub provided with a radial notch, a pawl shaft having a radial rib and adapted to be inserted within the bearing of the housing and into the tubular hub of the pawl, a weight having an extension provided with an opening to pivotally receive the pawl shaft, said weight having stop shoulders and said pawl shaft having a stop to engage with the stop shoulders, said stop also serving to prevent the removal of the weight prior to the removal of the pawl shaft, a gear wheel mounted within the housing and having ratchet teeth to engage with the pawl, the arrangement of the radial notch in the housing being such that the pawl shaft can not be removed until the gear wheel is removed from its operative position within the housing, means to turn the gear wheel, and brake applying means operated by said gear wheel.

1,749,951. STRUCTURAL DESIGN FOR AIRCRAFT. HARRY F. LAKE, Viroqua, Wis. Filed Dec. 1, 1928. Serial No. 323,033. 7 Claims. (Cl. 244—31.)



1. A structure of the class described including a torque tube, hoops disposed about the torque tube at spaced intervals, radial tension members between the hoops and the torque tube, diagonal tension members between the torque tube and the hoops, a member including a sleeve to receive the torque tube and a second sleeve disposed transversely of the first sleeve, spars in the second sleeve extending laterally from the torque tube.

1,749,952. HANGER FOR ARTICLES TO BE PLATED. LOUIS LICHTMAN, New York, N. Y., assignor to Chromeplate, Inc., New York, N. Y., a Corporation of New Jersey. Filed Nov. 27, 1928. Serial No. 322,222. 5 Claims. (Cl. 204—5.)

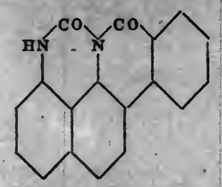


5. In a hanger for supporting flexible articles of interlinked units, a substantially rectangular frame having hangers at its top and article supports, each including a pair of hooks, the members in substantial register and secured to opposite members of the frame, and springs interposed between the hooks and the frame.

1,749,953. RACK OR HANGER FOR ARTICLES TO BE PLATED. LOUIS LICHTMAN, New York, N. Y., assignor to Chromeplate, Inc., New York, N. Y., a Corporation of New Jersey. Filed Nov. 27, 1928. Serial No. 322,225. 7 Claims. (Cl. 204—5.)

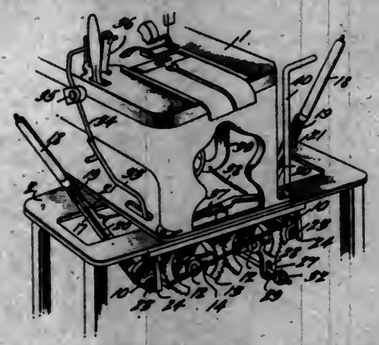
7. An electro-plating rack for supporting plate-like articles, including a substantially U-shaped frame having a body and arms provided with hangers for supporting the rack, and with a plurality of resilient cross bars arranged between the arms substantially parallel with the body, each cross bar and the body having members for engaging the edges of the articles, each of said members comprising a body portion secured to the frame body or to a cross bar and arms extending laterally from the body, the free end of each arm having a V-shaped notch to receive the edge of the article.

1,749,954. FEED GRINDER. HERMAN B. LUBBERS, Osmond, Nebr. Filed Nov. 10, 1928. Serial No. 318,547. 3 Claims. (Cl. 83—11.)



1. A feed grinder including an outer drum, the periphery of which has a discharge opening, a shaft entering one end of the drum and having thereon a plurality of substantially radial beater arms arranged in staggered relation, the opposite end of the drum having a central feed opening, a screen concentric to the shaft and disposed outward of the ends of the arms and spaced from the periphery of the drum, and means for rotating the shaft, the arms on the shaft having laterally projecting studs and an end wall of the drum being provided with inwardly projecting studs coacting with the studs on the arms, each of said arms at its outer end being provided with a shoe and having teeth facing in the direction of rotation.

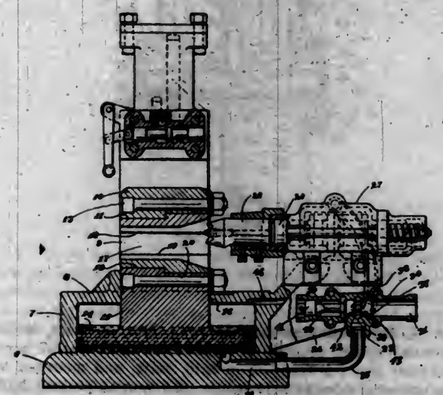
1,749,955. NEW CONDENSATION PRODUCT OF THE PERIMIDONE SERIES. WALTER MIEG, Opladen, and RUDOLF HEIDENREICH, Leverkusen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed June 18, 1928, Serial No. 286,481, and in Germany Dec. 16, 1925. 8 Claims. (Cl. 260—32.)



1. Process, which comprises reacting upon a compound obtainable by reacting upon perimidone with an aromatic carboxylic acid halide, with anhydrous aluminium-chloride.

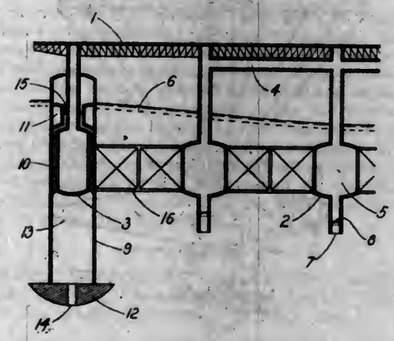
8. The product of the probable formula:

said product forming yellow needles, soluble in strong sulfuric acid with a yellow coloration and with a powerful green fluorescence.



1,749,956. CENTRALIZER FOR SEWING MACHINES. HENRY C. MILLER, Waterford, N. Y. Original application filed July 26, 1922, Serial No. 577,714. Divided and this application filed Sept. 15, 1927. Serial No. 219,789. 15 Claims. (Cl. 112—75.)

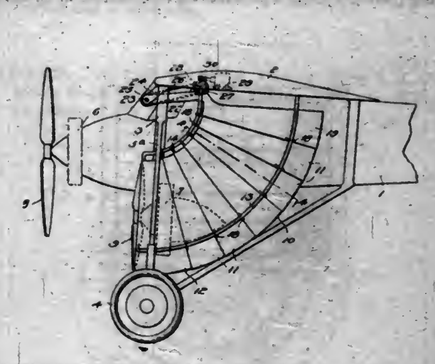
1. A centralizer comprising a pair of article engaging arms mounted for relative swinging movement, means for inducing a simultaneous, uniform and relative movement of the arms in a direction away from each other to center an article carried by the arms, and means for mounting the arms for bodily unitary movement to serve to move the article so centered to a point of deposit.



1,749,957. DRILL SHARPENER. PAUL A. NELSON, Denver, Colo., assignor, by mesne assignments, to The Gardner-Denver Company, Quincy, Ill., a Corporation of Delaware. Filed Sept. 14, 1926. Serial No. 135,437. 4 Claims. (Cl. 76—5.)

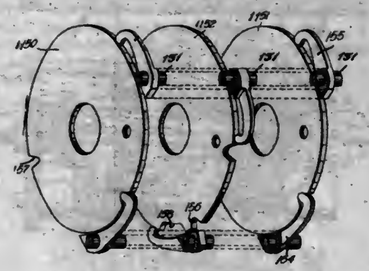
1. In a machine of the character set forth, the combination with a cylinder member having an upper head and a yoke overhanging the head, of a piston in the cylinder member having an upstanding die carrier operating in the yoke, means for securing an upwardly faced die on top of the carrier and a downwardly faced die on the top of the yoke, a bracket at one side of the cylinder member, means mounted on the bracket for operating on work clamped by the dies, a valve mechanism mounted on the bracket, means for directing motive fluid from the valve mechanism to the cylinder member below the piston to raise the lower die into coaction with the upper die and to the means mounted on the bracket, the interior of said cylinder member above the piston being at all times open to atmosphere.

2. In a machine of the character set forth, the combination with a cylinder member having an upper head and a yoke overhanging the head, of a piston in the cylinder member having an upstanding die carrier operating in the yoke, means for securing coacting dies to the carrier and yoke, said cylinder member head having a socket and an upstanding tubular pin carried by the piston and slidably fitted in the socket, the bore of the pin having communication with the interior of the cylinder member above the piston and said interior having open communication with atmosphere.



1,749,958. FLOATING STATION. RALPH R. RANDELL, Washington, D. C. Filed June 13, 1929. Serial No. 370,654. 20 Claims. (Cl. 114—0.5.)

14. The method of abating differences between and fluctuations in the buoyancy of the supporting open-bottomed floats of a floating station due to disturbances in the water, which consists in approximately equalising the pressures in the various floats.



20. The method of abating differences between and fluctuations in the buoyancy of the supporting floats of a floating station due to surface disturbances in the water, which consists in insulating the water in which they float from the surrounding surface water.

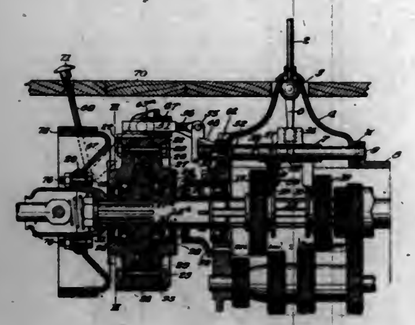
1,749,959. AIRPLANE. HAROLD J. READ, San Diego, Calif. Filed July 28, 1928. Serial No. 295,900. 16 Claims. (Cl. 244—14.)

13. An airplane involving a propeller whose axis of rotation is normally substantially horizontal, and means movable into and out of the path of the slip-stream of said propeller for deflecting said slip-stream upwardly against the under side of a wing of the airplane.

1,749,960. CASH REGISTER. BERNIS M. SHIPLEY, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Mar. 26, 1923. Serial No. 627,711. 29 Claims. (Cl. 235—6.)

1. In a machine of the class described, the combination of a plurality of totalizers, a plurality of supporting means for said totalizers, means for actuating any desired totalizer, the totalizers being normally disengaged from the actuating means, means for engaging the desired totalizer with and disengaging it from said actuating means, and means for controlling said engaging means comprising a plurality of members and a plurality of feelers each provided with a plurality of fingers cooperating with said members.

1,749,961. METHOD OF PRODUCING CINEMATOGRAPHIC TITLES, HEADLINES, ANNOUNCEMENTS, AND THE LIKE. JOHANN JACOB FRIEDRICH STOCK, Munich, and PAUL EPPING, Berlin, Germany. Filed Mar. 19, 1927, Serial No. 176,752, and in Germany Mar. 20, 1926. 2 Claims. (Cl. 88—16.)

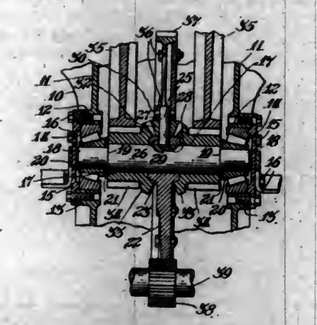


1. The method of producing cinematograph titles, headlines, announcements and the like, which consists in

arranging a plurality of loose and individually formed letters upon a ground-plate so as to compose the desired text, temporarily fixing the letters in position on the plate, faintly photographing a pictorial representation on a photo-

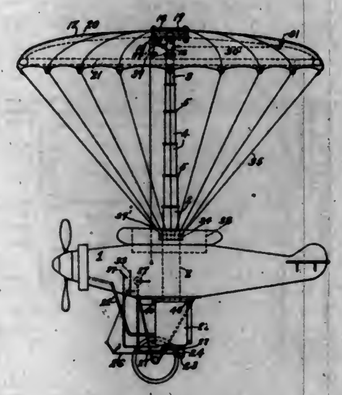
graphic plate or cinematographic film, subsequently exposing the plate or film to photograph the matter so composed on the ground-plate, and cinematographically making the required number of film pictures from the doubly exposed plate or film.

1,749,962. GEAR-SHIFTING MECHANISM. FRANCIS J. STRAUB and JOSEPH T. WEINZIERL, New Kensington, Pa. Filed Mar. 22, 1928. Serial No. 263,694. 12 Claims. (Cl. 192—4.)



5. In change-speed mechanism for motor vehicles, a power imparting shaft having a shifting gear, a shifting device therefor, a brake-drum surrounding the shaft, releasable binding mechanism between the shaft and drum, a brake band surrounding the drum having terminal lugs, an adjusting set screw for one of said lugs, a spring pressed bolt engaging the other lug, and means connected with the shifting device for spreading the lugs apart to loosen the band.

1,749,963. SULPHUR DYESTUFF PASTE. ERNST VOETTER, Konstanz, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 24, 1928, Serial No. 256,799, and in Germany June 16, 1925. 11 Claims. (Cl. 8—6.)

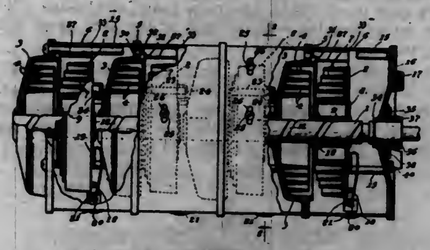


1. The process for preparing homogeneous sulphur dyestuff pastes, which comprises adding to the press-cake of a sulphur dyestuff a bactericidal agent, an alkaline reacting agent and a carbohydrate capable of being swelled by the action of the said alkaline reacting agent.

1,749,964. DIFFERENTIAL MECHANISM. HERMAN E. ALTGELT, South Bend, Ind., assignor, by mesne assignments, to Oliver Farm Equipment Company, a Corporation of Delaware. Filed Mar. 9, 1928. Serial No. 260,479. 10 Claims. (Cl. 74—99.)

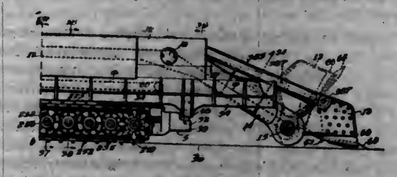
1. A differential mechanism comprising a shaft, a differential spider secured to said shaft, differential bevel and spur gears journalled on said shaft, and mounted on the opposite sides of said spider, differential pinions journalled in said spider and meshing with the bevel gears on said shaft, pinion shafts secured to said spider on which said differential pinions are journalled, and means for securing said differential spider to said differential shaft by one of said pinion shafts.

1,749,965. SAFETY PARACHUTE. FRANK ARNAIZ, Los Angeles, Calif. Filed July 25, 1928. Serial No. 295,140. 5 Claims. (Cl. 244—21.)



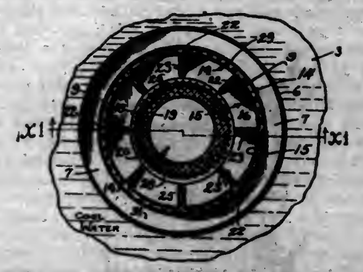
1. The combination with a parachute sheet; of a telescopic tubular standard; means for supplying compressed air to the standard to extend the same to lift the sheet; pneumatic means to spread the parachute sheet after the standard has been extended and means operable by the extension of the standard to start the pneumatic spreading means into operation to spread the sheet.

1,749,966. BRASSIÈRE FOR BATHING SUITS. ARTHUR J. BARNETT, New York, N. Y., assignor to The Worcester Knitting Co., Worcester, Mass., a Corporation of Massachusetts. Filed June 28, 1928. Serial No. 288,888. 4 Claims. (Cl. 2—67.)



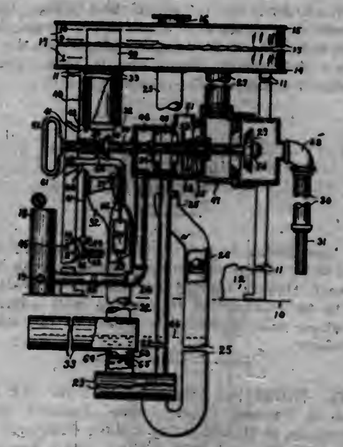
1. As an article of manufacture, a bathing suit having a waist portion provided with shoulder straps and a nether portion and a brassière connected with the waist portion at the top and bottom to insure that any strain applied to the brassière will be along substantially vertical lines.

1,749,967. CONDENSER. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed June 11, 1927. Serial No. 198,104. 7 Claims. (Cl. 175—41.5.)



1. A condenser construction comprising a stationary element having cylindrical condenser plates and a movable element having cylindrical condenser plates cooperating with said stationary plates, manually operable means for actuating the movable element for increasing or decreasing the capacity, and adjustable means for varying the capacity curve of the condenser, comprising means whereby the capacity corresponding to the maximum capacity position of the manually operable actuating means may be varied without as great a variation of the capacity corresponding to the minimum capacity position of the manually operable actuating means.

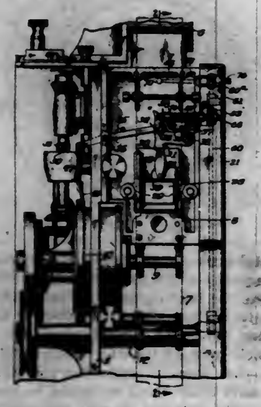
1,749,968. EXCAVATING AND LOADING MACHINE. JOHN H. BLAIR, Chicago, Ill. Filed Apr. 26, 1926. Serial No. 104,527. 13 Claims. (Cl. 214—90.)



1. In a machine of the class described, the combination of a main frame, a laterally swingable frame thereon, an extensible frame on said laterally swingable frame, a swingable arm at the outer end of said extensible frame, and a material member pivoted for swinging movement at the outer end of said arm.

1,749,969. WATER HEATER. ARVID BRODIN, Los Angeles, Calif. Filed Jan. 3, 1928. Serial No. 244,107. 13 Claims. (Cl. 219—38.)

2. A liquid heater comprising a shell having an inlet below, and an outlet above an intermediate level; means to supply liquid to the inlet; a drum arranged inside and narrowly spaced from the walls of the shell to form an outer passageway for fluid, and formed with folds constituting narrow channels open at top and bottom and open at the periphery of the drum to communicate with the outer passageway; said folds being arranged to form the outer wall of a chamber adjacent to and enclosed by the walls of said channels and passageway; heads to close said chamber; an electrical heating element in the chamber, and switch controlled means to supply current to such element.



1,749,970. AUTOMATIC LIQUID-DISPENSING MACHINE. ROBERT E. COLLINS, Topeka, Kans., assignor of twenty-five per cent to Constantine G. Chumos, Topeka, Kans. Filed Feb. 13, 1928. Serial No. 254,098. 7 Claims. (Cl. 221—100.)

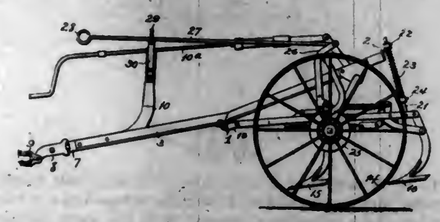
1. A gasoline dispensing machine comprising a measuring vessel in communication with a source of the liquid supply and having an outlet for dispensing the gasoline and an overflow, a source of compressed air in communication with the gasoline source for lifting the fuel to the measuring vessel, an adjustable measuring device associated with the overflow, valve means for controlling the outlet from the measuring vessel, a second valve means for controlling the supply of compressed air to the gasoline source,

and a single operating means connecting both said valve means for alternate opening and closing, and latch means for said operating means positioned to be released upon movement of the liquid through the overflow.

1,749,971. FIRE SHUTTER AUTOMATIC RELEASE. AUGUSTO DINA, Jersey City, N. J., assignor to The Precision Machine Co., Inc., New York, N. Y., a Corporation of New York. Filed Sept. 5, 1925. Serial No. 54,621. 11 Claims. (Cl. 88—17.)

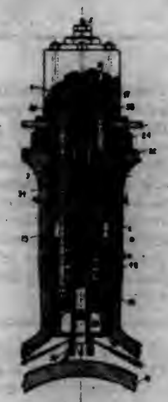
7. In a motion picture projector, a film gate having an aperture, a film strip moving across said aperture, means for forming a loop in said film, a shutter for closing said aperture, a governor operated by the projector having a positive connection to and for holding said shutter open, and means including an angularly displaceable arm within the loop operated by a reduction in dimension of said loop for actuating said positive connection for releasing the shutter to close the same irrespective of said governor.

1,749,972. CAST-METAL TRUCK BOLSTER. HARRY C. DREIBUSS and GEORGE S. CHILES, St. Louis, Mo., assignors to Scullen Steel Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 9, 1928. Serial No. 268,639. 8 Claims. (Cl. 105—230.)



1. A cast metal bolster having hollow end portions provided with reinforcing trusses disposed so as to cause the upward thrusts exerted on the bottom wall of the bolster to be transmitted to the top wall adjacent the points where said top wall is joined to the side walls of the bolster.

1,749,973. HOISTING ANCHORAGE FOR CAR ROOFS. EDWIN G. FRANCK, Detroit, Mich., assignor, by mesne assignments, to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Delaware. Filed Jan. 3, 1927. Serial No. 158,707. 2 Claims. (Cl. 105—355.)

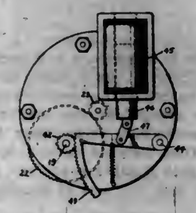


1. The combination with a car roof comprising a plurality of carlines extending transversely of the car, of a beam extending centrally and longitudinally beneath said carlines and attached thereto, said beam being of inverted channel shape and having its base secured to a plurality of the said carlines, said beam being provided with outstanding flanges at the bottom of its sides and a loop provided with inturned hooks for engaging said flanges adjustable thereon longitudinally of the car.

1,749,974. CULTIVATOR. ARTHUR D. GALLAGHER, South Bend, Ind., assignor, by mesne assignments, to Oliver Farm Equipment Company, a Corporation of Delaware. Original application filed July 23, 1924, Serial No. 727,743. Divided and this application filed Mar. 22, 1927. Serial No. 174,871. 3 Claims. (Cl. 97—233.)

1. In a cultivator, the combination of a frame comprising front and rear transverse members, longitudinal members fixedly connected with both transverse members between the ends thereof, a crank-axle, mountings for said axle carried by the longitudinal members near the rear ends thereof, carrying wheels in which said crank-axle is mounted beyond the ends of the transverse members, cultivator gang units pivotally connected at their forward ends to the front transverse beam, and means yieldably connecting the rear portions of the gang units with the rear transverse beam.

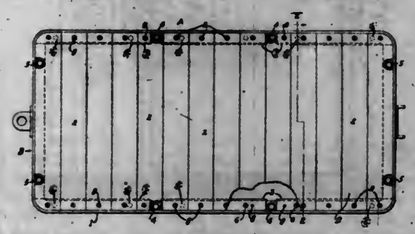
1,749,975. FUEL-SUPPLYING DEVICE. JOSEPH C. GEOFF, New York, N. Y. Filed Aug. 6, 1924. Serial No. 730,333. 12 Claims. (Cl. 123—33.)



1. A fuel supplying system for internal combustion engines of the compression ignition type comprising in combination, fuel injecting means comprising a differental piston device operated by the pressure developed within the power cylinder, and means comprising a member extending entirely through hollow portions of said piston into the combustion cylinder and fixed against motion upon the relative movement of said piston for immediately injecting the fuel upon and by the initial displacement of the differential piston device.

1,749,976. PROCESS OF REFINING EDIBLE OILS. ROGER B. HILL, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Nov. 30, 1923. Serial No. 677,885. 5 Claims. (Cl. 87—12.)

1. That step in decolorizing and refining edible oils and fats which consists in subjecting such oils to the action of from 0.05% to 0.15% of sulphuric acid solution of 30% to 75% by weight of H_2SO_4.

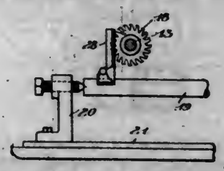


3. A process of refining an edible oil, which comprises treating the oil with 0.05% to 0.15% of a solution of 30% to 75% by weight sulphuric acid, neutralizing the sulphuric acid and also the free fatty acid content of such oil, adding sufficient bentonite to coagulate the neutralized impurities, and removing the coagulated impurities from the oil.

1,749,977. PARKING CLOCK. BENJAMIN F. HUTCHES, Jr., Allendale, N. J., assignor to Hutches Engineering Association, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 28, 1923. Serial No. 683,159. 17 Claims. (Cl. 161—15.)

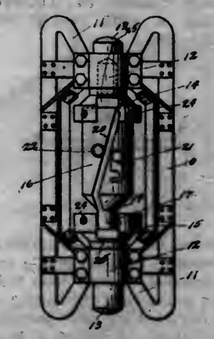
1. A parking clock mounted upon a movable device comprising a graduated dial, a hand adapted to pass over said dial to indicate elapsed time, means to drive said hand, means controlled by the movement of the device upon which said clock is mounted for maintaining the hand at a certain initial position, and the aforesaid means becoming inoperative upon the cessation of movement of said device to enable the drive means to operate the hand.

1,749,978. TRUCK. FRANK G. KOEHLER, St. Louis, Mo. Filed Sept. 29, 1928. Serial No. 309,253. 2 Claims. (Cl. 280—49.)



1. A truck having a deck portion including a deck frame arranged about the marginal edge of said deck portion, said deck frame being substantially T-shaped in cross-section and having a horizontally disposed leg portion arranged to provide the deck frame with marginal recesses arranged one above the other, one of which is deeper than the other, said deck frame being reversible top for bottom to present one or the other of said recesses at the top of the deck frame, deck boards having their end portions disposed in the recess located at the top of the deck frame and supported by the horizontal leg of the deck frame structure to present the top surfaces of said deck boards substantially flush with the top edge of the deck frame, said deck boards having fillers interposed between the same and said horizontal leg when the end portions of said deck boards are disposed in the deeper of said recesses upon reversal of the deck frame.

1,749,979. DOOR-HOLDING MEANS. DAVID R. LASIER, Chicago, Ill., assignor to Norton Lasier Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 4, 1926. Serial No. 139,534. 1 Claim. (Cl. 16—49.)

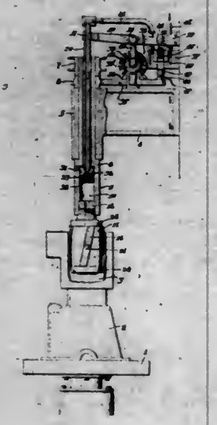


In a door holding device, a pair of arms, adapted to be pivotally attached to a door and door frame respectively, said arms being pivoted together, one of said pivots comprising a yoke on one of said arms having opposed flat faces, and a head on the part pivoted to said yoke having a flat face on one side and a spiralled cam face on its opposite side, said head being located between the flat faces of said yoke with its flat face in contact with one of the flat faces of said yoke, and an independent head having a flat face on one side and a cooperating spiral cam face on its other side, located between said first named head and the opposite face of said yoke with its spiral cam face in contact with said first named spiral cam face and immovable relative to said yoke, the distance between the faces of said yoke being such that a predetermined amount of movement of one cam face on the other cam face is permitted, whereas a binding of the parts is caused upon additional movement, and means for adjusting angularly the position of said second head relative to said yoke.

1,749,980. GAUGING INSTRUMENT. EDWARD OSCAR LORSER, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 26, 1925. Serial No. 11,854. 5 Claims. (Cl. 33—181.)

5. A gauging instrument for relatively movable parts comprising walls forming a substantially V-shaped groove, walls forming a second groove having its axis in a plane bisecting the angle of said first groove, and a spirit level having its axis perpendicular to said bisecting plane.

1,749,981. METHOD OF MAKING DRILL STEMS. GUSTAVUS A. MONTGOMERY, Dallas, Tex. Filed Apr. 11, 1927. Serial No. 182,913. 7 Claims. (Cl. 76—108.)

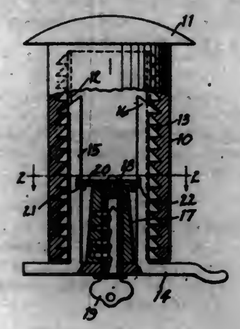


1. The method of making a well drill stem having helical wings, which consists in shaping the helical wings by

a separate operation, then positioning said wings on the outer surface of a drill stem mandrel, and then welding said wings to the mandrel by an interposed body of welding metal.

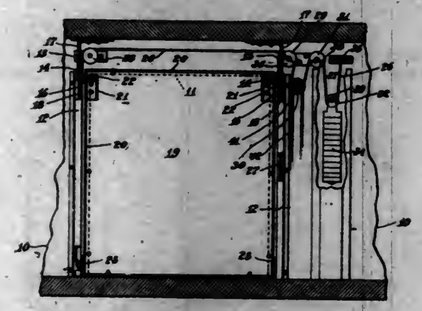
4. The method of making a well drill stem having helical wings, which consists in forming a wing blank from a stock bar by shearing the same, then heating said blank, then swaging the heated blank in a suitable forming device to a helical form and at the same time ramming the ends of the blank to conform to the diameter of the drill stem mandrel, then assembling a plurality of said helical wings in a jig about a drill stem in cruciform order, and then welding said wings to the mandrel.

1,749,982. BURNISHING MACHINE. JAMES W. NESBITT, Grosse Pointe Park, Mich. Filed Oct. 22, 1928. Serial No. 314,108. 10 Claims. (Cl. 29—90.)



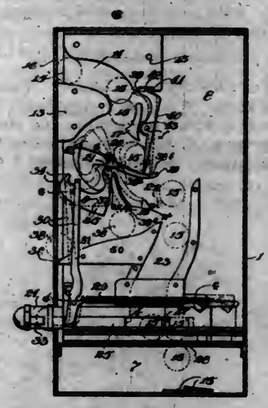
1. In a burnishing machine, a head adapted to enter a cylinder bore, laps carried by said head, a rotatable spindle supporting said head, means permitting the flow of lubricating fluid under pressure through said spindle into said head and through said laps, and means in said spindle for intermittently increasing the pressure of said fluid.

1,749,983. STAPLE AND HASP CONSTRUCTION. DANIEL NELSON, Oak Park, Ill., assignor to Marshall Field & Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 6, 1926. Serial No. 146,588. 7 Claims. (Cl. 292—281.)



1. Latching means for hasps comprising an attaching base, and an inherently resilient staple constructed with one leg fixedly mounted on said base and its other leg movably anchored to the base and having a limited movement relative to the fixed leg, said movably anchored leg having a recess adapted to engage a hasp and adapted to pass an interengaging portion of said hasp to and from its recess by the resilient action of the staple.

1,749,984. WHEEL-RIM LOCKING BOLT. LUIS V. NOGUEIRA, Dallas, Tex. Filed May 21, 1928. Serial No. 279,420. 5 Claims. (Cl. 70—90.)



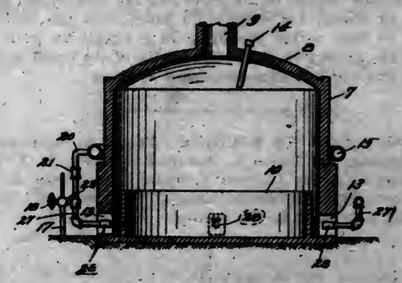
1. In a wheel rim bolt device, a bolt barrel open at one end and having a head at its opposite end, longitudinal guides within the barrel having countersunk teeth, a rim lug, movable arms carried by the lug and having dogs engaging in the guides and teeth when inserted in the barrel, a key rotated member carried by the lug, and means rotated by said member connected with said arms for swinging them into and out of engagement with the teeth.

1,749,985. WAREHOUSE DOOR. ROBERT S. PEELLE, New York, N. Y., assignor to The Peelle Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 10, 1925. Serial No. 22,189. 10 Claims. (Cl. 20—19.)

1. A warehouse door embodying therein vertically extending guides adjacent the wall of a building and upon opposite sides of a door opening therein, overhead tracks leading from but not communicating with said vertical guides and extending inwardly of the building, the portion of said tracks adjacent said vertical guides having a gradual ascent leading from adjacent the lintel of the door opening to a horizontal portion, each of said tracks comprising parallel rail sections, a door panel adapted to close the door opening, devices adjacent the top of said panel in continuous engaging relation between said rail sections and co-operating only with said overhead tracks respectively, whereby at all times a support is afforded the upper portion of said panel, devices adjacent the bottom of said panel movable in said vertical guides, sheaves above said guides respectively, a counterweight, flexible connections between said counterweight and the lower portion of said panel and passing over said sheaves, and means operative upon said flexible connections whereby the panel may be opened and closed.

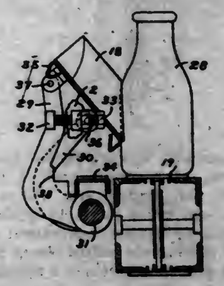
1,749,986. SLUG EJECTOR. ALBERT S. ROSS, Dallas, Tex. Filed Aug. 22, 1927. Serial No. 214,515. 6 Claims. (Cl. 194—103.)

1. A slug ejector having a coin-selecting beam, a slug passageway, said beam having an opening therein through which slugs of less than a predetermined width may pass into said slug passageway, and means to release slugs of greater width caught in said opening and to direct the same into said slug passageway.



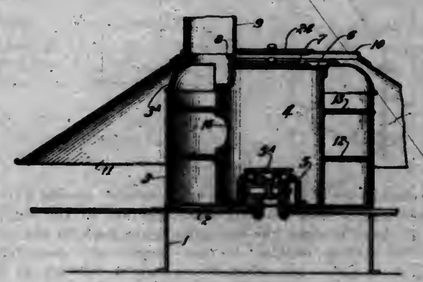
1,749,987. BROOM OR THE LIKE. SAMUEL G. RUSSELL, ERNEST L. BUCHANAN, and ROSSITER R. POTTER, Kalamazoo, Mich., assignors to Shakespeare Products Company, Kalamazoo, Mich. Filed July 12, 1928. Serial No. 292,148. 14 Claims. (Cl. 15—171.)

1. An implement of the class described comprising a head member formed of strands of wire having helical coils therein providing a helix adapted to receive a handle, the strands being twisted together at each side of the helix and having their ends upturned, fibres folded over said head member, the upturned ends of the head member being clamped upon the folded fibres, a U-shaped clamping member arranged over the fold of the fibres to engage the ends of said head member, a clamping band disposed below said head member in coengaging relation with the lower ends of said clamping member, said clamping member having a hole therein to receive the handle, and tie members arranged through the fibres to engage opposite sides of said band, one or more of said tie members being arranged through the ends of said clamping member.



1,749,988. TERRA-COTTA-FIRING SYSTEM. ALBERT H. SHEFFIELD, Kansas City, Kans. Filed Apr. 15, 1927. Serial No. 183,948. 2 Claims. (Cl. 25—145.)

1. In a terra cotta firing system, a kiln having a continuous side wall, and an entirely closed bottom, a relatively low bag wall extending around the inside of said kiln to form a continuous space between said side wall and bag wall a continuous bottom between said side wall and



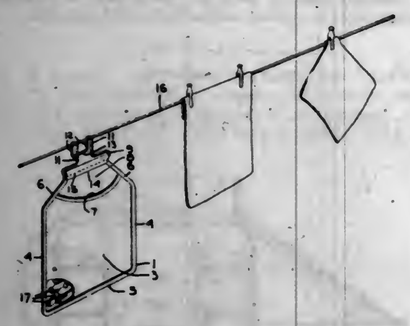
bag wall substantially in the plane of the bottom of said kiln and a plurality of openings extending thru said side wall and communicating with said continuous space.

1,749,989. BOTTLE-WASHING MACHINE. GEORGE F. SOELCH, Waukesha, Wis., assignor, by mesne assignments, to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 29, 1925. Serial No. 65,569. 8 Claims. (Cl. 198—27.)

1. In combination, bottle transporting means, a support formed to receive bottles in tilted position from said means, and means for swinging said support about a pivot at one end thereof to right the bottles and for swinging said support about a pivot at the opposite end thereof to discharge the righted bottles from said support.

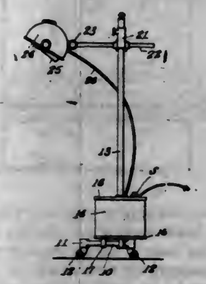
1,749,990. OIL-BURNING BROODER. DONALD B. TOLLEY, Macomb, Ill., assignor to American Steel Products Co., Macomb, Ill., a Corporation of Illinois. Filed Nov. 8, 1928. Serial No. 317,927. 16 Claims. (Cl. 126—93.)

1. A heater comprising an annular drum having an outlet adjacent to its top, annular partitions dividing the hollow drum into superposed chambers, a heating device within the combustion chamber, an outlet in the combustion chamber wall, ports in the partitions, and up-



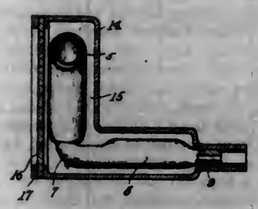
right and substantially radial baffles extending from the inner to the outer drum wall; the baffles being so arranged with respect to the ports and the first named outlet as to compel the combustion gases from the heating device to flow within the drum in a circuitous path in which the gases flow circumferentially of the drum in opposite directions in two superposed sections.

1,749,991. TESTING MACHINE. FRANK A. VALENTINE, Apponaug, and DAVID C. SCOTT, Providence, R. I., assignors to Henry L. Scott Company, Providence, R. I., a Corporation of Rhode Island. Filed Oct. 22, 1926. Serial No. 143,373. 13 Claims. (Cl. 265—12.)



1. In a testing machine, a work clamp comprising two work engaging jaws, driving mechanism, a pull member interposed between one clamp jaw and said driving mechanism and through which power is applied upon the clamp and work, and mechanism independent of the driving mechanism for moving the pulled clamp jaw towards the other clamp jaw after completion of a pulling operation.

1,749,992. CLOTHESPIN BAG. WILLIAM N. WILLIS, Medford, Mass. Filed Nov. 3, 1927. Serial No. 230,819. 1 Claim. (Cl. 68—11.)

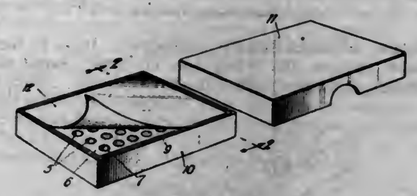


A clothes-pin bag comprising a bag member having a front section and a back section sewed together at the bottom and at the side edges, the side edges being parallel throughout the greater portion of that length and converging sharply towards each other for a limited distance at the upper end, the top edge of the front section being concavely curved and the back section extending somewhat beyond the top of the front section, the edges of such extension continuing on the converging lines of the upper part of said side edges to provide a relatively narrow flap, and a supporting member made of wire bent to form a straight supporting portion to which the upper edge of the back section is secured, said wire at the ends of the supporting portions being bent backwardly towards the center to form portions parallel with the supporting portion, said wire being also bent to present upwardly-bent portions at the termination of the backwardly-bent portion, said upwardly-bent portions each terminating in a relatively short upwardly bent portion, the lower ends of the upwardly-bent portion being directly connected by a bridge portion whereby a relatively wide hook is formed adapted to be hung on a suitable support.

1,749,993. ALTERNATING-CURRENT VAPOR ELECTRICAL DEVICE. WILLIAM T. ANDERSON, Jr., Newark, N. J., assignor to Hanovia Chemical and Manufacturing Company, Newark, N. J., a Corporation of New Jersey. Filed Feb. 23, 1926. Serial No. 89,924. 1 Claim. (Cl. 174—177.)

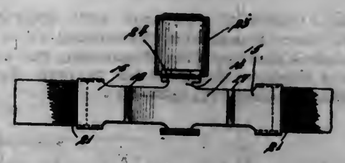
In combination with a mercury vapor lamp emitting ultra violet radiations for therapeutic use, an alternating current device for operating said lamp, a secondary reactance included in said device, said reactance having a solid iron core consisting of a base provided with three spaced integral upstanding bars, a coil of insulating wire wound about the central bar, and dielectric plugs over said coil within the spaces between the upstanding elements.

1,749,994. WATER-COOLED MERCURY-VAPOR ARC LAMP. WILLIAM T. ANDERSON, Jr., Newark, N. J., assignor to Hanovia Chemical and Manufacturing Company, Newark, N. J., a Corporation of New Jersey. Filed May 13, 1927. Serial No. 190,974. 3 Claims. (Cl. 176—43.)



1. A mercury vapor arc lamp comprising a quartz arc tube in the form of a loop and having rearward extensions at right angles from its lower end, a quartz envelope enclosing the loop portion of said tube, said envelope being shaped in conformity with and equally spaced from said tube, a jacket surrounding said envelope and tube, and means in said jacket to permit a circulation of water therethrough.

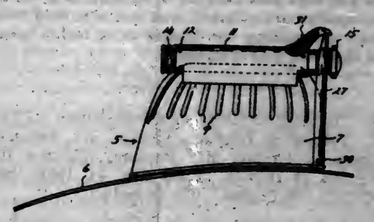
1,749,995. PROCESS FOR SECURING GOOD ELECTRICAL CONTACT WITH CRYSTALLINE CUPROUS OXIDE. WILLIAM THEODORE ANDERSON, Jr., and LESTER FLETCHER BIRD, Newark, N. J., assignors to Hanovia Chemical and Manufacturing Company, Newark, N. J., a Corporation of New Jersey. Filed Oct. 28, 1927. Serial No. 229,523. 2 Claims. (Cl. 204—2.)



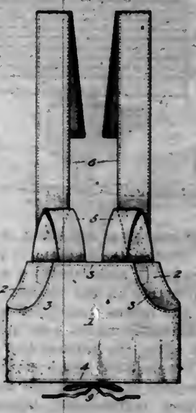
2. Process for the production of a continuous electrically conducting, adherent metallic layer strongly attached to a surface of crystalline cuprous oxide, by the electrolytic reduction of the outermost surface of the copper oxide and simultaneous deposition of metallic nickel which with the reduced copper form a bronze metallic layer.

1,749,996. PACKAGE FOR PERISHABLE MEDICATED ARTICLES. ALBERT D. BRUSH, Chicago, Ill., assignor to Abbott Laboratories, North Chicago, Ill., a Corporation of Illinois. Filed Aug. 8, 1928. Serial No. 298,228. 3 Claims. (Cl. 206—46.)

1. A package for medicated articles or the like, which tend to deteriorate upon exposure to the atmosphere or to lose their shape, comprising a substantially rigid block of impervious material provided with a plurality of sockets opening to one side of said block, said sockets being closed at their other ends by a portion of said block, each of said sockets being adapted to snugly receive one of the articles to be packaged, and a cover sheet of impervious material adhered to said side of the block and extending over the open ends of said sockets, said cover sheet being adapted to be partially removed from time to time to permit withdrawal of one of the articles from its socket.



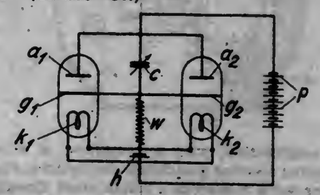
1,749,997. EXTENSION DEVICE. EDWIN G. CARLSON, Riverside, R. I., assignor to Speidel Chain Co., a Firm composed of Frederic Speidel and Eugen Speidel, Pforzheim, Germany, doing business in Providence, R. I. Filed Nov. 7, 1928. Serial No. 317,739. 8 Claims. (Cl. 29—71.)



1. An extension device for a wrist strap, comprising a body section and an end section hinged to each end of said body section to fold thereover toward each other, each end section having opposed flanges at the free end thereof, means extending between said flanges for securing a strap end thereto, the combined length of said end sections being no greater than the length of the body section whereby the end sections do not overlap, and means for securing said sections in folded position.

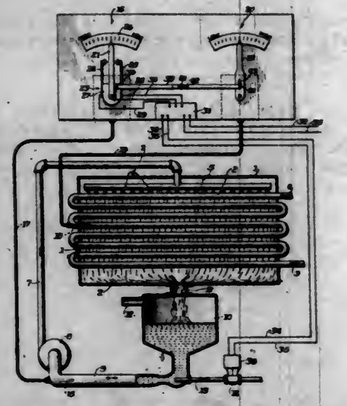
1,749,998. FIREMAN'S HELMET. MERRILL D. COLLINS, Detroit, Mich. Filed Apr. 4, 1928. Serial No. 267,282. 6 Claims. (Cl. 240—60.)

1. In a helmet including a crown having a grooved portion therein, a cover plate secured to the crown so as to bridge said grooved portion, a pair of threaded end members secured to the cover plate, a flashlight bulb assembly mounted upon one of said end members, batteries for energizing the flashlight bulb arranged in the grooved portion, and an adjustable cap mounted upon the other threaded end section.



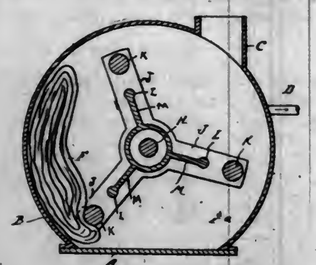
1,749,999. MANUALLY-HELD SUPPORTING DEVICE FOR ASSISTING CHILDREN IN LEARNING TO WALK. EDNA L. CROCKER, Denver, Colo. Filed Nov. 30, 1928. Serial No. 322,606. 2 Claims. (Cl. 155—20.)

2. In a supporting device of the character described, a body band of sufficient length to surround the body, and of sufficient width to extend from the chest to below the abdomen, the ends of the band being at the back, and being connected by a lacing cord, and relatively long looped hand straps, the ends of which are secured to the back of the band at the upper edge thereof, whereby the pull on the straps in supporting a child is sustained by the abdomen.



1,750,000. GENERATOR OF SHORT ELECTRIC WAVES. ABRAHAM ESAU, Jena, Germany. Filed Nov. 2, 1926, Serial No. 145,737, and in Germany Nov. 10, 1925. 2 Claims. (Cl. 250—36.)

1. An apparatus for the generation of short electric waves comprising in combination two three-electrode vacuum tubes of equal dimensions having incandescent cathodes, grid electrodes and anodes, wires connecting the corresponding electrodes of said tubes, and a capacity inserted symmetrically to said tubes between the wires con-

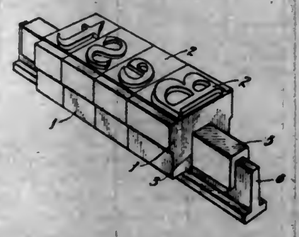


necting said grid and said anode electrodes whereby two oscillating circuits constituted by the respective inherent grid-anode capacities in series with part of said connecting wires and with said capacity of substantially the same natural frequency are obtained, and means in said circuits for always maintaining the anodes at a higher positive potential than the grid electrodes.

1,750,001. DUAL-CONTROL TEMPERATURE REGULATION. JOSEPH H. GODFREY, Chicago, Ill., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 24, 1928. Serial No. 301,757. 20 Claims. (Cl. 236—18.)

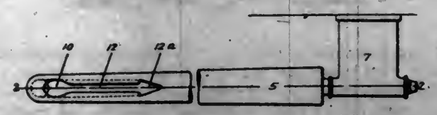
1. Apparatus of the class described comprising, a conduit for liquid, a conduit for medium in heat exchange relation thereto, means for maintaining a variable determinable normal temperature in the medium supplied to said medium conduit, and means associated with said medium temperature maintaining means and automatically operable therewith to effect the raising and lowering of said medium normal temperature responsively respectively to decreases and increases of temperature maintained by said medium temperature maintaining means in the liquid passing a portion of said liquid conduit.

1,750,002. APPARATUS FOR HANDLING DOUGH. JAMES C. GORDON, Detroit, Mich. Filed Feb. 15, 1929. Serial No. 340,068. 7 Claims. (Cl. 107—30.)



2. The combination, with a container, of a rotatable dough-engaging member positioned therewithin, the web of said member being formed as a hollow shaft through which a fluid refrigerant is adapted to be passed, and radially extending vane members extending outwardly from said hollow shaft portion of the dough-engaging member, whereby the air surrounding the same and which has been subjected to the cooling influence thereof is agitated centrifugally.

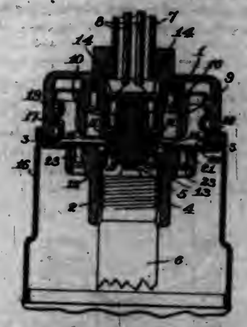
1,750,003. DRYING APPARATUS. HERMANN HAAS, Lennep, Germany. Filed Nov. 24, 1928, Serial No. 321,714, and in Germany Feb. 22, 1928. 4 Claims. (Cl. 198—165.)



1. In a dryer for drying cellulose plates, the combination with an endless conveyor operating at a uniform speed to convey packages of plates through a drying chamber, of means for giving the packages on the upper run of the conveyer simultaneously a rocking motion while being conveyed by the conveyor.

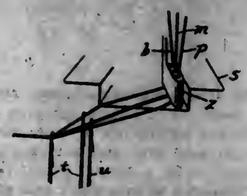
1,750,004. RUBBER-STAMP ASSEMBLY. HANS H. HELLESOE, Chicago, Ill. Filed Apr. 17, 1929. Serial No. 355,790. 7 Claims. (Cl. 101—381.)

1. A stamping outfit comprising blocks of counterpart heights having legend faces on their lower ends and having transverse grooves of uniform section in their upper ends, a compressible liner longer than the width of a plurality of the said blocks and extending through the grooves in the blocks when the blocks are aligned, the liner having a channel-shaped transverse section, and a rigid carrier bar of somewhat greater thickness than the normal interior width of the channel of the liner and adapted to be inserted in the liner, the liner being detachable from the said blocks when the carrier bar is not inserted in the liner.



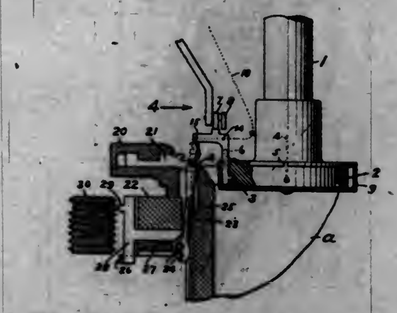
1,750,005. HOSIERY TURNING AND INSPECTING FORM. HUGO HEMMERICH, Wyomissing, Pa., assignor to Berkshire Knitting Mills, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Jan. 15, 1927. Serial No. 161,389. 4 Claims. (Cl. 223—20.)

1. A turning and inspecting device for stockings consisting of a stocking-extending form the toe-engaging entering head of which is provided rearward of the tip portion thereof with a transverse passage way for a collapsed stocking.



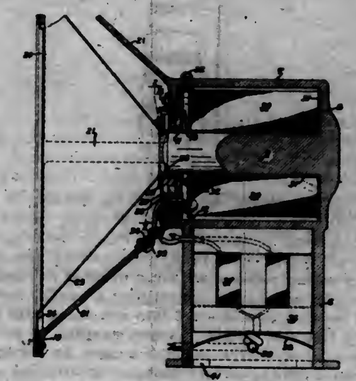
1,750,006. ELECTRIC-LIGHT FIXTURE. GERALD J. HENRY, Boston, Mass. Filed Aug. 16, 1928. Serial No. 300,053. 6 Claims. (Cl. 240—85.)

1. In an electric light fixture, the combination with a base member having circuit terminals, of a reflector separable from the base and having means for connecting it thereto by a turning movement and a lamp socket swiveled to the reflector and provided with terminals adapted to be



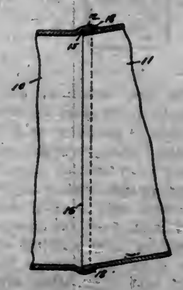
engaged with those of the base by an axial movement, said swivel connection permitting the engagement of the terminals during the turning movement of the reflector.

1,750,007. PROCESS OF KNITTING PLATED FABRIC. HAROLD E. HOUSEMAN, Edge Moor, Del., assignor to Standard-Trump Bros. Machine Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 15, 1928. Serial No. 261,734. 13 Claims. (Cl. 66—36.)



13. The process of producing on a knitting machine a plated knitted fabric which comprises feeding three threads simultaneously to the needles and so manipulating the threads as to cause certain needles to knit the threads into the fabric in a certain order from face to back to knit normal plated fabric, and prematurely depressing certain needles to cause them to engage the threads that are positioned on the face and in the center in said normal plating and also manipulating the last named needles to reverse the positions of these threads in fabric which they knit.

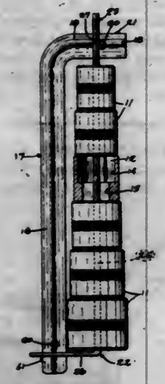
1,750,008. PROCESS AND MACHINE FOR KNITTING PLATED FABRIC. HAROLD E. HOUSEMAN, Edge Moor, Del., assignor to Standard-Trump Bros. Machine Company, Wilmington, Del., a Corporation of Delaware. Filed June 2, 1928. Serial No. 282,306. 8 Claims. (Cl. 66—135.)



8. In a machine for knitting hosiery, a series of independent needles adapted to be reciprocated lengthwise to knit, sole wrapping yarn carriers arranged in operative relation to needles adapted to knit the sole, toe, heel and rear of the leg, instep wrapping yarn carriers arranged in operative relation to needles adapted to knit the instep and front part of the leg, said yarn carriers being movable back and forth laterally, means to effect a movement of certain needles away from and back to the normal knitting plane in such timed and spaced relation to the movements of their respective yarn carriers as to cause the wrapping yarns carried by said yarn carriers to be wrapped around the espective needles, the two specified series of yarn carriers being provided with differently positioned butts, two yarn carrier actuating cams adapted to respectively engage differently positioned butts, and means to render both cams active or inactive or one cam active and the other inactive, whereby all the wrapping yarn carriers are actuable when both cams are rendered operative while only the instep wrapping yarn carriers are actuable when only its actuating cam is rendered operative and none of the wrapping yarn carriers are actuable when neither cam is rendered operative.

1,750,009. ELECTROMAGNETIC SOUND REPRODUCER. KARL K. JENSEN, Piedmont, Calif. Filed Jan. 28, 1928. Serial No. 250,193. 2 Claims. (Cl. 179—115.)

2. In an electromagnetic sound reproducer, an annular pole-piece, an annular flange for supporting a diaphragm, and supporting members mounting said flange on the pole-piece, said pole-piece, flange and supporting members being formed from a single casting.

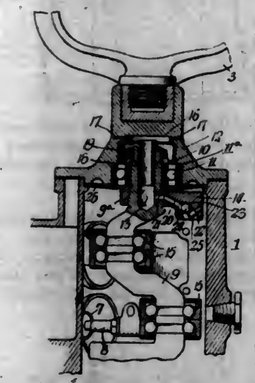


1,750,010. METHOD OF MAKING WELDED JOINTS FOR STEEL PIPE. FRED C. KING, Portland, Oreg. Filed Nov. 11, 1926. Serial No. 147,711. 2 Claims. (Cl. 113—112.)

1. A method of joining pipes together by a welding process consisting of forming a flared bell on the end of one

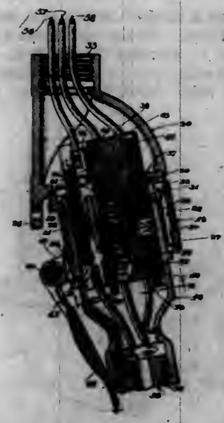
pipe for a length of approximately one twentieth of its diameter, then driving a second straight pipe into said bell to seat against its shoulder, then heating and laying said flared bell metal to metal against the outside of said straight pipe and then welding the end of said bell to said straight pipe, the completed joint not forming a recess for the lodgement or circulation of liquids passing through the pipe.

1,750,011. SOCKET-WRENCH SET. JOSEPH KNEIER, Cleveland, Ohio, assignor to The Vichek Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 17, 1927. Serial No. 240,792. 6 Claims. (Cl. 206—16.)



1. A socket wrench set holder, for holding a set of sockets each having an aperture extending therethrough and terminating at one side in a handle-receiving recess and at the other side in a nut-receiving recess, said handle-receiving recesses all being adapted to receive the same handle, said holder comprising: a handle, formed at at least one end to be inserted into any one of said handle-receiving recesses; and a stringer, adapted to be passed through said apertures of said sockets to receive said sockets on a portion of said stringer, and formed on each side of said portion to be secured to said handle.

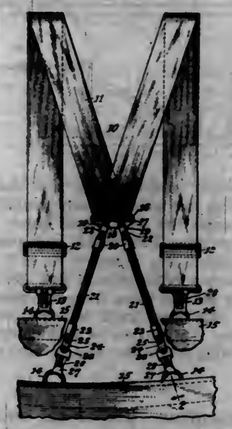
1,750,012. GAS-LINE VALVE. JACOB LERNER, Chicago, Ill. Filed June 5, 1928. Serial No. 283,099. 1 Claim. (Cl. 251—99.)



In a valved gas line coupling, an angular casting having threaded bores in its ends to receive the gas pipes and a gas passageway connecting said bores, the lateral faces of said casting being recessed, a valve extending transversely through said casting and through said gas passageway and terminating flush with said casting recess, said valve being formed with a port adapted to pass into and out of registry with said gas passageway, a pointed indicator head fixed to said casting contiguous to one lateral face recess, stop lugs located in the said lateral face recess, one of said lugs being disposed contiguous to said indicator head and the other lug remote therefrom, an indicator body portion fixed to and movable with said valve, the ends of said body portion extending into said lateral face recess for contact with said stop lugs and, in one position of said valve, for cooperation with said indicator head, a friction disc adjustably secured to the opposite end of said valve and bearing against one face recess, and a key for rotating said valve.

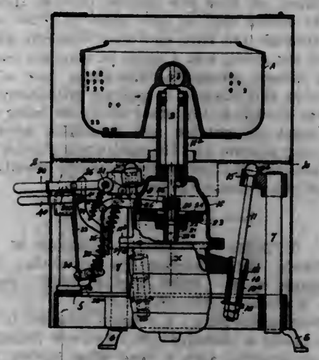
1,750,013. CRANK-CASE-VENTING MEANS FOR PNEUMATIC TOOLS. AXEL LEVEDAHL and REINHOLD A. NORLING, Aurora, Ill., assignors to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 8, 1923. Serial No. 673,471. 2 Claims. (Cl. 121—33.)

1. In a piston actuated pneumatic tool, the combination with a crank case, of a handle carrying block at one end of the case and having one or more air outlet ports, a crank shaft in said case and having an end journal supported by said block, a counter-weight in said case at said block and mounted on said shaft, said shaft and counter-weight having air outlet passages communicating with the exterior of the case and ports, respectively, and a valve carried by the counter-weight in the passage thereof for controlling the same, said valve being opened by centrifugal forces set up on rotating the crank shaft.



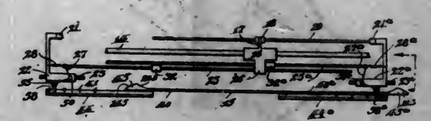
1,750,014. ELECTRIC-CURRENT CONNECTION. JOHN LOFGREN, Chicago, Ill., assignor to Ralco Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 6, 1928. Serial No. 244,793. 1 Claim. (Cl. 173—332.)

A connector comprising a socket member and a plug member, insulating blocks removably supported in each



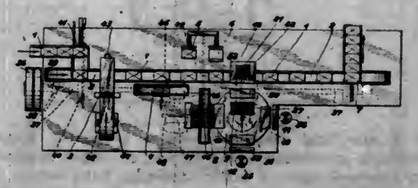
member, lugs in said socket member of different shapes and positions, said insulating block for said socket having correspondingly shaped and positioned recesses for assembly in but one position, said plug member and its insulating block having cooperating means for allowing assembly in but one direction, and each block carrying flat contacts arranged in different angular positions in the blocks to allow plug insertion in but one position.

1,750,015. SUSPENDERS FOR OVERALLS. BELA MESZAROS, New York, N. Y. Filed Mar. 25, 1929. Serial No. 349,623. 3 Claims. (Cl. 241—27.)



1. In a suspender having a shoulder web and devices thereon for attaching the same to overalls, a cross plate through which said shoulder web is passed, a plate extension on said cross plate, hook devices adapted to engage the overalls, also having plate extensions, oppositely placed pairs of sleeve heads pivoted to the plate extension on said cross plate and to the extension of a hook device, respectively, an expansible coil spring, the ends of which are arranged within said pair of sleeve heads and secured therein, and a limiting chain within said coil spring, the two ends of said chain being also secured in said sleeve heads.

1,750,016. CENTRIFUGAL MACHINE. CHRISTIAN F. MEYER, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Nov. 30, 1925. Serial No. 72,173. 4 Claims. (Cl. 210—72.)

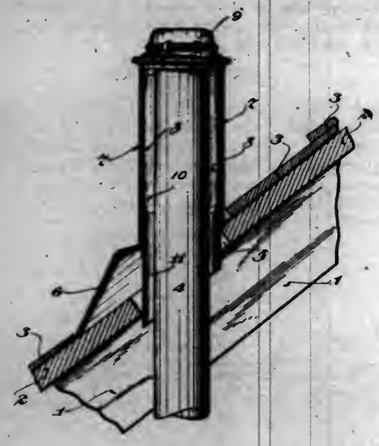


1. In a centrifugal machine comprising a supporting frame and a motor-and-shaft housing having a limited bodily movement thereon; a container-carrying motor shaft having a movable brake sleeve thereon, a sleeve-engaging lever pivoted to said housing, and a starting lever pivoted to said frame and having flexible connections to said sleeve-engaging lever whereby it is adapted to reversely operate said sleeve irrespective of the housing position relative to the frame.

1,750,017. SHOCK-ABSORBING CARRIER-ROD STOP MECHANISM FOR FULL-FASHIONED KNITTING MACHINES. CHRISTIAN F. MEYER and GOTTLOB BITZER, Wyomissing, Pa., assignors to Textile Machine Works, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Jan. 24, 1929. Serial No. 334,641. 12 Claims. (Cl. 66—130.)

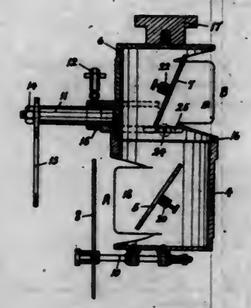
1. In a full fashioned knitting machine having a thread-carrier rod and means for reciprocatively operating the same, a momentum-absorbing rod-stop mechanism comprising a longitudinally movable stop rod for said reciprocated carrier rod periodically engageable with the latter, and means operated by said carrier rod reciprocative means to progressively decrease the speed of said stop rod longitudinal movement to a full stop during said periodical carrier rod engagement.

1,750,018. CIGARETTE-PACKING MACHINE. GÜNTHER MEYER-JAGENBERG, Dusseldorf, Germany. Filed May 16, 1928, Serial No. 278,274, and in Germany May 18, 1927. 10 Claims. (Cl. 226—5.)



1. In a device of the kind described, rotatably mounted holders for holding a plurality of articles, and turning means engaging the holders for rotating the same so as to turn the articles side for side.

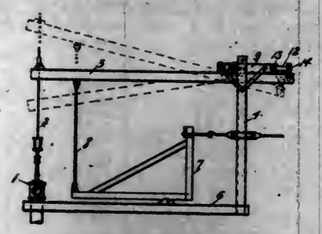
1,750,019. ROOF FLASHING AND JACKET. FRANCIS J. MOORE, Minneapolis, Minn. Filed Nov. 3, 1928. Serial No. 316,970. 1 Claim. (Cl. 285—31.)



The combination with a flashing having a raised intermediate portion, of a vent pipe jacket, the lower end of

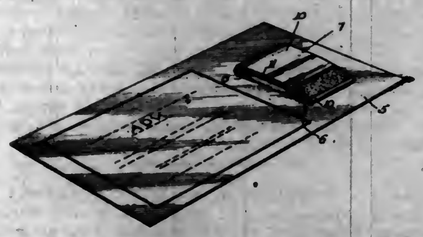
which is supported on said intermediate portion of the flashing and rigidly secured thereto, and a spacing sleeve

telescoped into the jacket, extending through the raised intermediate portion of the flashing and below said flashing.



1,750,020. CINEMATOGRAPH PROJECTION APPARATUS. JAMES SWORD NAIRN, Wardie, Edinburgh, Scotland. Filed Oct. 21, 1927, Serial No. 227,784, and in Great Britain Nov. 5, 1926. 6 Claims. (Cl. 240—3.)

3. A spot-light attachment for a projection lantern comprising a vertical casing having an upper apertured part rotatable upon a lower apertured part, means for detachably clamping the lower part to the projection lantern and for enabling it to be turned into or out of the beam of light from the lantern, a reflector mounted upon a transverse rotatable spindle in each part of the casing and a knob externally mounted on the upper part of the casing upon the spindle of the reflector therein for simultaneously adjusting the upper reflector and revolving the upper part of the casing.

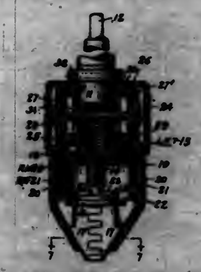


1,750,021. OIL-WELL-PUMPING JACK. RUPERT BERNARD NORRIS, Tulsa, Okla., assignor to W. C. Norris, Tulsa County, Okla. Filed Apr. 5, 1929. Serial No. 352,835. 2 Claims. (Cl. 74—5.)

1. A pumping jack for pumping an oil well, comprising a pumping beam mounted on a stationary standard, means of oscillating said beam and means of connecting a polished rod to said pumping beam at its weight bearing point; a stationary cam track on said stationary standard with the cam track longitudinally disposed with said pumping beam; a link pivotally connected to said stationary standard, and with said link also pivotally connected to said pumping beam, said link being of a predetermined length and having its axis at a predetermined point with reference to the fulcrum point of said pumping beam to correlate the arc prescribed by the point of its con-

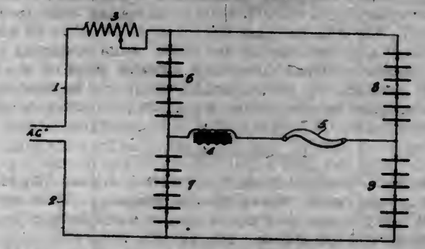
nection on the said pumping beam with the predetermined arc prescribed by the weight bearing point of said pumping beam to cause the last named point to travel in a substantially straight line when said pumping beam is oscillated; a roller cam attached to said pumping beam at a point thereon between said link connection thereto and the weight bearing point thereof, and with said roller cam engaging said cam track and free to move thereon and constituting the fulcrum of said pumping beam; and means of retaining said roller cam on said cam track.

1,750,022. BLOTTER. HUGO PICK, Winnetka, Ill., assignor, by mesne assignments, to Albert Pick-Barth Company, Inc., a Corporation of New York. Filed Feb. 18, 1927. Serial No. 169,178. 1 Claim. (Cl. 120—24.)



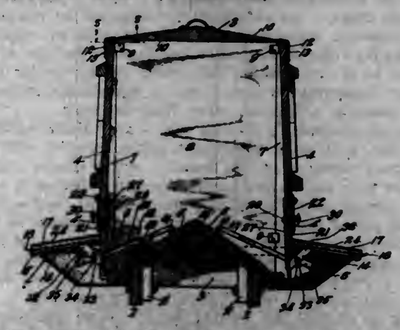
A blotter comprising a one-piece sheet of blotting paper having a pair of slits extending therethrough, a fibre board strip arranged so that the central portion thereof fits against the under side of the sheet and its ends are threaded through the slits and bent inwardly above the top face of the sheet, and a comb of matches having the base part thereof secured to the inner face of one of the strip-ends and adapted to prevent withdrawal of the strip in one direction, the other strip-end being foldable over the comb of matches and insertable between the aforesaid base portion and the said one strip-end to form a handle whereby the blotter sheet may be readily manipulated from one place to another.

1,750,023. AUTOMATIC CHUCK. ERNEST W. PRIGAN, Camp Baldy, Calif., assignor to Albert Lee Shepard, Los Angeles, Calif. Filed May 4, 1925. Serial No. 27,765. 2 Claims. (Cl. 279—1.)



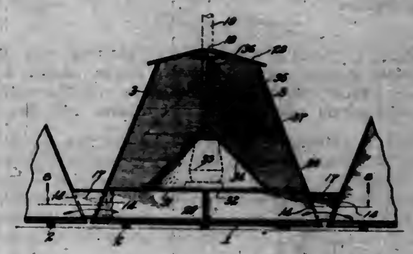
1. A chuck comprising: a spindle adapted to be constantly rotated; a threaded pin interiorly engaging said spindle and provided with a head plate having laterally extending segmental, annular jaw engaging extensions; jaws adapted to rotate with said spindle and provided

with inwardly extending head engaging projections; and control means, including separate control elements, also normally rotating with said spindle, and interior parts



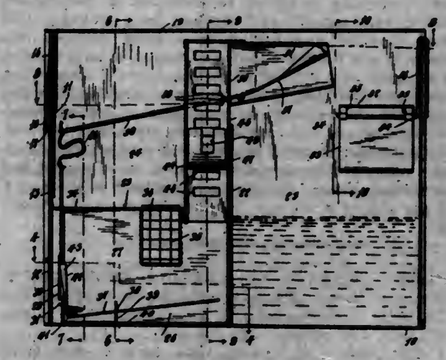
including gears associated with said control elements and said threaded pin, for effecting opening and closing movements of said jaws during a relative retardation of the respective control elements.

1,750,024. ULTRAVIOLET-LIGHT-GENERATING SYSTEM. FREDERIC W. ROBINSON and LESTER F. BIRD, Newark, N. J., assignors to Hanovia Chemical and Manufacturing Company, Newark, N. J., a Corporation of New Jersey. Filed Aug. 24, 1927. Serial No. 215,062. 2 Claims. (Cl. 250—84.)



1. In combination with a direct current mercury vapor lamp, an apparatus for operating the mercury vapor lamp from an alternating current source, comprising a smoothing reactor in series with the lamp to be operated, and a plurality of electronic dry contact rectifiers interposed between said lamp and the source of alternating current for rectifying the current passing through the lamp, the resistance of said rectifiers decreasing with a rise in temperature to automatically compensate for the increase in the resistance of the lamp when its temperature rises, whereby the resistance of the circuit will be substantially constant.

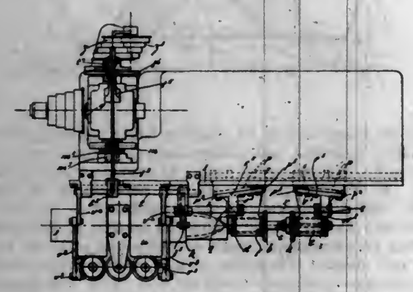
1,750,025. ANIMAL-FEEDING DEVICE. ALVIN V. ROWE, Galesburg, Ill. Filed Oct. 26, 1927. Serial No. 228,794. 4 Claims. (Cl. 119—54.)



1. In an animal feeding device, in combination, a housing, a feed trough in communication therewith, a hinge bar supported from and longitudinally of said housing, a plurality of spaced bars bracing said trough and connected therewith and with said housing, a plurality of adjacently placed cover members for said trough having a hinged connection with said bar and having upturned side flanges and curved edges along their free ends, the adjacent flange portions of pairs of said cover members normally resting on a common brace bar, and a plurality of supplemental cover members having a hinged connection with said bar, one overlying each of the adjacent flange portions of pairs of said first mentioned cover members and movable with the latter when raised, and provided with turned down flanges along opposite edges adapted to overlie the flange portions of said first mentioned cover members.

1,750,026. HOG HOUSE. ALVIN V. ROWE, Galesburg, Ill. Filed Nov. 21, 1927. Serial No. 234,666. 8 Claims. (Cl. 119—16.)

1. In a hog house, in combination, a plurality of individual separable and independent structural units, the said units adapted for assembly to provide a central unit and the remaining units grouped therearound in adjacent relation thereto and for communication therewith, each unit having closed walls and certain of said walls having an opening to permit entrance into and exit from the said units, a closure for each of said openings, means providing communication between each of the said grouped units respectively with said central unit, means to form a plurality of compartments in said central unit, one compartment coincident with each of said communicating means, and a hover means centrally disposed in said central unit and above said compartment forming means.

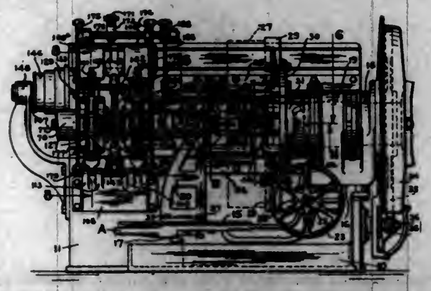


1,750,027. ANIMAL TRAP. EMIL F. SCHROEDER, Weyauwega, Wis. Filed May 18, 1927, Serial No. 191,095. Renewed May 29, 1929. 1 Claim. (Cl. 43—76.)

A trap of the class described having a casing provided with a partition therein to form a captive chamber on

one side thereof, a body disposed in the casing at the other side of the partition, said body having a top and a partition disposed at a right angle to the first mentioned partition to form entrance chambers, said body being open at the side of said entrance chambers whereby the chambers will be closed at the side by the adjacent side walls of the casing, said casing being open at one end wall, entrance openings through the body at the front walls of said entrance chambers, closures for said openings, a tilting platform in each entrance chamber, said platforms normally maintaining the closures open, channel members extending upwardly from each entrance chamber, an outlet duct extending from each passage member across the first mentioned partition wall and into the captive chamber, said entrance platforms being arranged for tilting by a rodent thereon so as to release the door for closing movement, levers having parts in said ducts adapted for engagement by a rodent, and connections between said levers and said closures, whereby when the levers are actuated by the rodent they will restore the closures to open position.

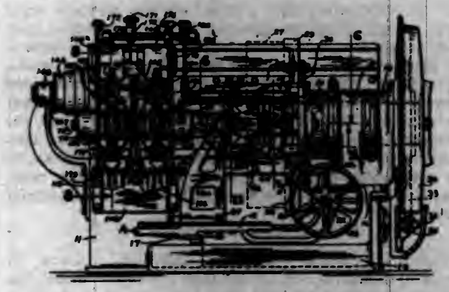
1,750,028. CUTTER RELIEF MECHANISM FOR MACHINE TOOLS. WILLIAM EDWIN SYKES, Slough, England. Filed July 14, 1921, Serial No. 484,713, and in Great Britain Aug. 30, 1920. 43 Claims. (Cl. 90—9.)



1. Cutter relief mechanism for machine tools, comprising a reciprocable member and a tool support slidingly mounted thereon, said tool support being adjustable relatively to said reciprocable member in the direction of the reciprocating movement thereof, each having cooperating means whereby, when one is moved relatively to the other, a relative movement between said parts at right angles to the direction of the first named movement is effected.

14. In a metal cutting machine, cutter relief mechanism comprising a cutter support and a reciprocable member, said support and member being slidingly connected together and having cooperating surfaces, the surface of one being inclined, and means on said member for engaging said support at each end of the cooperating surfaces to limit the sliding movement therebetween and to connect said support to said member for reciprocation thereby, and means operable in timed relation relative to the reciprocating movement of said member to insure relative sliding movement between said support and said member in one direction and resilient means to assist the sliding movement therebetween in another direction.

1,750,029. METHOD OF CUTTING GEAR TEETH. WILLIAM EDWIN SYKES, Slough, England. Filed May 24, 1923, Serial No. 641,125, and in Great Britain Aug. 30, 1920. 54 Claims. (Cl. 90—9.)

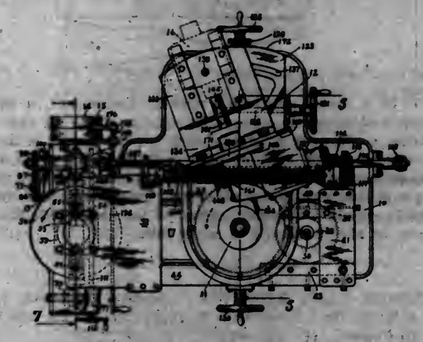


1. The method of cutting teeth upon a gear blank which comprises causing a cutter to traverse the peripheral face of the blank, and moving the cutter bodily and positively in a direction away from the blank at substantially right angles to the line of cut in a translatory movement to relieve it at the end of its operative stroke.

30. The method of cutting helical teeth on a gear blank, which comprises moving a shaping cutter toward the center of the gear face from the side thereof until it contacts with an abutment or shoulder intermediate of the width of the face, imparting a twist to the cutter to produce a helical cut and withdrawing such cutter directly from such abutment or shoulder by a translatory movement while imparting to the cutter and blank a continuous generating movement.

54. The method of cutting helical gear teeth in a blank, which comprises establishing a lost motion connection between a cutter and a reciprocating slide, reciprocating the slide to cause the cutter to be advanced and returned over the face of the blank while imparting to the cutter a helical movement, effecting relative movement between the cutter and blank in an inclined direction prior to the return stroke of the cutter to relieve it during the return stroke.

1,750,030. MACHINE FOR CUTTING GEAR TEETH. WILLIAM EDWIN SYKES, Slough, England. Filed May 24, 1923, Serial No. 641,126, and in Great Britain Aug. 30, 1920. 101 Claims. (Cl. 90—9.)



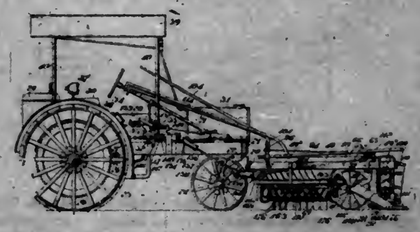
1. In a machine for cutting gear teeth, a support for a gear blank, a cutter operatively mounted for reciprocatory planing movement and for movement of rotation, means for rotating the cutter and causing the face of the blank to be traversed by the cutter, and means for positively imparting to the cutter a translatory relieving movement in a direction away from the work.

56. A machine for cutting helical gear teeth including a frame, a blank support, and a cutter carrying slide operatively mounted on the frame, a cutter spindle carried by the slide and having a cutter mounted thereon, a bearing member movably mounted on the frame, said spindle being guided for reciprocatory twisting movement in said bearing member, means for imparting a continuous rotative movement to said bearing member and spindle, and means for moving said bearing relatively to said frame to impart a bodily movement to the cutter spindle.

92. A machine for cutting helical gears comprising a frame, a blank support mounted thereon, a pair of cutters, a spindle upon which each of the cutters is mounted, each

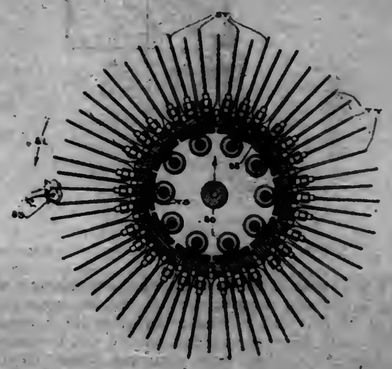
of said spindles being mounted in journals movably mounted on the frame, cam means associated with each of said journals, a rock shaft adapted to actuate the cam means associated with the journals at one end of each shaft, separate cam means adapted to actuate the journals associated with the opposite end of each shaft, a rock shaft mounted on the frame, and means for actuating all of said cam means from said rock shaft.

1,750,031. MACHINE FOR GENERATING GEAR TEETH. WILLIAM E. SYKES, Buffalo, N. Y. Filed Nov. 22, 1927. Serial No. 235,001. 42 Claims. (Cl. 51—52.)



1. A metal working machine, comprising a base, a reciprocable carriage slidably mounted on said base, means to reciprocate said carriage, another reciprocable carriage slidable relatively to said base, means operable by the reciprocation of said first mentioned carriage to reciprocate said second mentioned carriage, a rotatable work support mounted on one of said carriages, means mounted on the other of said carriages to rotate said work support, and a cutting tool mounted upon said base and disposed to act upon said work on said work support to form the same while said work is being rotated and reciprocated.

1,750,032. RECEIVING SET. MAMERTO V. TIMTIMAN, Manila, P. I. Filed July 1, 1927. Serial No. 202,969. 5 Claims. (Cl. 250—31.)

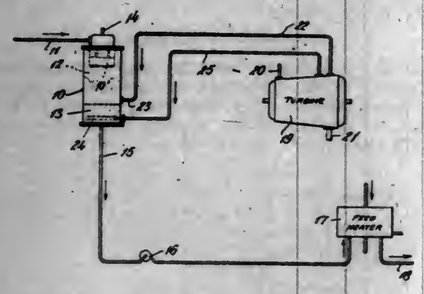


1. In a radio receiving apparatus, a tubular casing having an opening at one end, a cap threadedly mounted on said end over said opening and defining a compartment, a metallic crystal holder within the compartment, means to support the holder within the compartment, a radially disposed arm secured within the tubular casing and adapted to be connected in the circuit of the apparatus, a cat-whisker secured to the arm and extending through the opening of the casing for contact with a crystal within the crystal holder and means to connect the crystal holder in the receiving circuit.

1,750,033. COMBINED MOWER AND WINDROWER. CHARLES E. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Nov. 8, 1918, Serial No. 261,657. Renewed Aug. 29, 1927. 48 Claims. (Cl. 56—25.)

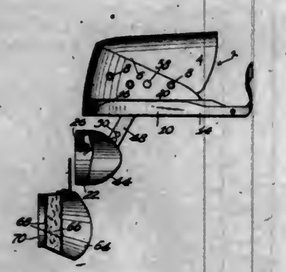
1. An agricultural implement comprising a frame, a transversely disposed mower connected therewith, devices back of said mower at opposite sides of the central longitudinal axis of the implement and operating to move the crop on the ground toward such longitudinal axis, and means for actuating said mower.

1,750,034. COTTON PICKER. HIRAM NEWTON BERRY, Greenville, Miss., assignor, by direct and mesne assignments, to Cotton Harvestor Corporation of America, Greenville, Miss., a Corporation of Delaware. Filed Apr. 22, 1927. Serial No. 185,826. 5 Claims. (Cl. 56—44.)



1. In a cotton picker having picking elements arranged for introduction into and retraction from the plants as the cotton picker progresses along a row; in combination, means interspersed between said picking elements for deflecting ripened bolls otherwise out of range of said elements into proximity with adjacent picking elements.

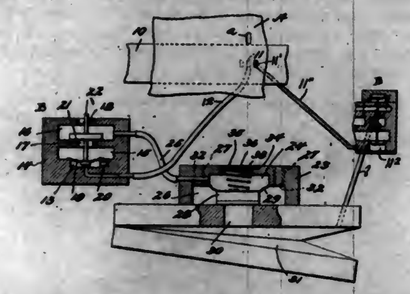
1,750,035. DEAERATOR. STANLEY BROWN, Garden City, N. Y., assignor to The Griscom-Russell Company, New York, N. Y., a Corporation of Delaware. Filed Nov. 19, 1926. Serial No. 149,327. 11 Claims. (Cl. 60—94.)



10. In a steam power system the combination of a turbine, a boiler feed heating system including a plurality of successive feed water heaters deriving heating steam at appropriate temperatures from various stages of said tur-

bine, a deaerator arranged to receive water from one of said heaters and deliver it to said boiler feed system, said deaerator having a primary heating means and a secondary heating means, an evaporator supplied with steam from

a stage of said turbine, means for conducting steam from the vapor space of said evaporator to said primary heating means, and means for conveying heat of the drains from said evaporator heating chamber to said secondary heating means.

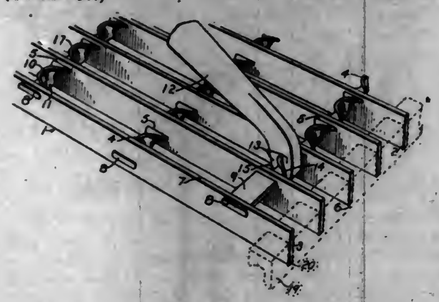


1,750,036. HEAD, NOSE, EYE, AND EAR PROTECTIVE MEANS. HOWARD E. CHAMBERS, Long Beach, Calif. Filed Mar. 10, 1928. Serial No. 260,635. 2 Claims. (Cl. 2—14.)

1. A head gear of the class described comprising a crown having a forehead covering portion, and an upper portion open at its rear end, a band attached to the bottom and inside of said forehead covering portion and in spaced relation thereto to coact with said open upper portion to provide for air circulation, a pair of goggles hingedly connected and provided with means for adjusting said goggles in a horizontal plane independently of the hinged connections, and a pair of arms for pivotally connecting said goggles to said crown.

1,750,037. MEANS TO ELIMINATE NOISE IN PARTS OF RECORD-CONTROLLED MUSICAL INSTRUMENTS. TOLBERT F. CHERK, New York, N. Y., assignor, by mesne assignments, to Welte-Mignon Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 20, 1923. Serial No. 663,831. 18 Claims. (Cl. 84—39.)

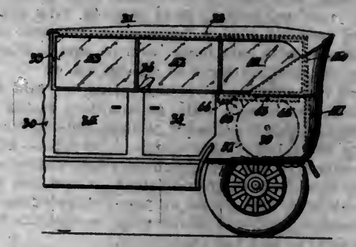
1. In a record controlled musical instrument, a member having an air expansion chamber having a plurality of ducts and linings for said ducts made of soft material and each open at its opposite ends to permit the free flow of air into and through the same.



7. In a record controlled musical instrument, a pneumatic and means to change the tension of the air therein, having a plurality of ducts, each provided with a lining of soft material, open at both ends, through which said means communicates with the atmosphere, and also having a pneumatically operable valve common to said ducts and by which the communication of the ducts with the interior of the pneumatic is controlled.

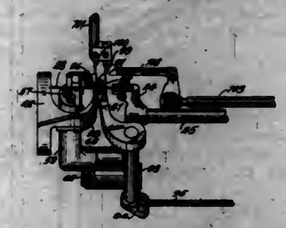
1,750,038. ASH RECEIVER. ROBERT CAMPBELL EVE, Atlanta, Ga. Filed Dec. 6, 1927. Serial No. 238,103. 10 Claims. (Cl. 131—51.)

1. An article of manufacture, including an ash receiver, and a non-spillable extinguisher for cigars and cigarettes united therewith.



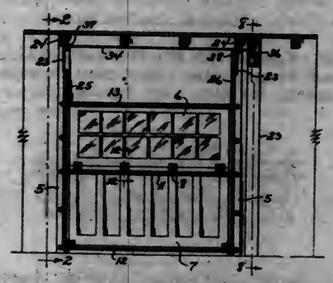
1,750,039. GRATING. PETER EMIL FELTES, Kansas City, Mo. Filed June 4, 1928. Serial No. 282,564. 8 Claims. (Cl. 94—30.)

1. In a grating, spaced support bars provided with sets of aligning longitudinal slots, the sets being in staggered relation, and tie bars positioned in aligned slots having integral portions extending oppositely from the axes of the tie bars.



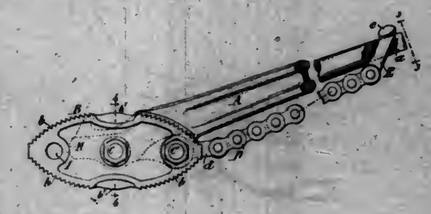
1,750,040. INCLOSURE FOR AUTOMOBILES. JEHU T. GORE, Drexel Hill, Pa. Filed Aug. 11, 1927, Serial No. 212,165. Renewed June 4, 1929. 18 Claims. (Cl. 296—45.)

1. A collapsible inclosure for open vehicles comprising magazine carriers normally concealed in recesses or hollows of the vehicle body, each of such carriers accommodating a number of sliding sashes side by side, and



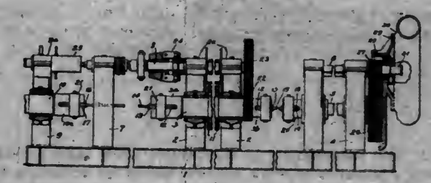
means to move the carriers into position for distribution of the sashes horizontally along opposite sides of the vehicle.

1,750,041. SEWING MACHINE. HORACE F. GRUMAN, Richmond Heights, Mo., assignor to Lewis Invisible Stitch Machine Company, Kittery, Me., a Corporation of Maine. Filed Oct. 29, 1924, Serial No. 746,676. 14 Claims. (Cl. 112—162.)



6. In a machine of the character described, a work table, a longitudinally reciprocating horizontal needle bar operating below said table, stitch forming mechanism cooperating with said needle bar to join seam the material, a longitudinally reciprocating vertical needle bar having stitch forming mechanism cooperating therewith to cover-seam the joined material, and means for feeding the material.

1,750,042. GARAGE DOOR. BROOKS B. HOOVER, Aurora, Ill. Filed Apr. 23, 1928. Serial No. 272,244. 3 Claims. (Cl. 20—20.)

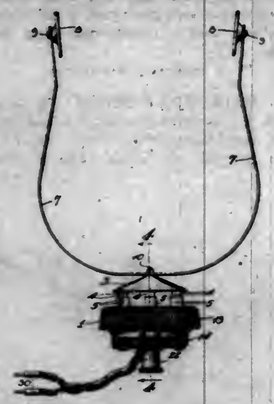


1. A door comprising a pair of hingedly secured sections, bracing strips secured across said sections in a manner to allow contraction and expansion thereof, brackets secured to the ends of said bracing strips, roller straps carried by said brackets, grooved rollers arranged in pairs and mounted in said roller straps, tracks receiving said rollers for movement thereon and being curved intermediate their ends to provide vertical and horizontal portions, hanger brackets for supporting said tracks, said vertical portions being bent to move the door toward and away from its frame when the door is being disposed to its opened and closed positions, a cable secured to one of said sections and a counterbalancing means carried by said cable.

1,750,043. CHAIN PIPE WRENCH. WILLARD C. KRESS, Buffalo, N. Y., assignor to J. H. Williams & Co., Buffalo, N. Y., a Corporation of New York. Filed Apr. 28, 1928. Serial No. 273,690. 9 Claims. (Cl. 81—66.)

1. A pipe wrench comprising a handle having a slot in one end and a flat link chain, one end of which is anchored near the end of the handle other than that having the slot and the other end of the chain being engageable when not in use in said slot in the handle, the slot in the handle and the faces of the chain links lying in parallel planes.

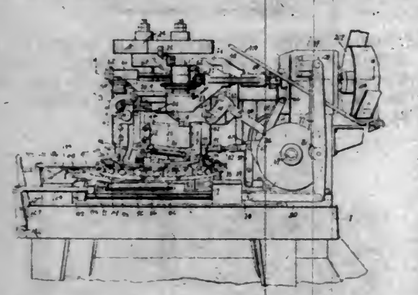
1,750,044. SHAFT MOUNTING AND COUPLING FOR ENGINES AND COOPERATIVE PARTS. CARL H. KNUDSEN, New York, N. Y. Filed Mar. 12, 1926, Serial No. 94,344. Renewed May 25, 1929. 5 Claims. (Cl. 64—29.)



1. An apparatus of the class described comprising an engine driven shaft, a supplemental driven shaft arranged at one end of and in axial alinement with the first named shaft and coupled therewith by a flexible coupling, a blower shaft arranged in parallel relation and geared to said supplemental shaft, a blower mechanism actuated by said blower shaft, and a governor shaft arranged in parallel relation to and geared directly in connection with the first named engine driven shaft.

1,750,045. METHOD OF AUDITION AND APPARATUS FOR PRACTICING THE SAME. JOEL W. MACDONALD, Houston, Tex., assignor of fifteen per cent to A. B. Prescott, twenty per cent to A. H. Koennecke, and sixty-five per cent to The Tactiphone Company, Houston, Tex., a Corporation of Texas. Filed Nov. 1, 1928. Serial No. 316,590. 5 Claims. (Cl. 179—107.)

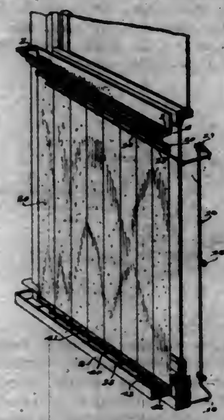
1. The method of transmitting speech and other sound impulses directly to the auditory nerves which comprises electrically vibrating a diaphragm to reproduce sound impulses, conducting the reproduced sound impulses directly from said diaphragm through a lengthwise rigid conductor of sound and propagating said impulses along



CARNEGIE LIBRARY OF ATLANTA

the lengthwise rigid conductor and continuing the conduction of the reproduced impulses to the skin of the head

in close proximity to the mastoid eminence, such conduction being always in a lengthwise rigid conductor of sound from the diaphragm all the way to said point of application.

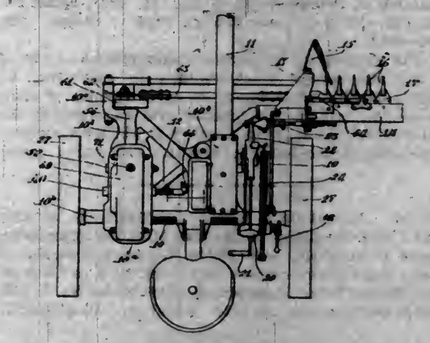


1,750,046. COMBINED MILLING AND DRILLING MACHINE. GEORGE MELLING, Jackson, Miss. Filed Apr. 29, 1927. Serial No. 187,648. 32 Claims. (Cl. 29—38.)

1. The combination of a rotatable work table provided with a plurality of work holders, means for actuating said work table with a step by step movement, a post disposed centrally relative to said work table, a crosshead mounted on said post and provided with oppositely disposed segmental ways, tool carriages oscillatingly mounted on said crosshead in opposed relation and provided with slide bearings coacting with said ways, a double lobed cam mounted on said post to coact with said carriages whereby they are simultaneously actuated, springs acting to retract said carriages, cutter shafts disposed vertically on said carriages and provided with cutters at their lower ends and with flywheels at their upper ends, forked bearing brackets mounted between said carriages and flywheels, beveled gears arranged on said cutter shafts between the forks of said bearing brackets, driving shafts supported by said bearing brackets and provided with beveled gears coacting with said gears on said cutter shafts, a second crosshead mounted on said post above said cutter supporting crosshead, drill units mounted in opposed relation on said second crosshead and provided with spindles having beveled gears at their upper ends, a shaft disposed centrally above said post and provided with gears coacting with both of the gears on said spindles, a driving shaft provided with a gear meshing with the gear of one of said spindles, and feed means for said spindles synchronized with said tool carriage actuating cam.

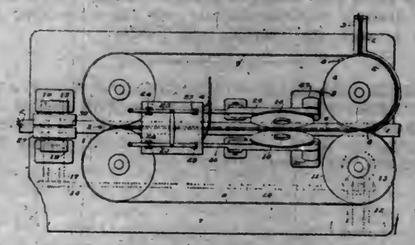
18. In a machine of the class described, the combination of a work table provided with index lugs, an actuating slide, a cam shaft provided with an actuating cam for said slide, a return spring for said slide, a driving pawl mounted on said slide to coact with said index lugs, a pivotally mounted holding pawl coacting with said index lugs and provided with a tappet arm, a tappet on said slide coacting with said tappet arm on said holding pawl whereby the holding pawl is disengaged on the return stroke of the slide, an actuating spring for said holding pawl connected to said slide, an auxiliary spring urging said holding pawl to engaging position, driving means for said cam shaft including a clutch, a tappet on said cam shaft, a pivotally mounted clutch releasing member adapted to swing into the path of said tappet on said cam shaft, a bell crank lever adapted to support the swinging end of said releasing member, and operating connections for said holding pawl to said bell crank lever.

1,750,047. AIR-COOLING APPARATUS. GUSTAVE A. METZGER, Belleville, Ill. Filed May 31, 1928. Serial No. 281,840. 4 Claims. (Cl. 261—103.)



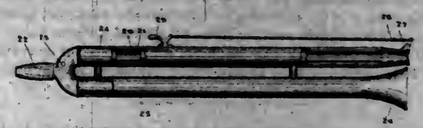
1. An air cooling apparatus comprising a water supply trough having a plurality of valved discharge pipes extending therefrom, pins detachably mounted on said pipes, absorbent fabric strips carried by said pins, a drip pan supported in a plane below said trough, and means for mounting the lower ends of said strips over said pan whereby the water fed through said pipes onto said strips will be received by the pan.

1,750,048. WATER-COOLED FURNACE WALL. OSCAR NYGAARD, Saugus, Mass. Filed Nov. 28, 1928. Serial No. 322,468. 8 Claims. (Cl. 122—6.)



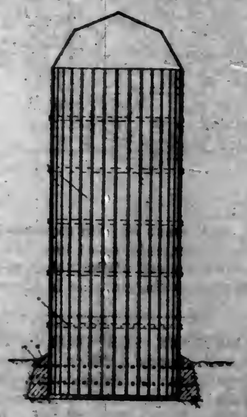
7. In a water cooled furnace wall, the combination of a series of tubes located side by side, a flanged bar extending transversely to said tubes and located immediately beside them, blocks resting in the flange part of the bar and having curved faces to bear against the respective tubes, and U-bolts partly encircling the respective tubes and extending through the bar and said blocks, said bolts serving to secure the tubes to said bar and to clamp said blocks between the respective tubes and the bar.

1,750,049. MOWER. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Sept. 17, 1928. Serial No. 306,409. 18 Claims. (Cl. 56—271.)



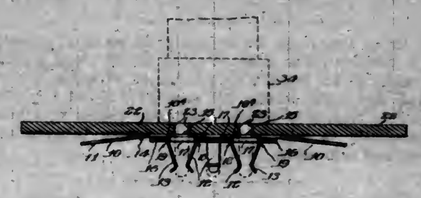
1. A mower having a frame, a two piece axle in the frame carrying wheels, a pawl carrying plate having a hub spanning adjacent inner ends of the axle pieces, means securing the hub to one of the pieces to turn therewith, a ratchet gear, said pawls being enclosed by the gear and plate, a sickle, and means driven from the ratchet gear for driving the sickle.

1,750,050. WELDING MACHINE. HOWARD D. RANDALL, Cincinnati, Ohio, assignor to The Randall Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 22, 1927. Serial No. 200,568. 12 Claims. (Cl. 219—4.)



1. In a machine of the character described a combination of a metal member with means for advancing same continuously; metal attaching devices; means for feeding said attaching devices; means for guiding said devices; a rotary member for making contact with said devices; connections from said rotary member to a source of electricity whereby said attaching devices will be welded to said member while they are in contact with said rotary member.

1,750,051. WIND INSTRUMENT. LOGAN RIVES, Los Angeles, Calif. Filed Aug. 17, 1927. Serial No. 213,541. 7 Claims. (Cl. 84—380.)

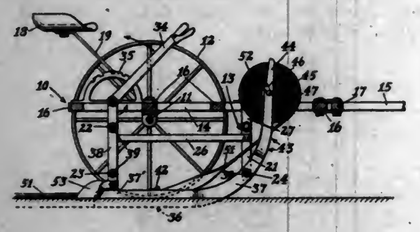


6. A wind musical instrument comprising a tube, both ends of the tube being capable of being open, said tube being adapted to be sounded while both ends are open, a mouth piece at which may be excited vibrations to the air within the tube at a point intermediate its ends, and means for varying the effective length of the tube, said means causing the column of air between the ends of the tube to vibrate as one column.

1,750,052. SILO. JAMES RUSSEL ROBERTS, Lincoln, Nebr. Filed Nov. 26, 1928. Serial No. 321,962. 2 Claims. (Cl. 20—1.4.)

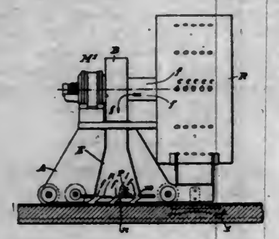
1. In a silo, a cylindrical body part comprising separate vertically disposed and spaced apart planks, hoops enclosing the planks to hold the same in circular order, said planks having beveled edges at their inner sides providing depressions at the adjacent edges of the planks, and wedge strips seated in the depressions adapted to be forced outwardly toward the beveled edges to seal the joints between the adjacent planks.

1,750,053. HOLDER FOR THERMIONIC TUBES. WALTER W. ROBINSON, Beloit, Wis. Filed July 11, 1927. Serial No. 204,704. 2 Claims. (Cl. 173—328.)



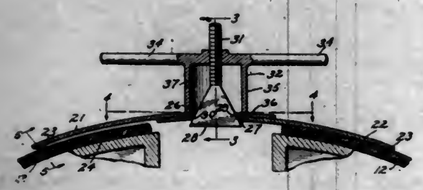
1. A contact member of the character described comprising a relatively long and narrow piece of thin springy metal having a hole near one end and having adjacent to said hole a pair of integral spring leaves extending substantially at right angles from the metal in which the hole is formed, said leaves being formed to contact a pin-like terminal passing through said hole, one of said spring leaves being formed out of body material of the metal leaving an opening therein of a shape substantially corresponding to that of the spring leaf formed from the metal at that place.

1,750,054. TRANSPLANTING MACHINE. GEORGE W. ROSSO, Los Angeles, Calif. Filed Apr. 25, 1928. Serial No. 272,763. 8 Claims. (Cl. 111—8.)



1. A transplanting machine comprising a fixed frame, forming part of a two-wheeled vehicle; a movable frame mounted in said fixed frame so as to be adjustable in relation thereto; a channeled runner attached to said mov-

able frame said runner being adapted to cut a furrow in the soil, a spool on said movable frame, turnable about a horizontal axis, said spool being adapted to carry a ribbon wound thereon in which plants are fixed at regu-

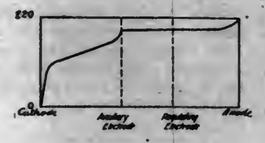


lar intervals, and means on said movable frame for guiding said ribbon from said spool into the furrow cut by said runner when one end of the ribbon is held fast at one end of the furrow, as the machine is driven across a field.

1,750,055. MACHINE FOR DRYING SHEET MATERIAL. ANDRÉ SAMUELS, Lyon, France, assignor, by mesne assignments, to Samuels Process Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 2, 1928. Serial No. 316,782. 9 Claims. (Cl. 34—18.)

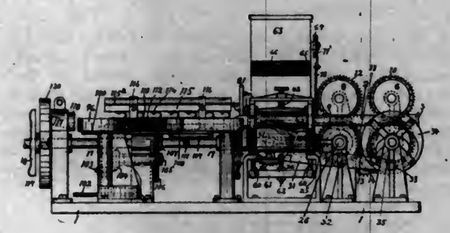
1. In an apparatus for drying sheet material comprising a movable frame adapted to be moved along a printing table, an air heating unit including a casing, a blower and means for driving the said blower, and a conduit extending from said casing, about said blower to a point of proximity to said table, and a damper between said blower and said table.

1,750,056. BRAKE-LINING TIGHTENER. GEORGE SHRAFFER, Hollywood, Calif. Filed June 12, 1928. Serial No. 284,849. 8 Claims. (Cl. 29—84.)



1. In a brake-lining clamp, the combination of: a pair of clamp-plates; a wedge for operating said clamp-plates; and wedge-working means for moving said wedge relative to said clamp-plates.

1,750,057. PROCESS OF PREPARING DIAZOSULPHAMIC ACIDS. KARL SCHIRMACHER and WERNER SCHIRMACHER, Hochst-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 17, 1927, Serial No. 169,131, and in Germany Feb. 22, 1926. 4 Claims. (Cl. 260—69.)

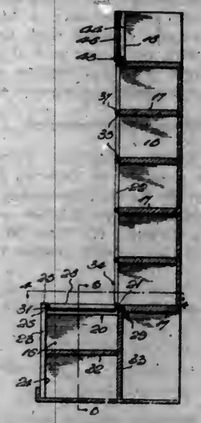


1. The process for preparing diazosulphamic acids of the aromatic series, which consists in converting an aromatic diamine by means of an agent capable of splitting off SO_3, into the disulphamic acid and treating the latter with nitrous acid, the quantity of which corresponds to the amount necessary to diazotize one amino group.

1,750,058. DISCHARGE TUBE CONTAINING AUXILIARY ELECTRODES. JOHANNES MICHAEL SCHMIERER, Gross Lichterfelde, near Berlin, Germany, assignor to Radio Patents Corporation, New York, N. Y., a Corporation of New York. Filed May 6, 1925, Serial No. 28,515, and in Germany Jan. 23, 1924. 9 Claims. (Cl. 250—27.)

1. In a gas discharge tube, a cathode, anode and electrode, means for applying a predetermined voltage across said cathode and anode, means whereby substantially all of said voltage is impressed across said cathode and electrode and substantially only the anode drop occurs between the electrode and anode.

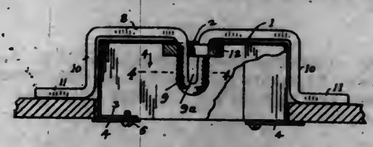
1,750,059. MACHINE FOR BANDING A STRIP AND CUTTING THE LATTER BETWEEN THE BANDS TO PROVIDE BANDED PIECES. ARTHUR R. SELDEN, Rochester, N. Y. Filed July 15, 1926. Serial No. 122,626. 28 Claims. (Cl. 93—2.)



1. A machine of the class described comprising means for moving a strip of material through the machine, means for applying bands to the strip at spaced points while it is in motion through the machine, and means for severing the strip between said bands while the strip is moving.

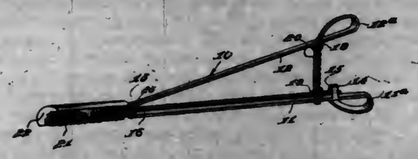
1,750,060. SELF-SERVICE-STORE EQUIPMENT. JOHN F. SMILEY, Dallas, Tex. Filed Nov. 12, 1926. Serial No. 313,853. 4 Claims. (Cl. 211—151.)

1. In self-service store shelving, a plurality of shelves one of which is provided at its front edge with spaced bearings, a horizontal rail rigidly mounted in advance of



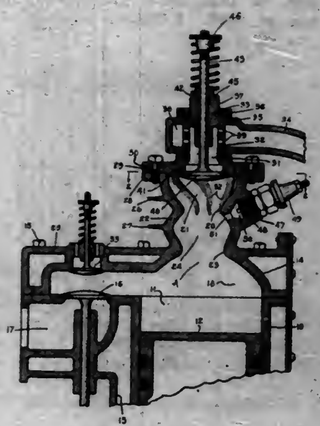
CARNEGIE LIBRARY OF ATLANTA

said one shelf and having bearings alined with those aforesaid, an open space being provided between said



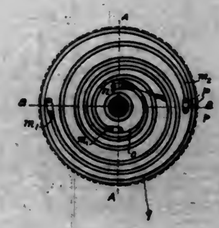
shelf edge and said rail, and basket-supporting rollers in said space extending between said rail and said one shelf and supported by said bearings.

1,750,061. HOUSING STAY AND SUPPORT DEVICE. EARL F. SMITH and GUY KENNETH WILSON, Muncie, Ind., assignors to Midwest Metal Products Company, Muncie, Ind., a Corporation of Indiana. Filed Feb. 7, 1929. Serial No. 338,127. 6 Claims. (Cl. 247—20.)



1. A housing, stay and support device of the kind described, comprising a box having an opening in the rear side thereof and the front of the box being open, a stay member having its body portion to register with the rear, and being provided with footed side portions which register on a plane a distance from the plane of the front of the box, and there being a stud on the body portion of the stay member to extend through the opening in the rear of the box, said stud having an opening therein through which electric wires may be passed, a flange plate on the front of the box, and means on the stud operable to draw the box toward the body portion of the stay member.

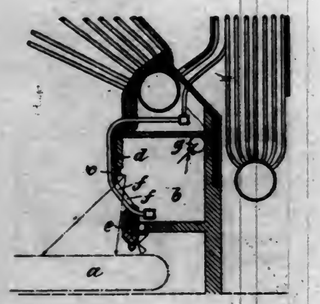
1,750,062. ROTARY BRUSH. JESSE R. SMITH, Benton, Ill. Filed July 25, 1927. Serial No. 208,245. 2 Claims. (Cl. 15—26.)



1. A rotary tooth brush comprising a frame member having an aperture therein, a shield having an aperture therein, a tubular supporting and limiting member adapted to receive a shaft, said supporting and limiting member being rigidly secured within one of said apertures and loosely extending through the other aperture, said supporting and limiting member provided with means to prevent separation of said frame member and shield, and a yieldable member surrounding said supporting and limiting member in frictional engagement with said frame member and shield.

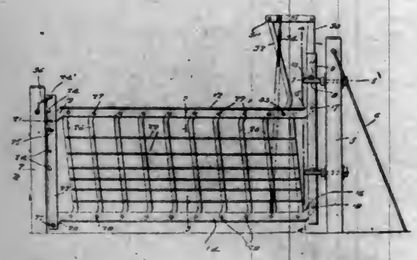
1,750,063. INTERNAL-COMBUSTION ENGINE. WILLIAM A. SORG, Owosso, Mich. Filed Jan. 28, 1926. Serial No. 83,228. 11 Claims. (Cl. 123—191.)

1. In an internal combustion engine, a cylinder, a piston movable therein, a cylinder head situated at the end of said cylinder providing a chamber having an ignition compartment therein, and a vaporizing compartment of substantially the same size as said first compartment communicating therewith, and means for conducting a fuel mixture into said vaporizing compartment.



1,750,064. RUNNING GEAR FOR HIGH-SPEED SUSPENSION CARS. CURT STEDEFELD, Heidelberg, Germany. Filed Oct. 25, 1926, Serial No. 144,071, and in Germany Mar. 10, 1926. 7 Claims. (Cl. 105—181.)

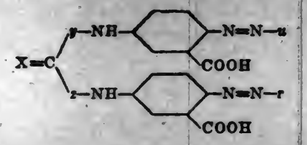
1. In a wheeled vehicle, a driving mechanism of the type including a frame, a hanger arm, a driving wheel journaled on said hanger arm, a drive for said wheel including a gear rigidly secured to said wheel, means pivotally mounting said hanger arm on said frame, a driven gear in mesh with said first gear and having an axis coinciding with the pivotal axis of said hanger arm, the pivotal mounting of said hanger arm restraining all



movement thereof except in a vertical plane, whereby the teeth of said gears remain fully in mesh upon vertical movement of said hanger arm, characterized by the fact that means is provided for resiliently driving said gears, whereby vertical movement of said wheel with reference to said frame is not transmitted through said gears to the prime mover.

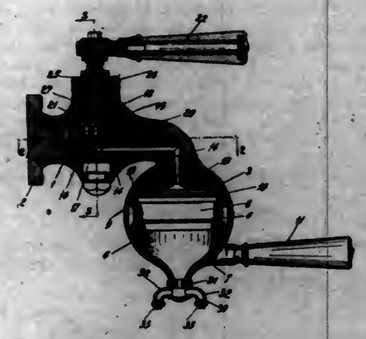
1,750,065. TRAVELING GRATE. LEBRECHT STEINMÜLLER, Gummersbach, Germany, assignor to the Firm L. & C. Steinmüller, Gummersbach/Rheinland, Germany. Filed Sept. 28, 1928, Serial No. 309,061, and in Germany Aug. 29, 1928. 4 Claims. (Cl. 110—1.)

1. The combination with a furnace having a grate and a combustion chamber, of an auxiliary chamber extending into said combustion chamber over the grate, said auxiliary chamber having openings therein to permit access to the combustion chamber and grate, and means for normally closing said openings.



1,750,066. GATE. JULIUS A. STRIPLING, Fort Dodge, Iowa. Filed Apr. 20, 1928. Serial No. 271,514. 2 Claims. (Cl. 39—80.)

1. In a gate structure of the class described, a pair of spaced longitudinal channel bars, a pair of upper gate bars pivotally engaged at adjacent ends in an intermediate portion of the respective channel bars, a pair of lower gate bars pivotally mounted in the lower portions of the respective channel bars, a plurality of rods pivotally engaged between the pairs of gate bars, and a plurality of wires extending transversely across the rods, a riser on one of said channel bars, a bracket on said riser, a hanger pivotally engaged with the bracket and pivotally engaged with the upper pair of gate bars, and spring means engaged with the bracket and the lower pair of gate bars for normally raising said bars.

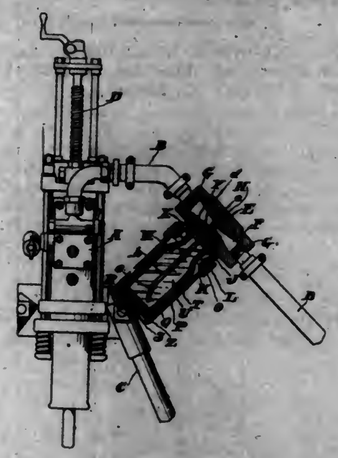


1,750,067. AZO DYES. RICHARD STÜSSER, Cologne-Deutz, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 7, 1928, Serial No. 268,378, and in Germany Apr. 21, 1927. 5 Claims. (Cl. 260—85.)

1. Azodyestuffs of the probable general formula:

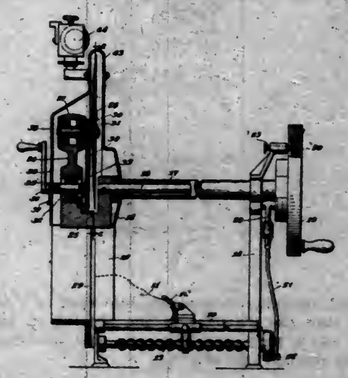
wherein X represents a sulfur or oxygen atom, z and r represent residues of any desired coupling components, y and z stand for at least once a group of the kind —NH—R—a—, whereby R represents an aromatic nucleus and a— represents one of the groups CO— and SO_2— being linked to a nitrogen atom, said dyestuffs being yellow to black powders, sparing soluble in the usual organic solvents, soluble in concentrated sulfuric acid with yellow to blue colorations, yielding on treatment with stannous chloride and hydrochloric acid among other products 2.5-diaminobenzene-1-carboxylic acid.

1,750,068. EXPRESS COFFEE-MACHINE SET. ANGELO TORRIANI, Pavia, Italy. Filed Nov. 6, 1928, Serial No. 317,631, and in Italy Nov. 14, 1927. 2 Claims. (Cl. 53—8.)



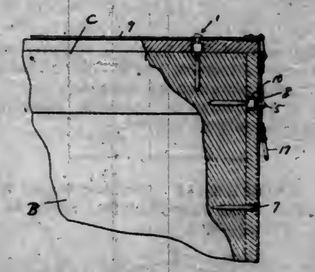
1. A device of the class described comprising an arm having a cup carried by one end, a circular carrier in the cup, a filter having an annular flange adapted to rest upon the carrier, a collector threaded in the cup and engaged with the carrier, said collector when in its operative position serving to clamp the flange of the filter between a wall of the cup and the carrier, said arm having ducts therein for conducting fluid into the cup, and means carried by the collector for discharging the contents thereof.

1,750,069. MUSICAL INSTRUMENT. VELMA S. TRUBEY and HARRY H. GROSS, San Francisco, Calif. Filed Mar. 7, 1927. Serial No. 173,273. 11 Claims. (Cl. 84—270.)



1. In a stringed musical instrument a rim, a head arranged on one side of the rim, a reflector plate closing the opposite side of the rim, and a bell-mouth resonator flange mounted on the inside of the rim and opening toward the reflector plate.

1,750,070. AIR-LINE OILER. GROVER G. TUTTLE, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed May 6, 1927. Serial No. 189,311. 1 Claim. (Cl. 184—55.)

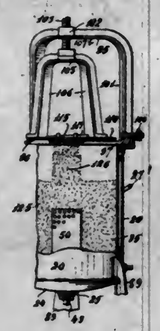


An air line oiler comprising a connection adapted to be attached to an air line, said connection having a passageway affording communication between adjacent sections of the air line, said passageway having a restricted portion, a threaded projection on one side of the connection having a recess, a bottle forming a reservoir for oil and extending with its open end into the recess, a guard surrounding the container and cooperating with the threaded projection to hold the container in assembled position, a tube in the bottle extending with one end into the passageway and with its other end to a point near the bottom of the bottle for conveying oil into the passageway, means in the recess to seal and cushion the open end of the container, a passage through the connection and said means for constantly admitting pressure fluid into the container to act on the surface of the oil in the container for transmitting the pulsations in the hose line to the oil and thus force oil through the tube into the passageway, and yieldable means between the bottom of the container and the guard to centraline the container with respect to the guard and to prevent contact between said container and the guard.

1,750,071. SLICING MACHINE. CORNELIS FRANCISCUS MARIA VAN BEEKUM, Wassenaar, Netherlands, assignor to U. S. Slicing Machine Company, La Porte, Ind., a Corporation of Indiana. Filed June 20, 1927, Serial No. 200,244, and in the Netherlands Aug. 25, 1926. 15 Claims. (Cl. 146—103.)

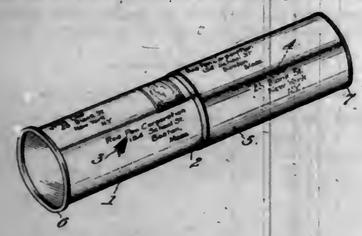
1. A meat and bone cutting machine comprising a rotary disc slicing knife, means for revolving said knife eccentrically to the axis of the knife to cause said knife to engage material to be sliced, said knife being free to assume its own angular position relative to its own axis during the movement of said knife through the material to be sliced.

1,750,072. COLLAPSIBLE BOX-CARRYING MEANS. HOMER H. VANDIVORT, Bado, Mo., assignor of one-fourth to Luther L. Grisham, one-fourth to Richard B. Grisham, and one-fourth to Raymond C. Miles, Elk Creek, Mo. Filed May 12, 1928. Serial No. 277,250. 3 Claims. (Cl. 217—12.)



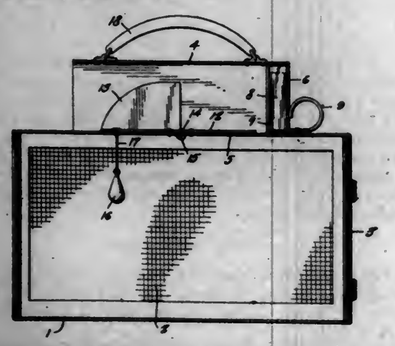
1. In a collapsible box of the character described wherein the side walls of the box are formed with spaced openings adjacent their ends, stud members projecting from the edges of the end walls of the box and being adapted to project through said openings in the side walls, and a pair of straps formed with spaced key slots arranged around the ends of said box so as to engage the studs projecting through the side walls in secure relation with said straps through said key slots.

1,750,073. FILTER. GEORGE L. WALSH, Jersey City, N. J., assignor to Joseph M. Rector, Jersey City, N. J. Filed Mar. 15, 1929. Serial No. 347,285. 2 Claims. (Cl. 210—138.)



1. In a filter the combination of a shell for a filtering material, a cover detachably connected to said shell, means to insert a fluid to be filtered in the shell, a yoke hinged over the shell, a screw in threaded engagement with said

yoke, a yoke in rotative engagement with the lower end of the screw, a disc plunger having an opening connected to the lower end of the latter yoke, a cover detachably connected to said disc plunger under the opening therein, a

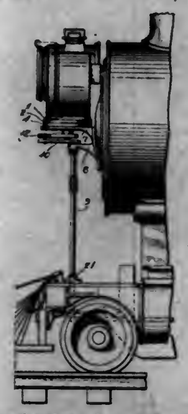


perforated discharge hood within said shell of a diameter smaller than the diameter of the opening in said disc plunger and a pipe extending from said discharge hood extending through said shell.

1,750,074. SHIPPING CONTAINER. IRVING WARNER, Wilmington, Del. Filed Apr. 17, 1929. Serial No. 355,768. 4 Claims. (Cl. 229—93.)

1. A shipping container having a plurality of complete shipping addresses thereon, and a shield slidably movable on said shipping container for completely covering one or the other of said shipping addresses, selectively, while leaving the other entirely exposed.

1,750,075. ANIMAL TRAP. WILLIAM WALTO WATERMAN, Tulsa, Okla. Filed Jan. 23, 1929. Serial No. 334,456. 1 Claim. (Cl. 43—69.)



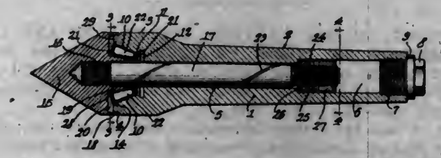
A trap of the class described comprising a casing having an opening in its top, a housing on top of the casing covering the opening, a hinged door in the housing over the opening, the front end of the door resting upon the front wall of the opening, with the rear end terminating short of the rear wall of the opening so that the rear part of the door can pass through the opening when the door is tilted, a weight on the front end of the door, a bait holder closing the rear end of the housing, said bait holder including a base plate and an upright hollow body having an opening in its front for exposing the bait, guiding means at the rear end of the housing for receiving portions of the base plate, said door having side pieces at its front with their front edges curved.

1,750,076. ALTERNATING-CURRENT MOTOR. HANS WEICHSEL, St. Louis, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a Corporation of Delaware. Filed Jan. 26, 1929. Serial No. 335,301. 2 Claims. (Cl. 172—279.)

1. In a dynamo electric machine provided with a commutator and brushes, means for short-circuiting the commutator which comprises a collar mounted on the shaft of the machine and provided with a circumferential recess and commutator short-circuiting elements carried in said recess, centrifugal means for moving the brushes out of contact with the commutator and for moving the short-circuiting elements into operaive position with respect to the commutator, and means insulating the short-circuiting elements from the collar.

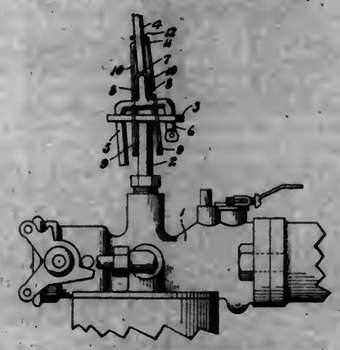
1,750,077. DIRIGIBLE HEADLIGHT. ASA BENTON WELCH, Atlanta, Ga. Filed Aug. 31, 1927. Serial No. 216,667. 2 Claims. (Cl. 240—62.)

1. Operating mechanism for a headlight comprising a casing, a pivoted member rigidly attached to the casing, an arm rigidly attached to said pivoted member and having a plurality of vertical bolt holes therein, a two part extensible rod having pivotal connection with a locomotive truck frame and carrying an upper and lower arm with means for taking up lost motion between the rod and arms, a pin in the lower arm, a projection on the truck and a slot connection between said projection on the truck and said pin said upper arm having a slot adapted to receive a pin inserted in either of said vertical bolt holes in the arm carried by the pivoted member.



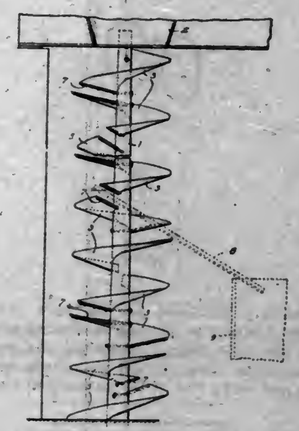
1,750,078. CONTROL APPARATUS. ERNST WILLHEIM, Gilgenberg, Austria. Filed Jan. 25, 1927, Serial No. 163,513, and in Austria Feb. 1, 1926. 3 Claims. (Cl. 161—15.)

1. An apparatus for controlling the running time of vehicles, consisting of a clock, having clockworks, a movable locking device adapted to engage an element of the clockworks and when so engaged preventing the working of the clock, resiliently supported masses, adapted to



oscillate under the influence of motion of their support and means translating the movement of said masses to said locking device to move and retain the locking member out of reach of the element of the clockworks.

1,750,079. TOOL. ELLIS VERNON WILLS, St. Louis, Mo. Filed June 7, 1928. Serial No. 283,596. 3 Claims. (Cl. 82—33.)

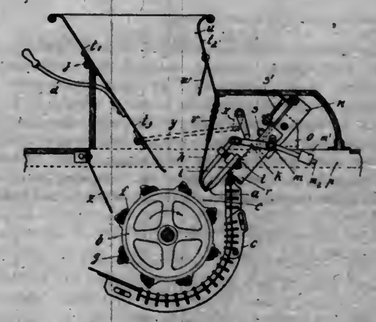


1. In a device of the class described, a body provided at one end with a lubricant chamber, a shaft journaled in the body, a centering piece carried by the one end of the shaft and cooperating with the body, bearings mounted in the body and supporting the centering piece for rotation, and the shaft having a superficial spiral groove by which a lubricant is fed from the chamber to the bearings when the centering piece and the shaft rotate.

1,750,080. ANTIRATTLING DEVICE. FLOYD G. WITHROW, Grand Rapids, Mich. Filed July 27, 1925. Serial No. 46,380. 3 Claims. (Cl. 287—1.)

1. The combination with a rotatable rod having a cross bar at one end and a forked operating rod having its forks extending through spaced openings in said cross bar, of an anti-rattling device engaging with said operating rod at one side, extending downwardly at each side of the rod under and in engagement with the cross bar, formed into spring coils under the cross bar and thence extended upwardly and detachably connected with said operating rod at the side thereof opposite where it is first engaged by said device, substantially as described.

1,750,081. DIFFERENTIAL HELICAL CHUTE. ROBERT F. WOOD and ERNEST A. HECKLER, Glenside, Pa. Filed Sept. 18, 1928. Serial No. 305,798. 7 Claims. (Cl. 198—12.)

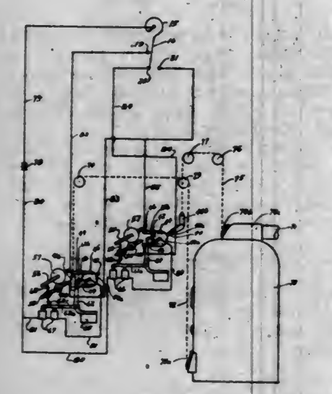


4. A substantially helical chute broken at intervals to permit of the insertion between certain convolutions of one end of a lateral lead-off chute.

1,750,082. PROCESS OF PURIFYING QUINOLINE AND QUINALDINE. MAX WYLER, Blackley, Manchester, England, assignor to British Dyestuffs Corporation Limited, Manchester, England. Filed May 5, 1927, Serial No. 189,176, and in Great Britain Sept. 6, 1926. 9 Claims. (Cl. 260—41.)

1. In the manufacture of pure quinaldines from crude reaction mixtures containing the same, the process which comprises converting the base in such a mixture into a double salt with zinc chloride by additions of zinc chloride and hydrochloric acid, and crystallizing out the resulting product.

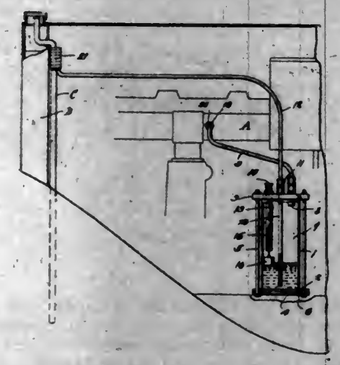
1,750,083. THRASHING MACHINE. ILLÉS ZAYMUSZ, Budapest, Hungary. Filed Aug. 14, 1926, Serial No. 129,268, and in Hungary Aug. 19, 1925. 4 Claims. (Cl. 130—27.)



3. Thrashing machine comprising a frame, a thrashing drum rotatably carried in said frame, a concave in said frame, and a grate arranged at the feed opening between said drum and said concave at an obtuse angle to the tangent to the circumference at the line of intersection of the drum and grate.

1,750,084. SANITARY APPLIANCE. HENRY ABRAHAMSON, Chicago, Ill. Filed Apr. 25, 1928. Serial No. 272,732. 2 Claims. (Cl. 2—113.)

1. A sanitary appliance for the bust comprising an undergarment, and bust chafing preventing bands extending from the sides thereof and along the inside of the front, said bands being secured with their outer ends to said sides and being free of the garment at their opposite ends.

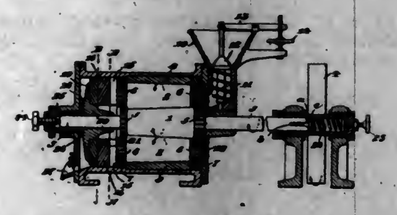


1,750,085. APPARATUS FOR REGULATING A HEATING MEANS. CLIFFORD M. AKINS, Minneapolis, Minn. Filed Nov. 4, 1927. Serial No. 231,037. 3 Claims. (Cl. 236—16.)

1. An apparatus for regulating a furnace having a draft damper and check damper, having in combination, a thermostat, means controlled by said thermostat upon a lowering of the temperature below a certain point in a room to be heated for closing said check damper, means controlled by said thermostat for opening the draft damper upon the further lowering of said temperature, and means for closing said draft damper and opening said check damper upon the temperature rising beyond said point.

1,750,086. GAS-SAVING ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. HENRY FRANK BEEMAN, Fort Collins, Colo. Filed Sept. 27, 1928. Serial No. 308,868. 2 Claims. (Cl. 123—25.)

1. A gas saving attachment for internal combustion engines including a tubular body, heads clamped thereagainst and cooperating therewith to provide a chamber for holding a heavy oil, a vapor supply tube opening downwardly into said chamber below the level of the oil, means for coupling said tube to the overflow tube of a radiator to receive vapor therefrom, a vapor outlet pipe extending from the upper end of the chamber and means for coupling the same to the intake manifold of an engine, an air intake



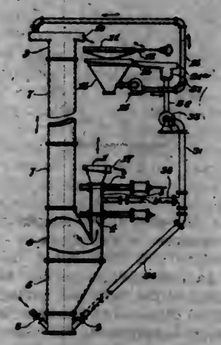
tube opening downwardly into the chamber, and float controlled means within the chamber for controlling the admission of air into said chamber.

1,750,087. PAINT, VARNISH, AND ENAMEL AND A METHOD OF THEIR PRODUCTION. WARREN F. BLEECKER and ELLSWORTH A. CLARK, Boulder, Colo. Filed Nov. 12, 1923. Serial No. 674,201. 3 Claims. (Cl. 134—54.)

1. A base for chemically-resistant and dielectric paints and kindred compositions, consisting of vulcanized rubber combined with lard-oil.

1,750,088. GRINDING MILL. THEODOR BRAGARD, Hamburg, Germany, assignor to the Firm of Macnowalsenmuhlen-Gesellschaft mit beschränkter Haftung, Hamburg, Germany. Filed July 3, 1928, Serial No. 290,115, and in Germany June 9, 1927. 7 Claims. (Cl. 83—8.)

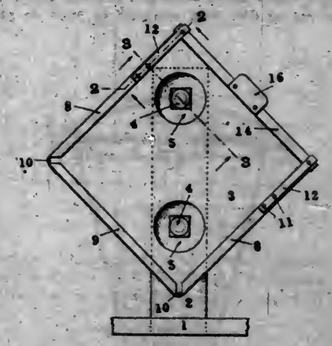
1. A grinding mill incorporating a casing, an annular grinding disc located in said casing, a plurality of planetarily driven grinding discs the end faces of which cooperate with said annular disc, grinding rolls connected with said planetarily driven grinding discs and a central roll about which the first named rolls rotate and which is externally driven, intermeshing spur gears on the rolls to planetarily drive the outer rolls from the central roll, the end faces of the spur gears at the exit ends of the planetary rolls carrying the movable discs.



1,750,089. SURFACE-CONTROL MECHANISM FOR AIRPLANES. FRANK R. CANNEY, Seattle, Wash., assignor to Boeing Airplane Company, Seattle, Wash. Filed Mar. 26, 1928. Serial No. 264,894. 2 Claims. (Cl. 244—29.)

1. In a system for lateral control for aircraft, the combination of a pair of aerodynamically differential ailerons having normally equal and substantial angles of incidence, actuating means interconnecting said ailerons, cam mem-

bers interposed between said actuating means and said ailerons, means pivotally mounted on said ailerons for engagement with said cam members.

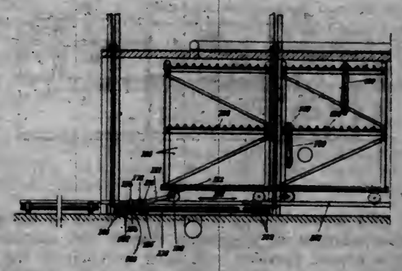


1,750,090. METHOD AND APPARATUS FOR SEPARATING MATERIALS OF DIFFERENT SPECIFIC GRAVITIES. THOMAS M. CHANCE, Merion Borough, Montgomery County, and HARRY O. STAPLES, Scranton, Pa. Original application filed Feb. 25, 1928, Serial No. 256,971. Divided and this application filed Mar. 26, 1929. Serial No. 349,005. 3 Claims. (Cl. 209—173.)

1. In a method for separating materials of different specific gravities by flotation of the lighter and sinking of the heavier of said materials in a fluid medium of intermediate specific gravity, consisting of a maintained suspension of comminuted solids in liquid, said solids being heavier than said liquid and substantially insoluble therein, the improvement which consists in providing a body of said fluid medium, extending upwardly from a region adjacent to the base of said body adapted to be used as a separating zone, to a region in which it is desired to deliver said lighter materials, in restraining upward movement of said fluid medium, whereby a substantially stationary fluid medium is utilized for separating and elevating said lighter materials, in causing said lighter materials to rise by the buoyancy of said materials to the top of said fluid medium, and in removing said elevated materials from said fluid medium.

1,750,091. PLACARD HOLDER FOR TANK CARS. WARREN E. COOPER, New York, N. Y., and FREDERICK K. HARRNICHT, St. Louis, Mo., assignors to Western Railway Equipment Company, St. Louis, Mo., a Corporation of Missouri. Filed July 19, 1923. Serial No. 293,999½. 5 Claims. (Cl. 40—17.)

1. In a device of the class described, the combination with a rectangular body portion provided at three sides with ways to receive the edge of a placard, the fourth side being adapted to allow the insertion and removal of the placard, of a spring actuated closure member movable

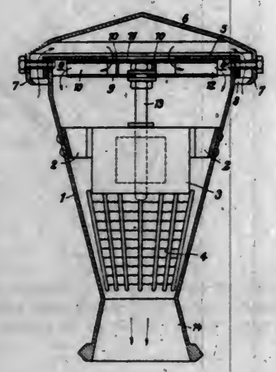


across the plane of the holder in a direction perpendicular thereto, said member extending across and completely covering the said fourth side when in normal position.

1,750,092. ELECTROPLATING PROCESS. ROBERT BRACE PENN CRAWFORD, Chicago, Ill., and ROY DIETRICH SNYDER, Hazleton, Pa. Filed Nov. 26, 1921, Serial No. 517,895. Renewed Jan. 22, 1930. 12 Claims. (Cl. 204—2.)

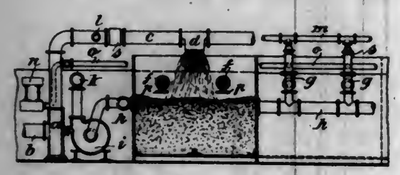
1. An electrolyte for electrodepositing an alloy of copper and nickel, which comprises nickel ammonium sulfate, copper oxalate, boric acid, nickel chloride, ammonium hydroxid, and water.

1,750,093. APPARATUS FOR BLEACHING TEXTILE FIBERS WITH A GASEOUS CURRENT SUCH AS OZONIZED AIR. EMILIO CRESPI, Crespi-sur-l'Adda, Italy, and MARIUS PAUL OTTO, Paris, France. Filed June 15, 1928, Serial No. 285,674, and in France Feb. 2, 1926. 4 Claims. (Cl. 260—19.)



1. In a plant for bleaching textile fibers with a gaseous mixture such as ozonized air, the following combination; a tunnel (151); a chamber (152, 153) at each end of the tunnel; means for blowing the outer air into these chambers and for expelling the gaseous mixture which filters into them; trucks carrying hanks of yarn (170) and running in the tunnel (151); and means for pushing the trucks (166) from the chambers (152,153) into the tunnel (151).

1,750,094. HAND AND FACE DRYING DEVICE. PAUL EMMRICH, Dresden, Germany, assignor to Rudolf Christian von Loeben, Dresden, Germany. Filed Feb. 22, 1929, Serial No. 342,247, and in Germany Nov. 12, 1928. 2 Claims. (Cl. 34—26.)

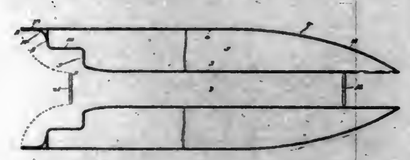


1. Hand and face drying device with a heater, a turbine wheel and a motor comprising in combination a case at-

tached to a wall and possessing a conical outlet opening, an annular covering disc within the upper part of the case adapted to cover the inlet opening of the device, the said turbine wheel being arranged slightly below the said annular covering disc and adapted to suck in air in an

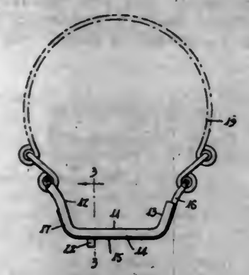
axial direction and possessing a plurality of arcuate blades adapted to radially press out the sucked-up air, the said motor being arranged behind the said turbine wheel, a heater provided within the outlet opening of the said case behind the motor and being of the same shape as the opening so as to hug the inner wall.

1,750,095. HOLD FOR DREDGERS. FRIEDRICH EWIG, Brunswick, Germany. Filed June 6, 1928. Serial No. 283,351. 6 Claims. (Cl. 214—15.)



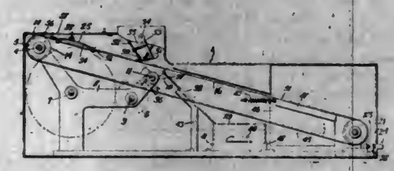
1. In a suction dredge for handling liquid having finely divided material in suspension therein, the combination with a hopper provided with sieve openings in the side walls thereof, of means for delivering the liquid and other material to said hopper, and a suction pump connected to said sieve openings for withdrawing the liquid whereby the finely divided material may be permitted to settle in said hopper.

1,750,096. METHOD OF SURFACING ROADS. SAM E. FINLEY, Atlanta, Ga. Filed Apr. 6, 1928. Serial No. 268,074. 6 Claims. (Cl. 94—23.)



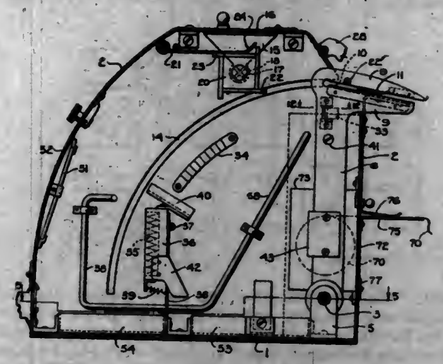
1. The method of surfacing roads which include bituminous cement in their structure, which comprises premixing mineral aggregate with a stable bituminous binder and a volatile solvent for the latter, the binder being in quantity to effectively bond the aggregate and form a homogeneous matrix therewith and applying the mixture in a substantially uniform layer to the road surface; whereby the binder of the mixture will be augmented by the cement of the road structure.

1,750,097. FLYING MACHINE. THOMAS M. FINLEY, St. Louis, Mo. Filed Oct. 18, 1928. Serial No. 312,841. 9 Claims. (Cl. 244—10.)



1. In a flying machine, a body having a longitudinal air channel or passage provided with a flaring mouth of step-like formation forming a plurality of shoulders providing suction pockets, said body having at the front of the mouth a relatively thin contact shield projecting in advance of the body and adapted to cut the air.

1,750,098. NONSKID DEVICE. MATHEW J. FRAMBACH, Hartley, Iowa. Filed July 28, 1927. Serial No. 209,075. 1 Claim. (Cl. 152—14.)



A saddle for a non-skid device adapted to fit astride a wheel felly and composed of two similarly shaped members in reversed positions and overlapping one another, each member having an intermediate portion to extend across the inner periphery of the felly and having outturned terminal portions to be disposed at opposite sides of the felly, one member having flanges along its edges to overlap the edges of the other member, one terminal portion of each member projecting beyond the corresponding terminal portion of the other member and having means for the connection of a flexible tread member, and means carried by one of said members to engage the other member for holding them together.

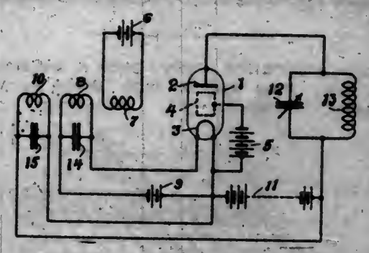
1,750,099. FINGERPRINT MACHINE AND METHOD. CHARLES F. GLASS, Brooklyn, N. Y., assignor to Fingerprint Machine Corporation, a Corporation of New York. Filed Aug. 29, 1919, Serial No. 320,593. Renewed Oct. 1, 1926. 4 Claims. (Cl. 41—4.)

2. In a machine for recording finger prints, the combination with means for supplying a pigment to a finger-impressed surface of a sheet, means for heating the pigment to fix it to the sheet and means for moving the said surface in a substantially straight line past said pigment-supplying and fixing means.

1,750,100. FINGERPRINT MACHINE AND METHOD. CHARLES F. GLASS, Brooklyn, N. Y., assignor to Fingerprint Machine Corporation, a Corporation of New York. Filed Oct. 23, 1920, Serial No. 418,867. Renewed Mar. 24, 1924. 32 Claims. (Cl. 41—4.)

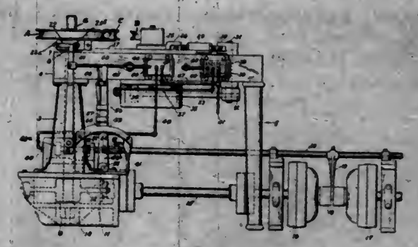
17. The method of recording a finger print which consists in causing the finger to be impressed upon the sheet, applying pigment to the impression, increasing the angle of the sheet to the horizontal to facilitate the sliding off of the surplus pigment particles and fixing the pigment to the sheet.

26. In a machine for recording finger impressions, the combination with means adapted to support a surface in position to receive a finger impression, of means adapted to apply pigment to the finger impression, means for heating the pigment to fix it to the finger lines on said surface, means for conveying the impressed surface from the point of impression to the point of pigment application and thence to the point of pigment fixation, and means for protecting the impressed surface from the point of impression to the point of fixation and means between the point of pigment application and the point of fixation for removing surplus pigment.



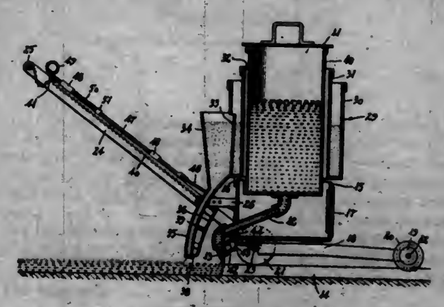
1,750,101. GAS-GENERATING CHEMICAL. BYRON C. GOSS, Cleveland, Ohio, assignor to The Lake Erie Chemical Company, a Corporation of Ohio. Filed Jan. 19, 1927. Serial No. 162,178. 15 Claims. (Cl. 167—47.)

6. Gas generating chemicals comprising as a solute, a dissolved chemical capable of developing a fuming, blinding or disabling gas, in a solvent having the property of forming an intermolecular mixture therewith, and thereby producing a resulting solution having a smaller volume than the sum of the separate volume of the components of said resulting solution.



1,750,102. DISCHARGE-TUBE SYSTEM. WALTER HAHNEMANN, Berlin-Marienfelde, Germany, assignor to C. Lorens Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed June 21, 1928, Serial No. 287,274, and in Germany June 24, 1927. 7 Claims. (Cl. 250—36.)

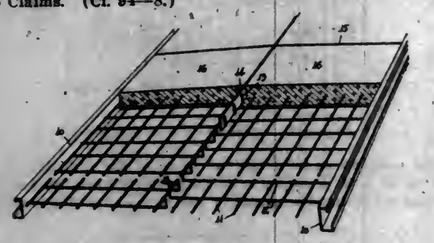
2. In an electric discharge device having main electrodes, means to produce an electric discharge stream between said electrodes, means acting on said discharge stream to produce a negative resistance effect between said main electrodes and means responsive to said first means



and adapted to influence the value of the negative resistance in such a way as to compensate variations of the negative resistance caused by variations of said first means.

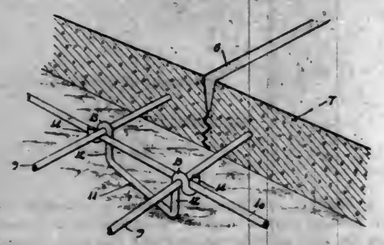
1,750,103. PEDESTAL BENDING MACHINE. HARRY E. HARVEY and EARL K. HOLMES, Cleveland, Ohio, assignors, by mesne assignments, to Steel and Tubes, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed May 13, 1926. Serial No. 108,885. 20 Claims. (Cl. 153—40.)

1. A bending machine comprising a rotatable bending roll, a holding member having a supporting roll associated therewith, said holding member and roll being movable toward and away from the bending roll in a direction radial of the latter, means for actuating the holding member toward the bending roll, means for automatically moving the holding member away from the bending roll when the last said means is in released position, and means including a starting lever for rotating, reversing and finally stopping the bending roll.



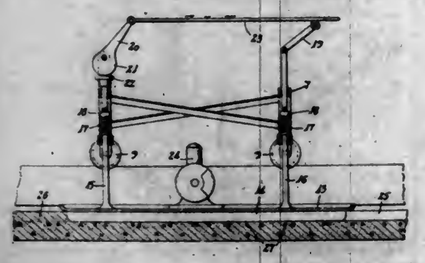
1,750,104. JOINT-FILLING MACHINE. JOHN N. HELTZEL, Warren, Ohio. Filed Nov. 19, 1926. Serial No. 149,441. 7 Claims. (Cl. 94—39.)

7. A machine of the character described comprising a container for one material having a discharge spout, an annular container for another material surrounding the first-named container, said annular container having an opening in the outer wall thereof, a funnel secured to said



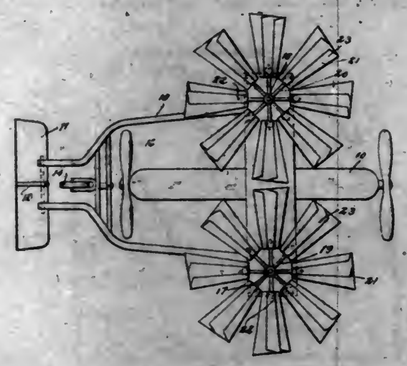
outer wall across said opening and communicating with said annular container through said opening, said funnel having a discharge spout in rear of the first-named spout, and means controlling the flow of materials through said spouts.

1,750,105. CONCRETE JOINT. JOHN N. HELTZEL, Warren, Ohio. Filed Nov. 19, 1926. Serial No. 149,443. 6 Claims. (Cl. 94—8.)



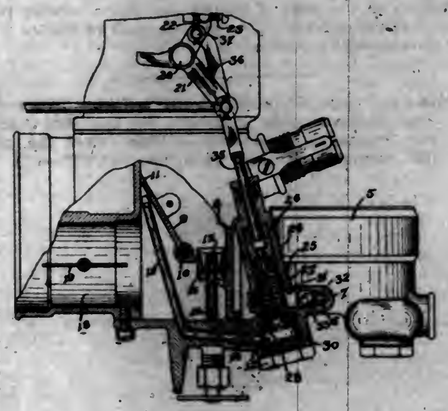
3. A concrete surfacing structure reinforcement, and a joint defining strip extending thereover, said reinforcement including rods having upturned terminals holding said strip in place.

1,750,106. REENFORCING-ROD CHAIR. JOHN N. HELTZEL, Warren, Ohio. Filed May 7, 1927. Serial No. 189,544. 19 Claims. (Cl. 94—8.)



14. The combination with spaced reenforcing rods and a third reenforcing rod crossing same, of a chair having a base to seat on a surface, and spaced pedestals rising from and connected by said base, said pedestals being bent in planes at angles to one another to engage said spaced and third rods.

1,750,107. JOINT-PRODUCING MACHINE. JOHN N. HELTZEL, Warren, Ohio. Filed Apr. 26, 1929. Serial No. 358,330. 14 Claims. (Cl. 94—39.)

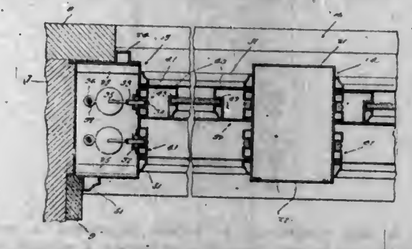


3. A joint machine comprising a carriage movable longitudinally over plastic concrete and having a longitudinal rail extending parallel to the direction of movement of the carriage, and joint producing means movable along said rail.

1,750,108. HELICOPTER AEROPLANE WITH A PLURALITY OF PROPELLERS. JAKOB HOJNOWSKI, Nekoosa, Wis. Filed May 6, 1929. Serial No. 360,850. 2 Claims. (Cl. 244—19.)

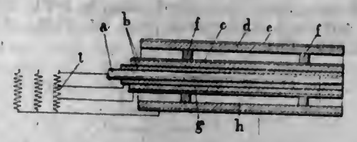
1. In an aeroplane of the helicopter type including a fuselage, a pair of motor driven vertical shafts laterally disposed to the fuselage, a pair of wind-mill wings on two of said shafts, each of said wings composed of a spider secured to its shaft, and wing-body secured to the ends of the spider branches, clamps for securing said wing body to said branches, and a plurality of planes angularly disposed to said wing body.

1,750,109. THROTTLE-PUMP CARBURETOR. CHARLES H. KIRBY, Flint, Mich., assignor to "Marvel Carbureter Company," Flint, Mich., a Corporation of Indiana. Filed July 3, 1924. Serial No. 724,280. 8 Claims. (Cl. 261—41.)



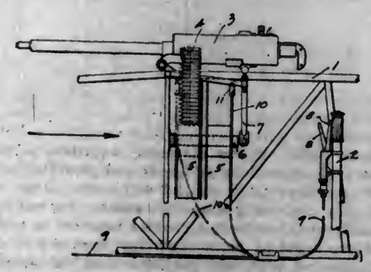
1. In a carburetor including a throttle and a float chamber, a fuel pump operatively connected to the throttle and drawing fuel from the float chamber, and a lost motion in said operating connection to the throttle whereby the pump is not brought into action until after a predetermined movement of the throttle.

1,750,110. WINDOW CONSTRUCTION. ALFRED H. KLIM, EDWIN JOHNSON, ARTHUR NELSON, ALLEN O. BELIN, and ANDREW L. LUNDSTEN, Jamestown, N. Y. Filed Dec. 4, 1926. Serial No. 323,684. 2 Claims. (Cl. 189—72.)



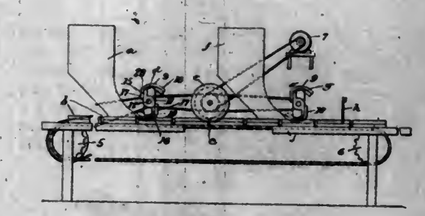
1. In a window construction of the class described, an all metal window frame comprising a sill plate adapted

for horizontal disposition, a pair of vertically disposed stiles disposed at the opposite ends of and rising from said plate, a mullion post rising from the center of the plate, a head jamb bridging and connected to said stiles and mullion post, vertically disposed rib equipped guides



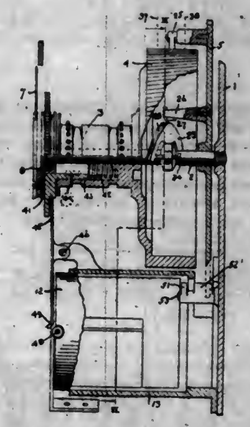
fastened to said stiles and post, and vertically slidable window sashes including vertical side members slidably contacting said guides, said side members comprising spaced opposed side walls having a single connecting wall at one end only thereof adapted to support a pane of glass, the free ends of said side walls embracing the guides.

1,750,111. HIGH-TENSION CABLE. PAUL MAHLKE, Cologne-Nippes, Germany, assignor to Felten & Guilleaume Carlswork Actien-Gesellschaft, Cologne, Mulheim, Germany. Filed Mar. 18, 1929, Serial No. 348,089, and in Germany Mar. 22, 1928. 4 Claims. (Cl. 173—264.)



3. An underground conductor for very high voltages, comprising in combination a cable consisting of a conductor, layered insulation on the conductor, a metal sheath on the said layered insulation, a pipe surrounding the said cable, distance pieces between the metal sheath of the cable and the pipe for holding the cable centrally in the said pipe and an elastic medium for filling the space between the metal sheath of the cable and the pipe, as and for the purpose set forth.

1,750,112. GUN-FEEDING MECHANISM. LOUIS S. MARSH, Seattle, Wash., assignor to Boeing Airplane Company, Seattle, Wash. Filed Mar. 26, 1928. Serial No. 264,722. 4 Claims. (Cl. 89—33.)

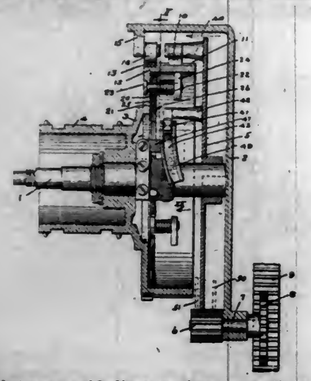


1. In apparatus of the class described, the combination of a cartridge reel, cartridges adapted to be drawn therefrom in belt-like formation, means operable simultaneously with the trigger of a machine gun for intermittently arresting the feeding action of said cartridge reel, said arresting occurring immediately after the firing of the gun.

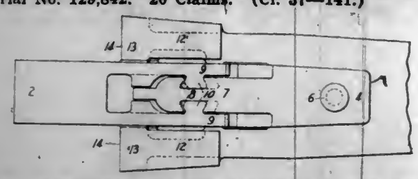
1,750,113. METHOD FOR FORMING SLABS. GEORGE C. MARTIN, Los Angeles, Calif. Filed Mar. 6, 1928. Serial No. 259,473. 5 Claims. (Cl. 25—155.)

1. The method of forming waterproof concrete tile which consists in first forming the concrete tile to shape, and while it is still wet packing thereon a waterproof substance to draw a thin layer of cement from the concrete to the surface of said waterproof material.

1,750,114. VARIABLE-SPEED MECHANISM. ARTHUR R. MASON and OTTO C. FAILING, Medford, Oreg., assignors to Accurate Gasoline Recording Company, a Corporation of Oregon. Filed June 27, 1928. Serial No. 288,710. 4 Claims. (Cl. 74—54.)



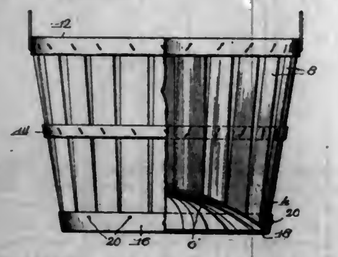
1. In speed variable mechanism, a driving element and a driven element, a track member adjustably fixed in a stationary position adjacent to one of said elements, means engaging and adapted to travel under the guidance of said track and fixed to the other of said elements, ratchet skew teeth on one of said elements and pawl means on the other of said elements, whereby when the track member is adjustably displaced then the travel of said first means compels a predetermined relative displacement between the elements.



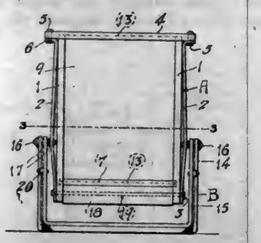
1,750,115. POSITIVE-POSITION TIMING CLUTCH. ARTHUR R. MASON, Medford, Oreg. Filed Nov. 24, 1928. Serial No. 321,652. 8 Claims. (Cl. 285—91.)

3. A positive position mechanism comprising a circular element having ratchet teeth, a stationary shaft about

which said element is adapted to be driven intermittently in one direction, a pair of discs within said element, a friction plate between said discs, spring connections between said plate and said shaft, other springs means compressing said discs against said plate.



1,750,116. TEETH FOR EXCAVATING DIPPERS AND THE LIKE. WALTER EDWARD MILEY, Marion, Ohio, assignor to The Marion Steam Shovel Company, Marion, Ohio, a Corporation of Ohio. Filed Aug. 17, 1926. Serial No. 129,842. 20 Claims. (Cl. 37—141.)



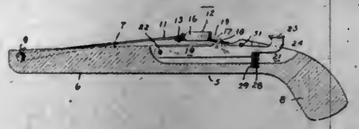
20. In an excavating dipper, a plurality of teeth secured to the front of said dipper and spaced one from the other, each of said teeth having a part extending laterally from each side thereof, upwardly and rearwardly inclined supplemental cutters carried by said laterally extending parts between adjacent teeth and having their forward edges adjacent to the lower surfaces of said teeth.

1,750,117. BASKET. GEORGE OTIS RESHAW, Los Angeles, Calif. Filed Apr. 18, 1927. Serial No. 184,521. 2 Claims. (Cl. 217—123.)

2. A tub basket comprising a plurality of staves each having a central portion extending across the bottom of the basket and end portions bent upwardly at an abrupt angle to the central portion to form the sides of the basket, a plurality of hoops holding the staves in substantially cylindrical form and one of said hoops being of substantially L-shape in cross section and covering the bottom corner of the basket, the said central portions of the staves being longer than the diameter of the basket bottom and held in upwardly bowed form by engagement of the ends thereof in the corner of the aforesaid L-shaped hoop.

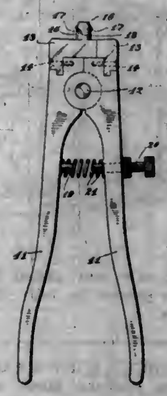
1,750,118. SIGN. CHARLES C. MUELLER, Jr., and DANIEL C. WENDEL, Newark, N. J. Filed Apr. 2, 1928. Serial No. 266,498. 4 Claims. (Cl. 40—138.)

2. A sign comprising a vertical sign-board, a metal strap secured to each vertical side thereof, a support, and pivotal means connected to said straps and said support for pivotally mounting said sign-board upon said support, the lower ends of said straps extending beyond the lower end of said board, and a counter-weight mounted between said ends of said straps to yieldingly hold said board in a vertical plane.



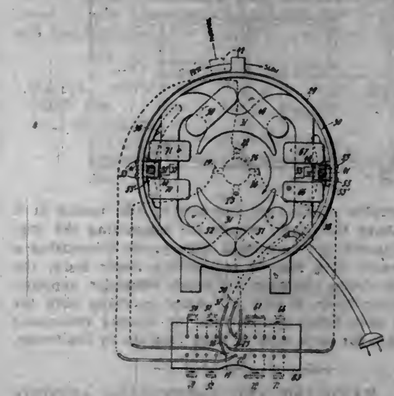
4. A sign-board comprising a frame having its sides formed with undercut grooves, and a sign panel comprising two superposed metal plates having their edges bent in opposite directions at angles to the planes of said plates and fitted into said grooves.

1,750,119. PROTECTIVE HOLDER. PAUL MÜLLER, Solingen, Germany. Filed Aug. 8, 1927, Serial No. 211,594, and in Germany Mar. 26, 1927. 2 Claims. (Cl. 206—16.)



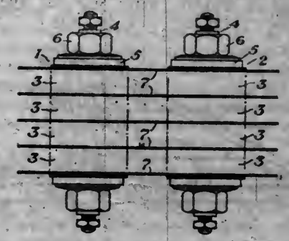
1. An assembly comprising a hollow ground single edged razor blade having a thick back, and a holder consisting of a U-shaped clamp the limbs of which are provided with edges on their opposing sides bearing against opposing sides of the blade, spacing the free ends of the said limbs apart and clamping the blade in place, said limbs being of greater width than the razor blade so that their free edges extend beyond the cutting edge of the blade and said limbs having notches in their ends exposing the ends of the blade and facilitating gripping of the blade.

1,750,120. SERPENTINE PROJECTOR. ARTHUR H. NUNEMACHER, San Francisco, Calif. Filed Apr. 27, 1927. Serial No. 186,865. 2 Claims. (Cl. 124—14.)



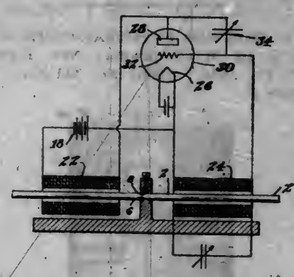
1. In a device of the character described, a body, a member projectible along said body and providing a socket for the reception of a roll of serpentine paper, means operative to resiliently urge said member outwardly of a retracted position thereof, a member mounted in said body and having a detent tooth extending upwardly therefrom for engagement with said projectile member to hold the same in retracted position, means operative to resiliently urge said last detent tooth to remain disposed for engagement with said projectile member, and means extending upwardly from said second named member whereby it may be displaced downwardly to release said tooth from engagement with said projectile member.

1,750,121. TOOL. LEON OTTINGER, New York, N. Y. Original application filed Mar. 4, 1927, Serial No. 172,905. Divided and this application filed Aug. 19, 1927. Serial No. 214,015. 1 Claim. (Cl. 81—5.1.)



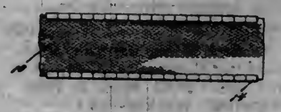
A tool comprising a pair of intermediately pivoted levers having expandingly coacting, concave, beveled cutting jaws adapted to slit and interlockingly attach a bushing to an apertured plate.

1,750,122. ELECTRIC MOTOR. ALFRED E. OSWALD, Hackensack, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 12, 1925. Serial No. 55,943. 10 Claims. (Cl. 172—276.)



10. An electric motor for use on direct current and alternating currents of different frequencies, having an armature, a bipolar field-magnet having diametrically opposite pole-members joined by yokes to form an annular magnet, main field-coils on each yoke adjacent said pole-members, auxiliary field-coils on each yoke disposed between the main field-coils, a commutator, a pair of main brushes at diametrically opposite sides of said commutator, a pair of auxiliary brushes also at diametrically opposite sides of said commutator between the main brushes, electrical connections whereby said brushes and coils are brought into a predetermined co-operative relation for operating said motor at a certain speed and power on a certain kind of current, said auxiliary brushes, in said relation, co-operating to supply current induced or flowing in said armature to a certain portion of said field-coils, and means for shifting the field-magnet position relative to all of said brushes to thereby vary the electromotive force of the main and auxiliary brushes to vary the speed and power of the motor afforded by the aforesaid predetermined cooperative relation of the brushes and coils.

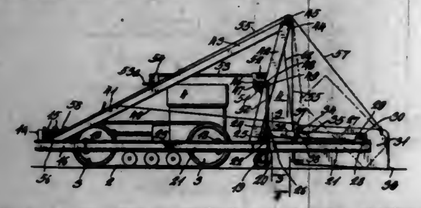
1,750,123. APPARATUS FOR RECTIFYING ALTERNATING ELECTRIC CURRENTS. LESLIE HURST PETER, London, England, assignor, by mesne assignments, to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 15, 1928, Serial No. 319,525, and in Great Britain Dec. 19, 1927. 1 Claim. (Cl. 175—366.)



Apparatus for rectifying alternating electric currents comprising a number of rectifying elements arranged in two groups, and a plurality of conducting plates each electrically connecting an element in one group with the corresponding element in the other group, said plates serving also to dissipate the heat generated in the apparatus.

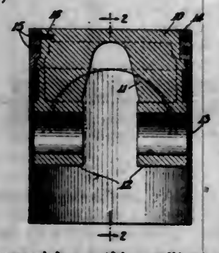
1,750,124. VIBRATORY SYSTEM AND METHOD. GEORGE W. PIERCE, Cambridge, Mass. Filed Jan. 3, 1927. Serial No. 158,452. 19 Claims. (Cl. 250—36.)

1. A magnetostrictive mechanically-tuned alternating-current system comprising a magnetostrictive vibrator with windings magnetically cooperative with said vibrator, a vacuum tube having plate, grid and filament, a part of said windings being in the plate-filament circuit and a part of said windings in the grid-filament circuit to produce sustained vibrations, a natural frequency of mechanical vibration of the vibrator being substantially equal to a predetermined frequency of the alternating current of the system.



1,750,125. BRACELET STRAP. EUGEN PRESTINARI, Irvington, N. J., assignor to Gemex Company, Newark, N. J., a Corporation of New Jersey. Filed Mar. 14, 1929. Serial No. 346,971. 2 Claims. (Cl. 63—11.)

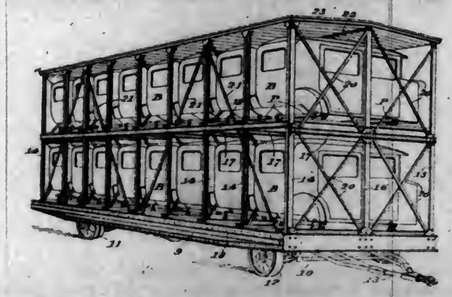
1. A bracelet strap comprising a body formed of intermeshing strands of wire, cross bars on the back of



said body extending laterally thereof with their extremities in close adjacency and folded over the edges of the body to form a border for the front of the strap, the portion of said bars intermediate the extremities being narrow to permit of flexibility, and projections on said cross bars and also intermediate their peripherial edges and adjacent the side edges of said body to extend into said body and prevent sliding and detachment of said bars from said body.

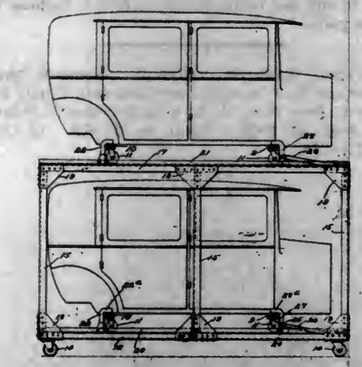
1,750,126. POWER-OPERATED SCRAPER. HAROLD M. PURSEL, Casper, Wyo., assignor to Sharrock and Pursel, Casper, Wyo., a Copartnership of W. G. Sharrock and Harold M. Pursel. Filed Mar. 30, 1929. Serial No. 351,138. 7 Claims. (Cl. 37—128.)

1. A power grader employing a tractor, horizontal beams secured to the sides of the tractor and projecting beyond the front end thereof, a scraper located between the front ends of the beams, a pair of links having their rear ends pivotally connected with the beams and their front ends pivotally connected with the sides of the scraper near the front of the latter, means for tilting the links and scraper about the former's pivotal connection with the beams without tilting the scraper relative to the links and means for tilting the scraper relative to the links while the latter remain stationary relative to the beams.



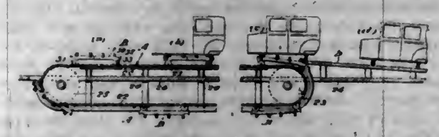
1,750,127. PISTON FOR INTERNAL-COMBUSTION ENGINES. HUGH M. ROCKWELL, New Haven, Conn. Filed Oct. 12, 1926. Serial No. 141,045. 2 Claims. (Cl. 74—108.)

1. A piston comprising a thin resilient cylindrical skirt having a collar at one end of less internal diameter than the remainder, said collar having a threaded recess, a head contained completely within said skirt, said head having a portion closing the end of said skirt and a threaded portion of larger diameter engaging said threaded recess, piston ring grooves in said collar, a pin extending through said collar and into said head to prevent relative rotation, said pin being held in place by a piston ring, and wrist pin bosses carried by said head, said skirt having a continuous lateral surface extending beyond said bosses.



1,750,128. TRAILER FOR AUTOMOBILE BODIES. ROBERT T. ROMINE, Mount Clemens, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 3, 1926. Serial No. 133,375. 8 Claims. (Cl. 214—38.)

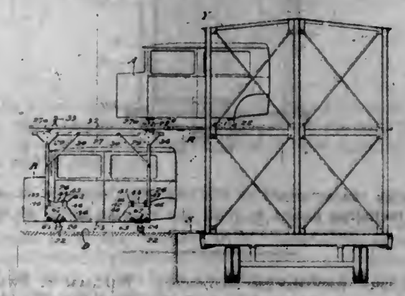
1. A portable conveyance for transporting a series of automobile bodies, each body carried on front and rear bars having supporting rollers, said conveyance having fixed locking members engaging one of the bars and shiftable locking members engaging the other bar, and



means for shifting said last named locking members beneath the bars to permit the body to be moved onto or off the conveyance.

1,750,129. AUTOMOBILE BODY HANDLING. ROBERT T. ROMINE, Mount Clemens, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 12, 1926, Serial No. 141,133. Renewed July 25, 1929. 4 Claims. (Cl. 280—1.)

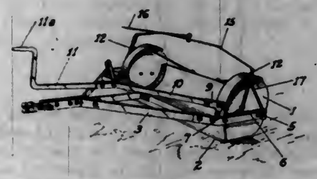
1. A portable conveyance for moving two bodies at a time one above the other, wheels for supporting the conveyance adjacent the floor, said conveyance comprising a skeleton frame of a size to enclose the lower body, the top of said frame forming an upper deck for supporting the upper body, a pair of caster carrying bars for supporting each body, and devices for locking the caster carrying bars for each body in fixed relation to the frame.



1,750,130. HANDLING AND ASSEMBLING AUTOMOBILE BODIES. ROBERT T. ROMINE, Mount Clemens, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 27, 1926. Serial No. 144,494. 16 Claims. (Cl. 29—89.)

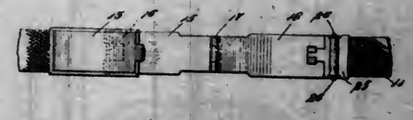
1. The hereindescribed method of handling and assembling automobile bodies, consisting in progressively assembling the frame members of the bodies along an assembly line, detachably connecting caster bars to the bottom of the bodies at predetermined points along the

assembly line, moving the bodies from the assembly line to a trim assembly line on their casters, and progressively trimming the bodies during their movement on the casters along the trim assembly line.



1,750,131. AUTOMOBILE BODY HANDLING. ROBERT T. ROMINE, Mount Clemens, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 2, 1927. Serial No. 165,880. 17 Claims. (Cl. 280—29.)

1. A portable apparatus for carrying automobile bodies in double deck relation, comprising a frame, means for supporting the upper body on said frame, independent caster carrying bars for supporting the lower body, and means for connecting said frame to said bars.

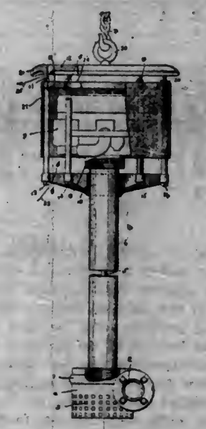


12. In combination with a rack for handling automobile bodies in double-deck relation and caster supports for supporting each body, of means carried by the rack for detachably connecting said rack to the caster supports for the lower body to support the rack thereupon, and locking means for said first mentioned means.

1,750,132. SCRAPER. BRUCE E. ROSS, Exeter, Calif. Filed Feb. 9, 1929. Serial No. 338,809. 5 Claims. (Cl. 37—140.)

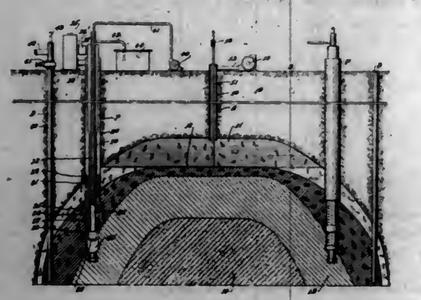
1. A scraper comprising a bowl having side trunnions, longitudinally extending draft beams having longitudinal slots through which the trunnions slidably project, arms pivoted at their forward ends onto the beams ahead of the trunnions, bars pivoted at their forward ends on the rear ends of the arms and at their rear ends on the trunnions; said trunnions, when the arms and bars are in straight alinement with each other being disposed toward the rear ends of the slots, means maintaining the bowl normally rigid with the bars and in such relation thereto that the bowl has an upward bottom slope from back to front when the bars are disposed in said straight alinement with the arms, and means for turning said arms downwardly about the pivots to cause the bars to be lowered at their forward ends and the bowl to be likewise lowered at its forward end so that the bottom slope of the bowl is reversed.

1,750,133. CLASP FOR FOLDABLE EXTENSION DEVICES. WILFRID J. ROY, Newark, N. J., assignor to Gemex Company, Newark, N. J., a Corporation of New Jersey. Filed Feb. 21, 1929. Serial No. 341,660. 9 Claims. (Cl. 24—71.)



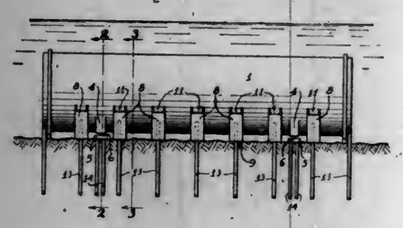
1. An extension device including a plurality of sections hinged together to fold one on another, means on said sections for securing strap ends thereto, a separate resilient latch member, means for so holding said member on one section that it can be lifted from position after one of the strap ends has been removed therefrom, another section having catch means engageable with said latch member to hold the sections in folded position.

1,750,134. LUBRICANT. EDWARD A. RUDIGER, Baltimore, Md., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Apr. 23, 1924. Serial No. 708,384. 3 Claims. (Cl. 87—9.)



2. A lubricant comprising a heavy oil containing sodium naphthenate compounded with a mineral thinning oil having a viscosity within the approximate range of 65 to 200 sec. Saybolt at 100° F., the product having a viscosity of 135–140 sec. Saybolt at 212° F. and a pour test not higher than 37° F.

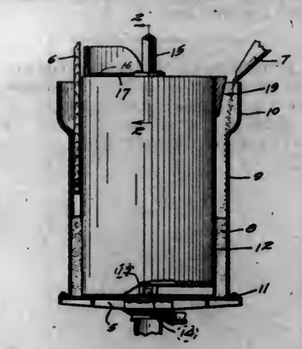
1,750,135. PUMP. GEORGE T. RUXTON, Alameda, Calif., assignor to Pacific Pumping Co., San Francisco, Calif., a Corporation of California. Filed July 28, 1928. Serial No. 294,676. 1 Claim. (Cl. 103—87.)



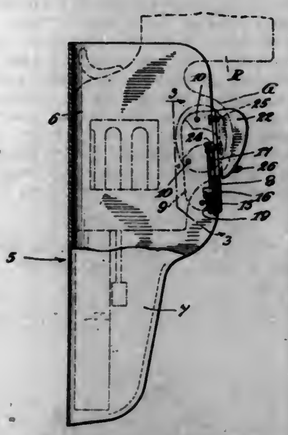
A vertical shaft centrifugal pump comprising motor means having a rotor and a stationary frame, an impeller, and a casing for the impeller, a hollow column fixed at each end by circular machined joints to said frame and to said casing, and having a concentric circular exterior portion, a shaft central within said column and having the rotor fixed on one end and the impeller on the other end thereof, a spider having a machined joint with said column portion, a ventilating ring over said motor means, a cover over said ring and a plurality of spacing members connecting said spider said ring and said cover in spaced relation and positioned concentric with said column.

1,750,136. SULPHUR MINING. JAMES E. SCHROEDER, Houston, Tex. Filed Mar. 9, 1922. Serial No. 542,223. 1 Claim. (Cl. 262—3.)

Apparatus for mining sulphur from underground deposits having, in combination, a producing well for introducing a heating medium into the deposit to effect the melting of the sulphur content and for removing the sulphur so melted, an air well extending down to the highest point of the sulphur-deposit for conducting air to form a heat-insulating layer immediately above the deposit, means connected to said air well for highly compressing the air and forcing it down the well and a theft pipe disposed within said air well for determining the depth of the air layer above the deposit.



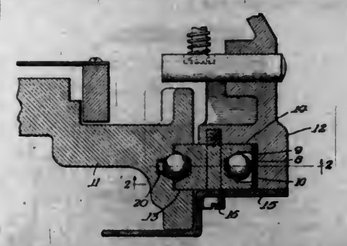
1,750,137. METHOD OF AND APPARATUS FOR SETTING PRECAST FORMS IN AQUEOUS BODIES. FRANCIS BETTS SMITH, San Francisco, Calif. Filed Oct. 27, 1928. Serial No. 315,417. 8 Claims. (Cl. 61—43.)



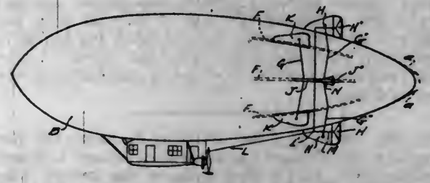
1. The method of setting submersible structures containing buoyancy means and carrying spaced hollow foundation forms in aqueous bodies which consists in preparing the bottom of the aqueous body by driving piles thereinto, arranged in groups, with the ends of the piles projecting above the bottom of the aqueous body, the groups being spaced corresponding to the distance between the hollow foundation forms, operating the buoyancy means to cause the gradual submergence of the structure to its desired position with each hollow foundation form receiving through its bottom the projecting ends of one of the groups of piles, then filling the foundation forms with concrete to form therein foundations in which the projecting ends of said piles are embedded.

1,750,138. BELL-PIPE MOLD. CLAUDE S. SORENSEN, Los Angeles, Calif. Filed Mar. 5, 1928. Serial No. 259,068. 8 Claims. (Cl. 25—37.)

1. A mold for forming bell end cementitious pipes and tamping of the same comprising a main core normally stationary, a jacket rotatable with relation to said main core, a bell core ring on said main core having a longitudinally extending passage aligned with the body space between said jacket and core for accommodating a tamping stick characterized by the ring being turnable on said core including means to limit the angular travel of said ring.



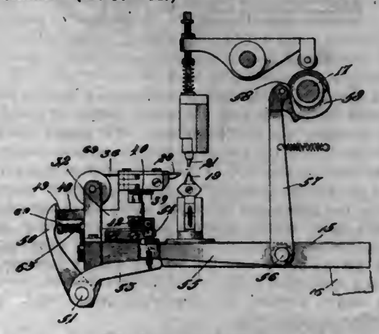
1,750,139. REVOLVER HOLSTER. WILLIAM S. SWIFT, Westerleigh, Staten Island, N. Y. Filed Feb. 15, 1928. Serial No. 254,351. 5 Claims. (Cl. 224—2.)



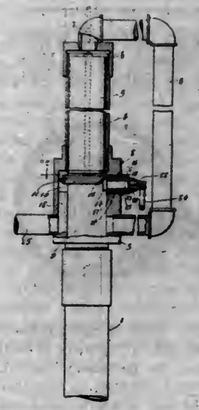
1. A revolver holster having an upper section open at its rear side, a plate fixed to the side walls of said holster section and bridging the rear open side thereof, said plate having a vertical recess open at its upper end to receive the trigger guard of the revolver and provided at its lower end with a seat for said guard, a latch lever pivotally mounted upon said bridge plate below said seat, said lever having a hook on one end, a spring connected with said lever to hold the same against pivotal movement and retain the hook thereof over the trigger guard, and an actuating member mounted on the bridge plate for movement in a plane parallel to the plane of movement of the latch, said member having means slidably engaged with the latch lever to move the latter to its released position.

1,750,140. ANTIFRICTION BEARING. HERBERT L. THOMPSON, Elgin, Ill., assignor to Addressograph Company, Chicago, Ill., a Corporation of Delaware. Filed Dec. 31, 1927. Serial No. 243,868. 5 Claims. (Cl. 308—6.)

5. The combination of a rigid member having a guide groove therein and a movable member having a recess therein, the inner wall of said recess being inclined longitudinally and relatively to the back wall of said groove, and a wedge shaped bearing secured in said recess and operating in said groove, said groove comprising a body having a ball race thereabout, a plurality of balls in the race, and a retainer for holding the balls in the outer part and the ends of the race, the remaining balls engaging the back wall of said groove.

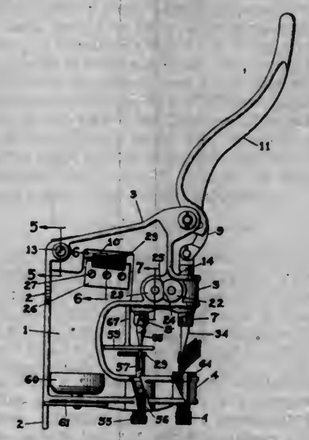


1,750,141. AIRSHIP FINS AND STABILIZATION. RALPH H. UPSON, Detroit, Mich., assignor to Aircraft Development Corporation, Detroit, Mich., a Corporation of Michigan. Filed Sept. 10, 1926. Serial No. 134,590. 6 Claims. (Cl. 244—3.)



6. In an airship, a fin system including a plurality of individual fin areas, extending longitudinally generally on meridian lines of hull radially from the hull surface, and having one or more of the individual fins positioned in advance of the other individual fin with respect to the ship's length.

1,750,142. LINK-WELDING MACHINE. HERMANN WEINACKER, Maplewood, N. J., assignor to Universal Chain Co. Inc., Maplewood, N. J., a Corporation of Rhode Island. Filed Aug. 6, 1927. Serial No. 211,179. 11 Claims. (Cl. 59—31.)

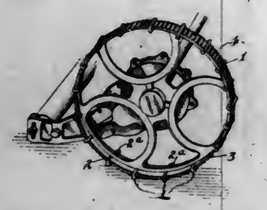


1. In a chain or link-forming machine, means for feeding, severing, and bending a length of link wire into open link form, a solder strip carrier, means for imparting a bodily longitudinal movement to the carrier, means for simultaneously advancing the solder strip in the carrier relative to and during the forward movement of the carrier to its operating position, and means for subsequently closing the loop upon the solder.

1,750,143. CEMENTING HEAD. NEWTON W. WICKERSHAM, Los Angeles, Calif., assignor to Perkins Cementing, Inc., Los Angeles, Calif., a Corporation of California. Filed Sept. 18, 1928. Serial No. 306,666. 5 Claims. (Cl. 166—1.)

1. A casing head having means for receiving a cementing plug and having a chamber below said means, with a latch in said chamber pivotally mounted on one side of the chamber for supporting the plug, and means for operating said latch to permit the same to move away from the plug to permit the same to descend.

1,750,144. BRAKE-LINING MACHINE. ANDREW O. WISTI, Indianapolis, Ind. Filed Apr. 12, 1928. Serial No. 269,467. 8 Claims. (Cl. 29—34.)

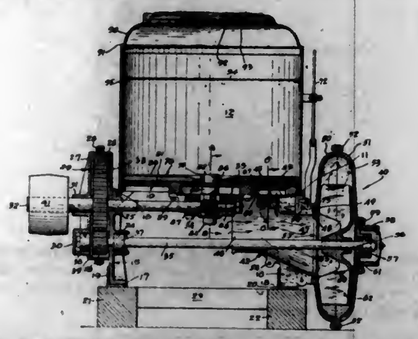


1. In a machine for relining brake shoes and the like, a frame structure; a pair of plungers; tools attached to said plungers; a lever mechanism for operating one of said plungers, and a pair of intermeshing gears for operating the other plunger simultaneously with the lever operated plunger.

8. The combination with a machine for relining brake bands and the like, of a cutting blade pivoted at one end to said machine; a support for said cutting blade formed to straddle the pivoted portion of said blade with dually arranged bosses; a screw means threaded thru one of said bosses and having a reduced end portion extending into

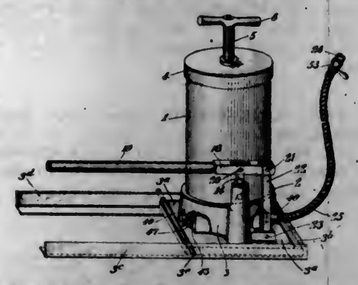
the other boss; a shoulder formed on said screw end portion at the juncture of the reduced end portion; a sleeve threaded into said other boss, and fitting over the end portion of said screw; and a screw threaded into the reduced end of said screw, the head of which embraces said sleeve.

1,750,145. CLEATED GROUND WHEEL. CHARLES C. WORTHINGTON, Dunfield, N. J. Filed Jan. 25, 1926. Serial No. 83,585. 3 Claims. (Cl. 301—44.)



2. In combination with a lawn-mower ground wheel having a corrugated rim, a plurality of individual traction cleats spaced around the periphery thereof and each comprising a body portion adapted to cooperate with the rim corrugations and having inwardly displaced end portions integral therewith and adapted to hold the cleat loosely on the rim to permit local movement of the cleat relatively to the rim, limited by said corrugations.

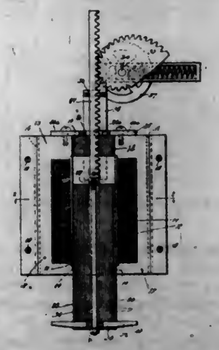
1,750,146. FLUID-OPERATED PUMP. JAMES A. WRAY, Los Angeles, Calif. Filed Dec. 28, 1926. Serial No. 157,456. 10 Claims. (Cl. 121—129.)



1. In combination with a well casing, a fluid motor for a pump comprising a shell mounted within said casing and spaced therefrom to form an annular motive fluid inlet space, a motor cylinder disposed within said shell and spaced therefrom to form therewith an annular motive fluid exhaust space, there being intake ports in said shell and said cylinder disposed in registration, there being exhaust ports in said cylinder, valves slidably mounted in said exhaust space for controlling said intake ports, said valves having intake ports for registration with the intake ports in said shell and cylinder and exhaust ports in said valve having peripheral communication with said exhaust space, a reciprocable operating rod within said cylinder, motor pistons secured to said operating rod for reciprocation in said cylinder, said valves being slidably mounted on said operating rod, and tappet means on said rod to engage and move said valves.

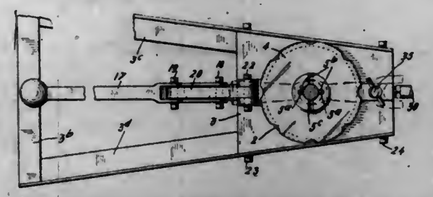
1,750,147. PLANT-DUSTING MACHINE. JACOB H. WRIGHT, Oakland, Calif., assignor to Western Sulphur Company, Inc., San Francisco, Calif., a Corporation of California. Filed June 6, 1927. Serial No. 196,707. 3 Claims. (Cl. 43—148.)

1. In a plant-dusting machine; a hopper having a plane bottom; a rotary agitator in said hopper and having its blades arranged to form substantially a scraping contact with the hopper bottom; a manifold mounted below said hopper, said manifold having an open air intake end, an outlet end, and a feed opening communicating with said hopper; means operative between said hopper and feed opening for regulating the flow of material from said hopper; a blower carried by said manifold and having its suction side connected to the outlet end thereof; a drive shaft; and gear means for driving said agitator and blower from said shaft.



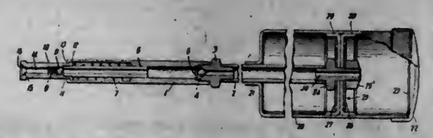
1,750,148. GREASE GUN. CHARLES L. ZABRISKIE, New York, N. Y., assignor, by mesne assignments, to Rogers Products Co., Inc., a Corporation of New Jersey. Filed Aug. 6, 1925. Serial No. 48,472. 10 Claims. (Cl. 221—47.1.)

1. A grease gun, including a relatively large cylinder and piston adapted to hold a reservoir supply of grease and screw-operated means for forcing the piston to expel service charges of the grease through a suitable outlet conduit, in combination with a powerful small-capacity pump having a cylinder and piston receiving grease from the outlet of the grease gun through a check valve and adapted to expel small service charges at pressures much higher than the reservoir pressure, and means for releasing the high pressure applied to the service charge comprising a manually controlled relief valve independent of the pump piston and a conduit for by-passing grease back to the reservoir.



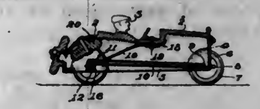
1,750,149. REACTANCE COIL. FRANK J. ZAMBONI, Haynes, Calif., assignor to Nuway Electric Company, Los Angeles, Calif., a Corporation of Delaware. Filed May 22, 1928. Serial No. 279,663. 18 Claims. (Cl. 171—242.)

1. An adjustable reactance coil, comprising a coil winding substantially cylindric in form, a magnetic sheathing surrounding the cylindric outer surface of the coil and extending over its ends, a magnetic core movable lengthwise within the coil, magnetic gap closing plates one



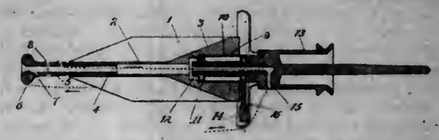
mounted on the end of the exterior sheathing and with which one end of the core is adapted to contact, and the other mounted on the other end of the core and adapted to contact with the other end of the magnetic sheathing.

1,750,150. HIGH-POWER GREASE GUN. HERMAN ALBERTINE, East Rutherford, N. J., assignor, by mesne assignments, to Rogers Products Co. Inc., a Corporation of New Jersey. Filed May 12, 1927. Serial No. 190,726. 9 Claims. (Cl. 221—47.1.)



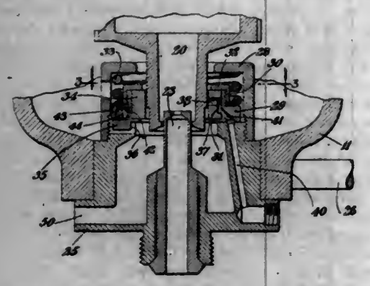
4. A grease pump, including a vertical grease container, an outlet at the lower end thereof, a horizontal pump cylinder in communication with said outlet, a plunger in said cylinder, an outlet of reduced cross-section for said cylinder, and power multiplying means for actuating said plunger including a bent lever and a fulcrum link pivotally connected to each other, to said plunger and to a point above and adjacent the rear end of the pump cylinder, the link being substantially longer than the weight arm of the lever and the whole being proportioned and arranged so that at the end of expulsion stroke of the piston, the handle will be substantially horizontal and there will be a substantially toggle effect on the plunger.

1,750,151. GREASE GUN. HERMAN ALBERTINE, East Rutherford, N. J., assignor, by mesne assignments, to Rogers Products Co. Inc., a Corporation of New Jersey. Filed May 12, 1927. Serial No. 190,727. 2 Claims. (Cl. 221—47.4.)



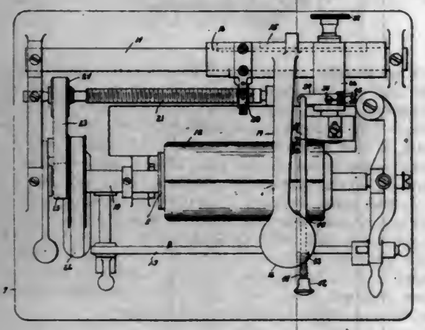
1. A grease gun including a cylindrical grease reservoir having at one end a head formed with a central axial slide bearing and at the other with a detachable closure permitting replenishment of the grease, a piston slidable in said reservoir and providing grease space between the same and the detachable closure, said piston having oppositely directed cup washers, one to prevent outleak of grease under pressure in one direction and the other to prevent inleak of air or dirt upon traction in the opposite direction; a hollow piston rod extending through said piston to said grease space, projecting through said central axial bearing in the head of the reservoir and providing an outlet for the grease from the reservoir, and an outlet non-return valve for said hollow piston, in combination with a high pressure pump secured to and coaxial with said hollow piston rod at the outlet end thereof, said pump including a tubular member having a bore of two diameters, connected by an annular shoulder, the smaller bore constituting a pump cylinder forming an extension in alignment with and receiving grease from said hollow piston rod and the larger bore being located beyond said pump bore to afford a guide surface; the piston of the pump consisting of a tube slidably fitting said smaller bore and provided with a guide fitting said larger bore; and a spring, housed in the annular space between said larger bore and the tubular piston, anchored at one end on the annular shoulder between the smaller bore and the larger bore and at the other end on said piston and substantially fitting the exterior thereof.

1,750,152. ELASTIC-PROPELLED TOY VEHICLE. MAURICE ALLAND, Atlantic City, N. J. Filed Nov. 30, 1928. Serial No. 322,805. 1 Claim. (Cl. 46—47.)



A toy vehicle, comprising a hollow shell comprising top, side, and end walls and open at the bottom, a driving shaft journalled through said side walls, a weight secured to said vehicle substantially above said shaft, wheels fixed to said shaft, a hook carried by the central portion of said shaft and directly in parallelism therewith, a lug carried by said shell, an elastic extending between said lug and said hook, a toothed collar secured to said shaft between said hook and one of said journals, and a resilient member secured at one end to said vehicle and having its free end in engagement with the teeth of said collar to create a vibratory sound as the shaft rotates under the impulse of said elastic when released after previous rotation of said shaft has caused said elastic to be wound thereupon.

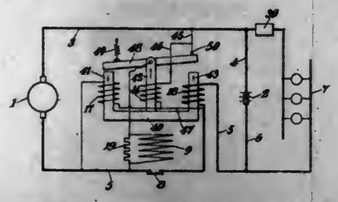
1,750,153. MACHINE FOR SPINNING, DOUBLING, TWISTING, AND THE LIKE YARNS, FIBERS, AND THE LIKE. THOMAS EDWIN ANDREW and MELON LANGSTRETH, Rochdale, England, assignors to Dunlop Cotton Mills Limited, London, England, a Corporation of Great Britain. Filed Nov. 18, 1927, Serial No. 234,232, and in Great Britain Nov. 22, 1926. 2 Claims. (Cl. 117—28.)



1. An apparatus of the type described which comprises a rotating drive spindle and a non-rotating bobbin removably mounted on the free end of said spindle, said spindle and bobbin having a central yarn passage therethrough and a tubular member removably mounted on the free end of said bobbin and said tubular member having openings through which said yarn may be threaded to create tension as it is drawn therethrough.

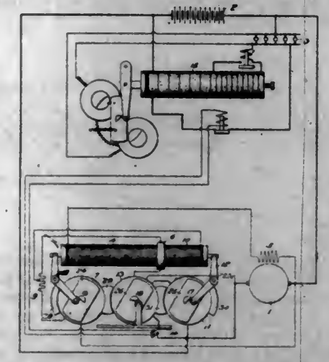
1,750,154. CENTRIFUGAL MACHINE. WILMER H. BATH, West Conshohocken, Pa., assignor to The Sharples Specialty Company, Philadelphia, Pa., a Corporation of Delaware. Filed Dec. 5, 1928. Serial No. 323,881. 13 Claims. (Cl. 233—47.)

1. In a centrifugal machine, a rotor, a member mounted for movement and adapted to be moved by the rotor during the oscillations and gyrations thereof, means for frictionally resisting the movement of said member, and means for cushioning the movement of said member.



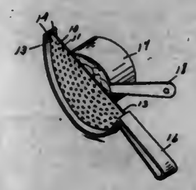
1,750,155. ART OF RESURFACING RECORDS. HURLBUT P. BUSBA, Schenectady, N. Y., assignor to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed Mar. 16, 1927. Serial No. 175,849. 21 Claims. (Cl. 82—1.1.)

1. In a record shaving machine, the combination of a record-support; a knife-bar movable into and out of cutting position relative to the record-support; movable means for supporting said knife-bar; and automatically operated means for moving said knife-bar and causing it to assume a predetermined cutting position with relation to a record carried by the record-support in response to movement of the knife-bar supporting means into position preparatory to making a cut.



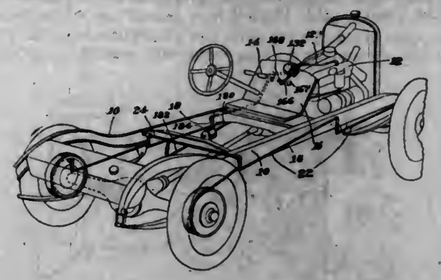
15. In a machine for shaving sound-record tablets, the combination of a tablet-carrying mandrel; a carriage; a guide or way for said carriage on which the carriage is capable of both longitudinal movement and turning movement; a housing carried by the carriage; a knife normally in locked position and carried by said knife-bar; a chip-chute carried by said knife-bar; a resilient gauge member carried on said chip-chute in advance of the knife when the tablet is being shaved to absorb the eccentric and irregular surface that the tablet may have; means operable from the forward part of the machine for unlocking said knife; resilient means for causing automatic adjustment of said knife with relation to the tablet when unlocking of the knife is completed; and automatic means for relocking the knife in position for cutting relation to the tablet.

1,750,156. ELECTRICAL SYSTEM OF DISTRIBUTION. ELI J. BLAKE, Buffalo, N. Y., assignor, by mesne assignments, to Simplex Equipment Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 20, 1924. Serial No. 744,684. 9 Claims. (Cl. 171—314.)



1. An electrical system of distribution having in combination a generator, a storage battery connected to be charged thereby, a switch in circuit between the generator and battery for connecting and disconnecting the two, an electro-responsive coil for controlling the action of said switch, and a continuously polarized relay for controlling the energization of said coil, said relay having a coil connected in series between the generator and battery and in shunt to said switch.

1,750,157. REGULATING APPARATUS. ELI J. BLAKE, Rochester, N. Y., assignor, by mesne assignments, to Simplex Equipment Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 1, 1926. Serial No. 145,692. 11 Claims. (Cl. 171—229.)

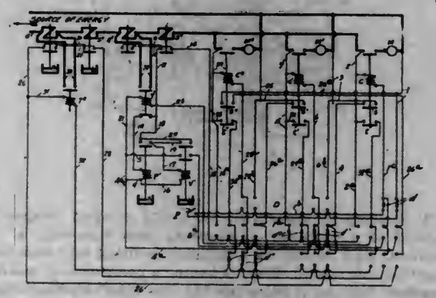


1. In an electrical apparatus, the combination with a compressible variable resistance, of a plurality of electromagnets having energizing coils, armature portions rotatable within said coils and a pair of yoke portions for each electromagnet for completing its magnetic circuit.

1,750,158. STRAINER. THOMAS W. BLAKEMAN, Long Beach, Calif. Filed Sept. 3, 1929. Serial No. 389,935. 4 Claims. (Cl. 53—8.)

1. A device of the character described comprising a reticulated plate provided along one edge with an outstanding flange extending at right angles from each side of said plate, and a handle projecting from one end of said plate.

1,750,159. AUTOMOTIVE CONTROL SYSTEM. FRANK S. BROADHURST, Watertown, Mass. Filed May 8, 1928. Serial No. 276,049. 19 Claims. (Cl. 192—8.)



4. An automotive control system comprising a vacuum-operated brake, a vacuum line to the intake manifold of the engine, a controlling valve in said line continuously subjected to the vacuum thereof and impelled thereby toward its brake applying position, and treadle operated means for moving the valve toward its brake releasing position.

1,750,160. COMPOUND OF COBALT CYANATE WITH A TERTIARY BASE. TENNEY L. DAVIS, Norwell, Mass., assignor of one-half to Walter O. Snelling, Allentown, Pa. Filed Apr. 16, 1928. Serial No. 270,575. 4 Claims. (Cl. 260—11.)

1. As a new chemical compound, a reaction product of cobalt cyanate with a tertiary base.

1,750,161. SYSTEM OF MOTOR CONTROL. WILLIAM DEANS, East Orange, N. J., and HENRY J. KAUFMAN, Chicago, Ill., assignors to Sundh Electric Company, Newark, N. J., a Corporation of New Jersey. Filed July 16, 1924. Serial No. 726,247. 20 Claims. (Cl. 172—239.)

1. In a motor system, the combination of a plurality of motors, circuits therefor arranged in parallel one with another, and a control system which comprises means for controlling the circuit of one of said motors and, for the control of the other motor or motors, means responsive to the motor current in the system and operative on a rise in the load thereon to a predetermined value to effect the closing and on a fall in the load thereon to a somewhat higher predetermined value to effect the opening of the circuit of an additional motor.

1,750,162. THERMIT MIXTURE. JOHN H. DEPPELER, Weehawken, N. J. Filed Sept. 8, 1928. Serial No. 304,794. 3 Claims. (Cl. 75—17.)

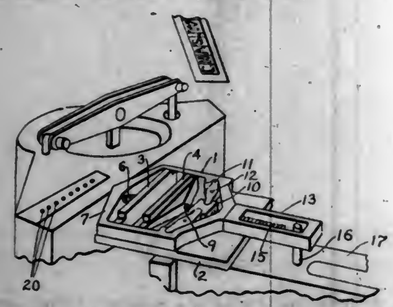
1. A thermit mixture for alumino-thermic welding including ground slag.

1,750,163. INSECT TRAP. JAMES LAMBERT DISNEY, Jenkintown, Pa. Filed Nov. 26, 1927. Serial No. 235,778. 6 Claims. (Cl. 43—134.)

1. An insect trap including a receptacle having surfaces of uninterrupted transparency and an open end adapted to be positioned against a surface, a handle on the receptacle, a flexible closure for closing the open end of the receptacle, and means operable from the handle for moving the closure.

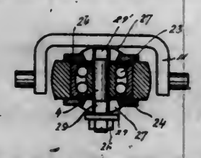
1,750,164. CIGARETTE EXTINGUISHING AND CRUSHING DEVICE. CHARLES DUCAS, New York, N. Y. Filed June 2, 1927. Serial No. 196,088. 1 Claim. (Cl. 131—5.)

A cigarette extinguisher comprising a tray portion, a fixed cigarette crushing platform mounted thereon, and a movable cigarette extinguishing plate mounted on said tray, said plate having means for permitting oscillatory motion in two planes relative to said tray and platform.



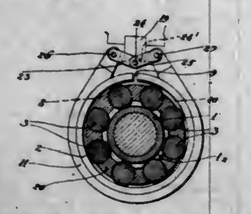
1,750,165. OVERSHOE AND METHOD OF MAKING THE SAME. ERNEST W. DUNBAR, Hudson, Mass., assignor to Cambridge Rubber Company, Cambridge, Mass., a Corporation of Massachusetts. Filed May 5, 1925. Serial No. 28,098. 14 Claims. (Cl. 36—5.)

1. A vulcanized overshoe having a rubber bottom and a waterproof top comprising a vamp and quarters integral with each other, the quarters overlapping portions of the vamp and cooperating therewith to form a bellows top, said top having two substantially parallel folds extending



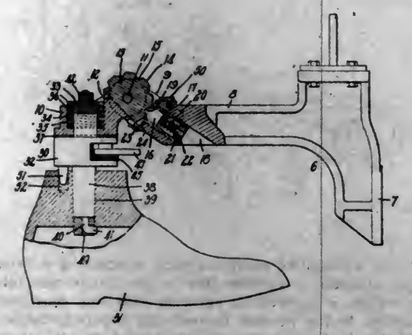
up the front of the shoe, and a plurality of pairs of fastenings, the individual members of which are secured, respectively, between said folds, whereby said members may be fastened to each other across the front of the upper to secure it about the leg of the wearer.

1,750,166. TYPE-CASTING MACHINE. CHARLES W. EDDY, East Providence, R. I. Filed Oct. 13, 1928. Serial No. 312,230. 4 Claims. (Cl. 199—47.)



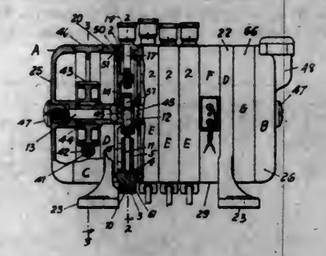
1. In a casting machine, a mold, slidable spring pressed jaws in the mold, operating means for one of the jaws to move same toward the other jaw, a spring pressed slide connected to said operating means, and a pin formed for connecting with the cam device of the machine to operate the slide.

1,750,167. FRICTIONAL GEARING. RICHARD ERBAN, Vienna, Austria. Filed Dec. 30, 1927, Serial No. 243,746, and in Austria Jan. 20, 1927. 9 Claims. (Cl. 74—34.)



1. In a change speed friction gearing comprising planet rollers arranged between races adapted to vary their relative position, adjusting means for varying the position of each roller, comprising a tiltable frame capable of being rocked about an axis, and means journalling each roller upon said frame to maintain a fixed axis for the rocking movement of the roller, said journalling means including a pivotal bearing for the roller mounted so as to allow a self-adjusting rocking movement about an axis perpendicular to the axis of rotation of the roller, allowing free movement around said axis.

1,750,168. FRICTION GEAR. RICHARD ERBAN, Vienna, Austria. Filed June 7, 1928, Serial No. 283,580, and in Austria June 7, 1927. 7 Claims. (Cl. 74—34.)

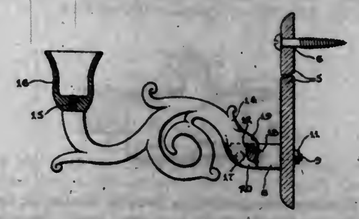


1. In a planetary friction gear, the combination with rolling bodies, of cooperating race-rings forming a path therefor, the ring cooperating with one side of said rolling bodies deviating from circular shape so as to relieve said rolling bodies during each revolution.

1,750,169. LASTING JACK. JOHN H. FLINK, Watertown, Mass., assignor, by mesne assignments, to Hood Rubber Company, Inc., Wilmington, Del., a Corporation of Delaware. Filed Feb. 27, 1929. Serial No. 343,168. 16 Claims. (Cl. 12—123.)

11. A last holder for a pack having, in combination, a last pin on which a last may be positioned, a locking member eccentrically mounted within said pin and having a radial last gripping portion normally confined within a prolongation of the periphery of the pin, and means to rotate said locking member to cause the last gripping portion thereof to project beyond the periphery of the pin whereby the gripping portion may interlock with the last.

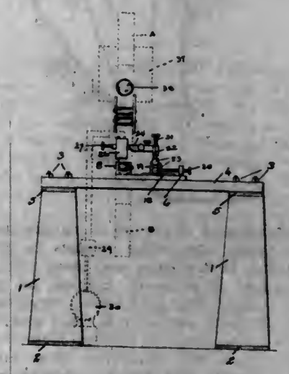
1,750,170. PUMPING APPARATUS. AUGUST FRISCH, St. Gallen, Switzerland. Filed Mar. 18, 1927, Serial No. 176,393, and in Switzerland Apr. 15, 1926. 27 Claims. (Cl. 103—10.)



1. A pumping apparatus comprising a liquid receptacle formed of a plurality of elements each including a cylindrical wall, means for detachably securing said elements together, one of said elements having a pump driving means, another having a pump having its inlet leading from said receptacle, and a third having a liquid heating means within said receptacle.

14. A pumping apparatus including a peripheral wall sub-divided into a plurality of annular sections two of said sections constituting end walls, and a centrally disposed shaft carried by said end walls, one of said sections including a pump having a driving element carried by said shaft and another of said sections having a heating element encircling said shaft.

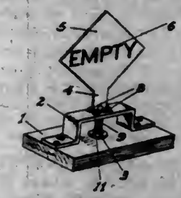
1,750,171. CANDELABRA. ABRAHAM M. GOLDSTONE, Baltimore, Md. Filed May 7, 1929. Serial No. 361,165. 3 Claims. (Cl. 67—25.)



1. In a knock-down candelabrum, the combination of a wall-plate provided with means to engage with a supporting member on a wall, a U-shaped bracket provided with means to secure it in a horizontal position on said wall-

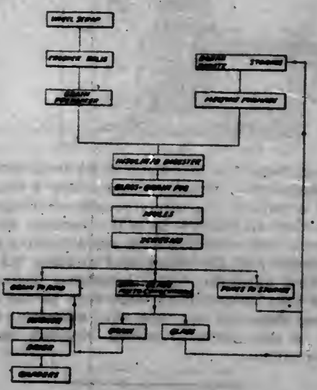
plate, said U-shaped bracket including several pairs of spaced parallel surfaces and intervening bridges, each bridge being of greater height than its front-to-rear extent or thickness, and several candle-socket-arms each having an attaching end formed with a notch, each candle-socket-arm having a rearwardly and downwardly curved supporting lug that forms the upper part of said notch and is

removably seated on and behind the upper part of any one of the bridges on which the candle-socket-arm is supported, said notch having a rear opening of sufficient extent to permit any of said bridges to be passed thereinto and to engage with said supporting lug so as to support any one of said candle-socket-arms detachably in a substantially horizontal position.



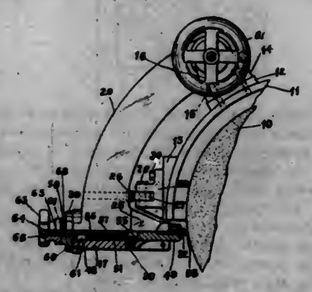
1,750,172. SOUND-RECORDING APPARATUS FOR USE IN EDUCATIONAL MOTION-PICTURE PROGRAMS. EARL H. FOLEY, Seattle, Wash., assignor, by mesne assignments, of ninety-nine one-hundredths to International Acoustigraph Company, a Corporation of Washington. Filed June 12, 1925. Serial No. 36,636. 8 Claims. (Cl. 274—46.)

1. In an apparatus of the type described, the combination of a length of sensitive film, a support for the film, means for moving the film over the support, a device for recording sound records on the film, and a support for said device, said support having a base, a block adjustably mounted on the base for movement toward and away from the film support, a head mounted for vertical adjustment on the block, an arm carried by the head and overhanging the support for the film, said arm provided with a cut-away portion for receiving therein the sound recording device.



1,750,173. REVERSIBLE CAR SIGN. EDWARD W. HAVELOCK and JAMES W. COCHRANE, Santa Rosa, Calif., assignors to Natalina C. Havelock and Louise M. Cochrane, Santa Rosa, Calif. Filed Jan. 21, 1929. Serial No. 333,884. 2 Claims. (Cl. 40—68.)

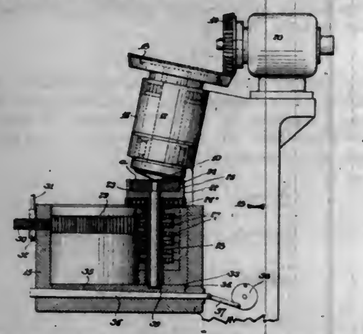
1. A reversible car sign including a vertically disposed flat sign-plate, a depending extension formed with the plate at the bottom thereof, a stem secured to and depending from said extension, a horizontal bracket plate through which said stem turnably projects; the bottom of the extension resting on the bracket plate, lugs upstanding



from the bracket plate on both sides of said extension to prevent rotation thereof, and a spring about the stem below the bracket to hold said extension in yieldable engagement with the bracket.

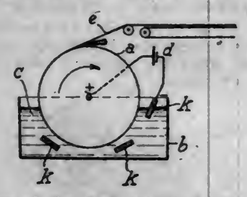
1,750,174. RECOVERY OF BONDED MATERIALS. EARL LESSON HAUMAN, Hamburg, N. Y., assignor to The Exolon Company, Blasdell, N. Y., a Corporation of Massachusetts. Filed June 29, 1926. Serial No. 119,334. 14 Claims. (Cl. 51—278.)

1. In a process of reclaiming dispersed material from a vitrified bonded mass consisting in comminuting the mass, introducing a molten solvent, maintaining a predetermined temperature above the fusion point of the solvent, milling the resultant and separating.



1,750,175. TRUING DEVICE. HAROLD W. HOLMES, Detroit, Mich., assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 14, 1926. Serial No. 129,184. 9 Claims. (Cl. 125—11.)

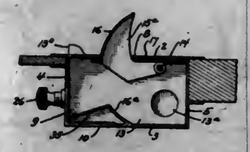
1. A grinding machine comprising a grinding wheel, a guard around the wheel, a truing mechanism mounted



upon the guard including a cylindrical support, an arm slidably mounted on and arranged to turn about the axis of the support, a dresser adjustably carried upon the opposite end of the arm and arranged to be pressed against the wheel by the action of gravity, means for limiting the movement of the dresser toward the wheel under the urge of gravity, means for adjusting the position of the dresser relative to said arm towards and from the wheel, and means for causing the dresser to move across the periphery of the wheel along a line substantially parallel to the axis of the wheel.

1,750,176. METHOD AND APPARATUS FOR ROLLING TAPERED WHEEL DISKS. JAMES W. HUGHES, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 3, 1926. Serial No. 145,935. 17 Claims. (Cl. 80—16.)

1. The method of rolling metal disks from substantially square blanks which consists in subjecting a blank to the action of a pair of oppositely rotating rolling elements acting, at a given instant, upon the opposite sides of the blank along a line extending from approximately the center to the periphery of the blank, and rotating the blank in one direction until the entire peripheral portion of the blank has been subjected at least once to the action of such rolling elements, and thereafter subjecting the blank similarly to the action of rolling elements rotating in reverse directions.

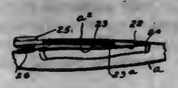


1,750,177. PROCESS FOR THE IMMEDIATE PRODUCTION OF MECHANICALLY-UNWORKED PURE RUBBER SHEETS FROM LATEX. PAUL KLEIN, Budapest, Hungary, assignor, by mesne assignments, to American Anode, Inc., a Corporation of Delaware. Filed Jan. 26, 1924, Serial No. 688,777, and in Hungary Oct. 11, 1923. Renewed Oct. 6, 1927. 23 Claims. (Cl. 18—50.)

3. A process of the kind described which consists in adding to the latex organic dyes, the ultramicrons of which exhibit a negative charge in the state of hydrosol and extracting by centrifuging from the latex the excess of dye not having been adsorbed by the rubber particles, and thereupon precipitating the rubber from said purified latex by electrophoresis upon an endless supporting surface having anodic properties and continually travelling through the latex, and detaching the rubber sheet from that part of said supporting surface.

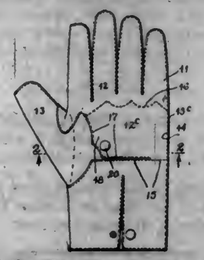
5. The process for the production of mechanically unworked pure rubber directly from latex which comprises freeing latex from impurities by centrifuging in centrifugal apparatus and thereafter precipitating the rubber from said purified latex by electrophoresis upon a supporting surface having anodic properties.

1,750,178. VENTILATING DEVICE. DONALD K. MACLEOD, San Francisco, Calif. Filed Mar. 18, 1929. Serial No. 347,760. 6 Claims. (Cl. 98—13.)



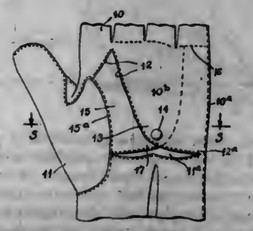
1. A ventilator comprising a housing having an opening formed in one side thereof, a shutter flush with the surface of the housing and adapted to open and close the opening, an air deflector plate adapted to be extended through the opening or retracted to a position within the housing, and manually operated means for adjusting the position of the shutter and the deflector.

1,750,179. OVERSHOE. WARREN MACPHERSON, Cambridge, and ERNEST W. DUNBAR, Hudson, Mass., assignors to Cambridge Rubber Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Mar. 24, 1925. Serial No. 17,926. 17 Claims. (Cl. 36—5.)



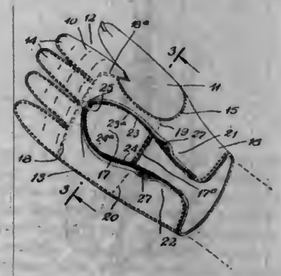
1. That improvement in the art of manufacturing overshoes of the arctic type, which consists in providing a waterproof fabric having outer and inner plies of fabric united throughout their areas, cutting the vamp and quarters of an upper from said fabric, stitching together the edges of said parts necessary to bring said upper into a closed form preparatory to lasting, subsequently placing said upper on a last, assembling other parts of the shoe on the last with said upper, and then vulcanizing the shoe.

1,750,180. POCKET FOR GLOVES AND THE LIKE. ISAAC MARINSKY, Providence, R. I. Filed Mar. 10, 1928. Serial No. 260,581. 3 Claims. (Cl. 2—160.)



1. A glove, one part of which is fashioned to form a flap integral with the glove part along one side edge only thereof, a member secured to said glove part to close the opening formed therein by the removal of said flap, and a pocket formed in the wall structure of the flap outwardly of its attached side edge and accessible when the flap is in an extended position with reference to the glove structure.

1,750,181. GLOVE. ISAAC MARINSKY, Providence, R. I. Filed Mar. 23, 1928. Serial No. 263,087. 9 Claims. (Cl. 2—160.)

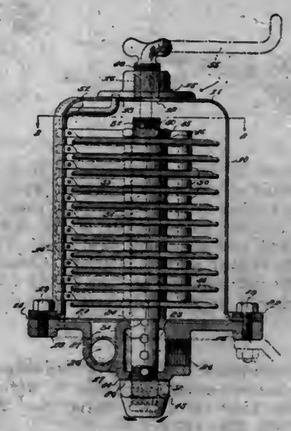


1. A glove of the class described formed from a main body part and a thumb part, said thumb part having an integral palm portion overlapping a predetermined area of the palm portion of said body part, and said overlapped palm portions being stitched together to form a pocket therebetween opening outwardly through the glove at the unstitched portion thereof.

1,750,182. GLOVE. ISAAC MARINSKY, Providence, R. I. Filed Mar. 31, 1928. Serial No. 266,142. 3 Claims. (Cl. 2—160.)

1. A glove of the class described fashioned from glove forming parts, one of which constitutes the main body part and having a thumb opening at one side and being stitched at the opposite side in forming said part, and the other a thumb forming part arranged in the thumb opening of the first named part and stitched thereto, both of said parts having integral palm portions, the palm portion of the thumb part extending to the stitched side edge of the main body part and being secured thereto by side stitchings and by other stitchings arranged at the base of the finger portions of the first named part to form within and between said palm portions a pocket opening outwardly through the palm portion of the glove, and means cooperating with said palm portions for forming a comparatively large open end to said pocket.

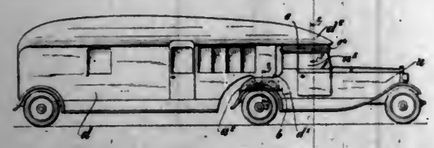
1,750,183. GLOVE. ISAAC MARINSKY, Providence, R. I. Filed Mar. 20, 1929. Serial No. 348,412. 8 Claims. (Cl. 2—160.)



1. A glove of the class described, the palm and wrist portion of which is severed centrally and longitudinally from the base of the finger portion of the glove outwardly through the wrist portion thereof to form independent side portions, closure means for drawing said side portions together to secure the glove firmly upon the hand and wrist of the wearer, and a pocket formed in the palm portion of the glove structure, access to which is controlled by said closure means.

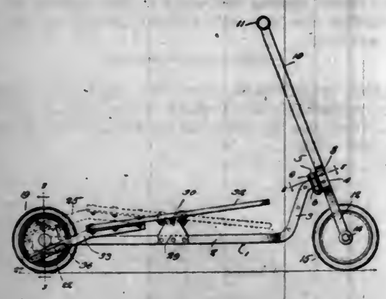
1,750,184. FIRE EXTINGUISHER. FRED THOMAS MATTHEWS, Brisbane, Australia. Filed May 8, 1925, Serial No. 28,919, and in Australia June 3, 1924. 1 Claim. (Cl. 169—30.)

A fire extinguisher of the character described, including a main closed receptacle having an opening in the top thereof, a cradle having flanges on the upper end for engagement about the edges of the opening for suspending the cradle within the receptacle, a compressed gas containing bulb on the cradle, a bulb piercing element also mounted in the cradle and provided with passages, a threaded cap adjustably engaged upon the opening, and a coiled expansion spring arranged between the bulb and the bulb piercing element and acting to hold the flanges of the cradle against the edges of the opening and the bulb against the cap, substantially as and for the purposes set forth.



1,750,185. FILTERING DEVICE. CHARLES A. MCGEHAN, Morristown, and PATRICK X. MCGEEHAN, Hazleton, Pa. Filed Aug. 22, 1927. Serial No. 214,754. 7 Claims. (Cl. 210—178.)

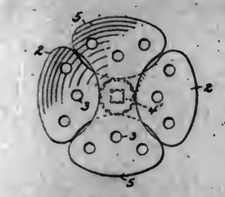
1. A filter comprising a shell having a substantially closed end and an outwardly flanged open end; a tapped



casting secured to said closed end; a casting provided with inlet and outlet openings and an opening in alignment with the tap in said first mentioned casting secured to said flange; a perforated terminally threaded pipe disposed within said shell in alignment with the said aligned tap and opening and extending through and inwardly of said second mentioned casting; a plurality of alternately arranged filter elements and spacers surrounding said pipe and engaging the inner face of said second mentioned casting; a cap nut threaded on the outer end of said pipe and resting against the outer face of said second mentioned casting; and a lock nut engaging the inner end of said pipe adapted to firmly hold said filter elements and spacers in assembled relation.

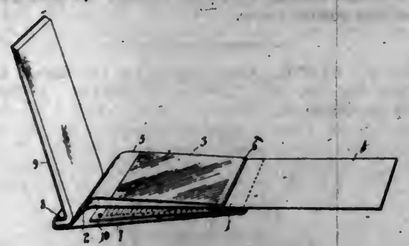
1,750,186. FLEXIBLE CLOSURE FOR TRACTOR-TRAILER VEHICLES. FRANK C. MCMANUS, Brooklyn, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 12, 1929. Serial No. 331,965. 3 Claims. (Cl. 296—1.)

8. In a tractor-trailer vehicle construction, a driver's cab on the tractor, an overhanging top portion on the trailer, a flexible closure between the cab and the overhanging top, top and bottom frames carrying the closure, means to mount the bottom frame on the cab, and means to urge the top frame yieldingly against the overhanging top with provision for movement relative thereto.



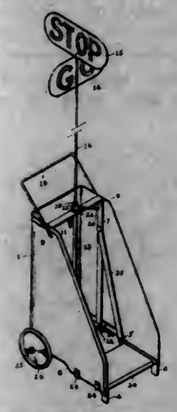
1,750,187. POWER COASTER. JEROME J. MILLER and WILLIAM PLATT, Chadron, Nebr. Filed Jan. 28, 1929. Serial No. 335,654. 2 Claims. (Cl. 208—35.)

1. In a device of the class described, a frame, a ground wheel journaled on the frame, a ratchet wheel connected to the ground wheel to turn therewith, a pawl wheel supported for rotation independently of the ratchet wheel, a pawl movably mounted on the pawl wheel and cooperating with the ratchet wheel, a platform tiltably mounted on the frame and including an arm having a slot, and a projection carried by the pawl wheel and movable in the slot.



1,750,188. SUPPORT. WILLIAM F. MUMBERG, Chicago, Ill., assignor of one-half to Albert A. Merts, Decatur, Ill. Filed July 11, 1928. Serial No. 291,947. 4 Claims. (Cl. 128—127.)

1. A support of the class described comprising a tubular stem, a pair of wings connected with the upper end thereof, a shaft passing through the stem, a pair of wings carried by the upper end of the shaft and means

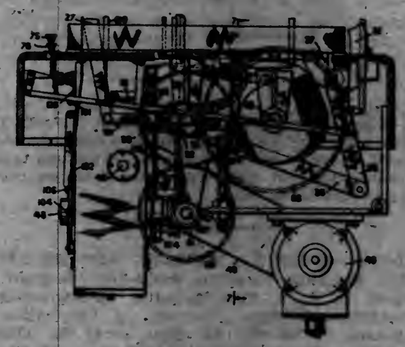


for turning the shaft in the stem to place the wings thereof over the wings of the stem or to place the wings on the shaft at rightangles to those on the stem.

1,750,189. MANIFOLDING BOOK. ERNEST E. PALMER, Toronto, Ontario, Canada, assignor to Toronto Type Foundry Company Limited, Toronto, Ontario, Canada. Filed Dec. 21, 1928. Serial No. 327,573. 1 Claim. (Cl. 282—9.)

A manifolding book comprising a back, a plurality of manifolding units, each unit comprising a carbon sheet and a detachable duplicate sheet bound to the back and an original sheet united to the duplicate sheet along one edge with its opposite edge free and folded over the carbon sheet, and a stop sheet united to the back and foldable over the used carbon sheets and between the same and the next duplicate sheet and protecting the record on the used carbon sheets against mutilation while making subsequent entries.

1,750,190. COMBINATION TRAFFIC SIGNAL AND BOOTH THEREFOR. THOMAS R. PAVELSKY, Rochester, N. Y., assignor of one-fourth to James Collins, one-fourth to Frank J. Binsack, and one-fourth to Elmer W. O'Brien, Rochester, N. Y. Filed Dec. 13, 1928. Serial No. 325,817. 4 Claims. (Cl. 116—63.)



1. In a booth, the combination of a horisontal and an upright frame, a booth covering attached thereto,

CARNEGIE LIBRARY OF ATLANTA

cross bars in said upright frame at the top and bottom thereof, a sleeve supported between said cross bars, a rod telescoping in said sleeve adapted to support a stop and go signal, means for fastening the rod to the sleeve so that it will turn with the sleeve, a handle on the sleeve by which it can be turned back and forth by a person standing in the booth to change the stop and go signal.

1,750,191. PERFORATED-CARD-CONTROLLED MACHINE. JOHN ROYDEN PEIRCE, New York, N. Y., assignor to International Business Machines Corporation, New York, N. Y., a Corporation of New York. Filed July 7, 1927. Serial No. 203,890. 14 Claims. (Cl. 101—93.)

1. In a perforated-record-controlled machine, means for analyzing records, means controlled by said analyzing means for controlling the subsequent operation of the machine, means for feeding records to said analyzing means and means for presenting a record for controlling the operation of said analyzing means.

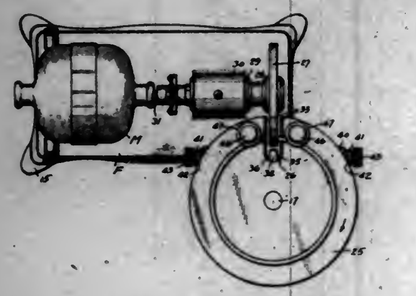
1,750,192. TAG. OVERTON W. PENDERGAST, Terre Haute, Ind. Filed July 20, 1928. Serial No. 294,222. 6 Claims. (Cl. 40—2.)

1. A service tag comprising a tag body portion, and an identification device embodying an identification portion folded over one edge portion of the tag body portion and having large identification numbers printed in duplicate upon one face thereof for display at opposite faces of the tag body portion, and a separable check portion having printed thereon with small type, an identification number corresponding to the identification numbers on the identification portion.

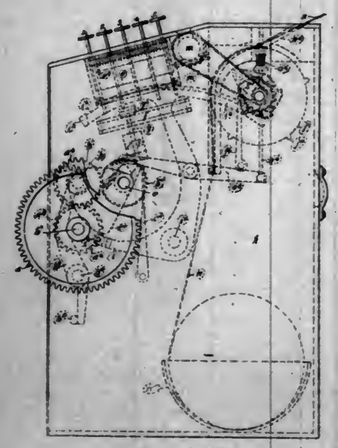
1,750,193. FISH-WEIGHING SCALE FOR FISHING RODS. TERRY T. REYNOLDS, North Uvalde, Tex. Filed June 8, 1928. Serial No. 283,959. 1 Claim. (Cl. 265—63.)

A fishing rod handle construction for containing indicating means, a tube provided with a slot extending longitudinally, a flange extending from the tube at the perimeter of said opening, a pane of transparent material adapted to cover said opening, and a sleeve of suitable hand grip material arranged on said tube and provided with a longitudinal opening therein for snugly receiving the flange of said tube.

1,750,194. DENTAL MIRROR. CARL G. A. RYDMAN, Oakland, Calif. Filed Mar. 31, 1928. Serial No. 266,219. 1 Claim. (Cl. 128—12.)



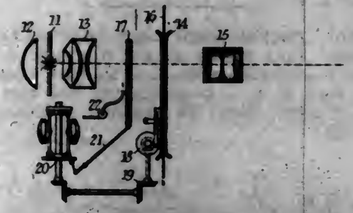
In combination, a tubular handle, a dental mirror supported at an angle thereto, a battery in the handle, a light in one end of the handle so as to reflect on the mirror and being electrically connected to the battery and the tube respectively, a cap threaded on the other end of the handle having a switch member movable therein for electrically connecting the tube and the battery, a ball on said switch member and spring fingers mounted in the cap in engagement with the ball for holding the switch member in active or inactive position.



1,750,195. PISTON-RING-FITTING MACHINE. GRANISON M. SANDERS, Ontario, Calif., assignor of one-half to Maude L. Luce, Ontario, Calif. Filed Sept. 15, 1926. Serial No. 135,686. 12 Claims. (Cl. 51—124.)

1. A piston ring fitting machine comprising grinding means, ring supporting means manually movable in one

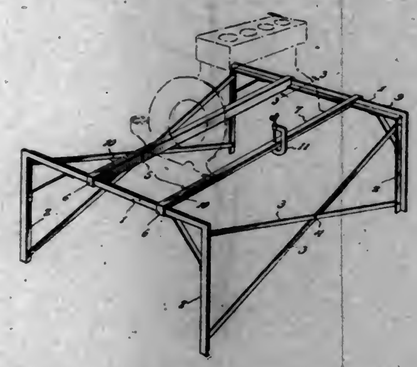
direction to cause one end of a ring thereon to have grinding engagement with the grinding means, yieldable means for urging the ring supporting means in another direction to maintain said end of the ring out of engagement with the grinding means, and adjustable means for determining the degree of manual movement of the supporting means in the first mentioned direction whereby the extent to which the ring end is ground can be predetermined.



1,750,196. TICKET-DELIVERY MECHANISM. LOUIS SCHER, Cleveland, Ohio. Filed June 25, 1927. Serial No. 201,525. 20 Claims. (Cl. 164—42.)

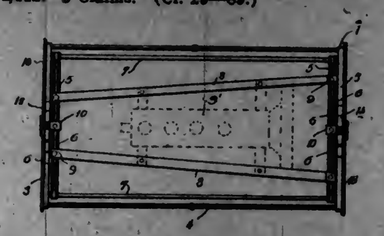
1. In ticket issuing mechanism, the combination with manually-operable movement limiting means for the ticket issuing mechanism, of an associated master-key controlled by said limiting means and adapted to start and stop the actuating means, ticket issuing and severing mechanism, and interposed actuating means for said mechanism, whereby ticket strips of selected lengths may be successively delivered.

1,750,197. HEAT-ELIMINATION SCREEN FOR PROJECTOR SYSTEMS. ARTHUR L. SCHOEN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 8, 1926. Serial No. 153,314. 6 Claims. (Cl. 88—17.)



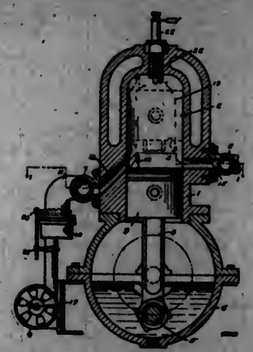
1. A screen for the elimination of heat rays and comprising a sheet of clear mica having a thickness of the order of .01 inches and a film of gold thereon and capable of transmitting heat rays to the order of ten per cent of heat rays incident thereon.

1,750,198. CLEANING, WETTING, AND EMULSIFYING. WALTHER SCHRAUTH, Berlin-Britz, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed May 25, 1926, Serial No. 111,666, and in Germany May 30, 1923. 9 Claims. (Cl. 87—5.)



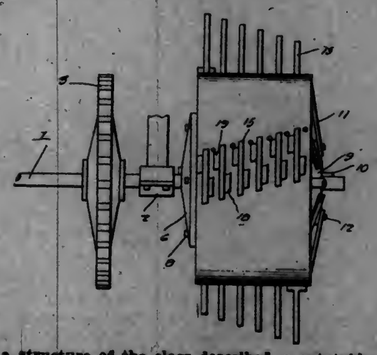
1. The process of preparing aqueous emulsions of organic compounds practically insoluble in water characterised by an addition of an aromatic sulfonic acid substituted by at least one residue of an aliphatic hydrocarbon containing more than 4 carbon atoms to an aqueous medium containing the aforesaid organic compounds.

1,750,199. MOTOR STAND. HILBERT C. SPAHN, Kewanee, Ill. Filed Apr. 10, 1928. Serial No. 269,005. 2 Claims. (Cl. 29—89.)



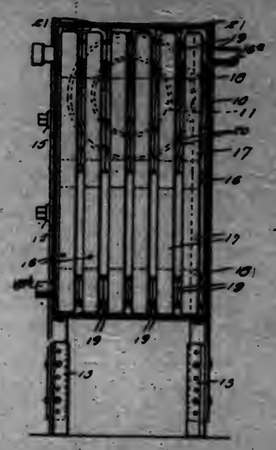
1. A stand of the class described comprising end frames including horisontal bars, legs formed integral with the bars, brace bars connecting the legs, supporting bars having slots formed in their ends for slidably engaging the horisontal bars, said supporting bars and brace bars being detachably connected with the frame.

1,750,200. MOTOR-SUPPORTING STAND. HILBERT C. SPAHN, Kewanee, Ill. Filed Oct. 23, 1928. Serial No. 314,441. 5 Claims. (Cl. 29—89.)



1. A stand of the class described, comprising end frames, blocks adjustably mounted thereon, bearings carried by the blocks, disks rotatably mounted in the bearings, a cradle, and means carried by the cradle for rotatably engaging the disks.

1,750,201. TWO-CYCLE ENGINE. GARDNER A. B. SPENCER and HARRY B. CORNISH, Alameda, Calif. Filed July 23, 1927. Serial No. 207,959. 1 Claim. (Cl. 123—59.)



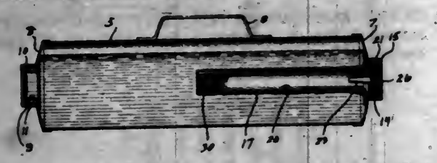
An internal two-cycle combustion engine having a cylinder with a closed top, a piston mounted in said cylinder, said cylinder having an intake and an exhaust port disposed in a position to be uncovered by said piston only when said piston reaches its lowermost position, means for delivering a combustible mixture under pressure to said intake, and a single valve for the intake and a single valve for the outlet port for controlling the flow of gases therethrough.

1,750,202. LAND BREAKER AND PLOW. AUBREY C. STEEVES, Hillsboro, New Brunswick, Canada. Filed May 18, 1928. Serial No. 278,761. 1 Claim. (Cl. 97—215.)

In a structure of the class described, a rotatable drum, a plurality of rectangular shaped earth engaging blades extending radially from the drum, a pair of threaded bolts formed on the inner edge of each blade adjacent the respective sides thereof, for disposition through openings formed in the drum, a lug arranged on the inner face of the periphery of the drum beneath the opening and being formed with an opening through which the threaded end of the respective bolt projects, the inner face of each lug being flat, and a nut threaded on the inner end of each bolt engaging with the flat face of the respective lug, the inner edge of the blade being curved, and laterally extending flanges formed on the opposite sides of the inner edge portion of each blade between said bolts, the inner faces of the flanges being curved to conform to the contour of the outer peripheral face of the drum.

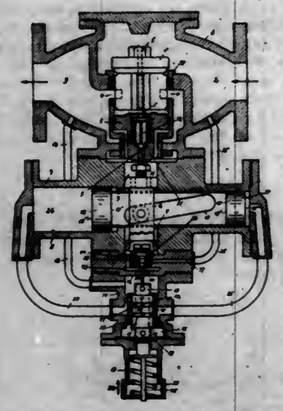
1,750,203. ECONOMIZER FOR USE WITH FURNACES. JOSEPH G. STROCK, Pittsburgh, Pa. Filed Aug. 16, 1928. Serial No. 300,109. 3 Claims. (Cl. 257—227.)

1. In an economizer, a casing, a sectional radiator within the casing, each section of the radiator having upon its side faces and at its upper end a rib structure, the rib structures of the sections combining in the assembled relation of the sections to form baffles between adjacent sections of the radiator, the ribs at the upper ends of the sections engaging the upper wall of the casing, the ribs of the outer faces of the outermost sections engaging opposite end walls thereof.



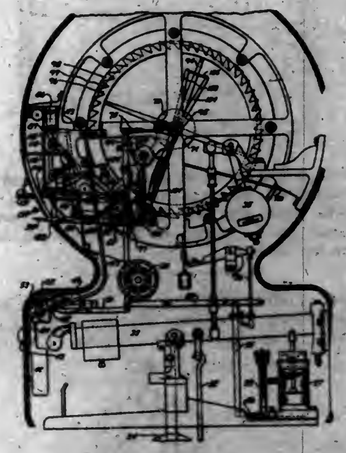
1,750,204. PROTECTING CONTAINER FOR BUTTER TUBS OR THE LIKE. ROBERT G. WICHNER, Coloma, Wis. Filed Mar. 1, 1928. Serial No. 258,320. 1 Claim. (Cl. 229—21.)

An insulating and cushioning protective container for a tub of circular cross-section, formed of a sheet of material



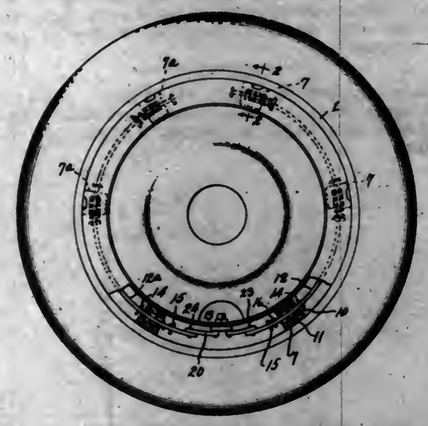
having spaced layers and a corrugated member interposed and forming air pockets between the said layers; said sheet of material being adapted to snugly surround a tub and have its ends connected together, and said sheet of material having top and bottom cover portions adapted to be opposed to the top and bottom, respectively, of a tub and flanged against the side of the sheet, whereby the sheet is adapted to be secured of itself on a tub without the assistance of extraneous means and when the sheet is so secured the tub is completely closed, insulated and protected.

1,750,205. RESERVE DISPENSING CONTAINER. OSCAR WILLUMSEN, Ocean Park, Calif. Filed Aug. 20, 1928. Serial No. 300,810. 7 Claims. (Cl. 221—23.)



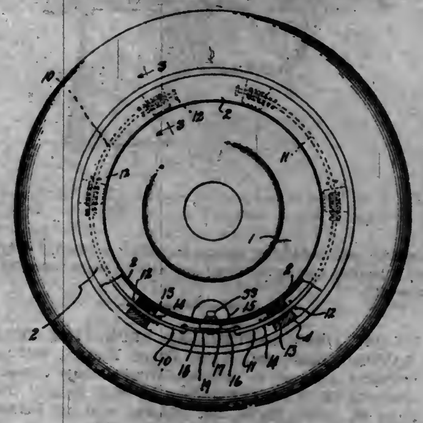
1. A dispensing container comprising a receptacle including a body portion having end walls, a tubular threaded extension provided at each end wall with one tubular extension providing an outlet opening for the receptacle, a threaded closure cap for the outlet opening, a pocket forming member supported in the receptacle body portion and opening thru the tubular threaded portion of the opposite end wall, a spout slidably fitting in the pocket and having a threaded end portion for threaded connection with the extension forming the outlet opening for the receptacle, and a retaining cap for threaded connection with the extension provided at the outer end of the pocket forming member for removably retaining the spout within the pocket.

1,750,206. REDUCING VALVE. EDMUND WINARSKY, Brunswick, Germany. Filed May 15, 1929, Serial No. 363,285, and in Germany Oct. 31, 1927. 9 Claims. (Cl. 50—11.)



1. A pressure reducing valve, comprising a valve cone, a cylindrical chamber, a driving slide capable of moving longitudinally in the cylindrical chamber, pipes for connecting the ends of the cylindrical chamber with the high-pressure and low pressure sides of the pressure-reducing valve, a controlling device adapted to open and close the said pipes, means for adjusting the controlling device to a desired pressure, and an inclined guiding surface on the driving slide adapted to control the ascent and descent of the valve cone as the driving slide moves longitudinally without allowing spontaneous movements of the valve cone to be transmitted to the driving slide.

1,750,207. RECORDING SCALE. GEORGE RUE WOOD, Dayton, Ohio, assignor, by mesne assignments, to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Mar. 16, 1922. Serial No. 544,174. 40 Claims. (Cl. 265—5.)



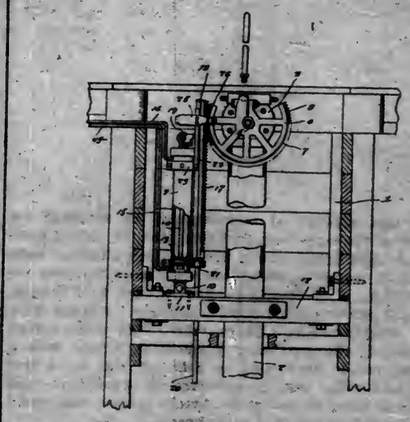
1. In a weighing scale, in combination, means for automatically counter-balancing the applied load, a capacity weight device for increasing the counter-balance effect, recording devices for recording applied loads, and means for controlling said recording devices, said means being settable in set positions corresponding to applied loads and having a portion thereof settable under the control of both said automatic counter-balancing means and said capacity weight device, said portion being capable of positioning a related portion of said recording devices for recordation of applied loads.

1,750,208. DEMOUNTABLE RIM FOR AUTOMOBILE WHEELS. EDWARD L. ACKERMAN and ALOIS J. ZWIERZINA, Detroit, Mich. Filed Jan. 18, 1928. Serial No. 247,592. 8 Claims. (Cl. 70—90.)

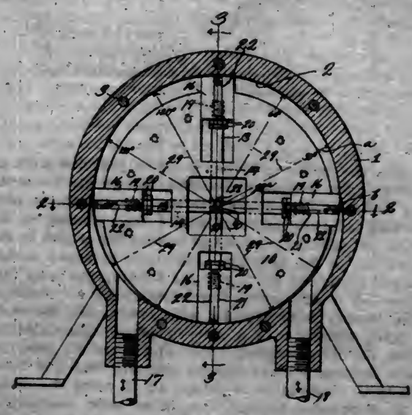
1. A device for locking a wheel rim to a felloe with which is provided cooperating parts for securing or releasing the rim relative to the felloe, comprising a means enclosed within the felloe, when the rim is in position, for operating the said cooperating parts consisting of an actuator element extending radially through the inner face of the felloe and by rotation of which in one direction or the other the said parts are actuated to respectively secure or release the rim, an operating device for the said actuator consisting of a hollow element rotatably mounted in the inner end of the actuator, and a lock device in the said hollow operator rotatable on the same axis and adapted to lock the operator to the actuator or release the same therefrom.

1,750,209. DEMOUNTABLE RIM. EDWARD L. ACKERMAN and ALOIS J. ZWIERZINA, Detroit, Mich. Filed Jan. 18, 1928. Serial No. 247,593. 2 Claims. (Cl. 301—27.)

1. In a device of the character described, a rotatable member, a pair of links pivotally connected to the rotatable member on opposite sides of the center of rotation, a pair of rods pivotally connected to the links and adapted to be drawn toward the rotatable member upon rotation of the member in one direction and adapted to be moved away from the rotatable member upon rotation of the member in the opposite direction, a series of lugs carried by each rod and a lock carried by the rotatable member having a bolt adapted to be moved between the ends of the links to prevent rotation of the rotatable member.



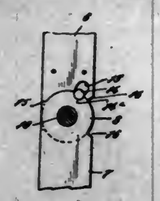
1,750,210. CORN-PULP EXTRACTOR. MARY AUSTIN, Rosemont, Pa. Filed Dec. 22, 1927. Serial No. 241,908. 4 Claims. (Cl. 146—4.)



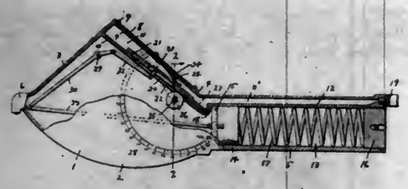
1. A corn pulp remover comprising a tubular body having an opening formed in its annular wall, and means extending across the opening adapted to express pulp from kernels of an ear of corn when an ear having cut kernels is moved across the same in pressing engagement therewith.

1,750,211. HYDRAULIC-CONTROL HEAD CLOSURE. SAMUEL S. BRADSHAW and CHARLES ALBERT MARTINDALE, Seminole, Okla. Filed Apr. 14, 1928. Serial No. 270,046. 3 Claims. (Cl. 166—15.)

1. The combination with the rotary valve in a well casing head; of means for actuating said valve, said means comprising a gear carried by the stem of said valve for rotation therewith, a toothed rack bar having meshing engagement with said gear, fluid pressure operated means for actuating the sliding toothed rack bar, said last mentioned means including a cylinder, a piston rod extending through one end of the cylinder, a piston secured on the inner end of the piston rod for reciprocatory movement in the cylinder, an operative connection between the outer end of the piston rod and the sliding toothed rack bar, and fluid pressure supply pipes communicating with the respective ends of the cylinder to control the operation of the piston therein.



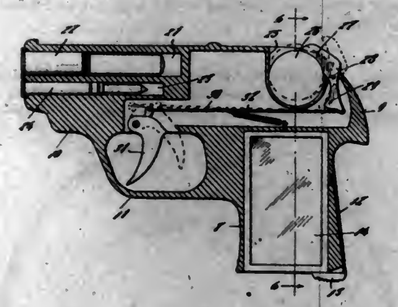
1,750,212. ROTARY PUMP. EMMETT CASKEY, Council Bluffs, Iowa. Filed Aug. 11, 1925, Serial No. 49,504. Renewed June 27, 1929. 2 Claims. (Cl. 103—138.)



1. A rotary pump comprising an annular casing having a round chamber therein and its inner periphery transversely straight, a rotor eccentrically mounted in said casing, plates secured to opposite sides of the rotor and having drive shafts extending through the casing, abutments slidably mounted in the recesses in the rotor and substantially rectangularly shaped, L-shaped packing members disposed in channels of the abutments and having arms overlapped, springs carried by the abutments and engaging one of the overlapping arms and normally forcing said packing members outwardly, parallel slidable connecting rods connecting the abutments and detachably connected thereto, the connecting rods of the abutments intersecting each other.

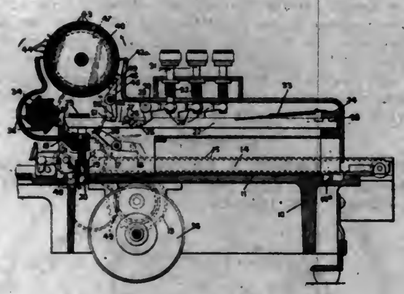
1,750,213. ARTIFICIAL-LIMB CONNECTER. EDWARD COLLINS, Tacoma, Wash. Filed Dec. 29, 1928. Serial No. 329,128. 1 Claim. (Cl. 287—99.)

As a new product of manufacture, an artificial leg connecter of the class described comprising a pair of complemental rigid metal straps having their adjacent ends formed with segmental flanges disposed in overlapping rotating contact, a pivot bolt passing through said flanges, one of said sections being formed adjacent its flange with a notch functioning as a pocket, a coupling roller seated in said notch, the remaining flange being formed with a peripheral notch functioning as a keeper seat for a section of said roller under predetermined conditions, and spacing and cover plates carried by one section and covering said pocket, roller, and keeper seat.



1,750,214. TIRE-INFLATING DEVICE. GARVIN HOWARD DAVIS, Healdton, Okla. Filed Dec. 28, 1927. Serial No. 243,064. 2 Claims. (Cl. 50—8.)

1. In a tire inflating device, a casing provided with an air outlet neck, a handle extending rearwardly from the casing and providing a cylinder that communicates with the casing, a piston operable within the cylinder, an expansible coil spring for normally holding the piston in the forward end of the cylinder, a partition arranged within the upper portion of the casing for dividing the same into an upper air passage and a lower compressed air chamber, said air passage being provided with an air inlet, the partition being formed with a slot to afford communication between the air passage and the compressed air chamber, a valve forming a plate slidable over the slot and being normally so disposed as to permit air to enter the casing and be discharged through the outlet neck, cooperating means between the valve and the piston for moving the valve to completely cover the slot when a predetermined pressure is present in the casing, said last mentioned means comprising a rockable lever mounted in the casing, one end thereof being operatively connected to the valve, and a rod operatively connecting the other end of the lever with the piston.

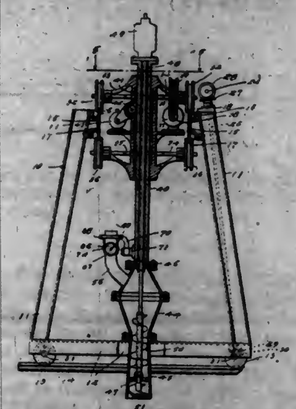


1,750,215. VANITY CASE. EARL PATRICK DWYER, El Paso, Tex. Filed Feb. 5, 1929. Serial No. 337,657. 3 Claims. (Cl. 206—38.)

1. In a vanity case of the class described, a container fashioned to represent and provide an artificial revolver and embodying a hollow article containing hand grip, article containing barrels, and an intervening article containing body portion, said body portion being further designed to provide a coin pocket and retaining and ejecting means

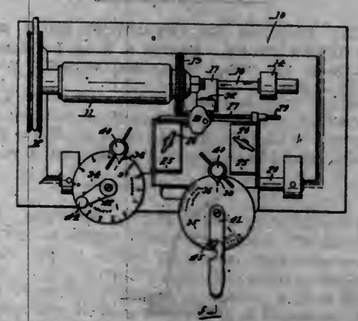
therefor, said retaining means including a pivoted trigger and a flexible spring retained operating element associated therewith.

1,750,216. DRUM-CONTROLLED REPEATING PERFORATOR. BERNHARD KARL FRITZ EWALD, Villingen, Germany, assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed July 30, 1927, Serial No. 209,444, and in Germany Oct. 14, 1926. 13 Claims. (Cl. 164—112.)



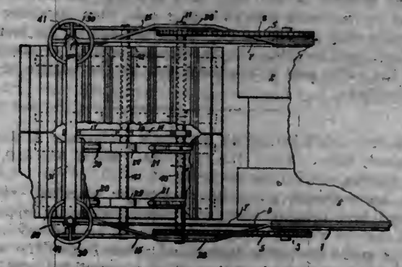
1. In a perforating machine, a plurality of punches, means for feeding records with respect to said punches, manual means for controlling the operation of the punches and means provided with insertible adjustable selecting devices for automatically controlling operation of the punches for producing perforations in a record.

1,750,217. MOLDING APPARATUS. BRADEN L. ELWELL, Granite City, Ill. Filed Apr. 2, 1929. Serial No. 351,957. 17 Claims. (Cl. 22—40.)



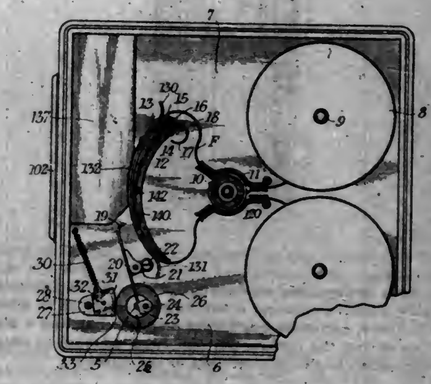
9. In molding apparatus of the character described, a longitudinally shiftable carriage, a sub-carriage supported thereby and shiftable upon the carriage transversely thereof, a vertically shiftable ram carried by the sub-carriage, a hopper supported from the ram, a discharge nozzle for the hopper, a rotatable packing element disposed at the discharge end of the nozzle, a storage hopper pivoted upon

the carriage, a discharge worm associated therewith and extended through the hopper of the ram, a support for the



worm fixed to the storage hopper and pivoted to the ram, and an extensible trough for said worm connecting the storage hopper and the hopper of the ram.

1,750,218. KEY-CUTTING MACHINE. MORRIS FALK, Fitchburg, Mass. Filed Apr. 18, 1927. Serial No. 184,643. 11 Claims. (Cl. 90—132.)



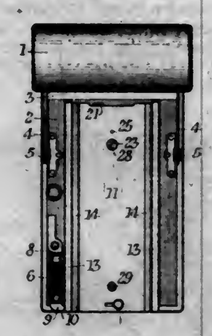
1. In a key cutting machine, the combination with a rotary cutter, of a shaft, a frame mounted to swing on said shaft parallel to the axis of the rotary cutter from horizontal to substantially vertical position, means for feeding the frame along said shaft, a rack carried by said frame perpendicular to the shaft, a carriage mounted on the frame and slidable on the rack, and means for moving the carriage along the rack toward and from the cutter.

1,750,219. ROTARY PLOW. LEON FONNESBECK, Logan, Utah. Filed Mar. 21, 1928. Serial No. 263,506. 4 Claims. (Cl. 97—46.)

1. A rotary plow comprising an endless series of pivotally connected shoes having transverse spaced ribs on their outer faces, blades extending the full width of the shoes having their inner edges fitted between said ribs and secured thereto and having concave working faces, means for supporting the series of shoes at the rear of a tractor, and means for driving the same from the tractor.

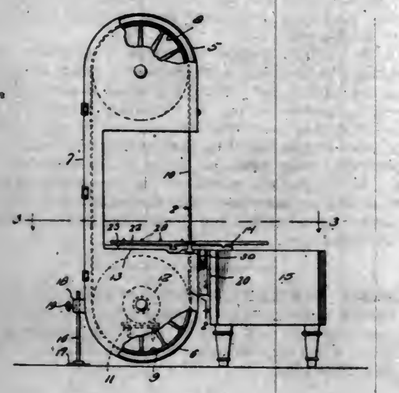
1,750,220. MOTION-PICTURE APPARATUS. EDWIN C. FRITTS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 22, 1924. Serial No. 733,653. 8 Claims. (Cl. 88—17.)

6. In motion picture apparatus, an objective, two stationary guide members extending behind said objective and constituting a film guide, the front member having an exposure window in alignment with the objective and having a slot, and intermittently operative film advancing mechanism in front of said guide and adapted to engage film in the guide through the slot, both of the guide members being curved uniformly and continuously opposite and past both said window and slot.



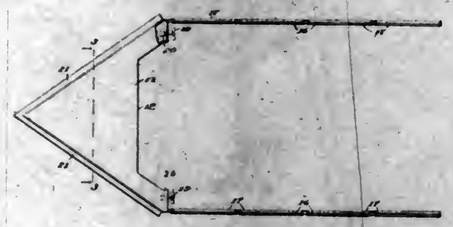
8. In motion picture apparatus, mechanism for advancing film including a rotary part, a motor connected to said mechanism for driving the same, a single manually movable member having an oscillatory movement, a part thereof moving tangentially to said rotary part, said member, when at one end of its path, acting as a brake directly upon said rotary part and, when at the other end of its path, permitting the rotary part to turn freely, said member, during its movement from the braking position to the free position, engaging and turning the rotary part to give it an initial turn.

1,750,221. VEHICLE FRAME CONSTRUCTION. CHARLES FROESCH, Teaneck, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed May 25, 1928. Serial No. 280,463. 2 Claims. (Cl. 280—106.)



1. A vehicle frame comprising front and rear wheel housings, longitudinal strengthening members connected to the wheel housings at their inner sides, transverse strengthening members connecting the elements at either side, vertical flanges formed on the outer sides of the wheel housings, and outer belt plates secured to the flanges.

1,750,222. CAMERA-LENS CARRIAGE AND TRACK LATCH. CARL C. FUERST, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed June 29, 1928. Serial No. 289,106. 7 Claims. (Cl. 95—45.)



1. In a camera, the combination with a bed, of a track slidably mounted thereon, a lens carriage adapted to slide on the track, and means including a slotted link and a pin for connecting the camera bed and track adapted to limit the movement of the lens carriage in one direction.

1,750,223. MEAT-SAWING MACHINE. WALTON GRANT and GEORGE W. LIMEBAUGH, Circleville, Ohio. Filed July 5, 1928. Serial No. 290,657. 5 Claims. (Cl. 143—25.)

4. A meat cutting machine comprising a frame including a bed, said frame supporting a band saw and its associated mechanism, a sliding table on the frame and between the reaches of the saw and projecting laterally beyond one of said reaches, and yieldable means to normally slide said table to its limit of movement in one direction relative to the saw and the bed, said table having a longitudinal slot through which the saw extends, and stop lugs carried by the bed engageable with the ends of the table slot for limiting the sliding movement of the table in opposite directions, said lugs being disposed at opposite sides of the saw within said table slot.

1,750,224. FLOATING HARBOR. CLARENCE W. KING, Shreveport, La. Filed June 13, 1929. Serial No. 370,579. 6 Claims. (Cl. 114—0.5.)

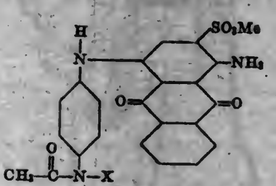
1. A protected harbor for hydroplanes or other vessels comprising a floating breakwater, to be exposed to the wind, and widely separated floating planes or plates connected with the rear of said breakwater and extending above the surface of the water so as to afford a harbor which is open at its rear for the entrance of the hydroplanes or other vessels.

1,750,225. PROCESS OF ATTACHING SHOE WELTS AND OUTER SOLES. WALTER S. KING, Lakeland, Fla. Filed Sept. 12, 1928. Serial No. 305,487. 1 Claim. (Cl. 12—142.)

A method of attaching shoe welts comprising disposing the edge portion of the shoe upper outwardly, securing a folded welt strip at its longitudinal intermediate portion to the upper at its bent portion, disposing one edge portion of the welt over the edge portion of the upper, applying the outer sole to the inner sole, securing the last mentioned portion of the welt with the edge portion of the upper to the inner sole and outer sole, then disposing the opposite edge portion of the welt down against its secured portion, and securing the upper edge portion of the welt and the outer sole to the inner sole at the margin of the shoe upper.

1,750,226. EMBROIDERY NEEDLE. PHILLIP S. KIRBY, Baron, Okla. Filed Jan. 2, 1929. Serial No. 329,718. 5 Claims. (Cl. 112—80.)

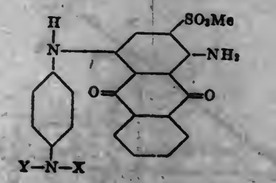
1. An embroidery needle comprising merging trough-shaped and tubular sections provided adjacent opposite ends thereof with eyes for the passage of embroidery material, a guide exteriorly fitting and secured upon the walls of the trough-shaped section, a stop associated with the tubular section and having an extension directed between



adjacent faces of the guide and the wall of the trough and slidable in a groove formed in one thereof, said extension

having a terminal portion interchangeably engageable in a series of longitudinally spaced openings formed in said wall of the trough.

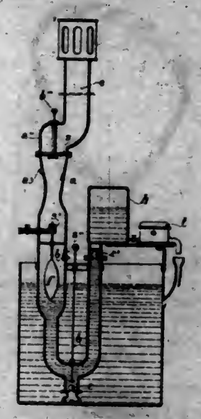
1,750,227. ACID WOOL DYESTUFFS OF THE ANTHRAQUINONE SERIES. GEORG KRÄNZLEIN, Hochst-on-the-Main, ERICH KRONHOLZ, Bad-Soden-on-the-Taunus, and FRITZ ROMMEL, Hochst-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 9, 1927, Serial No. 238,990, and in Germany Dec. 14, 1926. Renewed Dec. 11, 1929. 2 Claims. (Cl. 260—60.)



1. As new products, the dyestuffs of the following constitution:

wherein X stands for an alkyl or aralkyl group and Me for an alkali metal or for hydrogen dyeing wool blue tints, being easily soluble in water, having excellent properties as to fastness to light and possessing a great levelling power.

1,750,228. ACID WOOL DYESTUFFS OF THE ANTHRAQUINONE SERIES. GEORG KRÄNZLEIN, Frankfort-on-the-Main-Hochst, ERICH KRONHOLZ, Bad-Soden-on-the-Taunus, and FRITZ RÖMER, Frankfort-on-the-Main-Hochst, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed July 21, 1928, Serial No. 294,565, and in Germany Dec. 14, 1926. 3 Claims. (Cl. 260—60.)

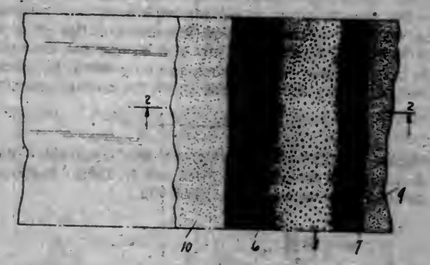


1. As new products, the dyestuffs of the following constitution:

wherein X stands for an alkyl or aralkyl group, Y for an aliphatic acyl residue and Me for a metal or for hydrogen dyeing wool blue tints, being easily soluble in water, having excellent properties as to fastness to light and possessing a great leveling power.

1,750,229. HEAT ENGINE ACTING AS A PUMP. JEAN RAOUL FRANÇOIS MARIUS LASMOLLES, Nerac, France. Filed Nov. 1, 1926, Serial No. 145,630, and in France Nov. 17, 1925. 3 Claims. (Cl. 103—249.)

1. In a thermal pump, a cranked body, of which the lower part dips in the liquid, a suction valve in said lower part, a delivery valve on one of the arms of the cranked body, a pipe for admission of combustible gases in the second arm of the body arranged vertically, a valve for



closing said pipe, a float arranged in the second arm for actuating said valve, means for igniting the combustible gas, and means for the escape of the burnt gases.

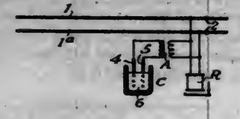
1,750,230. ELECTRIC ACCUMULATOR. HENRY LEITNER, London, England. Filed Mar. 28, 1929, Serial No. 350,797, and in Great Britain Mar. 27, 1928. 2 Claims. (Cl. 136—27.)

1. A process of forming a plastic mass for accumulator plates which consists in saturating a mixture composed of a major portion of glycerine and a minor portion of water, with sulphate of magnesium, mixing with said saturated solution a quantity of powdered lead monoxide and working the same into a stiff paste.

1,750,231. LEATHER COMPOSITION. SAMUEL H. LIFTON, New York, N. Y. Filed Dec. 20, 1927. Serial No. 241,424. 5 Claims. (Cl. 154—46.)

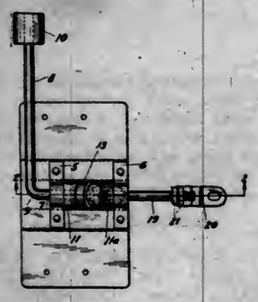
5. A leather composition consisting of a top and bottom, finely woven fabric which may be drilling, gauze, cotton sheeting or their equivalent, a linoleum filler having a non-drying binder which may be linseed oil impregnated in said woven fabric, a layer of granular cork applied to the face of the bottom fabric and a layer of thin leather cemented to the top fabric.

1,750,232. CRAVAT ATTACHMENT. SIEGFRID J. LINDSKOG, Los Angeles, Calif. Filed Jan. 12, 1929. Serial No. 332,065. 2 Claims. (Cl. 2—157.)



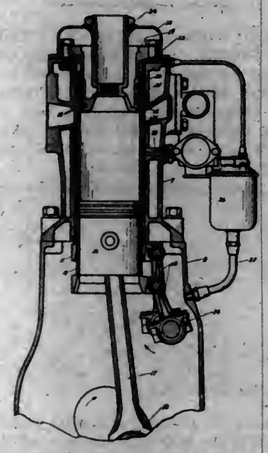
1. In combination, a four-in-hand cravat tied to provide a knot and a neck loop, a member positioned trans-

versely of the narrow end and about which the narrow end is transversely extended and coiled, and means on



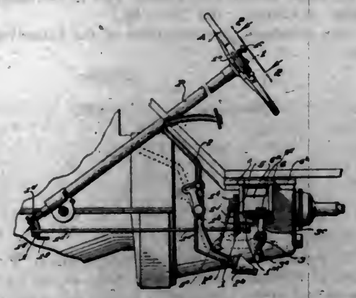
the member clamping the cravat for maintaining the narrow end extended and coiled about the member and retaining the member against displacement from the cravat.

1,750,233. RAILWAY SIGNALING TRACK-CIRCUIT REGULATOR. SAMUEL M. LUCAS, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 22, 1927. Serial No. 234,985. 5 Claims. (Cl. 246—34.)



3. In a railway signaling track circuit of the type comprising track rails, a track relay having a winding connected across said rails, and a source of current also connected across said rails and adjusted to maintain the normal operating voltage across said relay winding during the lowest value of ballast resistance, the combination with the aforementioned instrumentalities of a device connected across said rails and having the characteristic of conducting current when and only when the voltage across said relay winding rises above the normal operating value.

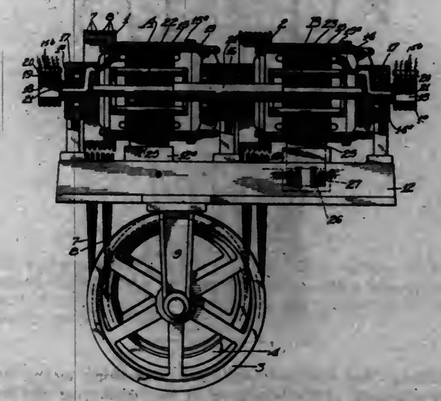
1,750,234. SWITCH-OPERATING MECHANISM. FRED A. LUNDAHL, Moline, Ill. Filed Oct. 7, 1929. Serial No. 397,829. 5 Claims. (Cl. 246—411.)



1. In a switch operating mechanism, a frame having bearing elements, a shaft rotatable in the bearing elements, means for rotating the shaft, cam members secured on said shaft and having spaced substantially parallel cooperating faces extending diagonally to the shaft, a perforated member mounted on the shaft between the said faces and cooperating therewith, and means connected with said member to be connected to the rails of the switch whereby the switch may be operated by rotating the shaft.

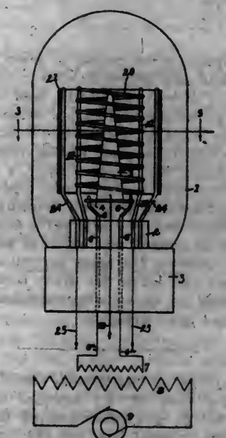
1,750,235. ENGINE-LUBRICATION MEANS. JOSEPH R. MARES, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 5, 1927. Serial No. 237,635. 15 Claims. (Cl. 123—196.)

1. The combination with a sleeve valve engine having a valve sleeve provided with an intake port, of means aided by exhaust gases to remove excess oil from the surface of the sleeves in the intake port region.



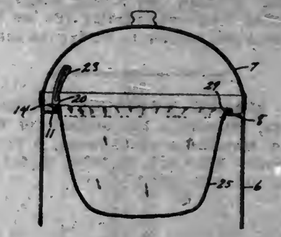
1,750,236. GEAR-SHIFTING MECHANISM FOR POWER TRANSMISSIONS. OVID E. MARK, San Diego, Calif. Filed May 21, 1928. Serial No. 279,533. 18 Claims. (Cl. 74—58.)

1. In a mechanism of the class described, the combination with a clutch lever, a power transmission and gear shifting members therefor, of a pair of slide bars operatively connected to each gear shifting member, a catch arm secured to each of said slide bars, cam means for selecting a predetermined catch arm, trip means engageable with said catch arms for shifting said selected catch arm, link members operatively connecting said trip means with said clutch lever, locking means for securing said selected catch arm in its shifted position, a ratchet and pawl means operatively connected to said clutch lever for



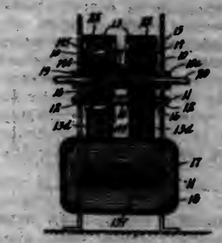
rotating said selection cams with a movement of said clutch lever and means for disengaging said pawl from said ratchet.

1,750,237. SLOW-SPEED ALTERNATING-CURRENT MOTOR MECHANISM. PHILIP MAYER, San Diego, Calif. Filed Dec. 23, 1925. Serial No. 77,195. 9 Claims. (Cl. 172—280.)



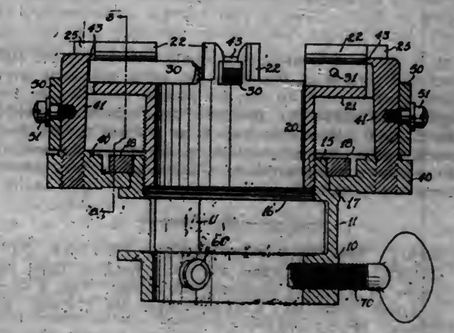
1. In an alternating current induction motor group, in combination, a revoluble secondary rotor means, separate, mechanically connected, oppositely revoluble primary members mounted in inductive relation with said secondary rotor means, similar windings on each primary member adapted to produce a plurality of revolving magnetic fields of different speeds, a source of alternating current, means for connecting said windings to said source of supply so that the magnetic fields in the two primary rotors are of different speeds but revolve in the same direction as the secondary rotor means, whereby said primary members are constrained to revolve in opposite directions at a speed substantially lower than the difference of said field speeds.

1,750,238. THERMIONIC TUBE. ORAN T. MCILVAINE, East Cleveland, Ohio, assignor to The Radio Television Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 2, 1925. Serial No. 41,069. 5 Claims. (Cl. 250—27.5.)



2. In a thermionic tube, in combination, a heating filament, and a flat, tapered, metal plate supported by said filament and in thermal conducting relation therewith.

1,750,239. COFFEE-URN DEVICE. THOMAS H. MILLS, Providence, R. I. Filed Oct. 16, 1929. Serial No. 400,116. 5 Claims. (Cl. 53—8.)



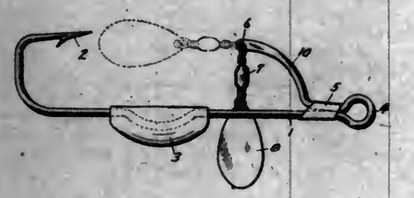
1. In a device of the character described, an incomplete resilient supporting ring, an inwardly inclined vertical handle upon one end of the ring, a horizontally disposed hook upon the other end of the ring slidably engaging the handle, and a foraminous bag provided with an annular tube for the reception of the ring.

1,750,240. ALTERNATING-CURRENT MOTOR. ALBERT P. MYER, Minneapolis, Minn., assignor to Simplex Heat Regulator Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Mar. 14, 1927. Serial No. 175,192. 2 Claims. (Cl. 172—278.)

1. An alternating current motor comprising a frame member having a lower portion, a field coil on said portion, said frame being divided above said coil into laterally spaced sections, each having spaced upper portions comprising spaced pole pieces and a rotor disposed between said pole pieces also having laterally spaced and similarly constructed sections substantially alined with said sections of said field frame and spaced the same distance from said pole pieces.

1,750,241. DIESTOCK. IRA W. NONNEMAN, Warren, Ohio, assignor to Borden Company, Warren, Ohio, a Corporation of Ohio. Filed July 8, 1927. Serial No. 204,236. 11 Claims. (Cl. 10—120.5.)

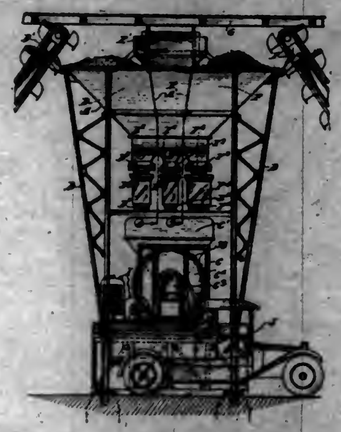
1. In a die stock, the combination of a stationary frame, a rotatable ring thereon, tapered pins rigidly carried by



the ring, a chaser carrying frame having a sleeve portion threaded to the stationary frame and having a head portion with chaser housings, chasers occupying said housings and engaging the pins, and a ring independent of the chaser carrying frame surrounding the set of pins and rigid with them and adapted to receive the outward thrust thereon.

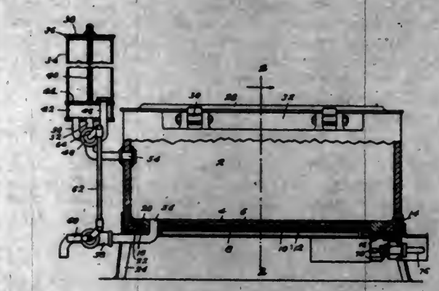
1,750,242. REMOTE-METERING SYSTEM. SAMUEL OSTROLENK, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 30, 1926. Serial No. 105,732. 3 Claims. (Cl. 177—351.)

1. In a duplex signalling system, a network comprising a first leg, a second leg connected thereto, and an artificial line, an indicating device connected across said legs and to said artificial line, between normally equi-potential points of said legs, a meter device, including a photo-electric cell, connected to the junction of said legs, a signalling line connected to said indicating device and one leg, said artificial line having such value as to balance the normal resistance of said line, a source of light and means controlled by said indicating device for varying the amount of light from said source impinging on said photo-electric cell to vary the conductivity thereof for any meter reading, as said line resistance varies from normal.



1,750,243. COMBINED HOOK AND WEED GUARD. JOSEPH E. PFLUEGER, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed June 6, 1925. Serial No. 35,358. 2 Claims. (Cl. 43—39.)

1. A fish hook comprising a single wire having one end bent and formed as the hook, the other end being bent upon itself to form an eye, an integral extension on the hook curved upwardly therefrom and extending toward the hook but spaced therefrom so as to form a rigid weed guard, and a spinner pivotally connected to the end of the extension and adapted to rotate in the space between the extension and the hook.



1,750,244. MACHINE FOR MAKING UNIFORM CONCRETE. JOHN F. ROBB, Cleveland Heights, Ohio, assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed May 9, 1928. Serial No. 276,363. 41 Claims. (Cl. 83—73.)

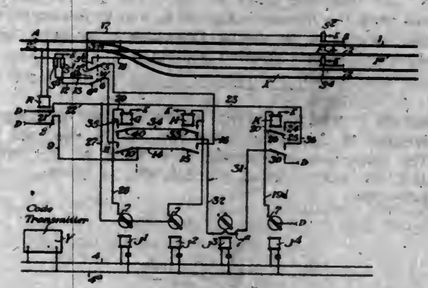
1. In a machine for producing uniform mixed concrete, in combination aggregate supply means, an aggregate measuring device associated with each aggregate supply means, discharge means for each aggregate measuring device, mixing means to unite and receive the different aggregates from the several aggregate measuring devices, means to

discharge the mixing means, and controlling means for the charging and discharging of the measuring devices coacting to control the charging and discharging of the mixer.

1,750,245. STERILIZER. GUSTAVE H. SCHWEDLER, Kansas City, Mo. Filed Sept. 1, 1927. Serial No. 216,881. 3 Claims. (Cl. 167—3.)

1. In a sterilizer, a receptacle, a drain cock connected to said receptacle and provided with a controlling lever, a tank mounted above said drain cock and having its lower portion partitioned off into a compartment, a pipe leading from the main portion of said tank, a pipe leading into the compartment, a pipe leading from the compartment, a pipe leading into the receptacle, a valve for establishing communication between said pipes and provided with a lever, and a connecting rod operably connecting the levers on the drain cock and said valve and whereby when the drain cock is opened the valve is adjusted to open communication between the main portion of the tank and its compartment and when the drain cock is closed said valve is adjusted to open communication between said compartment and the receptacle.

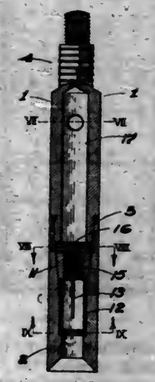
1,750,246. ELECTRIC TERMINAL BLOCK. LEMUEL W. SERRELL, New York, N. Y., assignor to Serelco, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 30, 1926. Serial No. 105,643. 8 Claims. (Cl. 175—298.)



1. In an electric terminal block, a conductor comprising a channel member, a plurality of posts mounted in the

channel member, and a plurality of similarly formed strips oppositely placed and mounted in the said posts, each of the said strips having flat sections at intervals for connection with the posts and curved sections adjacent the

flat sections with a socket section intermediate of the curved sections, the said socket section being adapted to receive and engage a terminal for the completion of an electric circuit.



1,750,247. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. PAUL P. STOKES, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Dec. 8, 1927, Serial No. 238,558. Renewed Aug. 2, 1929. 5 Claims. (Cl. 246—5.)

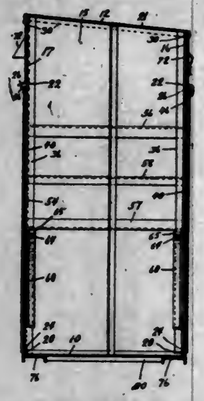
5. In combination, a section of railway track, a signal governing traffic through said section, a first relay controlling said signal, a second relay, means for selectively energizing said relays, a manually controlled normally closed contact, means effective after the first relay has been energized and operating if the second relay is open to hold the first relay closed until said contact becomes open, and means effective after the first relay has been energized and operating if the second relay is closed to hold the first relay closed until said contact becomes open or until a train enters said section.

1,750,248. FISHING TOOL FOR SUCKER RODS. ORVILLE J. THOMPSON, Franklin, Pa. Filed July 17, 1929. Serial No. 378,915. 1 Claim. (Cl. 294—102.)

In a fishing tool for sucker rods, a cylindrical body provided at its upper end with means for attachment to an actuating means, also a bore extending into the lower end of said body forming a socket and chuck-chamber, said chamber being formed at its upper end with upwardly-diverging walls terminating at their upper limit in a shoulder, and a longitudinally-movable, cylindrical chuck within said chamber consisting of an elongated tubular element adapted to be limited in its upward movement by contact of its upper face with said shoulder, said chuck having at its upper end expansible and contractible jaws and a rod passage therebetween for contact and engagement with the periphery of a rod, said limit of the upward

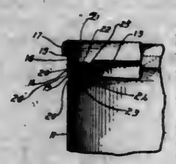
movement of said chuck being for the purpose of forcing said jaws over the rod to be operated upon, the outer peripheral faces of said chuck jaws having upwardly-diverging surfaces for contact with said diverging walls of said chamber when the tool is raised, as and for the purpose set forth.

1,750,249. TRANSMISSION-LINE DEVICE. NILS A. WAHLBERG, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 11, 1927. Serial No. 212,195. 8 Claims. (Cl. 173—318.)



1. In a transmission-line device, the combination with a clamp including a conductor-receiving member and a member for clamping the conductor relative thereto, of an electrostatic-field-controlling element comprising a multi-part arc-assuming member and a member held in position by said clamping member for holding said arc-assuming parts together.

1,750,250. PORTABLE METAL ELECTRIC-SWITCH HOUSE. MORRIS B. WOOD, Somerville, Mass., assignor to Condit Electrical Manufacturing Corporation, South Boston, Mass., a Corporation of Massachusetts. Filed Aug. 1, 1927. Serial No. 209,743. 8 Claims. (Cl. 189—2.)

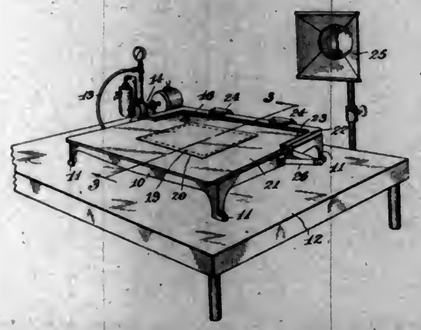


1. An outdoor switch house adapted to contain an electric switch, its operating mechanism, control panel and the like and composed of top, bottom and side walls of sheet metal fixedly united, one to another, and having integral inturned side edges of substantial depth which form house-bracing members characterised by providing the sole support for the walls, said house being free

from any internal supporting frame, the inturned side edges of the top wall depending over the outer faces of said end walls, and the inturned edges of the bottom wall upstanding within the inner faces of said end walls

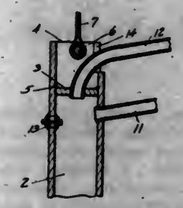
and side plates extended between the top ends only of said end walls and located between the inturned side edges thereof and the opposed inturned side edges of said top wall, the sides of the house having doors which close the openings under said side plates.

1,750,251. COMBINATION TEARING STRIP AND FRICTION CLOSURE CAN. JOHN M. YOUNG, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 2, 1925. Serial No. 66,228. 3 Claims. (Cl. 220—54.)



1. A can, comprising a body having score lines setting off a tearing strip around the body near its top, the material of the body being bent inwardly in a hollow looped flange below and near the tetring strip and to a distance beyond the rest of the interior surface of the body and forming an internal friction wall, and a cover having an external shoulder fitting tightly within the mouth of the body and a flange double-seamed with the top edge of the body and an external friction wall of less diameter than the said shoulder and fitting tightly within said internal friction wall of the body before the said tearing strip is removed.

1,750,252. WIRE-TIGHTENING DEVICE. MANUEL ARANCAL, San Francisco, Calif. Filed Dec. 9, 1925, Serial No. 74,344. Renewed Aug. 3, 1929. 1 Claim. (Cl. 140—123.5.)



A wire tightening device comprising a pair of pivotally connected crossed handles having upper and lower gripping jaws, the lower jaw projecting downwardly and forwardly at an angle from the meeting point of said jaws, and having a right angle forward projection at the bottom thereof.

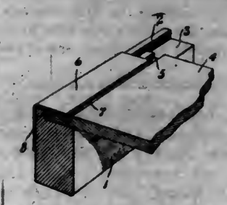
1,750,253. PHOTO-ENGRAVER'S PRINTING FRAME. WILLIAM J. ADAM, Brooklyn, N. Y., assignor to F. Wesel Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 2, 1926. Serial No. 145,813. 7 Claims. (Cl. 95—76.)

1. A printing frame, comprising: a stationary base with open-work top; a tiltable frame hingedly secured to the base, and a plate of transparent glass carried by said tiltable frame; a flexible cushioning and sealing member normally resting on said stationary base and adapted to receive both a sensitised plate and a negative from which a print is to be made thereon; and a vacuum connection thru said flexible member adapted to permit the same to follow movement of the tiltable frame relatively to its base and for temporarily causing attachment of negative and sensitised plate to the glass of the tiltable frame when the vacuum is applied as well as to permit the tiltable frame to be swung therewith away from said stationary base into printing position.

1,750,254. HEADER FOR WATER-TUBE BOILERS. WILBUR H. ARMACOST, New York, N. Y., assignor to The Superheater Company, New York, N. Y. Filed Jan. 23, 1928. Serial No. 248,701. 4 Claims. (Cl. 122—360.)

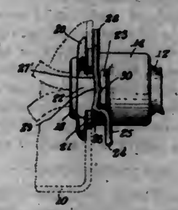
1. In a header of the class described having a closed upper end, the means of support comprising an extension of the walls of the header upward beyond the closure of the upper end, a bar engaging said extension at two opposite points, a fixed support above the header, and a hanger engaging the bar and the support.

1,750,255. COMBINED PENCIL AND LIGHTER. WILLIAM P. ARON, Dallas, Tex., assignor of one-half to Evangeline Rorex, Dallas, Tex. Filed Mar. 26, 1928, Serial No. 264,641. Renewed Jan. 11, 1930. 5 Claims. (Cl. 67—7.1.)



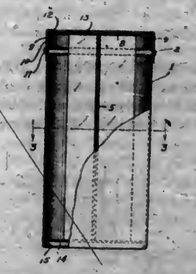
4. In combination with a body, a cover pivoted to one end of the body, lighter means operable by the

cover, a clip disposed exteriorly of the body and pivoted between its ends to the body, latching means on one



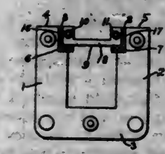
end of the clip, and means on the cover to engage the latching means, the opposite end of the clip being formed to engage the wall of a pocket.

1,750,256. TABLE TOP. EMMONS W. BONFIELD, Grand Rapids, Mich., assignor to American Box Board Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Apr. 11, 1927. Serial No. 182,623. 4 Claims. (Cl. 45—31.)



2. A table top comprising an open frame, a cover sheet of paper board or like material located over said frame, holding strips of sheet metal attached to the outer sides of the frame and extending over the edge portion of the cover sheet, said cover sheet having grooves paralleling its edges in the upper sides into which the inner free edges of the holding strips enter.

1,750,257. OUTLET-BOX CLAMP BUSHING. WILLIAM A. BONNELL, Brooklyn, N. Y. Filed Oct. 2, 1926. Serial No. 139,153. 2 Claims. (Cl. 247—25.)



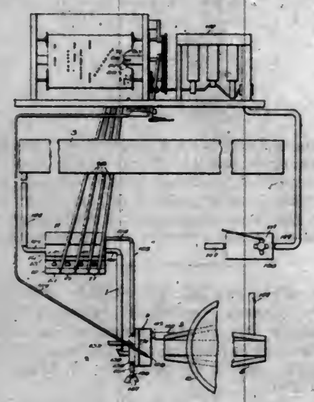
2. The combination with an outlet box having cable receiving openings, of a bushing having a flange of greater diameter than the openings in the box, a reduced step equal to the openings, and a body of lesser diameter, said flange, step and the adjacent portion of the body being recessed on two opposite sides, outstanding notched ledges on said body at the ends of the recesses, a spring wire keeper to straddle said body and engage between said ledges and surface of the box whereby said flange is drawn forcibly against the inner marginal surface of the opening, nodes on said spring wire keeper to engage the notches in the ledges, and means on said bushing to secure a cable entered therein.

1,750,258. PACKAGE. DONALD D. BROWN, Valley Stream, N. Y. Filed June 2, 1928. Serial No. 282,452. 1 Claim. (Cl. 206—46.)

A receptacle comprising a hollow body member and a pair of angle shaped partitions therein one of which has a longitudinal reentrant groove adapted to receive the longitudinal ridge portion of the other, and both being provided with longitudinal flanges bearing against portions of the interior surface of the body member.

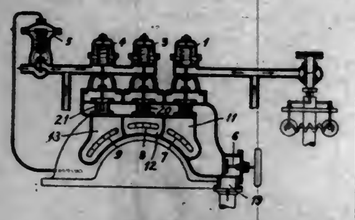
1,750,259. ELECTRICAL MEASURING INSTRUMENT. ALBERT CALLSEN, Nuremberg, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 9, 1927, Serial No. 211,731, and in Germany Dec. 9, 1926. 1 Claim. (Cl. 171—264.)

In an induction meter, the combination with a magnetic core of substantially U shape providing a pair of spaced pole pieces, of a magnetic shunt comprising an intermediate portion saturable at a predetermined flux value and enlarged end portions, and means for securing said shunt to said pole pieces whereby the enlarged end portions thereof increase the effective area of the faces of said pole pieces.



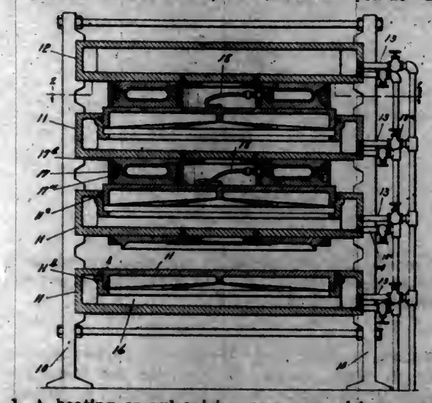
1,750,260. RESILIENT WHEEL FOR VEHICLES. HENRY DIELMANN, Woodhaven, N. Y. Filed Mar. 24, 1927. Serial No. 177,937. 2 Claims. (Cl. 152—42.)

1. In a resilient wheel of the class described, a driving connection member provided with an elongated aperture



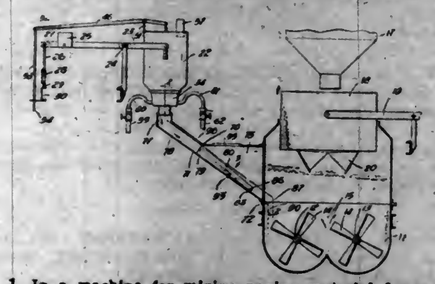
adapted to slidably receive a tapered member, said tapered member adapted to engage a cylindrical member, a means for securing the said tapered member in the said driving connection member.

1,750,261. EXPRESSION-CONTROL DEVICE. GUSTAV A. FORSBERG, Chicago, Ill., assignor to Gulbransen Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 1, 1927. Serial No. 180,103. 18 Claims. (Cl. 84—39.)



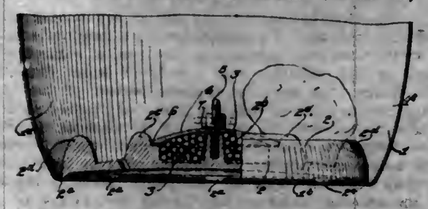
1. In an expression control device for player pianos, a suction chamber, means for admitting atmospheric air to the chamber, said means including a plurality of expansible members independently operable and subject to the tension in the chamber, said members being normally all open to the atmosphere and expansion of the members being opposed with different degrees of intensity, and means for cutting off communication between one or more of said members selectively and the atmosphere.

1,750,262. BACK-PRESSURE TURBINE. KARL FREY, Baden, Switzerland, assignor to Aktiengesellschaft Brown Boveri & Cie., Baden, Switzerland, a Joint Stock Company of Switzerland. Filed Mar. 3, 1927, Serial No. 172,543, and in Germany Mar. 5, 1926. 2 Claims. (Cl. 137—158.)



1. In steam turbine apparatus, a turbine casing provided with a plurality of consecutively arranged steam-supply chambers partitioned one from the other, a steam-supply chest common to said chambers, a main steam-supply controlling valve interposed between said steam-supply chest and one of the end-most of said steam-supply chambers, valve means associated with the other of said chambers for controlling steam flow thereinto from said chest by way of said main valve, and means responsive to high and low back-pressure conditions of said turbine and being operable at such conditions to effect closing and opening movements respectively of said valve means, said end-most of said steam-supply chambers being in direct communication at all back-pressure conditions with said steam-supply chest by way of said main valve.

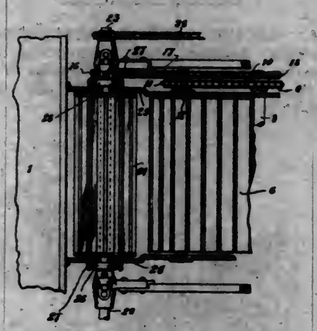
1,750,263. MULTIPLE HEATING OR VULCANIZING PRESS. JOHN R. GAMMETER, Akron, Ohio. Filed Mar. 20, 1928. Serial No. 263,077. 7 Claims. (Cl. 18—17.)



1. A heating or vulcanising press comprising a series of spaced, jacketed platens adapted to receive the goods to be treated therebetween, and means for supplying a heating or curing medium to said platens, said platens having a movable platen face operable by pressure of the curing medium therein on at least one of each set of cooperating faces.

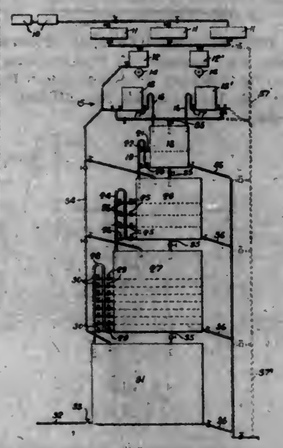
1,750,264. SPREADER FOR MIXING MACHINES. THEODORE A. GARROW, Los Angeles, Calif. Filed Nov. 28, 1923. Serial No. 677,391. 3 Claims. (Cl. 94—43.)

1. In a machine for mixing paving material for road and street work, a receptacle adapted to receive and weigh a required quantity of hot liquid asphaltum, a mixer adapted to receive a predetermined quantity of dry paving material and the weighed quantity of hot asphaltum and mix the two materials together and a fan shaped spreader intermediate the asphaltum determining apparatus and the apparatus for commingling the asphaltum and dry material, said spreader being adapted to deliver the asphaltum into the mixer in a continuous sheet of even depth.



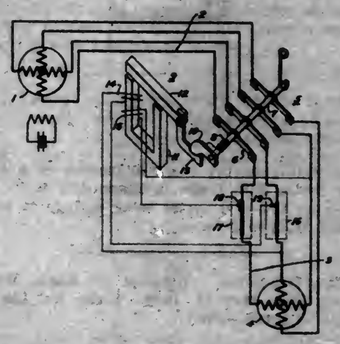
1,750,265. MINIATURE STEAM-COOKING DEVICE. LUDDER H. GROTHEER, San Diego, Calif. Filed June 8, 1929. Serial No. 369,322. 3 Claims. (Cl. 53—2.)

2. The combination with a receptacle, of a false bottom means adapted to be positioned loosely therein, means for



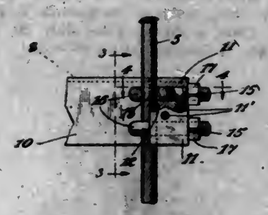
supporting the lower surface of said false bottom means in raised position relative to the bottom of said receptacle, and means for varying the weight of said false bottom means.

1,750,266. FODDER CUTTER. SIDNEY U. HAMAKER, Canton, Ohio, assignor to The Joseph Dick Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 17, 1925. Serial No. 50,804. 1 Claim. (Cl. 146—109.)



Feed mechanism for fodder cutters and the like, including a feed hopper having guideways in its side walls, a lower feed roll mounted for rotation in the hopper, an upper feed roll mounted in the hopper for moving to and from the lower feed roll and having an axial shaft extending at the ends into the guideways, and wheels journalled on the ends of the shaft and movable into rolling contact with the sides of the guideways by the pressure of the material fed between the rolls.

1,750,267. AUTOMATIC FERMENTATION APPARATUS. ARTHUR PENNOYER HARRISON, Washington, D. C., assignor, by mesne assignments, to Standard Brands Incorporated, Dover, Del., a Corporation of Delaware. Filed June 9, 1927. Serial No. 197,547. 8 Claims. (Cl. 195—18.)

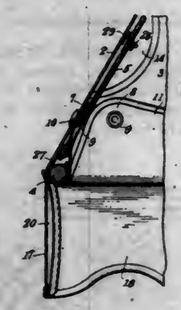


8. An apparatus for manufacturing yeast by propagation by an "addition" process, including a series of fermenters arranged at different and progressively lower levels, a take-off pipe connected to each and leading to the succeeding fermenter, each of said take-off pipes being substantially in the form of an inverted U and having arms of unequal length, the short arm being connected to the preceding fermenter and reaching to approximately the bottom thereof, the bend of said U establishing the maximum liquid level in the fermenter to which it is connected, each fermenter of the series being of approximately double the capacity of the next preceding fermenter, certain of said take-off pipes and fermenters being equipped at various levels with a short pipe leading from the fermenter to the short arm of the U and at substantially the same level from the short arm of the U to the long arm of the U, each of said short pipes being equipped with valves whereby an aliquot of the liquid may be removed therefrom without respect to the height of the U-shaped bend of the take-off pipe.

1,750,268. RELAY PROTECTIVE SYSTEM. OLIVER S. JENNINGS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 26, 1928. Serial No. 634,878. 9 Claims. (Cl. 175—294.)

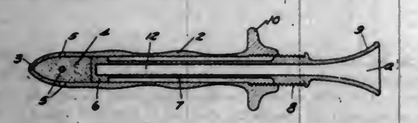
8. In an electrical circuit, the combination with a switch and an electromagnet provided with a coil energized from the circuit to maintain said switch in closed position and an auxiliary coil, of a thermal relay in said circuit for short-circuiting said auxiliary coil upon the occurrence of an overload in said circuit to render said electromagnet ineffective to hold said switch in closed position.

1,750,269. CABLE SCAFFOLD. FRANK B. JOHNSTON, Roselle Park, N. J. Filed Feb. 7, 1928. Serial No. 252,443. 8 Claims. (Cl. 304—40.)



1. In a scaffold, spaced scaffold suspending cables, a platform supporting putlog extending between said cables, and means mounted on each end of the putlog and adjustable with relation thereto to rigidly fix the end of the putlog in adjusted position upon the cable.

1,750,270. COATED IRON AND STEEL ARTICLES AND METHOD OF MAKING THE SAME. ELMER M. JONES, Detroit, Mich., assignor to Parker Rust-Proof Company, Detroit, Mich., a Corporation of Michigan. Filed June 13, 1927. Serial No. 198,696. 9 Claims. (Cl. 148—6.5.)

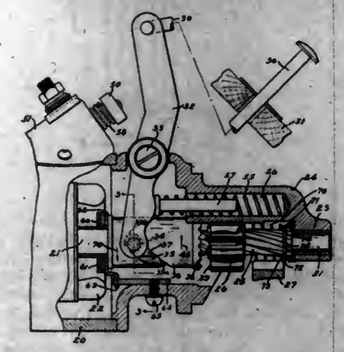


1. Iron or steel articles, or articles having surfaces of iron or steel, having a coating formed in situ on said surfaces and comprising a silicate of iron and a phosphate.

1,750,271. AWNING. LOUIS KABAN, New York, N. Y. Filed Nov. 7, 1927. Serial No. 231,555. 18 Claims. (Cl. 156—15.)

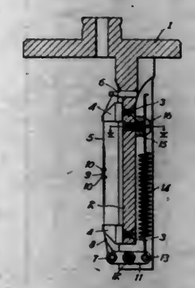
9. An awning having the combination of a frame, a rope for lifting said frame, a suspension device secured to said rope, and said device being springy to attach to and detach from said frame.

1,750,272. DILATOR. WILLIAM J. KIRK, Wellsburg, W. Va. Filed May 15 1926. Serial No. 109,280. 6 Claims. (Cl. 128—230.)



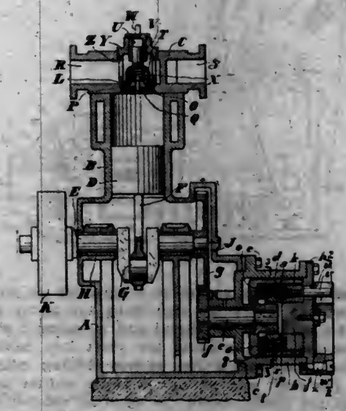
1. A dilator consisting of a hollow elongated integral body circular in cross section having a non-bulging tapered perforated minimum diameter end portion and a longitudinally undulating variable and maximum diameter exterior and a rear annular flat faced limiting flange, and a continuously integral interior hollow plunger having threaded connection with the outer end of the body.

1,750,273. MUSIC STAND. MARIE WILLIAM KRAUTH, Hamilton, Ohio, assignor to Krauth & Benninghofen, Hamilton, Ohio, a Firm. Filed July 20, 1927. Serial No. 207,241. 2 Claims. (Cl. 248—43.)



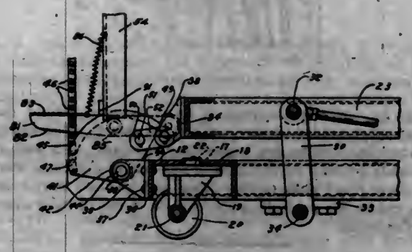
1. A latching means for a post supporting tripod, comprising, a carrier slidably mounted on the post, links pivotally connected to the carrier and to the respective legs of the tripod, an abutment formed on said post intermediate the base of the post and the carrier, a latch pivotally attached to a link pivot on said carrier, said latch moving adjacent to a side of the link and a pair of clips formed on the outer end of the latch, said clips adapted to engage the respective edges of the link for limiting movement of the latch and said latch having a hook portion adapted to engage the abutment for locking the tripod in set-up position.

1,750,274. ENGINE-STARTING APPARATUS. JOHN W. LAWSON, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 22, 1928. Serial No. 287,492. 16 Claims. (Cl. 74—7.)



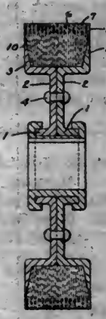
1. An engine starter drive comprising a rotatable driving member movable axially to engage with a driven part connected with the engine to be started, but normally spaced from the engine part; a rotatable device for rotating the driving member; and manually operable means for moving the driving member toward the engine part and for turning the rotatable device only during the movement of the driving member toward the engine part.

1,750,275. DEFLECTING SYSTEM. JOSEPH W. LEGO, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 23, 1927. Serial No. 221,601. 13 Claims. (Cl. 171—95.)



1. In a deflecting system a ribbon under tension, means to support said ribbon at its ends and to prevent it from twisting at said ends, and a permanent magnet mounted on said ribbon.

1,750,276. COMPRESSOR UNLOADER. RAYMOND C. MCALLISTER, Painted Post, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 27, 1927. Serial No. 242,857. 6 Claims. (Cl. 230—29.)

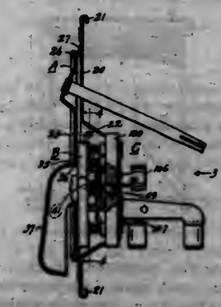


1. The combination with a compressor of a member driven by the compressor, spring pressed weights adapted to rotate with said member, a rotatable portion having a limited movement and adapted to be frictionally gripped by said weights and released therefrom by the centrifugal force acting on the weights, and a pneumatic controlling valve adapted to be actuated by said rotatable portion, said compressor having an inlet valve adapted to be controlled by said controlling valve.

1,750,277. LIFT TRUCK. CHARLES L. MOORMAN, Chicago, Ill. Filed May 9, 1927. Serial No. 189,855. 10 Claims. (Cl. 254—10.)

1. In a lift truck, the combination of a supporting frame with a lifting frame and a plurality of links connecting said frames, a hoisting cam of variable radius, a link connecting said cam and said lifting frame, a tension member attached to said cam, and a drum for winding said tension member.

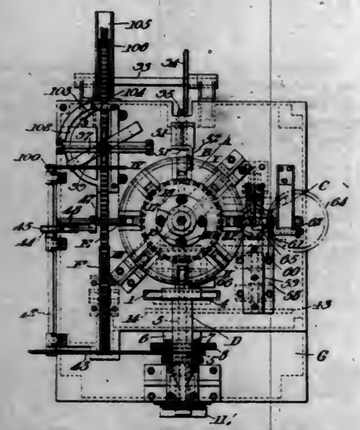
1,750,278. COMPOSITE GEAR. HOWARD R. MOYER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 13, 1924. Serial No. 698,883. 9 Claims. (Cl. 74—28.)



1. A composite article comprising a flanged hub portion and a non-metallic untreated rim portion, the latter being partially clamped between the flanges of said hub, the exposed portion having inserts of fibrous sheet material treated with a hardened binder.

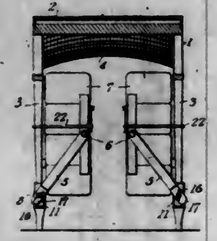
1,750,279. STOP-LIGHT SWITCH. HARRY E. NORVIEL, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 7, 1928. Serial No. 324,365. 9 Claims. (Cl. 200—161.)

1. In an electric switch comprising, a supporting bracket; a case; means for joining the case to the bracket to provide a pair of parallel walls, a shaft journalled in said bracket and case; a non-conducting movable contact carrier mounted on said shaft; a plurality of contacts insulatingly mounted on the supporting bracket to be engaged by the movable contact; a spring for yieldingly maintaining the movable contact in engagement with one of the stationary contacts, and means for rotating the shaft in one direction, and an operating member for rotating said shaft in the opposite direction.



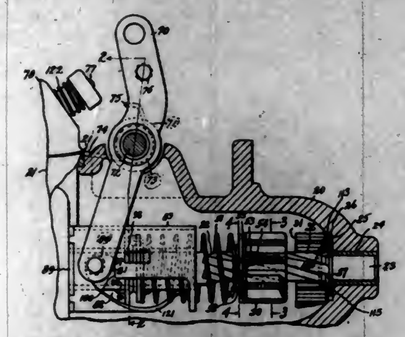
1,750,280. ELECTRIC SWITCH. HARRY E. NORVIEL, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 27, 1928. Serial No. 328,684. 11 Claims. (Cl. 200—11.)

1. An electric switch comprising, in combination, a pressed sheet metal mounting bracket having a dial plate



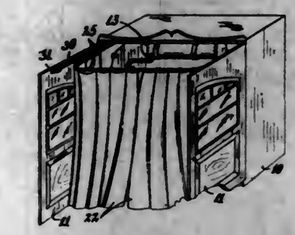
fixed thereto, said mounting bracket having a frusto-conical portion pressed therein substantially perpendicular to said dial plate to form a switch housing integral with said bracket, a stationary switch back carrying terminals and stationary contacts fixed to the end of said frusto-conical portion, movable switch mechanism within said case and having movable contacts, stops formed from the frusto-conical wall portion of said bracket to limit the movement of said switch mechanism, and a switch handle having a hub portion extending through said dial plate and operatively connected with said movable contacts.

1,750,281. MACHINE FOR ASSEMBLING BOOK MATCHES. LUCIAN E. PARKER, Wadsworth, Ohio, assignor to The Ohio Match Company, Wadsworth, Ohio, a Corporation of Ohio. Filed Apr. 6, 1927. Serial No. 181,478. 10 Claims. (Cl. 93—7.)



1. In a machine for assembling book matches, a movable carrier, means associated with said carrier for feeding cover-blanks thereto, means for positioning cards of matches upon said cover blanks, means for folding said cover-blanks into partial book form upon said cards of matches, means for completing the folding of said covers means for uniting said covers and cards of matches, and means for discharging the finished match books from said carrier, said first mentioned folding means being actuated by said discharge means.

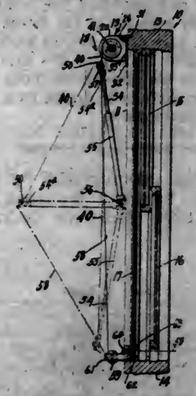
1,750,282. LIFE PRESERVER. MARIN POPESCU, Bucharest, Rumania. Filed July 15, 1929. Serial No. 378,285. 15 Claims. (Cl. 9—12.)



1. A life preserver comprising a chair adapted to be submerged in inverted state, the inverted seat of said chair adapted to receive a person in sitting position, and a pair of oppositely disposed floats located at the upper end of said inverted chair and being joined to the chair.

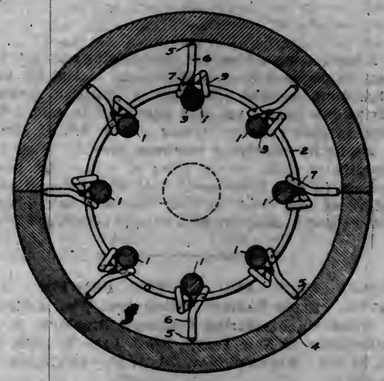
1,750,283. ENGINE-STARTING APPARATUS. FRANK H. PRESCOTT, Anderson, Ind., assignor to Delco-Remy Corporation, Anderson, Ind., a Corporation of Delaware. Filed Jan. 17, 1929. Serial No. 333,139. 20 Claims. (Cl. 74—7.)

1. Engine starting apparatus comprising, in combination, a motor; means for connecting the motor with a gear of an engine to be started and including a shaft, a pinion movable axially along the shaft into mesh with the engine gear, and a lost motion driving connection between the shaft and pinion; a pinion shifter movable axially of the shaft; means for effecting rotation of the shifter while it is moved axially; a spring for transmitting axial and rotary movement from the shifter to the pinion whereby the pinion may be rotated in case it abuts the engine gear prior to meshing, said pinion being yieldingly urged by said spring against the engine gear; and means for operating the shifter.



1,750,284. BATH CABINET. ANDREW RUSATZ, Northampton, Pa., assignor of one-half to John Yurasits, Northampton, Pa. Filed May 31, 1929. Serial No. 367,280. 2 Claims. (Cl. 4—146.)

1. In combination with a closet having hinged doors, horizontal guides secured within the closet, a rod having a transverse portion for supporting a curtain and side arms slidably secured on the guides, pull levers pivotally secured at their front ends to the doors and at their rear ends to the guides for projecting the curtain outward upon opening of the doors.



1,750,285. AWNING. GEORGE SCHULER, Woodside, N. Y. Filed July 16, 1927. Serial No. 206,144. 3 Claims. (Cl. 156—44.)

2. In a window awning adapted to be longitudinally extended over the entire length of the window, a spring roller, a bracket in which the roller is mounted to rotate, a curtain secured at one end to the roller, self-adjusting telescopically arranged curtain extending means in engagement with the free end of the awning, pivotally supported on the window frame, means suspended from the free end of the curtain whereby the said curtain may be rolled or unrolled, and a guide for the last mentioned

means, mounted below and in front of the center of the extending means pivot, to permit the said extending means to assume an angular position when fully extended.

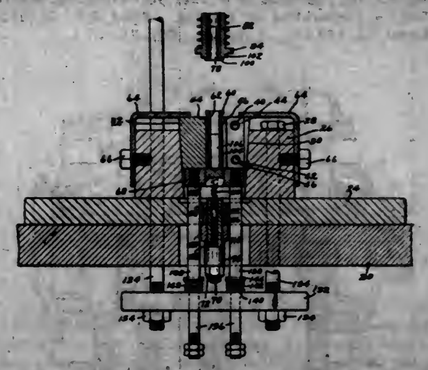
1,750,286. SPACER. AUGUST C. SHERWAN, Milwaukee, Wis., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 23, 1927. Serial No. 221,410. 2 Claims. (Cl. 72—76.)

1. A spacer for spacing a reinforcing frame in a mold and adapted to engage the frame at the junction of the longitudinal and transverse members thereof, said spacer comprising a single straight end portion to space the frame from the mold and a deformed helical portion comprising two loop portions which encircle the transverse member at opposite points of the longitudinal member.

1,750,287. PROCESS OF PRODUCING PERMANENT PAINTS. NORBERT SPECHT, Oranienburg, near Berlin, Germany, assignor to Deutsche Gasglühlicht-Auer-Gesellschaft mit beschränkter Haftung, Berlin, Germany, a Corporation of Germany. Filed Oct. 21, 1925, Serial No. 64,032, and in Germany Oct. 31, 1924. 1 Claim. (Cl. 134—58.)

The process of treating a titanium oxide pigment contaminated by acid adhering thereto, which consists in washing such pigment to remove the major portion of said adhering acid, then removing a further portion of such acid by neutralization with an alkali, then neutralising the remaining portion of such acid by kneading with about five per cent of zinc oxide, filtering, washing and drying the resulting product, and heating it to incandescence.

1,750,288. POLISHING COMPOUND. OTHO V. STEWART, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 8, 1925. Serial No. 74,192. 6 Claims. (Cl. 51—280.)

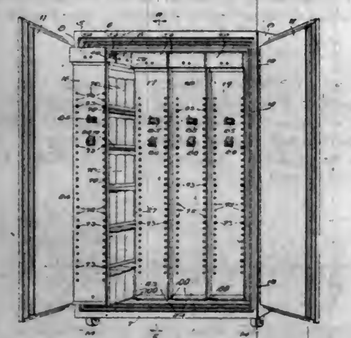


1. A composition of matter which consists of finely divided green chromic oxide intimately mixed with stearine wax.

1,750,289. LIFTING TRUCK. WILLIAM STUEBING, Jr., Cincinnati, Ohio, assignor, by mesne assignments, to The Yale & Towne Manufacturing Company, Stamford, Conn., a Corporation of Connecticut. Filed July 21, 1927, Serial No. 207,470. Renewed Feb. 19, 1929. 4 Claims. (Cl. 254—10.)

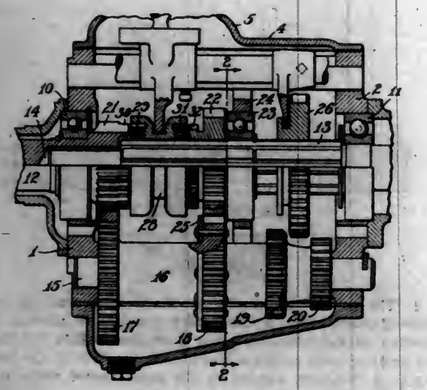
1. A lifting truck comprising, in combination, a lower frame, an elevating frame, a depending flange on said elevating frame, a handle pivotally mounted on said lower frame, a lifting hook pivotally mounted on said handle and extending rearwardly beneath said flange when said handle is raised, said hook being unbalanced so that it remains normally out of engagement with said flange but may be caused to engage the same when swung upwardly from its normal position.

1,750,290. SIZING DIE FOR FLANGE BEARINGS. ALBERT H. VALENTINE and JOHN C. LEMMING, Dayton, Ohio, assignors to The Moraine Products Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 6, 1928. Serial No. 244,907. 25 Claims. (Cl. 18—16.)



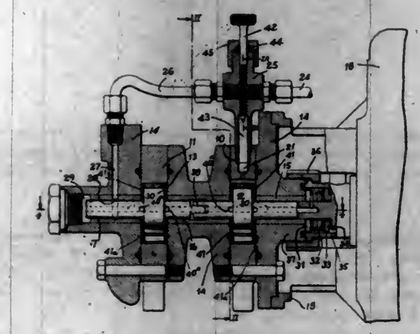
1. The method of forming a compressible bushing to a desired predetermined size which consists in placing the bushing within a die, inserting a mandrel within the bushing and applying pressure to the outer surface of the bushing in a direction normal to the axis thereof while it is within the die.

1,750,291. FILING CABINET. IRENE B. WHETSTONE, Chicago, Ill. Filed July 12, 1926. Serial No. 121,875. 1 Claim. (Cl. 45—2.)



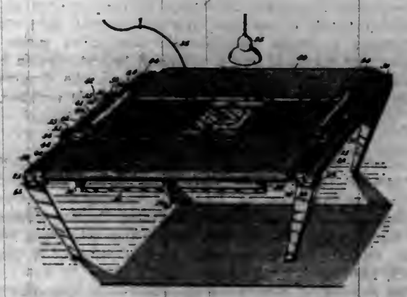
In a cabinet of the class described, the combination of an enclosing case having an open front and closed at the top, bottom, back and sides, a plurality of book racks each having means for supporting a plurality of vertically tiered rows of books and each rack being free at the bottom for

movement over the floor free of the surface thereof, said racks being each adapted to carry a relatively great weight and each vertically elongated with the bottom of each rack adjacent the bottom of the case and movable into and from the case in close proximity to the floor, means individually supporting each rack sole from the top of the case by suspension therefrom and permitting extension of the racks individually from the case, the extension support for each rack comprising a first bar rigidly suspended from the top



of the case above the rack, a second bar underlying said first bar and attached to the top of the rack, and an extensible guide comprising a pair of connected channels slidably hung from said first bar and forming a hanger for slidably supporting said second bar, said second bar having sliding movement in said extensible guide for extension therefrom and said guide having sliding movement on said first bar for extension therefrom to form a double extension support at the top of each rack.

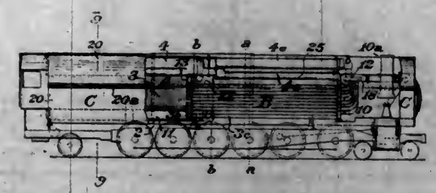
1,750,292. TRANSMISSION GEAR. SAMUEL O. WHITE, Muncie, Ind., assignor to Warner Gear Company, Muncie, Ind., a Corporation of Indiana. Filed Feb. 21, 1927. Serial No. 169,687. 2 Claims. (Cl. 74—57.)



1. In an automobile transmission the combination with a transmission casing, of co-axial driving and driven shafts mounted in said casing, bearings in the end walls thereof for said shafts, a drive gear on said driving shaft adjacent a bearing in the end wall of the casing, a counter-shaft mounted in said casing, a gear on said counter-shaft meshing with said drive gear, a second gear on said counter-shaft, a gear on said driven shaft meshing with said second gear on the counter-shaft and mounted intermediate of the end walls of the casing, a transverse wall intermediate of the end walls of the casing and connecting the side walls thereof, a bearing for said driven shaft mounted in said intermediate wall and receiving the axial thrust in one direction of the gear mounted on the driven shaft, an annular rim on the side face of the second meshing gear on the counter-shaft adapted to receive the axial thrust of the driven shaft gear in the opposite direction and means for causing said driven shaft to be driven from the drive shaft directly or through said gears.

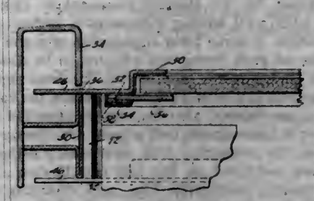
1,750,293. SYSTEM AND METHOD OF LUBRICATING COMPRESSORS. EDWARD T. WILLIAMS, Brooklyn, N. Y. Filed July 31, 1926. Serial No. 126,172. 12 Claims. (Cl. 230—207.)

1. A lubricating system for compressing apparatus comprising, in combination, an oiler-body, means for supplying lubricant to said oiler-body, a cylinder, means for supplying lubricant from said oiler-body to said cylinder, a rotor in said cylinder having a hole drilled along its axis, means for supplying lubricant directly to said hole, a plurality of disks on the sides of said rotor, passages transverse to said first-named hole and disposed near to the sides of said rotor whereby lubricant is fed between said disks and toward the bore of said cylinder.



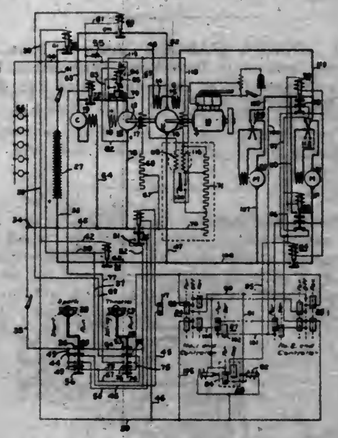
1,750,294. STEP AND REPEAT PRINTING APPARATUS. ELLIS BASSIST, Milwaukee, Wis., assignor to F. Wesel Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed June 2, 1925, Serial No. 34,363. Renewed Nov. 29, 1929. 13 Claims. (Cl. 95—76.)

1. In printing apparatus of the character set forth: a table or frame providing a horizontally disposed base; means to retain thereon a sensitized plate and including a



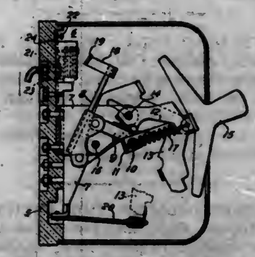
bed plate, guide pins extending therethru from said table and on which said bed plate may move vertically; a plurality of cams bearing against the under face of said bed plate, and means to move said cams; a source of light to which the sensitized plate may be exposed; intermediate adjustable masking means; and a negative carrier associated therewith and adapted to be located in consecutive positions over the sensitized plate.

1,750,295. STEAM BOILER. ALFRED W. BRUCE, New York, N. Y. Filed June 2, 1927. Serial No. 195,888. 15 Claims. (Cl. 122—94.)



1. In a locomotive, the combination of a locomotive frame structure; a steam generating member; a heat absorbing member for heating water, in communication with the steam generating member, said members being structurally independent one of the other; and means connected with the members, constituting therewith a boiler structure preventing relative longitudinal displacement of the members independently of any frame structure connections, said means being connected with the frame structure, to retain said boiler structure against longitudinal displacement relative to the frame structure.

1,750,296. WINDOW SASH AND FRAME CONSTRUCTION. HARRY E. CAMPBELL, Baltimore, Md., assignor to Campbell Metal Window Corporation, Baltimore, Md., a Corporation of Maryland. Filed July 24, 1928. Serial No. 295,085. 4 Claims. (Cl. 189—76.)



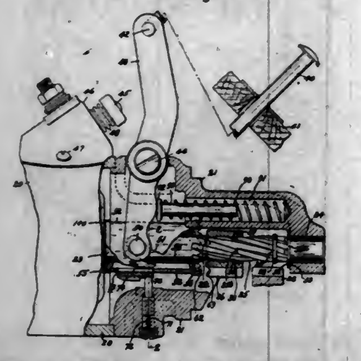
1. A window sash construction comprising a bottom rail having members adapted to form a glass channel, side rails each formed to provide a glass rabbet and a glass stop channel, glass stops adapted to slide endwise into operative position in such channels, means adapted to prevent the glass stops from being moved sidewise from their operative position out of said channels, a top rail formed to provide a glass rabbet and a removable member adapted to serve as a top glass stop and adapted to hold the side glass stops against endwise movement.

1,750,297. POWER SYSTEM. ANDREW H. CANDEE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 20, 1927. Serial No. 227,448. 13 Claims. (Cl. 290—11.)

8. In a power system, in combination, a variable speed engine, a main generator and an auxiliary generator driven by the engine, a plurality of auxiliary circuits disposed to be connected to the generators and means responsive to the loading of the engine for selectively connecting the battery to the generators.

1,750,298. CIRCUIT BREAKER. ALFRED CORBETT, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 31, 1927. Serial No. 243,879. 4 Claims. (Cl. 200—144.)

1. A circuit breaker comprising a pair of spaced contact members, a pair of connected spaced contact blades for engaging the said contact members, a separate metal arc quenching barrier for each blade disposed across the path of movement of the blade and provided with an opening through which the blade moves, the said barriers being spaced and insulated from the contact members, and a metal arc quenching barrier superimposed in spaced relation to the first barriers and provided with openings through which the blades move.



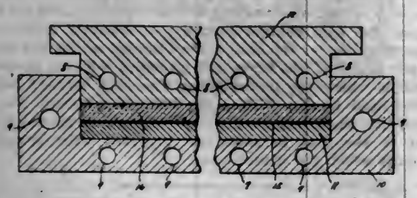
1,750,299. PRODUCTION OF ACYL RESORCINOLS. ALFRED R. L. DOHME, Baltimore, Md., assignor to Sharp & Dohme, Inc., Baltimore, Md., a Corporation of New Jersey. Filed Apr. 16, 1925. Serial No. 23,700. 11 Claims. (Cl. 260—131.)

1. The method of making acyl resorcinols which comprises heating a mixture of zinc chloride and a fatty acid

to a temperature of about 125–145° C. and gradually adding resorcinol to the heated mixture.

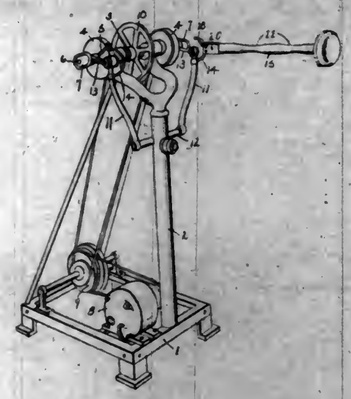
9. The method of making hexylyl resorcinol which comprises heating a mixture of caproic acid and not more than one-half its weight of zinc chloride to a temperature of about 125–145° C., and gradually adding resorcinol thereto.

1,750,300. ENGINE STARTER. JOHN B. DYER, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 9, 1928. Serial No. 245,300. 10 Claims. (Cl. 74—7.)



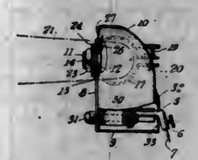
1. Engine starting apparatus comprising in combination, a motor; a shaft operated by the motor; means for connecting the shaft with the gear of an engine to be started including a pinion mounted on the shaft for longitudinal movement thereof and for rotary movement therewith; a manually operable actuator; means operated by the actuator for moving the pinion longitudinally of the shaft and for rotating the pinion in case of gear tooth abutment while the pinion is abutting the engine gear; and means for preventing the remeshing of the pinion with the gear until after the actuator has been returned to normal position.

1,750,301. WELDING FLUX. ROBERT R. FULTON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 16, 1926. Serial No. 135,997. 10 Claims. (Cl. 148—26.)



1. Welding flux containing a copper silicon alloy and a substantial amount of ammonium borate.

1,750,302. MOLDED COMPOSITION ARTICLE. HARVEY D. GEYER, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 3, 1927. Serial No. 223,500. 6 Claims. (Cl. 154—46.)

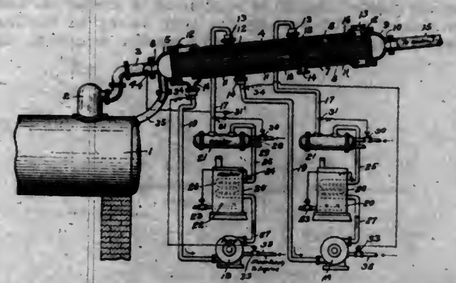


6. As a new article of manufacture, an ornamented molded panel comprising: a main body portion of bituminous material and a relatively hard decorative outer casing molded and cured in situ upon said bituminous material, said casing comprising a fibrous sheet having color contrast ornamentations thereupon embedded under a thin layer of transparent synthetic resin.

1,750,303. MASSAGING MACHINE. NORRIS E. GOODRICH, Battle Creek, Mich., assignor, by mesne assignments, to Sanitarium Equipment Company, Battle Creek, Mich. Filed May 19, 1927. Serial No. 192,594. 5 Claims. (Cl. 128—63.)

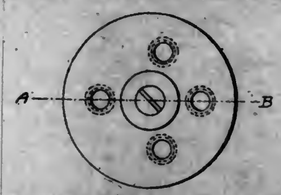
1. In a massaging machine, the combination of a reciprocating driven element having a rearwardly facing curved hook thereon, and an applicator comprising a rigid shaft having an eye of substantial width closely but slidably and pivotally engaging said hook whereby the applicator may be swung vertically and laterally on said driven element relative to the plane in which the driven element reciprocates.

1,750,304. PHONOGRAPH PICK-UP. CARL F. GOUDY, Flushing, N. Y., assignor to Pacent Radio Corporation, New York, N. Y., a Corporation of Delaware. Filed May 28, 1928. Serial No. 281,187. 10 Claims. (Cl. 179—100.41.)



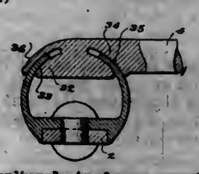
1. A casing for an electric phonograph pick-up, comprising a back wall having a forwardly projecting bottom wall extension, a cover hood engageable over the back wall and having an open lower end adapted to be closed by the bottom extension when in place on the back wall, a hub projecting from the back wall and by which the casing with the pick-up mechanism therein may be mounted in proper relation on a phonograph and a tone arm clamp shiftably engaged on the projecting hub, said clamp comprising an arm portion swiveled on the hub and having at its free end a forwardly projecting tone arm clamping structure standing in the plane of the cover and adapted to swing over the top of the cover from one side to the other.

1,750,305. INSULATING MATERIAL. JOSEPH E. GROSS, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 19, 1927. Serial No. 234,563. 13 Claims. (Cl. 175—21.)



1. An article of manufacture comprising magnetic sheet material provided with a thin, adherent, electrical insulating and heat resisting coating, said coating containing sodium silicate and a substantial proportion of finely divided mica.

1,750,306. FRACTIONATING APPARATUS. ELIOT HUNTINGTON HARRIS, Pittsburgh, Pa., assignor to Benjamin M. Herr, Pittsburgh, Pa. Filed Aug. 6, 1926. Serial No. 127,564. 5 Claims. (Cl. 196—141.)

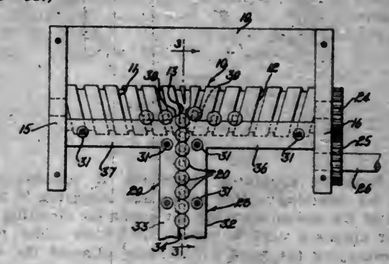


5. Fractionating apparatus, comprising a shell, at least one vapor conveying passage extending therethrough, means for delivering condensable vapors to said passage, said passage extending upwardly from the vapor inlet to the outlet end thereof, means for delivering fluid to the interior of said shell in heat transferring relation to said passage, means for varying the temperature and means for varying the rate of flow of such fluid at different points along said passage to control the rate of heat transfer between the fluid so delivered and the vapors traversing said passage.

1,750,307. ELECTRON-DISCHARGE DEVICE. NORMAN PULLEN HINTON, Timperley, England, assignor to Associated Electrical Industries Limited, a British Company. Filed Nov. 21, 1925, Serial No. 70,548, and in Great Britain Dec. 5, 1924. 2 Claims. (Cl. 178—344.)

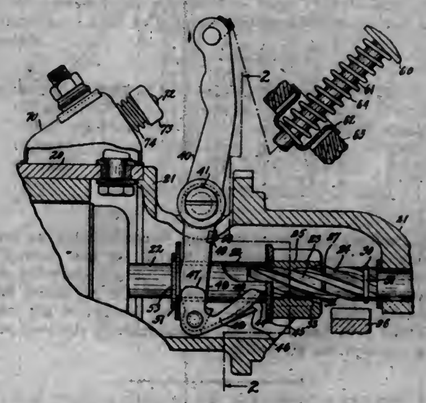
1. In a combination with an electron tube having a base carrying contact pins, and a socket having receptacles adapted to receive said pins, an adapter comprising a plate having a pin arrangement like that of said base, a second plate having a receptacle arrangement like that of said socket, means to maintain said last named pins and receptacles in substantial alignment, and flexible means connecting each pin of said plate with the receptacle of said other plate aligned therewith.

1,750,308. CAR-COUPLER-OPERATING DEVICE. CHARLES L. HOWARD, Chicago, Ill. Filed Aug. 1, 1927, Serial No. 209,884. Renewed Jan. 20, 1930. 7 Claims. (Cl. 213—169.)



1. In an uncoupling device for car couplers, an operating member, and a substantially horizontal pin lifting member having at one extremity means to support a coupler pin and having at its other extremity a T-head and slot connection with the operating member, which connection permits one member to swing in a substantially horizontal plane but restricts the relative movement at said connection between the members in a substantially vertical plane.

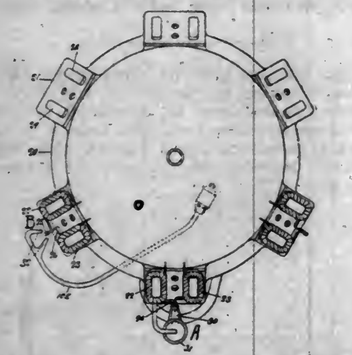
1,750,309. LETTERING DEVICE. JOSEPH T. JANOSEK, Cleveland, Ohio, assignor of one-half to Arthur Oliver, Cleveland, Ohio. Filed Nov. 28, 1928. Serial No. 322,561. 1 Claim. (Cl. 33—174.)



A lettering device comprising in combination a J-shaped rounding tool and a separate rectangular block letter O-shaped squaring tool having on its face notches at spaced intervals, said tools being equal in length, breadth and width.

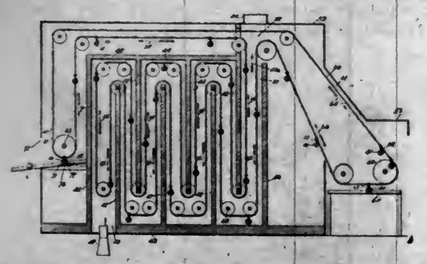
1,750,310. APPARATUS FOR ARRANGING ARTICLES. FRANK FERDINAND JONKEL, Chicago, and HOMER WALDO LARSON, Downers Grove, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 16, 1926, Serial No. 116,490. Renewed Nov. 8, 1929. 7 Claims. (Cl. 198—33.)

4. In an apparatus for arranging articles, a screw member having a peripheral way for guiding properly positioned articles and oppositely disposed spiral ways terminating in the peripheral way for properly positioning indiscriminately arranged articles and advancing them through the peripheral guideway.



1,750,311. ENGINE-STARTING APPARATUS. GEORGE W. ELSEY, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 24, 1926. Serial No. 118,230. 8 Claims. (Cl. 74—7.)

1. Engine starting apparatus comprising, in combination, a motor; means for connecting the motor with the gear of an engine to be started and including a shaft, a pinion slidable along the shaft into mesh with the engine gear and driven by the shaft, and provisions whereby the



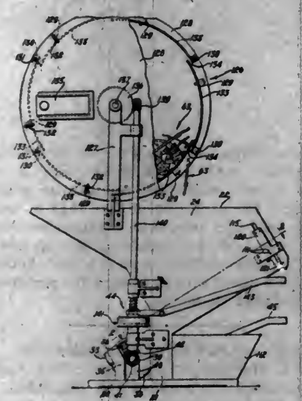
pinion will be automatically demeshed from the engine gear when the engine becomes self-operative; and means for yieldingly retaining the pinion in gear-meshing position relative to the shaft during the cranking operation, said means being free of the pinion substantially before the pinion is completely demeshed.

1,750,312. SOLDERING APPARATUS. RODGER J. EMMERT, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 29, 1925. Serial No. 26,577. 10 Claims. (Cl. 113—59.)

1. Soldering apparatus comprising, in combination, a duct for receiving molten solder and supplying it to the work in the molten state, an air nozzle for directing a jet of air upon the work to remove the excess solder, means for conveying the work successively adjacent the solder duct and the air nozzle, means for causing molten solder to issue from the duct when the work is adjacent the duct, and means for causing air to be supplied to said nozzle when the work is adjacent the nozzle.

1,750,313. COATING AND DRYING APPARATUS. RODGER J. EMMERT, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 29, 1925. Serial No. 65,687. 7 Claims. (Cl. 34—12.)

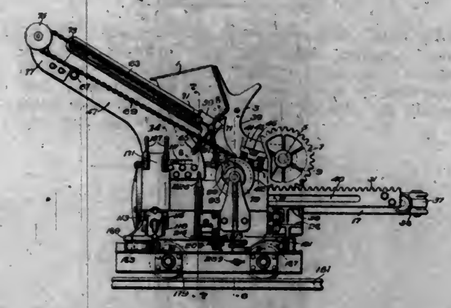
1. Drying apparatus comprising, in combination, an oven having an inlet for receiving heated air and having a conduit forming a warm air outlet, and a conveyor for conveying articles to be dried through the air outlet into the oven, then through the oven to the heated air inlet and then back again over the same course in the oven and then through the air outlet.



1,750,314. CAR COUPLER. MILTON FORCHHEIMER, Newark, N. J. Filed Dec. 31, 1926. Serial No. 158,147. 2 Claims. (Cl. 213—179.)

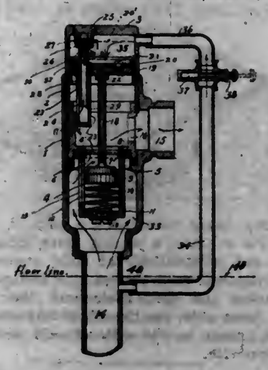
2. A coupling device comprising a member adapted to be attached to a car, and comprising a draw bar and a downwardly inclined flat portion extending outwardly therefrom and having an opening therein near its outer end, a latch pivoted to said member and having a downwardly curved end which normally extends into said opening, a second member adapted to be attached to another car and formed of a substantially flat body having an opening near its outer end and an angle member secured to its

under side and having an outwardly extending portion spaced from and beneath said second named opening, said second named member being adapted to ride up on the said downwardly extending portion as said cars move toward one another and to engage and lift said latch and move beneath said latch until said second named opening registers with said latch and said latch drops into said second named opening.



1,750,315. APPARATUS FOR ARRANGING ARTICLES. CLEM H. FRANKS, La Grange, and MARVIN ROY OLSEN, Glen Ellyn, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 16, 1926, Serial No. 116,493. Renewed Nov. 8, 1929. 19 Claims. (Cl. 198—29.)

1. In an apparatus for arranging articles, a screw mechanism for arranging an article associated therewith, a cam, and rotary means cooperating therewith for disassociating the article from the screw mechanism and for rearranging the disassociated article in a predetermined position.

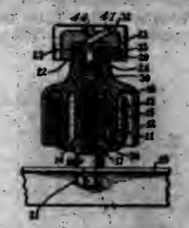


1,750,316. MATERIAL-HANDLING APPARATUS. GEORGE H. GILMAN, Belmont, Mass. Filed Dec. 8, 1921, Serial No. 519,634. Renewed Aug. 2, 1929. 44 Claims. (Cl. 214—90.)

1. A machine of the character described having, in combination, a pivoted shovel arm, a cooperating gear and rack for moving said arm, and means for moving said rack in one direction relative to said gear while withholding motion from said pivot and for moving said gear

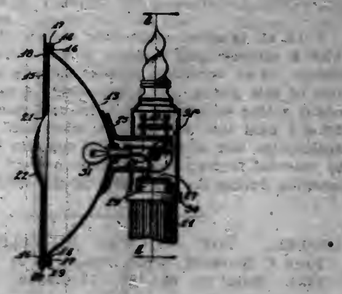
in the opposite direction relative to said rack for causing translation of said pivot and swinging of said arm about said pivot.

1,750,317. FLUSH VALVE. CHARLES S. HOPE, Springfield, Mass., assignor, by mesne assignments, to Katherine Keating, John D. Keating, and Brightie E. Brutnell, Springfield, Mass., and Mary K. Quirk, Middletown, Conn. Filed Nov. 5, 1923. Serial No. 672,788. 2 Claims. (Cl. 137—93.)



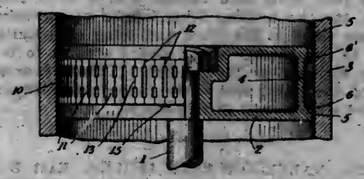
1. A flushing valve structure comprising an upright casing having inlet and outlet openings and a piston chamber at the upper end of said casing, a valve controlling the passage of water between said openings, a piston in said chamber and connected to said valve, means disposed externally of the casing to admit water from a source of supply on the pressure side of said valve to said piston chamber on the side of the piston opposite that of the outlet opening, said means being connected to the chamber at one side thereof, and means to permit the passage of the water so admitted through the piston to the outlet opening.

1,750,318. CABLE-SUPPORT INSULATOR. JOHN KAISER, Dobsina, Czechoslovakia. Filed Nov. 28, 1928. Serial No. 321,294. 2 Claims. (Cl. 173—318.)



2. In an insulation bell of the class described, a body member with an extended element having a transverse opening for the passage of a wire, a clamping block within the opening for engaging against the wire, a head member

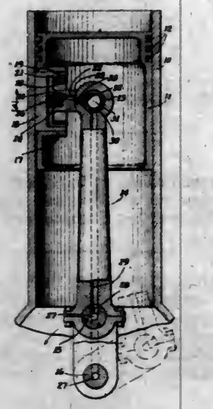
connected with said extended element for holding the block in place, an engaging member pivoted on the head member



and engaging said clamping block, and manually operable, adjustable means for abutting said engaging member for holding the clamping block against said wire.

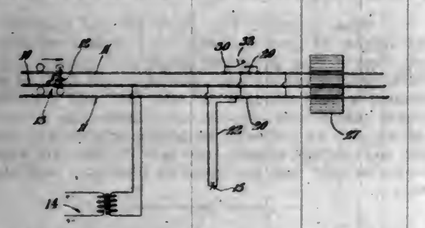
1,750,319. SIGNAL DEVICE. WILLIAM G. KEITH, Chicago, Ill., assignor to Welsbach Traffic Signal Company, Philadelphia, Pa., a Corporation of Delaware. Original application filed Oct. 16, 1926, Serial No. 142,012. Divided and this application filed July 31, 1928. Serial No. 296,517. 1 Claim. (Cl. 40—133.)

In a signal device, a support, a reflector mounted on said support, a glass disc supported in said reflector, a face plate having perforated characters thereon and a central opening therein and mounted on the front of said reflector, a lens mounted in said disc and projecting through said central opening, and illuminating means in said reflector, said reflector being of a substantially parabolic cross-section whereby the rays of light are evenly distributed over said face plate to illuminate said characters.



1,750,320. METALLIC PACKING AND METHOD OF CONSTRUCTION. CHARLES Y. KNIGHT, Pasadena, Calif., assignor to Knight American Patents Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 6, 1922. Serial No. 592,912. 12 Claims. (Cl. 74—109.)

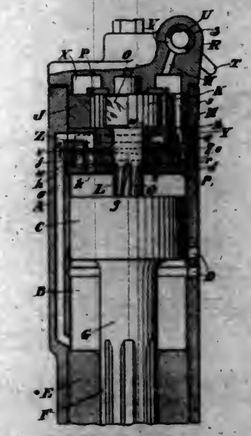
1. A packing ring for use in preventing passage of gas or the like between two surfaces or parts composed of a plurality of inflexible elements abutting against each other and carried directly by one of said parts and maintained against the other part solely by the abutment of said elements.



CARNEGIE LIBRARY OF ATLANTA

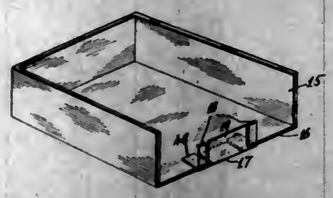
1,750,321. INTERNAL-COMBUSTION ENGINE. CHARLES Y. KNIGHT, Pasadena, Calif., assignor to Knight & Kilbourne Development Co., Chicago, Ill., a Corporation of Illinois. Filed June 13, 1924. Serial No. 719,722. 9 Claims. (Cl. 74—108.)

1. In an internal combustion engine, the combination with a cylinder and a piston mounted for reciprocation therein, of an extensible member slidably mounted in the side of said piston, and independent of said piston, said piston acting solely as a guide for said member; means to draw a fluid into said member when said piston is held against the side of said cylinder opposite to said member by external forces; and means to prevent the fluid from escaping during the remainder of the stroke.



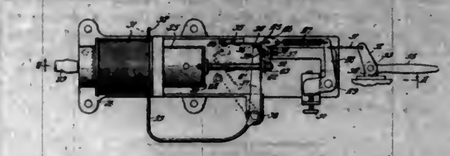
1,750,322. TOY RAILWAY SIGNALING SYSTEM. JOHN C. KOERBER, South Orange, N. J. Filed Aug. 22, 1928. Serial No. 301,182. 10 Claims. (Cl. 246—31.)

1. In a toy electric railway system a track having a continuous third rail and two wheel bearing rails insulated from said third rail, a source of current connected to a wheel bearing rail and to said third rail, said wheel bearing rails being each formed with a short insulated section, the two sections being located at approximately the same point in the track and being electrically connected to one another and a device adapted to be electrically operated by the passage of the car over said point of the track, said device being connected to said insulated sections and to said source.



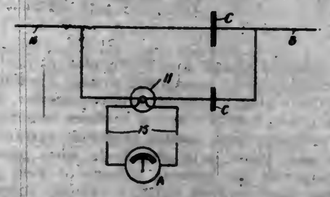
1,750,323. VALVE FOR ROCK DRILLS. EARL B. LEAR, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 14, 1928. Serial No. 325,952. 5 Claims. (Cl. 121—19.)

1. In a fluid actuated rock drill, the combination of a cylinder and a piston, an exhaust port for the cylinder, a valve chest having a valve chamber, inlet passages leading from the valve chamber to the cylinder, an oscillatory plate valve in the valve chamber to control the inlet passages, and ports and passages in the valve chest



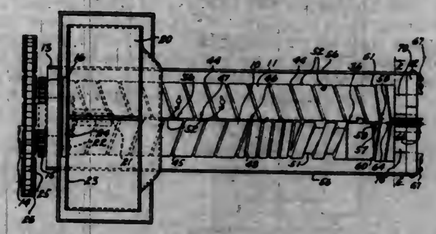
for conveying pressure fluid over both ends of the valve during its course to the inlet passages, thus exerting a suction on both ends of the valve tending to throw the valve from one limiting position to the other.

1,750,324. GALLEY CLAMP. FREDERICK J. METZ, New York, N. Y. Filed Aug. 13, 1928. Serial No. 299,187. 2 Claims. (Cl. 40—11.)



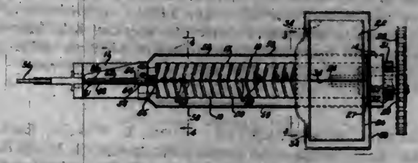
1. A galley clamp, comprising a pair of spaced prongs integral with a plate, a second plate integral with the said plate and substantially at right angles thereto, the prongs having rearward turned tips and roughened rear sides adjacent the said plate and the plate having roughened front sides on the edges adjacent the prongs, and spaced prongs on the sides of said second plate and integral therewith.

1,750,325. ADJUSTABLE TREMOLO DEVICE. BERT E. MILLS, Oak Park, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed June 2, 1928. Serial No. 282,864. 10 Claims. (Cl. 84—11.)



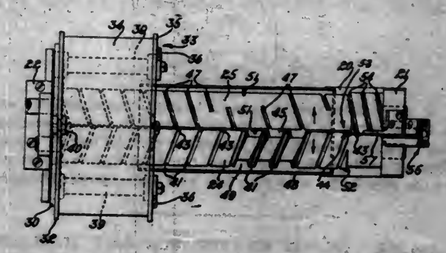
6. In combination with a string tensioning device of a stringed instrument of the viol class, a tremolo device comprising a pulsating device connected with said tensioning device, a pump provided with a conduit serving said pulsating device, an electrically-operated device for actuating said pump in one direction, including an electric circuit and a make-and-break device controlled by the pump, yielding means for actuating the pump in the opposite direction, and means operable at will during the playing of the instrument for varying the tension of said yielding means to thereby vary the control of said make-and-break device by the pump.

1,750,326. INDICATING DEVICE FOR HIGH-FREQUENCY CURRENTS. ALEXANDER NYMAN, Dobbs Ferry, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 24, 1926. Serial No. 137,486. 10 Claims. (Cl. 171—95.)



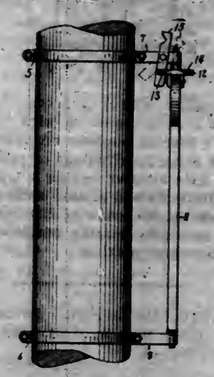
4. An indicating device comprising a condenser, means for connecting the device to an outside operating circuit, a second condenser and a thermoelement in shunt with the first condenser, and at least one device connected to the second condenser and said element to damper disturbing oscillations induced from the outside operating circuit.

1,750,327. APPARATUS FOR ARRANGING ARTICLES. MARVIN ROY OLSEN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 20, 1928. Serial No. 287,032. 14 Claims. (Cl. 198—33.)



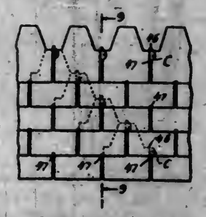
1. In an apparatus for arranging articles, a screw mechanism having a portion for receiving and advancing articles indiscriminately associated therewith, and another portion for reversing improperly positioned articles.

1,750,328. APPARATUS FOR ARRANGING AND MAGAZINING ARTICLES. ROBERT HAND PATCHEN, Chicago, and GEORGE LYNDEN ROCK, Cicero, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 16, 1926. Serial No. 116,491. 17 Claims. (Cl. 198—33.)



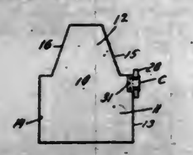
1. In an apparatus for arranging articles, a screw mechanism comprising a pair of parallel screw devices for advancing an article indiscriminately associated therewith, said screw devices having means formed thereon for arranging the advancing article into a predetermined position.

1,750,329. APPARATUS FOR ARRANGING ARTICLES. ROBERT HAND PATCHEN, Chicago, and GEORGE LYNDEN ROCK, Cicero, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 16, 1926. Serial No. 116,492. 16 Claims. (Cl. 198—33.)



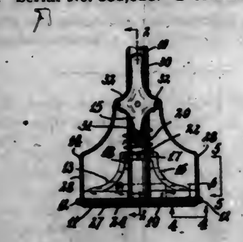
1. In an apparatus for arranging articles, a screw mechanism for advancing an article, and a means cooperating therewith having a groove for arranging the article during the advancement thereof into a predetermined position.

1,750,330. ROAD SIGN. WALTER A. RIDA, West Haven, and HOWARD A. PERRIGO, Whitneyville, Conn. Filed Feb. 20, 1929. Serial No. 341,416. 2 Claims. (Cl. 40—68.)



1. A road sign, comprising a pair of horizontal supports, a sign pivotally mounted in said supports and provided at its upper end with a disk having a plurality of notches, and a gravity latch pivoted to the top support and adapted to engage either of the notches in said disk.

1,750,331. SHINGLE. WILLIAM A. SCHOLLMEYER, Yonkers, N. Y. Filed Feb. 12, 1929. Serial No. 339,368. 6 Claims. (Cl. 108—7.)

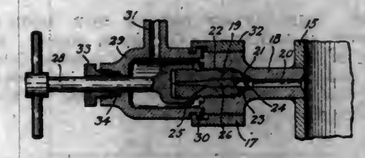


1. A shingle having one end tapered in width and having substantially parallel side edges at the other end, and a tab projecting laterally beyond one of the parallel edges and located at the inner end thereof, said tab being adapted to mount a securing clip.

1,750,332. SHINGLE. WILLIAM A. SCHOLLMEYER, Yonkers, N. Y. Filed Feb. 12, 1929. Serial No. 339,369. 4 Claims. (Cl. 108—83.)

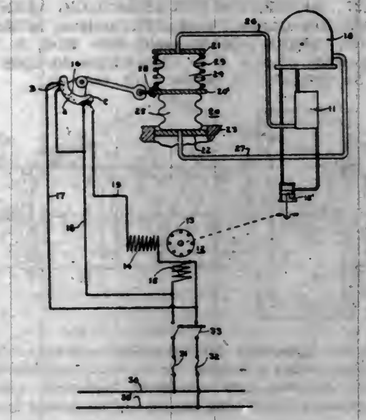
1. In combination, a shingle having a straight edge and a clip secured to said edge and having a portion projecting beyond the edge, the projecting portion having spaced lugs extending laterally from the clip and transversely to the shingle for engaging side edges of adjacent shingles.

1,750,333. GUARD MEMBER FOR MOP HANDLES. FREDERICK SCHWEIGERT, New York, N. Y. Filed Apr. 10, 1929. Serial No. 353,923. 2 Claims. (Cl. 15—152.)



1. The combination with a mop head having a bottom strip portion, of a strip connected with said bottom strip and formed with bearing portions on opposite edges, said bearing portions being longitudinal of said strip and parallel thereto, a wire member having a transverse portion slightly spaced from the end of said strip and right angled co-extending arms at the ends of the transverse portion and extending into said bearing portions, and a rubber tube on said transverse portion.

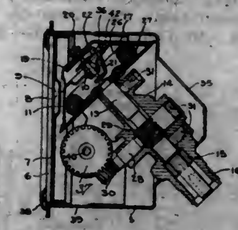
1,750,334. LIQUID CONTAINER. LOUIS J. STERN, New York, N. Y. Filed Mar. 9, 1929. Serial No. 345,767. 4 Claims. (Cl. 220—1.)



1. In a container, in combination, a beverage container, a removable receptacle closure for said beverage container, a removable cup container closure for said receptacle closure and a removable cover for said cup container closure.

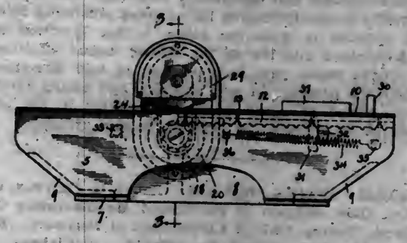
1,750,335. COMBINATION FILLING AND FUSIBLE PLUG FITTING. ROBERT SETH TAYLOR, Brooklyn, N. Y., assignor to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 21, 1927. Serial No. 185,408. 11 Claims. (Cl. 62—119.5.)

1. A combined fusible and filling plug fitting comprising a member having a passageway through the same adapted to receive a plug, a plug for said passageway, said plug and passageway having coacting surfaces forming a valve closure, said plug being formed to permit passage of fluid past the same when said plug is in some positions in said passageway but prevent passage of fluid past the same when said surfaces coact, a channel through said plug and fusible metal in said channel.



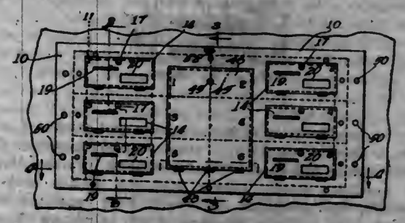
1,750,336. MOTOR-STARTING SWITCH. MATSON C. TERRY, Philadelphia, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 15, 1925. Serial No. 43,876. 26 Claims. (Cl. 62—4.)

1. In combination with a machine embodying two chambers wherein it is desired to maintain a predetermined difference of pressure between said chambers, a motor pump device embodying an armature, a starting winding, a running winding and a pump for maintaining said pressure difference, a pressure responsive device subject to the pressures in said chambers, means for energizing said motor pump device and control means subject to movements of said pressure responsive device to energize said starting winding and operative upon excessive pressure difference to stop the energization of said motor pump device.



1,750,337. SPEEDOMETER. CYRIL T. WALLIS, Rochester, N. Y., assignor, by mesne assignments, to North East Appliance Corporation, Rochester, N. Y., a Corporation of New York. Filed June 28, 1926. Serial No. 119,070. 2 Claims. (Cl. 264—18.)

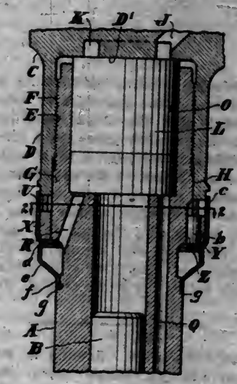
2. In a speedometer, the combination of a rotary indicator provided with a pivot staff, a frame-member provided with a bearing for one end of the pivot staff, and an arm provided with a bearing for the other end of the pivot staff, said arm being fixed to said frame member



but adjustable rotatively about the axis of the pivot staff, and said arm and the indicator having cooperative engaging portions acting as stops for the indicator.

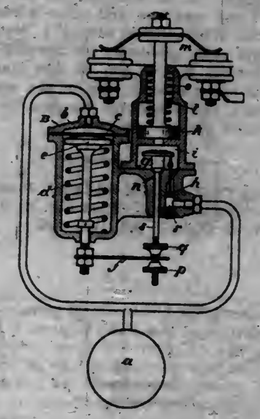
1,750,338. ENVELOPE-OPENING MACHINE. ALBERT WEISS, New York, N. Y. Filed Nov. 13, 1928. Serial No. 319,131. 5 Claims. (Cl. 164—62.)

1. An envelope opening machine comprising a supporting body and housing, a sliding carriage on said body, a gear rack carried beneath the carriage, a shaft having a pinion meshing with the gear rack, a second shaft within the housing, a pair of cooperating cutting disks mounted on the shafts in proximity to the inner edge of the carriage and meshed gears on said shafts.



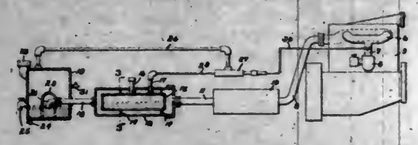
1,750,339. MAIL BOX. ANDREW C. WOOD, Chicago, Ill. Filed June 14, 1926. Serial No. 115,832. 2 Claims. (Cl. 232—24.)

1. In a device of the class described, top, bottom, and side walls and a face plate joined thereto, a rear wall, a plurality of partitions disposed within said walls to form compartments, one of said partitions being common to a plurality of compartments on each side thereof, a door disposed opposite said partition so as to give access to said compartments through adjacent corners thereof, and an individual door in said face plate for each compartment.



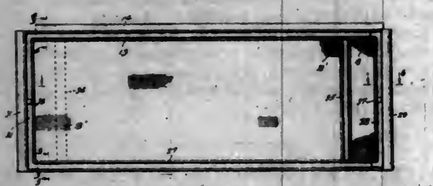
1,750,340. LOCKING DEVICE. WILLIAM FRANK ZIMMERMANN, Waverly, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 23, 1928. Serial No. 264,127. 2 Claims. (Cl. 121—36.)

1. In a pneumatic tool, the combination of a cylinder and a handle threaded on the cylinder, a plurality of longitudinal grooves in the periphery of the cylinder, an exhaust deflector embracing the cylinder, a ring on the cylinder having longitudinal grooves to register with the grooves in the cylinder, a pin inserted in a pair of registering grooves to hold the ring against rotation with respect to the cylinder, lugs on the handle and the ring lying in the same transverse plane, a cover encircling the ring,



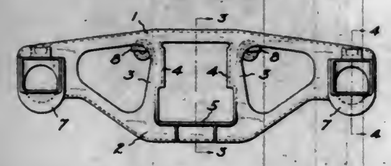
a flange on the cover interposed between the ring and the exhaust deflector, and a tension spring encircling the cylinder and having ends bearing on the lugs to tighten the connection between the handle and the cylinder, said ends being offset with respect to each other to enable the spring to exert a pressure in a longitudinal direction for holding the guard and the exhaust deflector against endwise movement on the cylinder.

1,750,341. AUTOMATIC PRESSURE-OPERATED SWITCH. ALBERT AICHELE, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri and Cie., Baden, Switzerland. Filed May 28, 1921, Serial No. 471,684, and in Switzerland June 2, 1920. 11 Claims. (Cl. 200—82.)



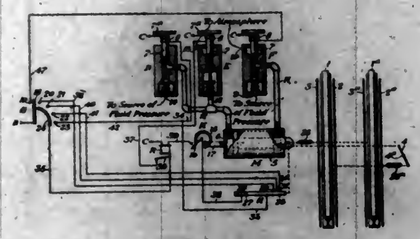
1. In apparatus of the class described, the combination with a switch operating piston and its cooperating cylinder, of an inlet valve and an outlet valve for said cylinder, the outlet valve controlling opening movement of the inlet valve and said valves being movable relative to each other, and a pressure responsive device for operating the outlet valve at critical maximum and minimum pressures.

1,750,342. CARBON-MONOXIDE CONSUMER. WELLS S. BAILEY, Detroit, Mich. Filed Feb. 29, 1928. Serial No. 257,817. 2 Claims. (Cl. 128—119.)



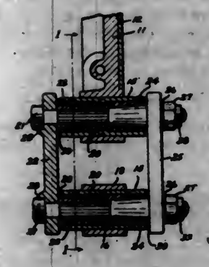
1. The combination with the intake manifold and exhaust pipe of a gasoline engine, of a main fuel supply conduit connected with the intake manifold, a chamber through which the exhaust gases pass as they are discharged from said exhaust pipe, a tank within said chamber for containing alcohol to be vaporized by heat from the exhaust, means tending to remove from the exhaust gases the products of combustion other than carbon monoxide, means for conducting the purified carbon monoxide to the intake manifold, and means for discharging the vaporized alcohol centrally into the stream of purified carbon monoxide before the latter reaches the intake manifold.

1,750,343. AUTO SCREEN. JOSEPH R. BARRY, Fairfield, Conn. Filed Jan. 12, 1929. Serial No. 332,045. 4 Claims. (Cl. 156—38.)



2. An automobile screen comprising two sections each including a frame, a sheet of wire screen secured in each frame, one of said frames having a longitudinal rib on its top and a vertical rib on one end bar to seat in the grooves at the top and one end of a window opening respectively, the other frame having a vertical rib to seat in the glass guide groove at the opposite end of the opening, the bottom bar of one of said frames having a groove in its under side to seat on the upper edge of the window glass, and means for securing the frames together for relative sliding movement.

1,750,344. CAR-TRUCK SIDE FRAME. JOSEPH W. BETTENDORF, Bettendorf, Iowa. Filed Feb. 23, 1928. Serial No. 256,200. 1 Claim. (Cl. 105—205.)

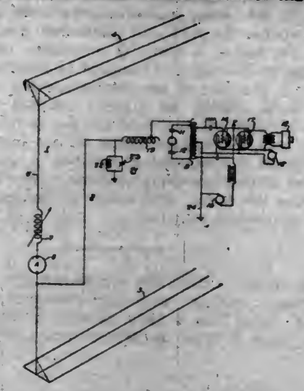


The hereindescribed cast car truck side frame member having integral bolster guides and an integral spring seat, the external surfaces of said frame member as cast being of smooth, fine grained, homogeneous surface structure free from surface imperfections, and said bolster guides and spring seat as cast being fine grained, strong and relatively hard, thereby providing efficient bearing surfaces.

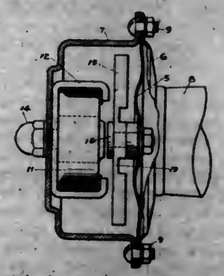
1,750,345. RAILWAY BRAKING APPARATUS. HERBERT L. BONS, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 20, 1928. Serial No. 287,006. 15 Claims. (Cl. 303—20.)

3. Railway braking apparatus comprising a braking bar located in the trackway, a cylinder, a piston reciprocable in said cylinder and operatively connected with said bar, manually controlled means for at times admitting fluid to said cylinder to move the piston in one direction to a predetermined position in its stroke, means effective if the piston moves past such position in said direction to reduce the pressure in said cylinder, and means effective if the piston is moved past such position in the other direction to increase the pressure in said cylinder.

1,750,346. SPRING SHACKLE. RALPH H. CHILTON, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 21, 1927. Serial No. 162,649. 10 Claims. (Cl. 267—54.)



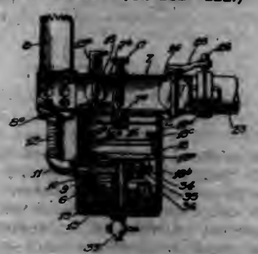
1. In combination with the spring and frame of a vehicle, a shackle comprising: transverse eye members fixed to the spring and frame respectively and located adjacent one another, elastic rubber bushings within said eye members, said bushings in non-distorted condition being shorter than said eye members, a pin extending through each of said bushings and having annular wedges thereabout, means for holding said annular wedges forced inwardly to compress the rubber bushing and to distort it to the full length of the eye member, and two side links interconnecting said pins and non-rotatably secured thereto.



1,750,347. ANTENNA SYSTEM. FRANK CONRAD, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 1, 1925. Serial No. 33,903. 4 Claims. (Cl. 250—17.)

1. A radio signalling system comprising an aerial, a counterpoise, a connection therebetween comprising an inductor and a lead wire, an oscillation generating means, a transfer channel therebetween comprising a second lead wire, connected to said first mentioned lead wire and to

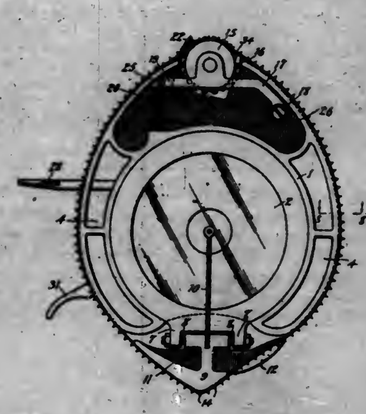
said generator and a lumped impedance interposed therein, and a ground connection to said transfer channel having a high impedance to the fundamental frequency of said generator, and a low impedance to all other frequencies.



1,750,348. ELECTRIC HORN. FARNUM F. DORSEY, Rochester, N. Y., assignor, by mesne assignments, to North East Appliance Corporation, Rochester, N. Y., a Corporation of New York. Filed July 10, 1925. Serial No. 42,760. 2 Claims. (Cl. 177—7.)

1. In an electric horn, the combination, with a sonorous diaphragm and an electromagnet, of a resonantly vibratory armature attached, at its middle point only, to the middle of the diaphragm and cooperating magnetically with the magnet, the armature being relatively thick and rigid for the greater part of its length, but having limited portions of reduced thickness close to its point of attachment, whereby resonant bending of the armature is substantially restricted to the parts thereof adjacent the point of attachment.

1,750,349. CARBURETOR. ARCHIE G. DOWELL, San Diego, Calif., assignor of one-half to Fred A. Sutherland, San Diego, Calif. Filed Mar. 16, 1925. Serial No. 15,807. 5 Claims. (Cl. 261—121.)

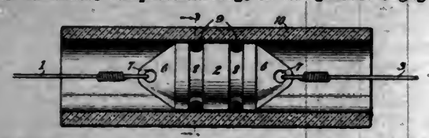


1. In a carburetor structure having a fuel receptacle means, a fuel supply conductor communicating with said fuel receptacle means and float and valve means for controlling and regulating the entrance of fuel into said fuel receptacle, an air conductor having its intake end adjacent to an exhaust manifold of a vehicle and its discharge end within said receptacle below the normal fuel level therein, a valve means mounted in said air conductor within said receptacle above the normal fuel level therein communicating from said air conductor into said receptacle for equalizing the pressure therebetween and permitting the discharge of excess air from said air conductor into said receptacle and aiding the evaporation of fuel globules suspended within said receptacle, a second air conductor connected with said first conductor and extending across the top of said receptacle, a Venturi tube integral with said second air conductor, a choke valve at the entering side of said Venturi tube, a valve controlled passage connecting said receptacle with said second air conductor approximately at the point of least pressure within said air conductor for drawing vaporized fuel from said receptacle.

1,750,350. PROCESS OF REFINING USED OIL. JOSEPH C. PATRICK, Kansas City, Mo. Filed Oct. 28, 1927. Serial No 229,534. 7 Claims. (Cl. 196—16.)

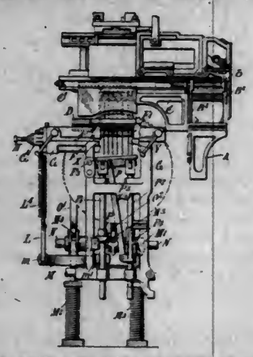
6. The method of refining used mineral lubricating oil containing water and hydrocarbon diluents which consists in heating the oil to approximately 120° F., adding sulphuric acid to the oil while hot, agitating the mixture, removing the oil from the resultant sludge, vaporizing diluents from the oil, and then adding sufficient active adsorptive reagent to clarify, decolorise and neutralize the oil, and finally separating the reagent and adsorbed impurities from the purified oil.

1,750,351. PHONOGRAPH STYLUS AND SOUND BOX. AUGUSTE E. PASCHE, New York, N. Y. Filed July 6, 1928. Serial No. 290,824. 6 Claims. (Cl. 274—25.)



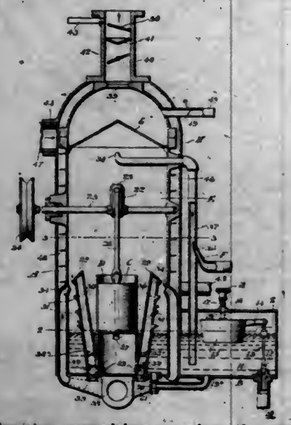
3. In a device of the character described, the combination with a sound box having a peripheral groove of a stylus-carrying band receivable in and movable through said groove in the periphery of said box, and means for tensioning said band within said groove, said means being operative to control the movement of said band through said groove.

1,750,352. ELECTRIC INSULATOR. JOHN F. PHILLIPS, New York, N. Y. Filed Mar. 31, 1928. Serial No. 266,246. 1 Claim. (Cl. 173—28.)



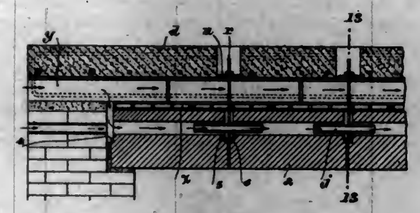
A device of the character described, including an insulator, a tubular casing open at both ends and adapted to receive the insulator and of greater length than the insula-

tor, said insulator having annular grooves around the same and removable compression rings in the grooves engaging



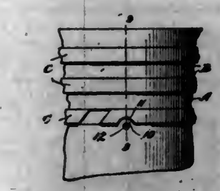
the inner face of the casing and spacing the insulator therefrom, and eyes at the ends of the insulator for the connection of wires thereto.

1,750,353. SLUG-CASTING MACHINE. EDWIN W. PIERSON, Newark, N. J., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Feb. 7, 1929. Serial No 338,131. 12 Claims. (Cl. 199—51.)



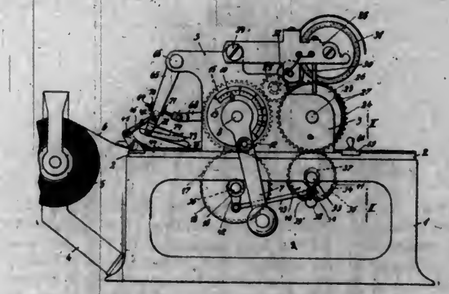
1. In a slug casting machine, the combination of a composed line of matrices and expansible spacebands, a mold for casting a slug against the line, a pair of jaws between which the line is confined in casting relation to the mold, a justification bar movable in two stages to expand the spacebands in effecting respectively a preliminary and final justification of the line, means for operating the bar, and means for causing the bar in the first stage of its operation to engage the spacebands in an inclined position and then to be straightened out in effecting the preliminary justification of the line.

1,750,354. CARBURETOR. CHARLES NELSON POGUE, Winnipeg, Manitoba, Canada, assignor to Alfred Joseph Andrews, trustee, Winnipeg, Canada. Filed Aug. 20, 1927. Serial No. 214,361. 5 Claims. (Cl. 261—36.)



1. A carburetor comprising a casing, the upper part of which is adapted to form a vaporizing chamber, the lower part of which is adapted to contain liquid fuel, a fuel tank connected to the bottom of the casing, a float valve arranged in the same, controlling the level of liquid, a conduit between the tank and the casing, a reciprocating pump in the casing, a plurality of nozzles for the same having spaced openings and designed to discharge the fuel upwardly, a plurality of air nozzles opening adjacent to the aforesaid nozzles, an injector adapted to be connected to a supply of compressed air, and to the fuel in the aforesaid tank, a discharge nozzle for the injector in the upper part of the vaporizing chamber, a screen in the upper part of the vaporizing chamber, a heating chamber surrounding the casing, and means for passing hot gases through the heating chamber.

1,750,355. CONSTRUCTION OF FURNACE OR OVEN ARCHES. ALEXIS CONSTANT RAGOUCY, Bourgoin, France. Filed June 4, 1926, Serial No. 113,745, and in France June 9, 1925. 6 Claims. (Cl. 110—99.)



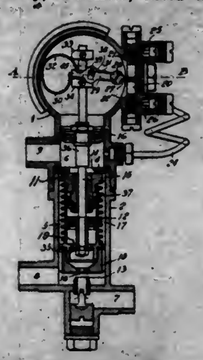
1. In a ceramic or tile furnace in combination with lateral walls, a flat slab resting on said walls and serving as a continuous stay for the arch, refractory bricks arranged in rows, forming a substantially flat roof for the oven and provided with transverse openings, suspension members depending from said slab, the lower end of each of said members being disposed at the junction of a pair of adjacent bricks of a row, and a tube carried by said suspension members and the opposite ends of which tube enter said openings of said adjacent bricks said suspension elements being each provided with a ring freely engaged on the tube.

1,750,356. PISTON AND RINGS. WILLIAM H. RAGSDALE, Silver Spring, Md. Filed Apr. 23, 1928. Serial No. 272,050. 3 Claims. (Cl. 74—109.)

1. A piston having a ring groove and including a puuch mark in such relation to an edge of the groove as to cause the portion of said edge at a place adjacent said mark to protrude outward into the groove to form an integral projection by which an expansible piston ring seated in the groove and having a notch in its edge may be anchored against movement circumferentially of the piston.

1,750,357. STRIP-FEEDING MECHANISM. LEOPOLD RAMDOR, Falkensee, Berlin, Germany. Filed Jan. 11, 1928, Serial No 246,028, and in Germany Jan. 11, 1927. 6 Claims. (Cl. 101—228.)

1. Strip feeding mechanism comprising a pair of feeding members, strip engaging projections extending over part of the effective surface of each member, means for introducing the strip between said members, means for imparting rotation to said members and means for varying the relative position of said projections.

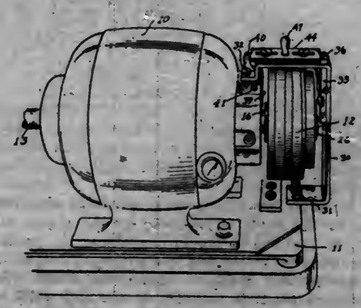


1,750,358. COLOR PHOTOGRAPHY. PIERRE ABEL RICHARD, Paris, France, assignor to La Société du Film en Couleurs Keller-Dorian, Paris, France. Filed Nov. 18, 1926, Serial No. 149,166, and in France Dec. 19, 1925. 2 Claims. (Cl. 88—16.4.)

1. In the production of motion pictures in color, the steps of photographing the objects on a moving film which is goffered on its front face with a multitude of minute lenticular projections, while subjecting the light rays to the action of a polychrome filter so as to select the colors of the rays which reach the film and thereby form images in polychrome corresponding to the colors of the filter; and thereafter reproducing the polychrome images of the goffered film on a nongoffered film while the former is illuminated, and advancing the non-goffered film, for each image-space of the goffered film, a number of image-spaces equal to the number of color values of the polychrome filter, while masking said filter in such a way as to permit the light to pass through only one of its colored elements for each image on the non-goffered film, to obtain on said non-goffered film a plurality of separate monochrome images of the polychrome image corresponding in number to the number of color values of said polychrome image.

1,750,359. PULSATOR VALVE. JOHANNES VALDEMAR MÅRTEN RISBERG and HJALMAR LINDELÖF, Soderteije, Sweden; said Lindelöf assignor to said Risberg. Filed Mar. 15, 1928, Serial No. 262,015, and in Sweden May 31, 1926. 3 Claims. (Cl. 137—139.)

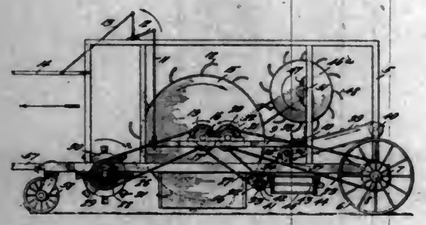
1. In a pulsator-valve the combination of a piston, a relay-valve device connecting the pressure chamber at the one side of the piston alternately with admission and discharge passages for a pressure-medium, spring actuated valves movable between members shifted by the piston and admitting pressure medium to its functioning place and discharging the same, a lever-arm connected to the relay-valve device for moving the same into its operative positions respectively, a shifter, acted upon by members



moved by the said piston, said shifter acting upon the said lever arm and throw-over springs actuating the lever-arm and shifter.

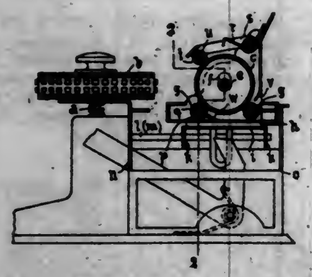
1,750,360. FOOT SUPPORT. HARRY R. ROGERS, Chicago, Ill. Filed Apr. 4, 1927. Serial No. 180,662. 5 Claims. (Cl. 36—76.)

1. A shoe embodying therein an outsole, an insole, and a foot supporting device positioned between said soles, said device comprising a longitudinally arched shank fixed at the heel end to said insole and a clip also fixed to said insole and in which the front end of the shank has sliding engagement, said clip comprising a plate with a depressed bottom wall which opens through a slot at one end and an integral tongue at the other end to overhang the front end of the shank and being so positioned as to come under the arched part of the foot so that no weight is imposed thereon.



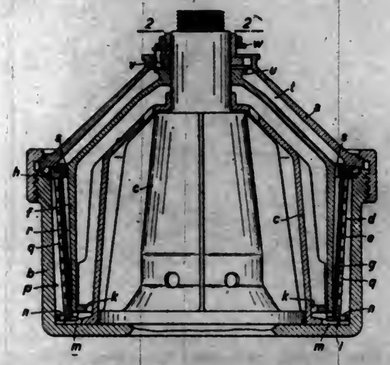
1,750,361. SPEED-ADJUSTING DEVICE FOR MOTOR GOVERNORS. SAMUEL W. ROTHERMEL, Lynbrook, N. Y., and ERNEST W. HEWITT, Stamford, Conn., assignors to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Sept. 16, 1929. Serial No. 393,008. 5 Claims. (Cl. 264—3.)

1. The combination with a motor governor having a cylindrical housing and an adjusting wheel projecting from each end thereof and revolving therewith, of operating means for said adjusting wheel comprising a spring



member disposed at each end of said housing normally out of contact with said adjusting wheel and a sliding member mounted to one side of said housing for moving either of said spring members into position for engagement with said adjusting wheel during its revolution with said housing.

1,750,362. POTATO HARVESTER. EDWARD SANDERS, Moorhead, Minn. Filed May 19, 1928. Serial No. 279,067. 3 Claims. (Cl. 55—59.)



1. In a potato harvester, a frame, arms oscillatably mounted on the frame and extending approximately horizontally, bearings on the said arms, a drum rotatably mounted on the bearings, guards at the ends of the drum for confining soil in the effective zone of operation of the drum, means for moving the arms upwardly and downwardly, means for rotating the drum, teeth carried by the drum, means for dislodging clods from the teeth, means for dislodging vegetation from the teeth, a conveyer for the vegetation, a conveyer thereunder for receiving potatoes, and means for operating said movable parts.

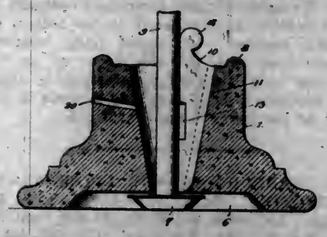
1,750,363. PAPER CARRIAGE FOR TYPEWRITING MACHINES. MAX SCHMID, Nuremberg, Germany. Filed Jan. 15, 1929, Serial No. 332,647, and in Germany Apr. 13, 1928. 3 Claims. (Cl. 197—60.)

1. A carriage for type-writing machines in which the printing of the types is produced by the platen striking against the stationary types, comprising in combination with the machine frame and the platen, a casing for the platen having end walls, a supporting frame for said casing, transverse rods mounted in the end walls of said supporting frame said casing being shiftable on these transverse rods, and rods transversely to the axle of the platen extending through the long walls of said supporting frame so that said frame can be shifted on said latter rods.

1,750,364. SEPARATOR DRUM. AUGUST SCHMÜCKING, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Oct. 19, 1928, Serial No. 313,608, and in Germany Oct. 28, 1927. 4 Claims. (Cl. 210—76.)

1. A separator drum of the class described comprising a shell, a filter cloth carrier arranged therein, a filter cloth arranged between said carrier and said shell, tapering annular faces at the top and bottom of said carrier and corresponding counter faces on said shell, said faces being adapted to clamp said filter cloth between them.

1,750,365. RAIL. MAX SCHNEIDER, Duisburg-Ruhrort, Germany, assignor to the Firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany. Filed Feb. 15, 1929, Serial No. 340,134, and in Germany Feb. 27, 1928. 1 Claim. (Cl. 238—148.)

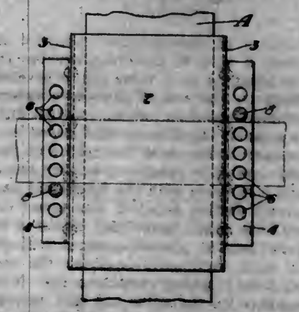


A method of manufacturing rails of rail-way- and tramway-lines, consisting in bringing insertions of special material like hard steel in form of a grate into the mould, in pressing said insertions against the walls of the mould by props, and in casting the rail around said insertions, for the purpose set forth.

1,750,366. CABINET DOOR AND MIRROR FRAME. EDWARD A. SMITH, Chicago, Ill. Filed Sept. 7, 1926. Serial No. 134,006. 1 Claim. (Cl. 45—18.)

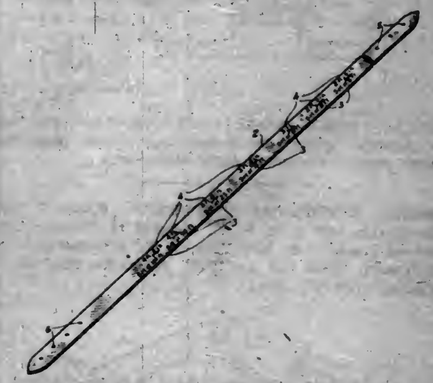
A frame stock comprising a filler member of substantially rectangular cross section having a recessed part on one face, a one piece metallic member bent longitudinally into substantially U-cross section, with a long leg and a short leg being depressed toward the long leg below the edge of the connecting part and adapted to seat in a recess of a filler member when the latter is positioned within said metallic member and the long leg of said metallic member having an outwardly depressed marginal flange adapted to receive a shock absorbing filler, said marginal flange extending beyond the face of the filler member substantially as specified.

1,750,367. CHRISTMAS-TREE HOLDER. JAMES C. SMITH, San Francisco, Calif. Filed Dec. 31, 1927. Serial No. 243,997. 3 Claims. (Cl. 248—38.)



1. A Christmas tree holder comprising a body portion of molded plastic material provided with a vertical Christmas tree receiving opening and having longitudinal recesses in the walls of the opening, and a plurality of wedges slidably mounted in the said recesses and adapted to engage Christmas trees of different diameters, and provide intermediate of their ends with a recess having upper and lower walls and adapted to permit expansion of a Christmas tree within the same.

1,750,368. ROTARY VALVE FOR INTERNAL-COMBUSTION ENGINES. JOHN L. SMITH and FOSTER L. GUSHARD, Cedar Falls, Iowa. Filed Apr. 11, 1928. Serial No. 269,078. 2 Claims. (Cl. 123—190.)

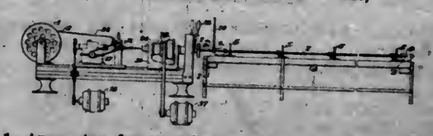


1. In an internal combustion engine, a head therefor having a hollow bearing seat with intake and exhaust ports and a third port in communication with the combustion chamber of the engine, a rotary valve in said seat and not having circumferential contact therewith, said valve having a transverse wall recess positioned to effect communications successively between the intake and exhaust ports and said third port, having also circumferential annular grooves at each side of said passage, and having longitudinal grooves between said annular grooves at each end of and opening into said wall recess, and resiliently controlled wiper devices mounted in the annular and longitudinal grooves, each of the longitudinal devices having a side flange widening its peripheral surface, said valve having passages therein in communication with a supply of liquid lubricant under pressure and leading into said annular and longitudinal grooves.

1,750,369. WORKHOLDING APPARATUS. WALTER K. SEPTER, Duquesne, Pa. Filed July 21, 1928. Serial No. 294,410. 3 Claims. (Cl. 90—59.)

1. A work holder for metal slabs and the like comprising an inverted U-shaped base member, a pair of horizontal vertically spaced flanges extending outwardly from each of the side members of said base, the flanges of each of said pairs of flanges being provided with a series of vertically alined holes, and a plurality of rods adapted to be mounted in selected ones of said holes to hold the work in a substantially vertical position.

1,750,370. CAMERA STRAP FOR MEASURING DISTANCES. PHILIP RAYNER STRAUS, Baltimore, Md. Filed June 12, 1928. Serial No. 284,804. 1 Claim. (Cl. 88—111.)

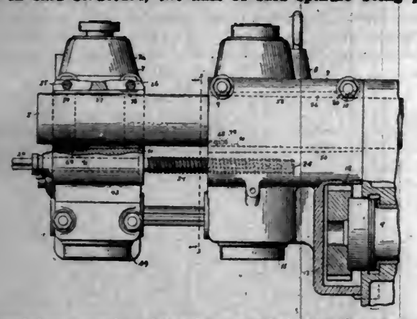


A tape for use with cameras having a short distance or portrait lens substituted for the usual lens; said tape having graduations thereon to indicate distances of a subject from a camera and having legends at each graduation to indicate the scale setting of the lens relative to the usual camera focusing scale to correspond to the said graduation.

1,750,371. COMPOSITION OF MATTER FOR COLORING FLAMES. HERBERT GILES TANNER, Eugene, Oreg. Filed June 1, 1925. Serial No. 34,229. 18 Claims. (Cl. 52—23.)

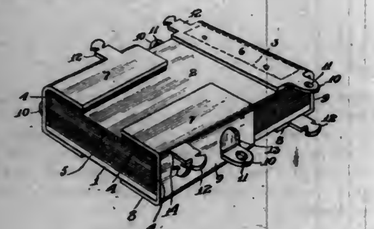
3. A pyrotechnic article of manufacture comprising flame colorant fashioned into a coherent mass which is non-flammable and as a whole non-combustible.

1,750,372. APPARATUS FOR MAKING CAPILLARY TUBES. KENNETH L. TATE, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Mar. 19, 1929. Serial No. 348,844. 20 Claims. (Cl. 140—71.)



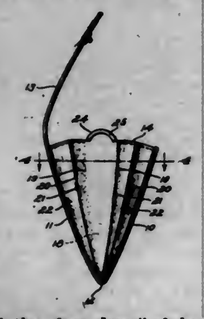
1. Apparatus for entering a wire into a flexible tube, comprising means defining a plurality of aligned bearings constructed and arranged to maintain the flexible tube in a substantially straight line and free to be rotated, means for rotating the tube and means for continuously feeding the wire into the tube.

1,750,373. ATTACHMENT FOR MACHINE TOOLS. THEODORE TRECKER and JOSEPH B. ARMITAGE, Milwaukee, Wis., assignors to Kearney & Trecker Corporation, West Allis, Wis. Filed Aug. 20, 1925. Serial No. 51,316. 16 Claims. (Cl. 90—16.)



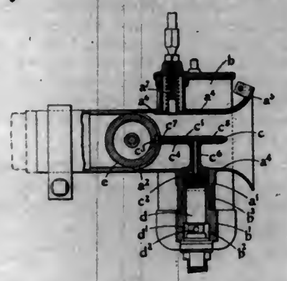
1. In an attachment for machine tools having a plurality of horizontal overarms spaced apart the combination of a structure mounted on and entirely supported

from said overarms and a vertical spindle rotatably mounted in said structure, the axis of said spindle being posi-



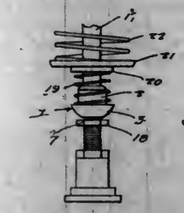
tioned for a portion thereof to pass between the overarms, whereby said spindle has substantially equal resistance against pivoted movement about either arm.

1,750,374. ELECTRICAL CONDENSER. HARRY R. VAN DEVENTER, New York, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 14, 1924. Serial No. 692,785. 2 Claims. (Cl. 175—41.)



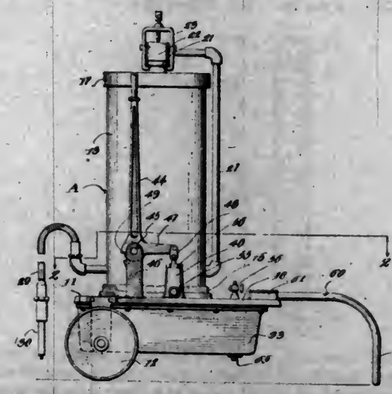
1. A condenser comprising a base plate, sheets of conductive material separated by a dielectric, one of said sheets extending across the end of another, said other sheet projecting a material distance beyond one side of the first sheet, said first sheet having one or both its extremities projecting beyond the adjacent side edge or edges of said other sheet, a clip extending across one end of the condenser and engaging the base plate and the adjacent extremity of said other sheet, and separate clips extending along the opposite sides of the condenser towards the other end, said last named clips engaging the base plate and the ends of the first sheet, whereby the said sheets and said base plate are held firmly together.

1,750,375. BAG GUSSET. ANTHONY M. VINCIGUERA, Brooklyn, N. Y. Filed May 28, 1927. Serial No. 194,962. 3 Claims. (Cl. 150—30.)



1. A bag of the class described having the combination of side sections, and gussets joining the opposite ends of said side sections to define a pocket, said gussets allowing said side sections to be moved toward and away from each other, each gusset having a non-foldable substantially V-shaped member positioned centrally thereof, and which extends approximately to the bottom juncture of said side sections, each gusset being foldable along lines coincidental with the side edges of its V-shaped member, and both V-shaped members being cooperative with the opposite ends of said side sections to limit the movement of the latter toward each other.

1,750,376. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES. HENRY WESLAKE, London, England. Filed Sept. 19, 1925, Serial No. 57,406, and in Great Britain Aug. 4, 1925. 5 Claims. (Cl. 261—62.)



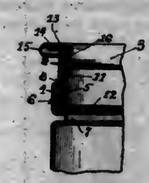
1. A carburetor comprising in combination a mixing tube substantially horizontally disposed, a transversely disposed throttle valve provided in the said mixing tube, a nozzle disposed within the said mixing tube, said nozzle being substantially horizontally disposed with its outlet end adjacent the periphery of the said throttle valve, in a plane parallel with the axis of the said throttle valve, said nozzle being adapted for the passage through it of the volatile liquid fuel, and having at its upper part adjacent its outlet end only air admission apertures which extend to within the interior of the said nozzle adjacent the outlet end, substantially as described.

1,750,377. VALVE SILENCER. ALBERT WIDMAN, Newcastle, Ind. Filed May 23, 1928. Serial No. 279,991. 1 Claim. (Cl. 123—90.)

A valve silencer of the character described comprising a sleeve having a bore of uniform diameter throughout adapted to be mounted on a valve rod, a beveled annular retaining flange on one end of the sleeve extending into the bore, a rounded head on one end portion of the sleeve providing an annular shoulder on said sleeve intermediate its ends, the outer surfaces of the head and flange being concentrically curved, a compressible plug having a convex upper end concentric with the flange and head and an inwardly beveled portion adjacent said upper end for engagement with the flange, detachably mounted in the bore and having its beveled portion engaged with the flange and its side wall frictionally engaging the wall of the bore, an expansible spring encircling the sleeve having one end supported on the valve rod and its opposite end impinged against the shoulder for urging the sleeve longitudinally on said rod.

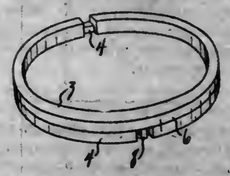
1,750,378. GREASE GUN. KNIGHT N. WILLMORE, Fairfax, Okla. Filed May 25, 1929. Serial No. 366,056. 6 Claims. (Cl. 221—47.1.)

1. A lubricating device comprising a base plate, ground wheels carried by the base plate, a reservoir tank secured to the lower face of the base plate, a cylinder head formed on the base plate, a cylinder for receiving a lubricant connected with the cylinder head, a removable head carried by the upper end of the cylinder having a lubricant outlet, a piston slidably mounted in the cylinder, and a pump carried by the base plate and communicating with the lower end of the cylinder below the piston and with the reservoir for forcing a liquid from the reservoir into the cylinder.



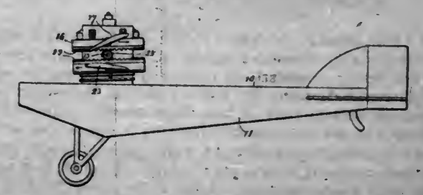
1,750,379. FOLDING UMBRELLA. STANLEY AKRIGG, Dryburg, Mich. Filed Apr. 9, 1928. Serial No. 268,535. 14 Claims. (Cl. 135—26.)

1. In a folding umbrella, a stock formed of telescopically collapsible sections, ribs formed of collapsible sections, means to connect the ribs to the stock, and means actuated by a longitudinal pull on the stock to adjust all collapsible sections to their operative positions.



1,750,380. EASY-OPENING CONTAINER. CHARLES J. AULBACH and WILLIAM F. PUNTE, Passaic, N. J., assignors to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 26, 1929. Serial No. 350,027. 4 Claims. (Cl. 220—53.)

1. A container comprising a body portion having score lines adjacent one end thereof forming a rip strip, a container end double seamed to said body portion and a collar located within the body and permanently attached to the



container end and body above the upper score line and adapted to enter the body for reclosure after the rip strip is removed.

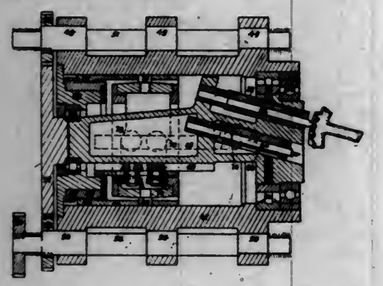
1,750,381. PISTON RING. WILLIAM S. BAKER, Fort Worth, Tex., assignor to Illinois Piston and Ring Company, Fort Worth, Tex., a Corporation of Illinois. Filed July 26, 1927. Serial No. 208,510. 3 Claims. (Cl. 74—109.)

1. Piston packing comprising an open ring member having a flange at the top edge projecting radially outward and providing a packing or pressure surface on the top thereof, an open ring member mounted on the exterior of said inner member and having the outer surface thereof flush with the outer surface of said flange and having the bottom edge thereof flush with the bottom edge of said inner member, both members being automatically expansible, and a stop integral with the outer surface of said inner ring and with said flange and projecting between the ends of said outer ring.

1,750,382. PROPELLING DEVICE. WESTINUS BOER, Groton, Conn. Filed Dec. 27, 1928. Serial No. 328,788. 2 Claims. (Cl. 244—19.)

1. The combination in a craft of the class set forth, of a supporting body, a stator on said body, upper and lower rotors on said stator, each rotor having wings extending laterally therefrom and disposed diametrically opposite each other, each wing being turnable on its own axis, means to rotate said rotors in opposite directions to cause the wings on one rotor to revolve opposite to those on the other rotor, and means to impart turning movement to each wing on its own axis, to change the angle of incidence thereof, twice during each revolution of the related rotor.

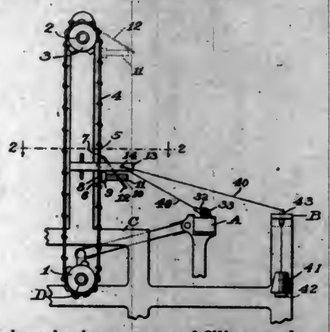
1,750,383. REFLECTOR WATER GAUGE. RAOUL BOIZARD, Paris, France. Filed May 21, 1927, Serial No. 193,288, and in France Jan. 14, 1927. 2 Claims. (Cl. 73—54.)



1. A reflector water gauge for boilers and the like, comprising a hollow casing having a sight opening in its front wall; a reflector glass disposed within the casing

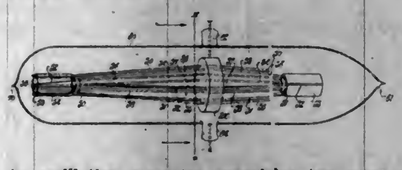
directly behind said opening; a fluid container in said casing directly behind said glass, a longitudinal series of independently-adjustable tightening members mounted in the rear wall of the casing; and a structurally-separate spring

individual to each tightening member to be tensioned thereby and interposed between the same and the rear wall of the fluid container, said springs acting to overcome the internal steam pressure in said container, and to maintain tightness of the joints.



1,750,384. METHOD OF AND APPARATUS FOR CUTTING TOOTHED GEARS. PAUL BÖTTCHER, Jr., Altona-Bahrenfeld, near Hamburg, Germany. Filed Mar. 18, 1927, Serial No. 176,452, and in Germany Mar. 20, 1926. 23 Claims. (Cl. 90—4.)

1. A method of cutting helical, spiral, double helical, herringbone or other cylindrical and bevel gears having curved teeth, consisting in imparting to the cutter edge which generates the tooth blank a cutting movement in a plane parallel to that of imaginary master teeth and in addition to said movement imparting a component movement to said cutting edge at right angles to said plane for the purpose of influencing the depth of the tooth spaces, said component movement of the cutter being relative to the cutter head and in the longitudinal direction of said edge when variable tooth space depths with correctly shaped teeth are to be cut.

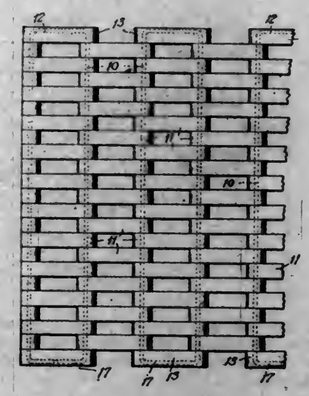


14. Apparatus for cutting helical, spiral, double helical (herringbone) or other cylindrical and bevel wheels with in alignment with the rotational axis of said cutter holder, mounted to rotate and move axially in said cutter head, a cutter mounted in said cutter holder with its cutting edge in alignment with the rotational axis of said cutter holder, means for imparting a rotary movement to said cutter holder, means for imparting an axial movement to said cutter holder, said means for imparting said axial movement to said cutter holder comprising a rail guided in said cutter head at right angles to the plane of imaginary master teeth, and engaging in an annular groove formed in said cutter holder and a controlling member for said rail, said controlling member comprising a circular ring mounted for adjustment about a diameter thereof, said ring having a rise to impart a return movement to said cutter on completion of each cut.

1,750,385. LOOM. JOHN C. BROOKS, Paterson, N. J., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed July 18, 1927. Serial No. 205,506. 4 Claims. (Cl. 139—122.)

1. In a loom having a source of filling supply and means to insert lengths of filling in the shed, the combination with a sprocket chain, of upper and lower sprocket wheels over which it passes, means on the sprocket chain to engage said filling thread between the filling-inserting means and the source of supply and draw off a length of filling thread, and means on the chain and rendered operative as the chain passes over the upper sprocket wheel to disengage said filling thread from the pulling-off means.

1,750,386. SPACE-CURRENT DEVICE. WALTER JOHN BROWN, Brooklands, England. Filed Dec. 18, 1926, Serial No. 155,734, and in Great Britain Dec. 23, 1925. 13 Claims. (Cl. 250—27.5.)

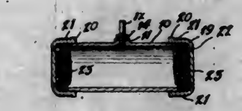


1. An oscillation generator comprising two space current units within a single envelope and conductors, also within the envelope, connecting corresponding electrodes of the two space current units and forming a complete oscillatory circuit therewith.

1,750,387. PLANT AND FLOWER SUPPORT. JACOB J. BURKHARTZMEYER, Rochester, N. Y. Filed Dec. 31, 1926. Serial No. 158,346. 1 Claim. (Cl. 47—45.)

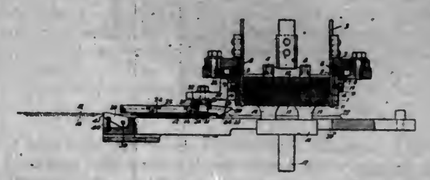
A plant support comprising corner supporting rods, lower supporting eyes formed directly on and offset from said rods intermediate the ends thereof, upper supporting eyes formed directly on said rods at the upper terminals thereof, upper and lower sets of longitudinal and transverse connecting rods having eyes formed on the terminals thereof engaging the upper and lower eyes on said supporting rods, the connecting rods having bight portions formed therein intermediate their ends, and transverse and longitudinal cross rods having eyes formed on the terminals thereof engaging the bight portions.

1,750,388. LINK MAT. JOHN H. CALDWELL, Twin Falls, Idaho. Filed May 31, 1928. Serial No. 281,791. 2 Claims. (Cl. 20—74.)



1. In a mat structure, a frame comprising a plurality of parallel rods, each pair of rods formed of a single strand bent to substantially U-shape with its free ends bent inwardly toward each other, body members connecting the several rods and hingedly connecting the adjacent rods of the several pairs, end members having longitudinally disposed bores wholly within the same to enclose the bight portions of said pairs of rods and the bent ends thereof, and said end members having lateral openings near their ends communicating with said bores and through which the adjacent portions of said rods pass; said end members being of flexible material and of the same size as said body members so as to be capable of being flexed around angular portions of said rods.

1,750,389. FILLING-STATION MACHINE. CALVIN F. CHRISTOPHER, Canton, N. C. Filed Sept. 28, 1928. Serial No. 309,079. 1 Claim. (Cl. 40—63.)

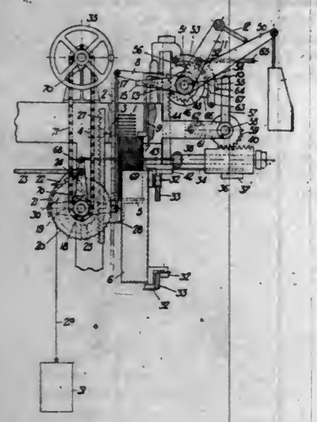


In a machine of the class described, a vertical support provided at its upper end with an angle, and at its lower end with an angle, the angles being arranged symmetrically with respect to the longitudinal axis of the support, the support being provided at a point near to its upper end with a compartment, and at a point near its lower end with a compartment, there being a space between the compartments, closures for the rear of the compartments, pivot elements connecting the upper ends of the closures to the support, whereby the closures will tend to swing downwardly by gravity to closed position with respect to the compartments when the support is vertically disposed, and mechanism for aiding an operator to set the support in a vertical position, said mechanism comprising an index located on the front side of the support, in said space, the index extending along a line joining the aforesaid angles of the support.

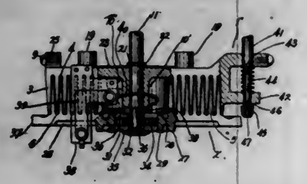
1,750,390. DEEP-METAL REFINER. WILLIAM M. CONNOR, Baltimore, Md., assignor to American Tin Company, Inc., Baltimore, Md., a Corporation. Filed Feb. 12, 1929. Serial No. 339,416. 2 Claims. (Cl. 266—34.)

1. A device of the character described comprising a tubular body portion, a handle member secured thereto, said body portion being adapted to receive a fluid, and having an inlet opening, means to close said inlet opening, perforated caps secured to the ends of said tubular body portion, and wads of fibrous material arranged in said caps and adapted to impede the flow of liquid therefrom.

1,750,391. CAN-END-FEEDING MECHANISM. JOHN COYLE, Baltimore, Md., and WALTER PLUMB, Jersey City, N. J., assignors to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed June 5, 1928. Serial No. 282,972. 18 Claims. (Cl. 113—114.)



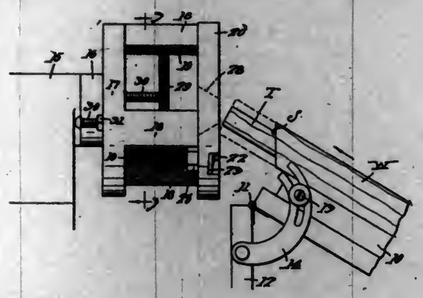
1. A feeding mechanism for non-circular can ends including a stack holder, suction means for withdrawing the ends one at a time from the stack, movable fingers for supporting the can ends in the stack, and a spring means for urging each finger toward the stack.



1,750,392. DEVICE FOR COLLECTING FINISHED MATCHES FROM MATCH-MAKING MACHINES. PAUL WILHELM DIETMANN, Jonkoping, Sweden, assignor to Aktiebolaget Siefrert & Fornander, Kalmar, Sweden. Filed June 9, 1928, Serial No. 284,169, and in Sweden July 22, 1927. 5 Claims. (Cl. 226—10.)

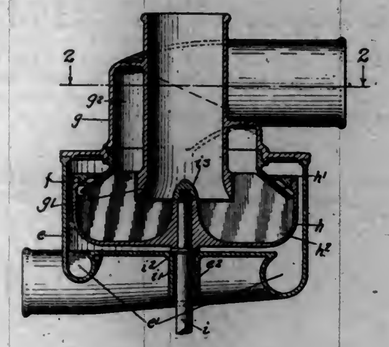
1. In an automatic match-making machine having an endless splint carrier to support rows of splints in spaced relation to each other and means for ejecting the finished matches directly into collecting boxes to collect them into piles, the combination with vertically movable pile supports in said boxes, of a mechanism to lower said supports, a feeling member to control the operation of said mechanism, and means to move said feeling member down into contact with the top surface of said piles at intervals and

let it come to stop when touching said top surface, thereby to regulate the lowering of said supports so as automatically to maintain the variation of the level of said top surface within definite limits irrespective of the thickness and percentage of filling of the matches.



1,750,393. VARIABLE CONDENSER. WILLIAM DUBILIER, New York, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed May 12, 1925. Serial No. 29,783. 5 Claims. (Cl. 175—41.5.)

1. A condenser comprising a stator having a head from one face of which semi-cylindrical armatures project, said armatures being separated by recesses, a rotor comprising a similar head from the face of which substantially similar armatures project into the recesses of the armatures on the stator, the stator having a central bearing, a shaft extending through said bearing, the rotor having a central opening with an inside collar, projections extending in opposite directions disposed at points around the inner edge of the collar, discs of insulation on both sides of said collar receiving said projections, and held in place thereby, a hub having a flange at one end passing through said discs, a washer on said hub between the said discs, and a washer on the other end of said hub and secured by the expanded end of said hub against the face of the adjacent disc, said shaft having a reduced end with a shoulder upon which said hub is secured, a piece of insulation secured on the stator, a contact piece on said piece of insulation, and a flexible insulated conductor connecting the said contact piece to said rotor.

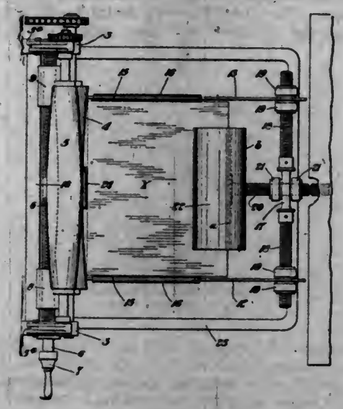


1,750,394. TENONING CUTTER HEAD. JOSEPH DUMONT, Gardner, Mass. Filed July 1, 1929. Serial No. 375,044. 5 Claims. (Cl. 144—205.)

1. As an article of manufacture, a rotary cutter head for forming tenons, comprising a face plate having a plurality of grooves therein, cutting knives secured in said grooves, said face plate having a central perforation flared backwardly from the front face of the plate and means for

supporting the work in a position at an angle to the axis of the cutter, whereby the work can be moved in its own plane into and through said central perforation, for the purposes described.

1,750,395. CENTRIFUGAL STEAM SEPARATOR. JAMES EDWIN ELLOR, Derby, England, assignor to Rolls Royce Limited, Derby, England. Filed Apr. 1, 1929, Serial No. 351,724, and in Great Britain Mar. 8, 1928. 2 Claims. (Cl. 233—21.)

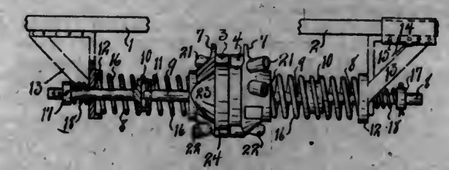


1. An apparatus for the separation of mixed water and steam, comprising a casing, a rotary basin in said casing, spaced therefrom and provided with radial blades, a chimney rising from said basin for the escape therefrom of separated steam, a volute conduit leading to said basin for the passage of mixed water and steam, and an outlet conduit for the water from said basin, located below the latter, the basin having a contracted oulet at its upper edge to form a water seal, and constructed and adapted to cause the water to escape therefrom by overflowing the edge thereof.

1,750,396. PILING AND PACKING APPARATUS. ARCHIBALD D. EVANS and JAMES K. LAMOREE, New Castle, Pa., assignors to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 28, 1927. Serial No. 222,680. 5 Claims. (Cl. 271—86.)

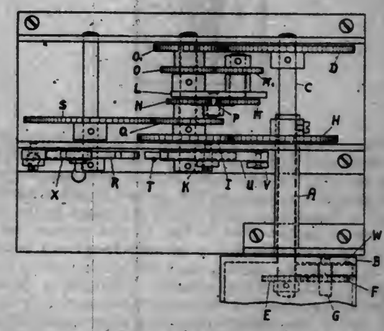
1. In a sheet mill apparatus, means for feeding sheets and plates out over a support, and a stop for limiting the movement of said sheets and plates and for causing said sheets and plates to descend by gravity in an orderly manner forming a pile, said stop comprising a wall member having a straight vertical pile forming portion and a curved guide portion, said curved guide portion being bent

forwardly from the upper end of said vertical portion in the direction of travel of said sheets and plates and then rearwardly and upwardly, said curved guide portion being



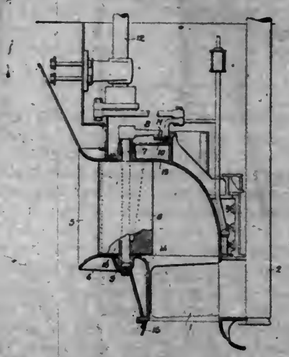
adapted to engage the forward ends of the plates and sheets and direct said sheets and plates downwardly toward said support.

1,750,397. RUSSIAN BOOT. GEORG FAULSTICH, Cassel, Germany. Filed Mar. 9, 1928, Serial No. 260,407, and in Germany Mar. 17, 1927. 2 Claims. (Cl. 36—51.)



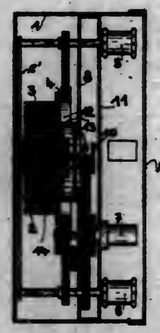
1. In a Russion boot the formation of the front portion of the leather of the leg portion to form a number of deep undulating folds lying close together tapering in downward direction and extending from top to bottom of the leg and a backing of elastic webbing on the folded portion of the leather sewn on the undulations at the lower end of said folds.

1,750,398. TRAIN AIR AND STEAM LINE COUPLER. JOHN L. FRANCIS, Fort Worth, Tex. Filed July 21, 1928. Serial No. 294,466. 4 Claims. (Cl. 285—24.)



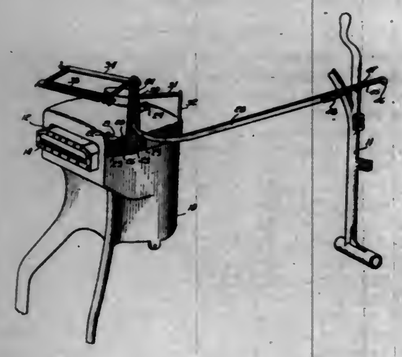
1. Air and steam line couplers comprising two heads provided with openings therethrough for the passage of steam and air, the openings of one head adapted to register with the openings of the other head, means in and on said heads for causing said openings to register, means for directing air and steam through said openings, means for suspending said couplers from drawheads of car couplers including hangers rigidly connected to the drawbars of car couplers, plungers composed of members rigidly connected to said air and steam line couplers and members adjustably connected to said rigid members and projecting through said hangers and movable freely therein, means on the ends of said adjustable members for permitting limited motion in uncoupling operations and shock absorbing means mounted on said plungers for protecting the meeting faces of said air and steam line couplers.

1,750,399. FRANKING MACHINE. WILHELM FRIEDRICHS, Berlin, Germany. Original application filed Aug. 8, 1922, Serial No. 580,450. Divided and this application filed Dec. 22, 1928. Serial No. 327,907. 2 Claims. (Cl. 101—91.)



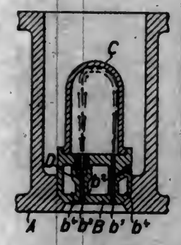
1. In a printing device, a rotatable drum, a type carrier adjustably mounted in said drum, a gear for rotating said drum, a gear for adjusting said type carrier in said drum, a setting mechanism, means for locking said setting mechanism, and a planet gear connecting said drum rotating gear and said setting mechanism to said type carrier adjusting gear, the arrangement being such that said type carrier is freely adjustable by said setting mechanism, while the turning of said drum rotating gear causes the simultaneous rotation of said type carrier adjusting gear to maintain said type carrier in a fixed relation to said drum.

1,750,400. WICKET GATE FOR HYDRAULIC TURBINES. EUGENE U. GIBBS and GEORGE A. JESSOP, York, Pa. Filed Apr. 7, 1928. Serial No. 268,229. 15 Claims. (Cl. 253—122.)



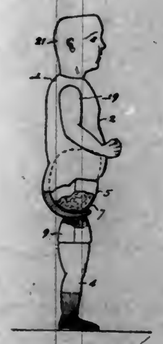
1. A wicket gate for turbines decreasing in thickness downwardly over a substantial part of the gate and increasing the volume of water passing between the gates.

1,750,401. CINEMATOGRAPH CAMERA WITH CLOCKWORK DRIVING MECHANISM. EMANUEL GOLDBERG and OTTO FISCHER, Dresden, Germany, assignors to Zeiss Ikon Aktiengesellschaft, Dresden, Germany. Filed Dec. 29, 1927, Serial No. 243,420, and in Germany Feb. 16, 1927. 3 Claims. (Cl. 88—17.)



1. In a cinematographic camera, a casing, an inner and outer wall arranged in spaced parallel relation within the casing and subdividing the latter into three compartments, the inner wall having a portion thereof struck inwardly to provide a chamber, a spring motor arranged in the innermost compartment of the casing, a rigid support for said motor mounted transversely of said innermost compartment and extending within the chamber formed in the inner wall, a centrifugal speed relator arranged in the intermediate compartment of the casing and carried by the extended end of said motor supporting shaft and paralleling said spring motor, and film driving means arranged in the outermost compartment of the casing and being operatively connected to said spring motor and centrifugal speed regulator.

1,750,402. MOUTH WIPER. HENRY G. GUIER and ALBIN L. CHALFONTE, Trenton, N. J. Filed Sept. 13, 1928. Serial No. 305,790. 6 Claims. (Cl. 199—62.)



1. A device of the character described comprising a base mounted upon the metal pot, an arm pivotally carried thereby, a wiping member carried by said arm, spring means for normally retaining said arm in raised position, and means for moving said arm, said means including a rearwardly extending operating link movable in response to movement of an ejector lever, said link and ejector lever having a lost motion connection.

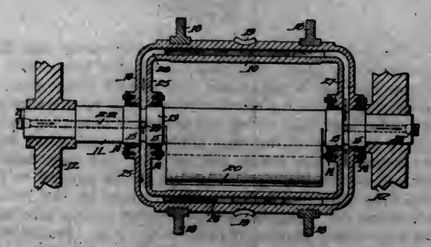
1,750,408. DEVICE FOR OPERATING INTERNAL-COMBUSTION ENGINES WITH AN IGNITION CHAMBER. ERNST HERRT, Kiel, Germany, assignor to Fried. Krupp Germaniawerft Aktiengesellschaft, Kiel-Gaarden, Germany. Filed Aug. 28, 1925, Serial No. 53,158, and in Germany Oct. 27, 1924. 4 Claims. (Cl. 123—33.)

1. In combination with an internal combustion engine of the character described, comprising a cylinder and an ignition chamber on said cylinder, a constantly open ignition channel and an air channel between the ignition chamber and the cylinder, a fuel supply duct terminating in said ignition channel and a freely movable check valve in the air channel adapted to open toward the ignition chamber.

1,750,404. DOLL. LOUIS HERMAN, Brooklyn, N. Y. Filed Mar. 30, 1927. Serial No. 179,541. 4 Claims. (Cl. 46—40.)

4. In a doll, a main body or trunk comprising a casing having a hard outer wall, a portion of the bottom wall being cut away providing an opening extending into the casing, leg members and a lower body portion secured to said leg member, the said lower body portion being formed to interlock with the walls of the casing and to be secured therein by said bottom wall.

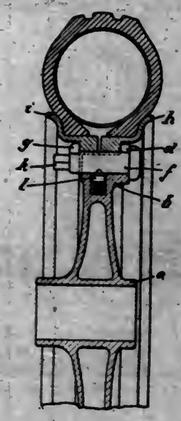
1,750,405. WELL-SHOOTING DEVICE. JESSE J. HILL, Independence, Kans. Filed Oct. 13, 1927. Serial No. 225,973. 1 Claim. (Cl. 102—4.)



In combination with an outer shell adapted to contain a suitable shattering charge, a device for exploding said charge embedded in said shattering charge and comprising, an upper casing, an intermediate sleeve section having a restricted opening, and a cap connected with said section and having an opening aligning with the opening of said section, an acid container in the upper casing having a depending spout of reduced diameter disposed in the restricted opening of the sleeve or section, a tubular firing

CARNEGIE LIBRARY OF ATLANTA

device fitting in said cap with its upper end contiguous to the lower end of the spout of the container, and a cap or cover for protecting the firing device.



1,750,406. WATER-COOLED PLATE-FINISHING MACHINE. JOHN A. ISBELL, Plainfield, N. J., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 6, 1927. Serial No. 203,728. 3 Claims. (Cl. 29—21.)

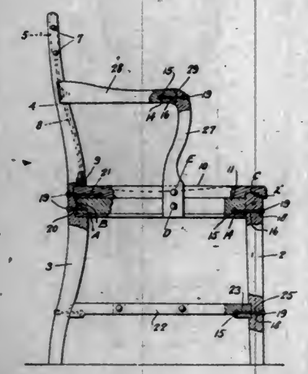
1. In a stereotype plate shaving machine, the combination with a stationary shaft having a stationary shaving blade thereon, said shaft having a pair of hubs, each having a port therein, and the shaft being provided with means for introducing water in the interior of one of the hubs and discharging it from the interior of the other, of a cylinder rotatably mounted on said hubs, means on the outer peripheral surface of the cylinder for rotating the cylinder, said cylinder having a pair of hollow arms at each end contacting with the hubs, each pair of arms being open to communicate with the port of the hub at that end and the walls of the cylinder being hollow to receive water through the arms, said arms being located at an inclination to permit the introduction and discharge of a curved stereotype printing plate endwise.

1,750,407. WHEEL. FRITZ KOPP, Ulm-on-the-Donau, Germany. Filed Jan. 18, 1929, Serial No. 333,303, and in Germany Dec. 7, 1925. 1 Claim. (Cl. 152—21.)

A vehicle wheel of the class described having in combination, a felly portion provided with a transverse opening having a reduced vertical portion extending to the outer edge of the felly portion and a circumferentially disposed flange, a locking bolt having a cylindrical stem arranged to be revolubly mounted in said opening and normally prevented from removal therefrom, said bolt having an enlarged head at one end arranged to abut said flange and a lug adjacent the opposite end, said lug adapted to register with the reduced portion of said opening for permitting the insertion or removal of the bolt from the wheel, a rim comprising circumferential sections mounted on said wheel, said sections having inwardly extending portions

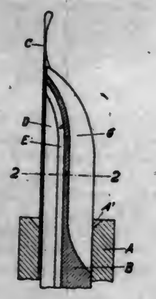
arranged to be confined between said flange and said lug, means on said sections engaging the outer surface of said bolt for preventing movement of the rim relative to the wheel, and yieldable means for preventing rotation of the bolt when the parts are in operative position.

1,750,408. CUSHION WHEEL. ALEX A. KOHN, Chicago, Ill., assignor to Morand Cushion Wheel Co., Chicago, Ill., a Corporation of Illinois. Filed May 24, 1928. Serial No. 280,181. 2 Claims. (Cl. 295—11.)



1. A cushion wheel construction comprising; an inner annular channel-form rim and an outer annular channel-form rim, said rims being separated by an annular space and having their flanges extending toward each other, the edges of the flanges of one rim having opposed bevels and the adjacent edges of the flanges of the other rim having complemental bevels to cause interlocking of said flanges upon movement of one rim towards the other; and an interposed cushion element in the annular space between said rims.

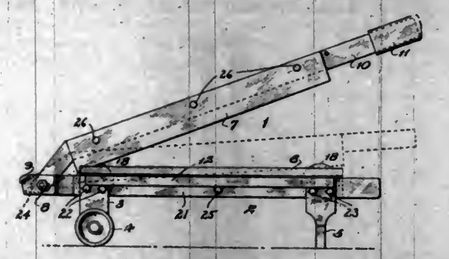
1,750,409. CHAIR CONSTRUCTION. EDWARD KOVAC, Jr., New York, N. Y. Filed Mar. 10, 1928. Serial No. 260,624. 1 Claim. (Cl. 155—106.)



As a new article of manufacture, a chair including front and rear legs, said rear legs being recessed at their upper end portions, horizontal shoulders in the recesses, a supporting frame supported, at its rear end, in the recesses and having its upper face in the horizontal plane of the shoulders therein, means for detachably securing the frame therein, said frame having its forward end in abutting engagement with the side of the front legs adjacent the upper ends thereof and detachably secured thereto, tenons on the upper ends of the front legs, a seat mounted on the frame and extending into the recesses in the rear legs and mounted on the shoulders therein, means for detachably securing the seat therein, said seat extending over

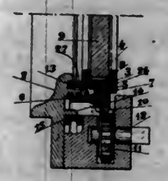
the upper ends of the front legs and being provided adjacent its front ends, with sockets in its bottom face for the reception of the tenons, a back rest extending upwardly from the rear legs, vertical posts on the outer sides of the frame and the seat and extending upwardly therefrom, securing elements extending transversely through

the lower end portions of the posts and into said frame and seat and constituting means for detachably supporting the posts thereon and for detachably maintaining the forward portion of the seat on the frame and the front legs, and arm rests extending between the upper ends of the posts and the back rest.



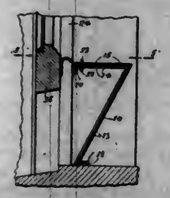
1,750,410. RESERVOIR PEN. THEODOR KOVACS, Hanover, Germany. Filed Apr. 6, 1929, Serial No. 353,027, and in Germany Apr. 11, 1928. 11 Claims. (Cl. 120—50.)

1. A reservoir pen comprising a feed bar below the nib formed with an air supply channel, capillary grooves at the bottom of said channel and a longitudinal groove in the side remote from said nib and in that part which projects from the barrel of said reservoir pen, and a connection between the front end of said groove and the conduit supplying from the reservoir of said pen to the point of said nib.



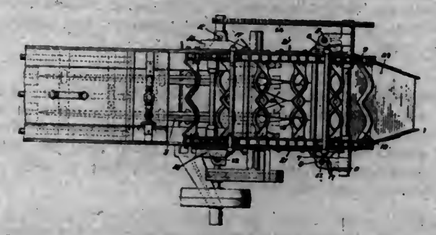
1,750,411. UTILITY SHEAR. DUCLISE J. LA BAUVE, Lake Charles, La. Filed May 8, 1928. Serial No. 276,084. 4 Claims. (Cl. 164—44.)

1. A shearing machine comprising a stationary blade carrying bar, a movable blade carrying bar pivoted at one end to the stationary bar, means at the pivoted end portions of said bars for limiting the movement of said mov-



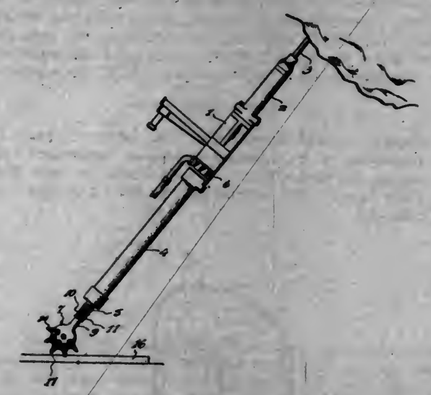
able bar, a work supporting table fixed to the stationary bar at one side thereof, and work receiving members extending from the opposite side of said bar.

1,750,412. SCUTTLE PORT AND LIKE TIGHT-CLOSED WINDOW. LOUIS LALANNE, Marseille, France. Filed Nov. 28, 1928, Serial No. 322,369, and in France Feb. 15, 1928. 4 Claims. (Cl. 114—177.)



1. In a controlling device for scuttle ports and like tight closed windows the combination of a frame with a circular opening, a watertight ring in said frame next to the opening, a movable circular pane holder resting against said watertight ring, a flat uninterrupted detaching collar fixed to the back of the pane holder, a second collar situated nearer to the frame and fixed to said pane holder, both collars forming together a ring groove parallel to the watertight ring, projecting means carried by the frame, and means for bringing said projecting means into said ring groove and moving it parallel away or towards said watertigbt ring for the purpose of either acting upon said flat detaching collar so as to detach and to remove the pane holder from its watertight ring simultaneously over the whole circumference or acting upon the second collar so as to bring the pane holder parallel to itself to fit tight back on to the tightening ring.

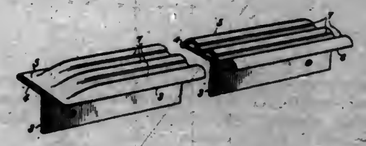
1,750,413. VENTILATOR. ALBERT R. LAUBENSTEIN, Ashland, Pa. Filed Mar. 13, 1929. Serial No. 346,691. 3 Claims. (Cl. 98—99.)



1. A window ventilator consisting of a main deflector section, and a perforated top section extending laterally from the upper edge of the deflector section and equal to the length thereof, and in combination, fasteners each adapted to be fixedly secured to a window frame, and engageable in one of the perforations of said top section, for the purpose of detachably securing the ventilator in place in the window frame opening.

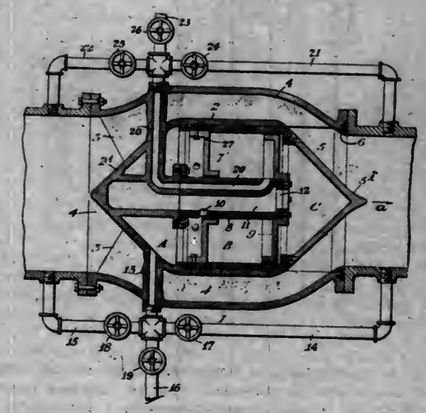
1,750,414. MACHINE FOR TREATING TOMATOES. HAROLD R. LEWIS, Hoopeston, Ill., assignor to Sprague-Sells Corporation, Hoopeston, Ill. Filed Mar. 26, 1925. Serial No. 18,583. 11 Claims. (Cl. 146—81.)

6. A machine for treating tomatoes comprising an endless conveyor for initially receiving and moving tomatoes, a pivoted frame member located adjacent the delivery end of said initial conveyor, an endless conveyor carried by said frame member and adapted to receive tomatoes from said initial conveyor, severing knives mounted on said pivoted member and having vertical adjustment relative to the path of travel of the tomatoes, said frame member, conveyor and slicing knives being movable away from the operative position by swinging on said pivot.



1,750,415. FOOT REST FOR STOPING DRILLS. GAIL G. MARSH, Butte, Mont. Filed Dec. 29, 1927. Serial No. 243,379. 1 Claim. (Cl. 255—52.)

A foot piece of the character described comprising a ball shaped body, said body having spaced series of circularly alined sockets formed therein, calks engaged in the sockets and disposed in angular relation with respect to the longitudinal axis of the body, a single calk connected with the body in alinement with the longitudinal axis thereof for engagement with a support when the longitudinal axis of the body is perpendicular, the calks of the circular series being adapted to engage the support when the longitudinal axis of the body is in an inclined or horizontal position.



1,750,416. SEALING STRIP FOR BOTTOMS OF VEHICLE BODIES. WALTER A. MAYNE, York, Pa., assignor to Martin-Parry Corporation, York, Pa., a Corporation of Pennsylvania. Filed July 18, 1927. Serial No. 206,620. 1 Claim. (Cl. 296—41.)

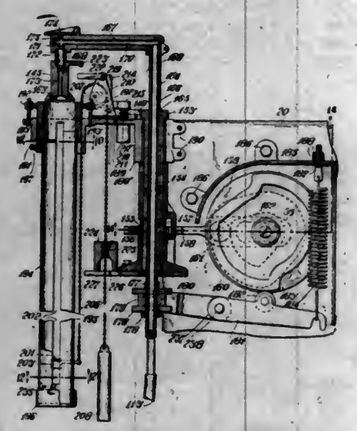
In a vehicle body, the combination with a bottom composed of a series of spaced apart floor boards, a sealing device having a vertical portion engaging the edge of one of said floor boards, a horizontal extension spanning the space between such floor boards and resiliently engaging the upper surface of the adjacent board, a returned bent

portion overlying the horizontal and vertical portions aforesaid, said returned bent portion having corrugations formed therein and the convex portions of which engage the horizontal extension at points on each side of the space between said floor boards.

1,750,417. PRESSURE-ACTUATED CONTROL VALVE. LESLIE N. MCCLELLAN, PHILLIP A. KINZIE, JOHN L. SAVAGE, and CHARLES M. DAY, Denver, Colo. Filed Jan. 31, 1928. Serial No. 250,778. 12 Claims. (Cl. 137—139.)

1. In a valve of the character described, the combination with a valve body and a fixed valve element therein, of a movable plunger carried by said valve element and provided with means forming a movable piston cooperating with the valve element, said element provided with a diaphragm cooperating with the movable plunger, said valve member, plunger, piston and diaphragm so associated as to form a plurality of separate pressure chambers, means for introducing pressure fluid into said chambers, means affording communication between all of said chambers, means affording free transference of pressure fluid between certain of said chambers whereby the pressures therein are equalized, means for supplying pressure fluid to a chamber intermediate said certain chambers, and controlling means for said pressure fluid supplying means.

1,750,418. ETCHING AND DECORATING METAL SURFACES. JAMES C. MCFARLAND, Fort Thomas, Ky., assignor to The Wadsworth Watch Case Co., Dayton, Ky., a Corporation of Kentucky. Filed Dec. 5, 1928. Serial No. 324,024. 4 Claims. (Cl. 204—1.)



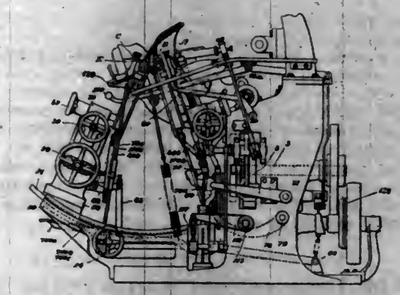
4. The method of treating a base metal surface, which comprises: plating the surface; applying a suitable resist design to said plating; dissolving said plating at the unprotected areas; removing said resist design; electroplat-

ing with chromium the areas presented by one of the metals, using such current density that the other areas will not be plated; removing by means of a suitable solvent

the remainder of the first-mentioned plating; plating with precious metal the last exposed areas; removing the chromium plating; and etching the surface exposed by the removal of the chromium plating.

1,750,419. CAPPING MECHANISM. JULIUS J. MOJONNIER and HARLEY R. PHILLIPS, Oak Park, and HENRY J. CLARKE, Chicago, Ill., assignors to Mojonnier Bros. Co., a Corporation of Illinois. Filed Aug. 17, 1926. Serial No. 129,700. 30 Claims. (C. 226—76.)

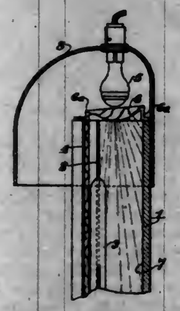
1. In combination, a holder for a column of stacked articles, a movable pneumatic cup for engaging the topmost article to seize it and remove it, a member for engaging beneath a number of stacked articles in said holder, a sprocket pulley, a weight, a sprocket chain over said pulley connecting said member and weight, said weight when free being operative to raise said member, a ratchet wheel rotatable with said pulley, a pivoted catch for engaging the teeth of said wheel to lock the same against movement by said weight, lever mechanism operated by the downward travel of said cup to free said catch, and a spring for returning said catch to locking position when said lever mechanism is unrestrained by said cup.



2. In combination, a support, a holder for a column of stacked articles, said holder comprising two segments of a tube divided lengthwise, one segment being secured to said support, the other segment having lugs at its lower end whereby it may be slipped into a carton of stacked articles and withdrawn with the articles upon it in stacked relation, and means for securing the segments together to complete the holder.

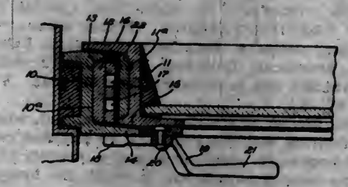
25. In combination, a vertical holder for a column of stacked articles, a blade carrier, movable supporting means for said carrier extending lengthwise of said holder whereby said carrier may be placed at desired heights along said holder, a horizontal blade secured to said carrier and movable into and out of the holder to supportingly engage different numbers of articles in the stack, means for causing said blade to press upward, and means for engaging the topmost article as said pressure is applied by said blade.

1,750,420. TREATMENT OF PETROLEUM PRODUCTS. FRANCIS B. MUHLENBERG, Upper Darby, Pa. Filed Dec. 15, 1925. Serial No. 75,618. 5 Claims. (Cl. 196—32.)



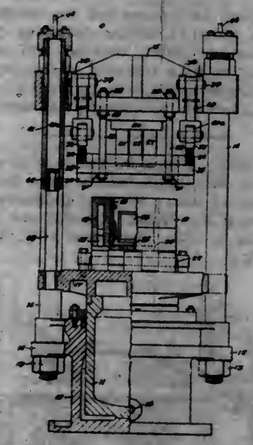
4. The process of desulphurising hydrocarbons comprising treating the hydrocarbons under normal atmospheric conditions with a solution of a compound formed by the reaction of cupric hydroxide and ammonia, and agitating the mass.

1,750,421. PULLING-OVER MACHINE. AUGUST NEUBERT, Weissenfels-on-the-Saale, Germany, assignor to the Firm of Nollesche Werke Kommandit Gesellschaft, Weissenfels-on-the-Saale, Germany. Filed Feb. 28, 1928, Serial No. 257,748, and in Germany Mar. 5, 1927. 5 Claims. (Cl. 12—4.)



1. In a machine for pulling-over shoes, the combination of a shoe-support, and grippers for operating upon the supported shoe at the rear of its ball with means for adjusting these grippers in curved paths running in vertical planes parallel to the longitudinal axis of the shoe support below the support about points lying approximately on the same level as the supporting face of the support.

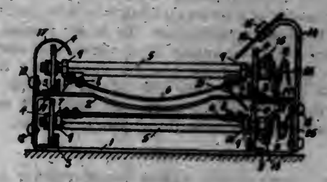
1,750,422. THERMOMETER. BRADFORD NOYES, Jr., Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed July 7, 1928. Serial No. 290,999. 5 Claims. (Cl. 240—2.)



3. In a thermometer assembly, the combination of a thermometer stem, a scale plate having a slot for receiving the stem, a light diffusing member in back of the stem in a position to illuminate the same, means for illuminating the light diffusing member, including a source of light near one end of the stem, optical means between the source and the said member for rendering the density of the light at the surface of the member substantially uniform over an area in longitudinal alignment with the stem, and a hood surrounding the light source, said hood being constructed to direct a fraction of the light downwardly over the scale plate.

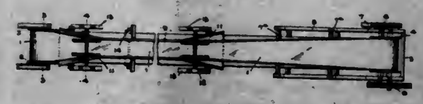
1,750,423. CASEMENT-WINDOW LATCH. WALTER S. OGLESBY, New York, N. Y.; Anna A. Oglesby administratrix of said Walter S. Oglesby, deceased. Filed May 28, 1927. Serial No. 194,983. 6 Claims. (Cl. 292—202.)

1. The combination with a casement frame, a sash hingedly mounted therein and a pivoted latch on the inner face of the sash adapted to engage the frame and prevent swinging of the sash to open position, of a grooved keeper on the inner face of the frame adapted to receive the latch for retaining the sash in slightly opened position.



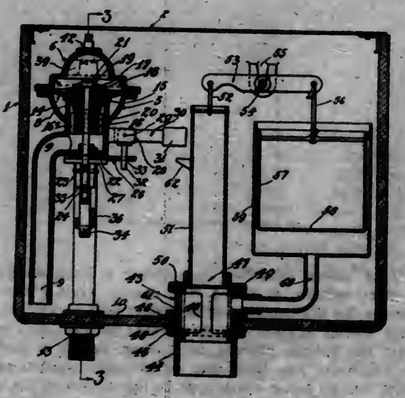
1,750,424. MOLDING APPARATUS. NELS L. OLSON, Highland Park, Mich., assignor to American Rubber Products Corporation, a Corporation of Michigan. Filed Nov. 4, 1927. Serial No. 230,979. 8 Claims. (Cl. 18—19.)

3. In a device of the type described, the combination with a mold having a movable side wall, a core, said mold and core being movable relative to each other, a frame member movable relative to both said mold and core member engageable with said movable wall and the opposite side of said mold, the angle of contact between said frame member and said mold being less than the angle of friction of the material from which said mold or frame member is formed whereby said frame will lock itself to said mold upon engagement therewith, and yieldable means for urging said frame member into close relationship in respect to said mold comprising a pair of pivoted members co-operating to resist movement of said frame member relative to said core member.



7. A mold having all walls thereof fixed except one which is movable, the side walls adjacent said movable wall being spaced apart a greater distance at said movable wall than at the opposite side of said mold, plates received in said mold in contact with said walls, the plates contacting against said side walls tapering in section oppositely to the direction of taper of said side walls, and means for forcing said plates towards said movable wall, said means comprising a screw parallel with said plate opposite said movable wall and a pin perpendicular thereto and actuated thereby bearing against the rear face of the plate for the wall opposite to said movable wall.

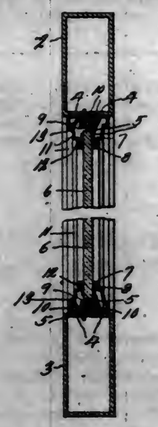
1,750,425. ENDLESS CONVEYER OR ELEVATOR. JOSEPH PARKER, Cowdenbeath, Scotland. Filed Mar. 7, 1929, Serial No. 345,061, and in Great Britain Mar. 18, 1928. 7 Claims. (Cl. 198—208.)



1. A conveyer or elevator comprising an endless belt, a track, rollers movable along said track, axles supporting said rollers, rope grips attached at intervals to the face of the belt and rope grips attached at intervals to the side of the belt.

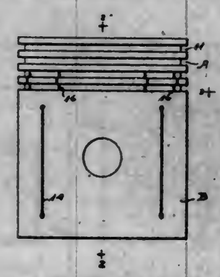
1,750,426. CONVEYER. HARRY EWART PARTRIDGE, Finchfield, Wolverhampton, England, assignor of one-half to John Thompson (Dudley) Limited, Dudley, England. Filed Jan. 5, 1929, Serial No. 330,459, and in Great Britain Jan. 24, 1928. 3 Claims. (Cl. 266—6.)

1. A conveyer comprising an endless belt constructed from flexible material, guiding drums for supporting the ends of the belt and around which the belt is adapted to pass, means for driving one of said drums and causing said belt to move in an endwise direction, a liquid containing tank for receiving the intermediate part of the belt depending into said tank in the form of a loop and wheels dipping into said liquid containing tank and engaging with the upper surface of the belt and causing that part of said belt passing through said liquid tank to be distorted into channel or trough shape, said wheels being spaced apart to allow material carried by the belt to pass between them.



1,750,427. FLUSH TANK. JOHN B. PAUL, Pittsburgh, Pa. Filed June 8, 1928. Serial No. 283,774. 5 Claims. (Cl. 4—41.)

1. In combination with a flush tank, a supply valve comprising a valve body having an inlet pipe and an

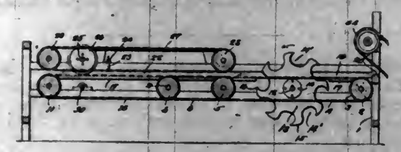


outlet pipe discharging into said tank; a cover for said body; a diaphragm positioned intermediate said body and cover; a valve disc positioned on the lower side of the diaphragm; a seat for said disc; a plug adapted to secure said disc to the diaphragm and having a central aperture; a plunger pin loosely slidable in said aperture and having a head adapted to close the same; means to introduce water from the supply pipe above said diaphragm; means to lift the plunger pin for discharging the water above the diaphragm into the discharge pipe; a slide adapted to engage the plunger pin and hold same into lifted position, and means to actuate said slide.

1,750,428. METALLIC DOOR STRUCTURE OR THE LIKE. JOHN P. PEARSON, La Porte, Ind., assignor to Metal Door & Trim Co., La Porte, Ind. Filed Dec. 1, 1926. Serial No. 151,870. 8 Claims. (Cl. 189—46.)

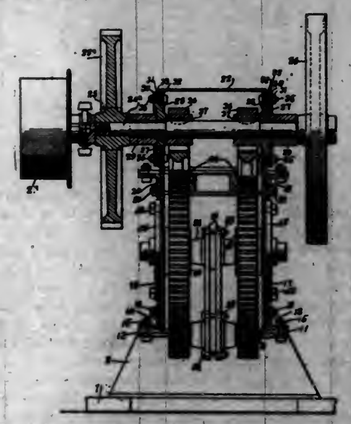
1. The combination with a device of the character described comprising side members, end members and a panel, of a molding, said molding having a main channel in which the edges of the panel are disposed and a single auxiliary channel, engaging flanges carried by the side and end members and disposed in the auxiliary channel.

1,750,429. PISTON. ARTHUR W. POPE, Jr., Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Oct. 13, 1926. Serial No. 141,253. 7 Claims. (Cl. 74—108.)



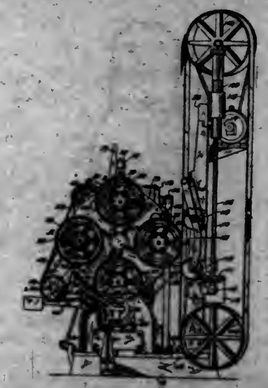
1. A piston structure comprising a head section and a skirt section, a closed ring seated against the inner side of the skirt section at the upper edge thereof, a closed ring seated against the inner side of the skirt section near the bottom thereof, said rings having a coefficient of expansion less than that of the skirt section and the skirt section being continuous in the planes of the respective rings and means connecting the head section to the skirt section and adapting said head section for expansion and contraction independently of the skirt section the skirt section being normally under stress over the rings and the rings being normally under compression due to such stress.

1,750,430. PROCESS OF TREATING CRUDE FIBERS AND TEXTILE FABRICS. RAINER HERMANN POTT, Dresden, Germany, assignor to Chemische Fabrik Pott & Co., Dresden-N., Germany. Filed Jan. 22, 1923, Serial No. 614,308, and in Germany June 15, 1921. 8 Claims. (Cl. 87—5.)



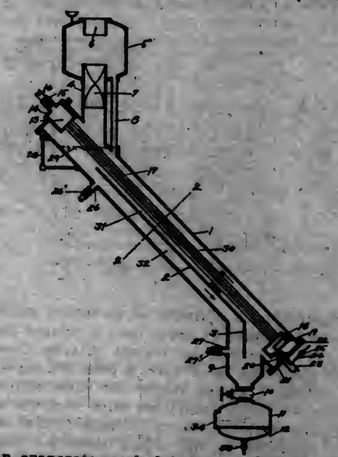
1. The process of treating textile material, which comprises treating such material with an emulsion comprised of a hydrogenated naphthalene and a quantity of saponified fatty substances sufficient to render the hydrogenated naphthalene water miscible.

1,750,431. FISH-CUTTING MACHINE. ARTHUR R. ROGERS, Jonesport, Me. Filed Jan. 28, 1929. Serial No. 335,579. 10 Claims. (Cl. 17—4.)



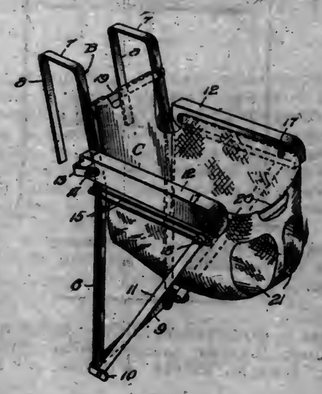
1. In a machine for cutting fish the combination with cutters, and a series of endless conveying elements, of a rotatable cradle working between said elements for successively picking up a plurality of fish from the conveying elements, positioning them by gravity in the cradle, and depositing them on the conveying elements.

1,750,432. PRESS. BRUCE ROLLMAN, Bellevue, Ohio, assignor to The Ohio Cultivator Company, Bellevue, Ohio, a Corporation of Ohio. Original application filed Nov. 16, 1925, Serial No. 69,392. Divided and this application filed May 3, 1926. Serial No. 106,335. 5 Claims. (Cl. 308—72.)



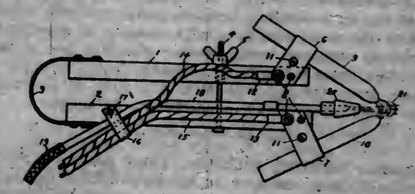
2. In a baler, a base, lower rails and upper rails on either side of said base spaced from one another, and side plates extending from the lower rails upwardly on either side above the upper rails, and a driven shaft supported in the portions of the side plates above said upper rails, and means in said side plates for adjusting the horizontal position of said driven shaft, said adjusting means consisting of a bearing plate having a concave inwardly-disposed bearing flange and a wedge disc having a convex adjacent marginal portion whereby as the wedge disc is shifted vertically or horizontally it will change the position of the driving and driven means carried thereby.

1,750,433. SANDING AND CHAMFERING MACHINE. JOSEPH W. ROSCHE, Minneapolis, Minn. Filed Aug. 7, 1926. Serial No. 127,883. 12 Claims. (Cl. 147—1.)



1. A stave receptacle sanding and chamfering machine, comprising a frame, a revoluble holding device journaled on the frame and having a plurality of means for holding staves assembled to form a receptacle, all but one of said holding means being independently rotated and all of said holding means being moved by the holding device to a plurality of positions to permit operations on the receptacle, means at one of its lower positions for clamping a receptacle, means at a second position for removing a temporary holding hoop from the receptacle and for chamfering one edge portion of the receptacle, means at a third position controlled by one of the receptacles in another position for sanding the outer side portion of the receptacle at said third position, means at a fourth position for forcing a hoop on the receptacle, and means at the first mentioned position for stopping the rotation of one of said holding means and for unclamping the receptacle from the holding means to permit its removal and the positioning of another receptacle on the holder.

1,750,434. EVAPORATOR. WILLIAM SIECK, Jr., Winnetka, Ill., assignor to William Garrigue & Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 16, 1928. Serial No. 247,111. 5 Claims. (Cl. 159—23.)

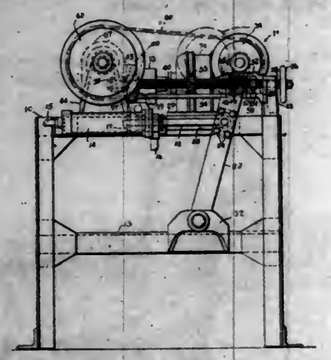


2. An evaporator embodying an elongated and inclined chamber, heating tubes therein and extending throughout the length of the chamber, means for supplying a heating medium into the tubes, means for supplying liquid into the chamber, said tubes being so arranged in said chamber as to cause the liquid to flow against only so much of the heating surfaces as is necessary to convert said liquid into vapor, and means for creating a defined circulation of the liquid within said chamber.

1,750,435. CHILD'S SEAT. B COLEMAN SILVER, Chicago, Ill. Filed Oct. 27, 1928. Serial No. 315,549. 7 Claims. (Cl. 155—79.)

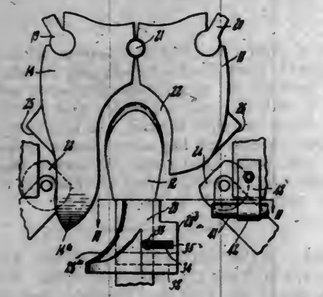
4. In a child's seat, the combination with a back support, of arm rests pivoted at one end thereto, braces extended between the support and arm rests and connected pivotally with one and adjustably and slidably with the other, a bow extended between the free ends of the arm rests and parallel to the same, means joining the bow to the arm rests, and a seat of flexible sheet material suspended from the back support and from the bow throughout the major portion of its length.

1,750,436. ELECTRIC-ARC CUTTING APPARATUS. VLADIMIR B. SOUNITZA, Pasadena, Calif. Filed Aug. 17, 1927. Serial No. 213,583. Renewed Jan. 23, 1930. 3 Claims. (Cl. 219—1.)



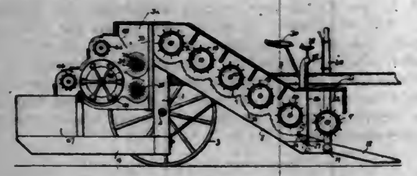
3. In an electric arc cutting apparatus, the combination with electrodes, of supporting means for said electrodes, means to conduct electric current to said electrodes, means to move said electrodes apart, means to adjustably limit said movement of the electrodes apart, said electrodes being adapted to be manually moved together, and means to direct the flow of oxygen against the tips of said electrodes.

1,750,437. TIRE-LINING MACHINE. WILL C. STATE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 9, 1926. Serial No. 134,508. 6 Claims. (Cl. 91—60.)



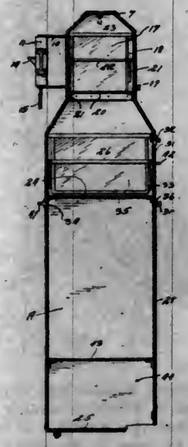
1. An apparatus comprising a frame, relatively movable rotatable members for supporting an endless band, means for driving the rotatable members, a member piv-

oted to the frame and carrying one of the rotatable members, fluid operated means for moving the pivoted member



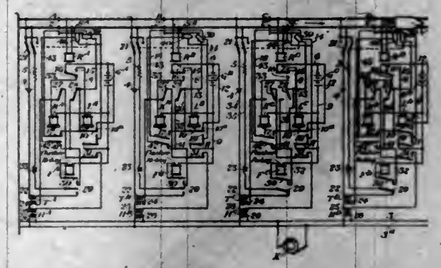
and means controlled by the operation of the pivoted member for controlling the operation of the rotatable members.

1,750,438. COUNTER-MOLDING MACHINE. JOHN HAMMOND STEWART, Lynnfield, Mass. Filed Dec. 17, 1928. Serial No. 326,616. 9 Claims. (Cl. 12—66.)



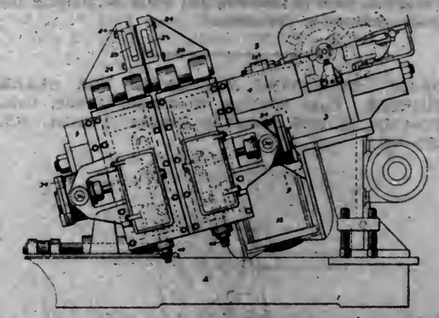
1. A counter molding machine of the type employing complemental inner and outer molding members and a flange presser and having extensions on the inner and one of the outer molding members complementally formed to mold the extension wing of a counter in substantial conformity with the instep portion of a last, one of said extensions being laterally displaceable from the other to provide space for accommodating the wing of a counter blank when being placed in position to be molded.

1,750,439. COTTON PICKER. JOHN ARNOLD STREUN, Sherman, Tex., assignor to Hardwicke-Etter Company, Sherman, Tex. Filed Jan. 8, 1927. Serial No. 159,809. 2 Claims. (Cl. 19—37.)



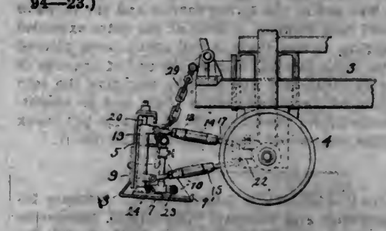
1. A cotton picker and separator vehicle having a forward cotton-receiving opening adjacent the ground, means to pass the cotton rearwardly, an upwardly inclined chute having a perforated wall below the same, separator rolls adapted to pass the cotton upwardly along said wall, and means to eliminate the bulls and dirt thereafter and move the cotton to a receptacle.

1,750,440. DISPLAY CABINET. WILLIAM H. TARVER, Savannah, Ga. Filed June 16, 1927. Serial No. 199,320. 2 Claims. (Cl. 312—100.)



2. A cabinet of the class described comprising vertically disposed corner irons, cross members connecting the upper and lower end portion of said irons, said irons at their upper ends being continued by inwardly and upwardly disposed members terminating in vertically directed supplemental corner members, a crown member operatively supported by the supplemental corner members, panels interposed between and carried by the corner irons, the cross members, the supplemental corner members and the inwardly and upwardly disposed members, opposed panels interposed between the supplemental corner members being provided with windows, and a third of such panels provided with a door.

1,750,441. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HOWARD A. THOMPSON, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 22, 1926. Serial No. 110,922. 11 Claims. (Cl. 246—38.)

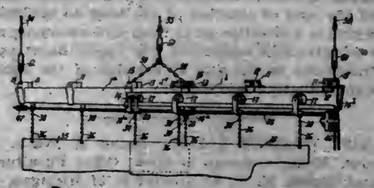


4. In combination, a plurality of successive sections of railway track, a source of track circuit current for supplying current of normal or reverse polarity depending upon traffic conditions in advance, a polarized track relay for each section, a coding device for each section and means controlled by the associated track relay for operating said coding device, a source of train control current, and means controlled by the coding device for supplying intermittent train control current to one track section when one of the two sections next in advance is supplied with track circuit current of normal polarity and the other section is supplied with track circuit current of reverse polarity.

1,750,442. ELECTRICAL WELDING MACHINE. RUSSELL T. TODD, Warren, Ohio, assignor to The Taylor-Winfield Corporation, a Corporation. Filed June 9, 1928. Serial No. 284,083. 8 Claims. (Cl. 219—4.)

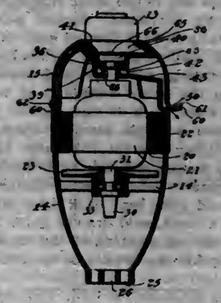
1. In an electrical welding machine, a movable table, separate sets of dies, for clamping the work and conducting electric current thereto, said dies extending transversely of said table, separate sets of adjustable toggle devices mounted in slides at opposite sides of said table for operating said separate sets of dies, and separate cylinders and pistons for operating said toggle devices, said toggle devices including stationary blocks adjustably mounted in said slides.

1,750,443. METHOD OF LAYING BITUMEN PAVEMENTS. JASPER G. TULLIS, Cleveland, Ohio, assignor, by mesne assignments, to The Jaeger Machine Company, Columbus, Ohio, a Corporation of Ohio. Filed June 14, 1928. Serial No. 285,232. 4 Claims. (Cl. 94—23.)



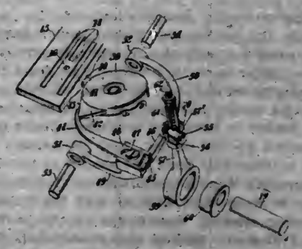
4. The method of laying bitumen pavement, which comprises reciprocating a positively heated compressing member over progressive areas extending completely across the pavement.

1,750,444. CURTAIN TRACK. EARL J. VALLEN, Akron, Ohio. Filed Jan. 7, 1928. Serial No. 245,160. 8 Claims. (Cl. 156—20.)



2. In an adjustable sectional curtain track construction, a supporting bracket for securing the track sections in lapped relation, said bracket including a central member extending between the sections and embracing the under surfaces of the track sections, and side members adapted to be secured with their backs to the central member and each embracing the upper portion of a track section, and means for securing the bracket members together.

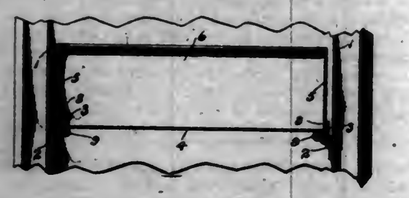
1,750,445. CURTAIN TRACK. EARL J. VALLEN, Akron, Ohio. Filed May 22, 1928. Serial No. 279,780. 4 Claims. (Cl. 156—46.)



1. In a curtain track structure including master and floating hangers movable along a track and an operating cable connected to the master hanger; each floating hanger comprising a bracket having a spacer sleeve thereon through which the operating cable is extended, and means swiveled onto said bracket to suspend the curtain therefrom, said spacer sleeve being formed of rubber to provide a noiseless bumper when said floating hangers are gathered by operation of the master hanger.

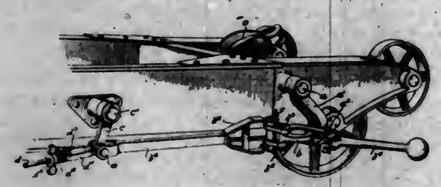
1,750,446. DYNAMO-ELECTRIC MACHINE. JOHN D. WALLACE and CLIFFORD H. LANDIS, Chicago, Ill., assignors to J. D. Wallace & Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 27, 1928. Serial No. 257,471. 6 Claims. (Cl. 172—36.)

1. A motor comprising a hollow shell-like head having operative mechanism therein and means to produce a ventilating draft therethrough, said head being appropriately apertured to accommodate the necessary inlet and exit of air and being provided with a filter of double walled and fiber lined pocket construction arranged to strain the incoming air and entrap dust particles therein.



1,750,447. ROTARY-HOOK MECHANISM FOR SEWING MACHINES. MAX LEON WATERMAN, Fairfield, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Mar. 31, 1928. Serial No. 266,239. 9 Claims. (Cl. 112—184.)

1. In a sewing machine, a reciprocatory needle, a rotary hook cooperating with said needle in the formation of

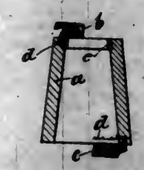


lock-stitches, a thread-case journaled in said rotary hook, stationary means for limiting oscillation of said thread-case in one direction, an opener-finger having a thread-case engaging portion movable in a general direction crosswise of the axis of rotation of the hook to oscillate said thread-case in a direction away from said stationary means, means for pivotally supporting said opener-finger upon an axis transverse to the axis of rotation of the hook, and means for actuating said finger.

1,750,448. DRAWER SLIDE. PETER M. WEGE, Grand Rapids, Mich., assignor to Metal Office Furniture Co., Grand Rapids, Mich., a Corporation of Michigan. Filed Jan. 23, 1928. Serial No. 248,598. 3 Claims. (Cl. 45—77.)

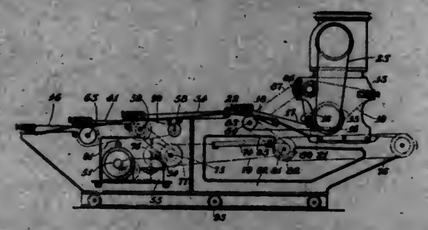
1. In a construction of the class described, a casing having spaced apart vertical sides, two angle members immovably secured one to the inner side of each side of the casing and having horizontal drawer guide flanges extending horizontally inward toward each other and in the same plane, and vertical flanges permanently secured to the sides of the casing, a drawer, and drawer guide members attached to the outer sides and at each lower side corner of the drawer, each of said drawer guide members being formed from a single piece of sheet metal with a vertical section lying against the outer side of and immovably secured to the side of the drawer, each of said sections being bent inward underneath the drawer for a short distance and then bent back upon itself in an outwardly opening U-bend, said drawer guide flanges extending into said U-shaped portions of the drawer guide members to thereby guide the drawer in its sliding movements.

1,750,449. HAND-BRAKE-LEVER ASSEMBLY. SIDNEY B. WINN, Lapeer, Mich. Filed July 9, 1928. Serial No. 291,456. 9 Claims. (Cl. 280—33.1.)



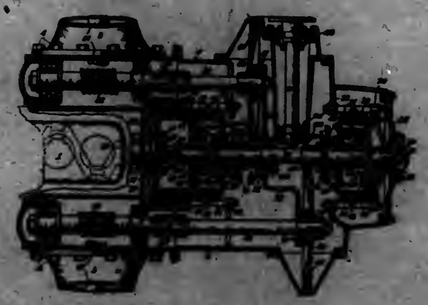
1. In tractor-trailer combinations of the semi-trailer type, wherein the tractor and trailer have a coupling relationship to permit combined and separate service activity, wherein the trailer is under brake control from the tractor during combined service activity, and wherein separation of tractor and trailer is operative to automatically apply the trailer brakes in brake-set condition, brake mechanism for and carried by the trailer, said mechanism including an element manipulable from the tractor to provide trailer brake movements during combined service activity, and connections between said element and the trailer brakes for translating element movements to the brakes of the trailer, said element, brakes and connections forming a unitary mechanism in constant connected relationship, said connections including a pair of pivoted supporting arms located in fore and aft relation and connected to move in unison, a section in advance of and connected to the fore support, and means within the section for temporarily releasing the brakes from element control while maintaining said connected relationship and while maintaining the brake-set position of the element.

1,750,450. OPERATING MECHANISM FOR GLARE SHIELDS. CARL WILLIAM WOODHEAD, Gilman, Colo. Filed Mar. 14, 1929. Serial No. 346,914. 1 Claim. (Cl. 296—97.)



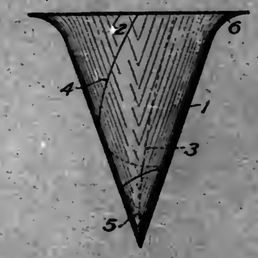
In a device of the kind described, a case for mounting above the windshield of an automobile, a rack segment pivoted in the upper part of the case, a pinion journaled in the case in mesh with the said rack, an arm extended from the said pinion outwardly through the case, a glare shield at the end of the arm, a shaft journaled horizontally and laterally through the lower frontal portion of the case, an elongated spring carrier mounted upon the said shaft within the case, the free end thereof being extended upwardly and backwardly, a retractile coil spring stretched between the free end of the spring carrier and the forward end of the said rack segment, a lever at the outer extended end of the spring carrier shaft, a bell crank lever pivoted upon the outer front face of the case, the end of one arm of this lever being bifurcated and thereby engaging the said lever at the end of the spring carrier shaft, and an operating wire extended from the other arm of the said bell crank lever to a point convenient to the hand of the driver.

1,750,451. NAIL-CLEANING APPLIANCE. WILFRID INGRAM WRIGHTSON and VICTORIA WRIGHTSON, Newcastle-upon-Tyne, England. Filed July 18, 1928, Serial No. 293,659, and in Great Britain July 26, 1927. 4 Claims. (Cl. 132—73.)



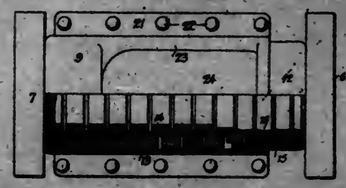
4. A nail-cleaning appliance comprising a stock having a series of tufts of short bristles disposed in a curve at one end thereof adjacent to the rim of said stock, and a concavity in said end to receive the pad of the finger tip, and a disc mounted so as to be free to revolve in said concavity, said tufts being inwardly-inclined so that, when the pad of the finger tip is placed across said end to rest in said concavity, said bristles enter beneath the tip of the finger nail and, by partially revolving the stock to and fro while it rests against said pad, extraneous matter beneath the finger nail is readily removed, said stock being also provided with a polishing pad.

1,750,452. UNLOADING AND STACKING MECHANISM FOR BISCUIT OVENS. GEORGE RALPH BAKER, CLAUDE DUMBLETON, and JOHN CURRIE PATERSON, London, England, assignors to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed June 18, 1929, Serial No. 370,960, and in Great Britain June 12, 1928. 3 Claims. (Cl. 107—45.)



1. In a device for removing biscuits from the trays of a traveling conveyor and for stacking them, the combination of a suction nozzle disposed crosswise the direction of travel of the conveyor and spanning the width thereof, a perforate bottom for said nozzle, an air-pervious traveling band arranged to pass across the perforate bottom in the direction of the length of the conveyor and in close proximity to the biscuits on the trays, three conveyors arranged in succession and driven respectively at decreasing speeds, the first conveyor adapted to receive and carry material delivered to it by said traveling band, the receiving end of the second conveyor underlying the delivery end of the first conveyor, the receiving end of the third conveyor underlying the delivery end of the second, said second conveyor formed near its delivery end with a relatively steep declination, and means for driving said conveyors and said air-pervious band, for the purposes set forth.

1,750,453. TRACTOR. WILLIAM I. BALLENTINE and PAUL R. THOMPSON, La Porte, Ind., assignors to Advance-Rumely Company, La Porte, Ind., a Corporation of Indiana. Filed June 16, 1923. Serial No. 645,751. 35 Claims. (Cl. 180—17.)



1. A tractor, comprising wheels, power means and means for transmitting power to the wheels, said power transmitting means including a clutch mechanism having a rotatable member rotated by the power means, a stationary member, said rotatable and stationary members having clutch elements, a slidable member and a cooperating member each having clutch elements cooperating with the clutch elements of the rotatable and stationary members and mounted to rotate with said rotatable member when the clutch elements of the rotatable member, the slidable member and the said cooperating members engage, a driving connection to a wheel including means connected to the rotatable member and said cooperating member, and means for controlling the sliding movement of said slidable members.

1,750,454. ROLLED-EDGE-CONE CUP. CESARE BARBERI, New York, N. Y., assignor, by mesne assignments, to Vortex Cup Company, Chicago, Ill., a Corporation of Delaware. Filed June 2, 1927. Serial No. 195,899. 1 Claim. (Cl. 229—1.5.)

A conical drinking cup constructed of a blank of substantially quadrantal form shaped to permit overlapping of two of the margins thereof, and means for securing the overlapping margins together, said quadrantal form having one edge thereof deflected during the formation of the cup to form a substantially plain peripheral drinking edge above a curved section.

1,750,455. DRAFT GEAR. FRANK B. BELL and OSCAR R. WIKANDER, Pittsburgh, Pa., assignors to Edgewater Steel Company, Pittsburgh, Pa. Filed Apr. 21, 1927. Serial No. 185,556. 6 Claims. (Cl. 213—29.)

1. In a draft gear, a draft frame, a yoke, a casing in said frame and coacting with said yoke, said casing being open at one end and comprising a body of generally circular cross-section and provided with bosses about its circumference, forming longitudinal guideways and terminating adjacent to the open end of the casing to provide stop shoulders, a shock absorbing spring in the casing, and a plunger slidably mounted in the open end of the casing and receiving one end of the spring, said plunger being provided with outstruck portions forming combined guide members engaging said guideways in the casing and stop members to engage said stop shoulders of the casing, the part of the ring spring contained in the casing having rings of such outside diameter as to fit the same, and the part of the spring extending into the plunger having outside rings of a smaller diameter to fit the inside diameter of said plunger.

6. In a draft gear, a casing open at one end, a chambered plunger open at its inner end and telescopically fitting in the open end of the casing, and a ring spring in said casing, the outer rings of a part of said ring spring being of such diameter as to fit within the casing, and the outer rings of the remainder of said ring spring being of such diameter as to fit within the telescoping plunger, the travel of the part of the ring spring inside of the plunger being less than the width of one ring, whereby liability of the edges of the ring spring catching in the edge of the open end of the plunger is obviated.

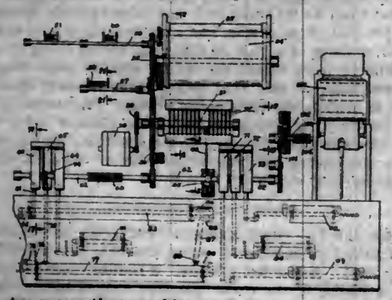
1,750,456. REGISTERING-DEVICE ACTUATING MEANS. FERDINAND H. BORM, Chicago, Ill. Filed Mar. 26, 1927. Serial No. 178,524. 4 Claims. (Cl. 74—54.)

1. A device of the class described comprising in combination a casing; a toothed wheel journalled therein; a leaf spring having a U-shaped portion; one side of said

U-shaped portion being curved downwardly and the end thereof engaging teeth in said wheel; the other side of

said U-shaped portion lying along the upper side of said casing, and means for operating said spring for rotating said toothed wheel.

1,750,457. METAL FURNITURE CONSTRUCTION. RICHARD BRADSHAW, Montreal, Quebec, Canada, assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 13, 1926. Serial No. 154,598. 7 Claims. (Cl. 5—131.)



1. In metal furniture, in combination with posts and a panel between the posts, a bottom rail connecting the posts and supporting the lower edge of the panel comprising a plate located in a plane lying forwardly of and parallel with the plane of the panel, a stiffening member behind the upper part of said plate, and a head strip holding the panel to the stiffening member and covering the upper edge of the plate.

1,750,458. VENTILATING SYSTEM. JAMES BURKE, Erie, Pa., assignor to Burke Electric Company, a Corporation of Pennsylvania. Filed Nov. 6, 1919. Serial No. 336,210. 4 Claims. (Cl. 98—39.)

2. A ventilating system comprising a series of sections adapted to be suspended from a ceiling, heating means in certain of said sections and a plurality of separate motor driven fans in others of said sections and conduit means connecting said heating and fan sections.

1,750,459. INDIVIDUALLY-RESETTABLE ACCUMULATOR-UNIT TABULATOR. FRED M. CARROLL, Yonkers, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Nov. 12, 1926. Serial No. 147,960. 38 Claims. (Cl. 235—58.)

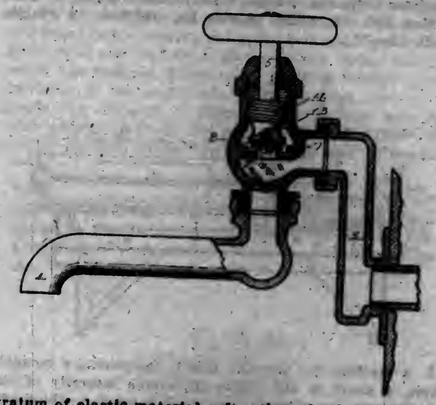
1. An accounting machine including a printing device comprising electrically-operated control means, an accumulating device comprising a differential mechanism and electrically operated control means, separate control circuits for each of said control means and initiating means for listing operations comprising a common actuator for said circuits, an additional control circuit for said printing control means for totaling operations and an actuator for said last named circuit operated by said differential mechanism whereby items may be listed and their totals printed on a common record sheet by said printing device

12. An accounting machine which is provided with a plurality of accumulator units having associated recording devices controlled thereby and forming an accumulating and recording bank, adapted to be split at any point to isolate desired accumulator units with their associated recording devices into independent sub-banks, characterized by the provision of resetting means for said units operable upon a recording operation and means for selectively associating any of such formed sub-banks therewith to effect resetting of the units of any sub-bank so selected without resetting of the units in the other sub-banks on a recording operation.

1,750,460. COMPOSITION OF MATTER AND METHOD OF EMPLOYING SAME. CLARENCE M. CARSON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 6, 1927. Serial No. 159,511. 13 Claims. (Cl. 91—68.)

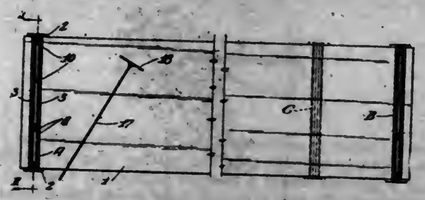
6. A method of rendering balloon fabric impermeable to inflating gas which comprises applying to said fabric a coating material containing latex, a protein and a hygroscopic electrically conductive salt, said salt being potassium chloride.

7. A balloon fabric coated with a material containing latex and fibrin.



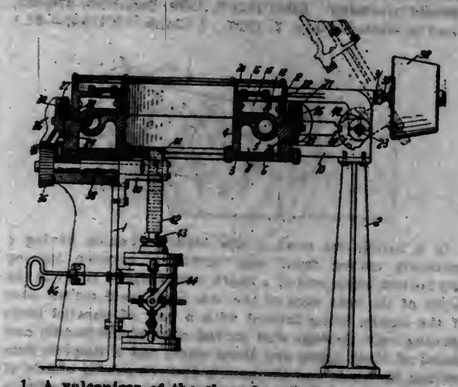
1,750,461. TRUSS PAD. FRANK E. CHESTERMAN, Noble, Pa. Filed May 7, 1928. Serial No. 275,604. 3 Claims. (Cl. 128—117.)

1. A truss structure consisting of a soft cushioning flanged pad having spaced radially arranged lug receiving openings in the flange of said pad, a rigid disc fitted within said pad, radially arranged lugs on said disc for engaging said openings, said disc having a central screw threaded aperture therethrough, a rigid casing arranged to receive said pad, said casing having a central aperture therethrough in alignment with the disc aperture, a cross strap fitted to said casing and having an aperture therethrough in alignment with the aforesaid apertures, a screw having a head which screw is arranged to penetrate said casing and cross strap and to engage said disc, and a belt engaging said casing at right angles to the cross strap and frictionally engaging the head of said screw without engagement with said cross strap.



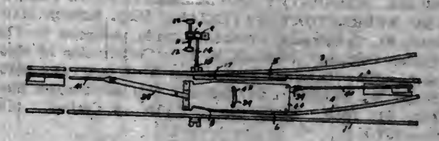
1,750,462. VALVE. LOUIS A. CORNELIUS, Grand Rapids, Mich., assignor to Wolverine Brass Works, Grand Rapids, Mich., a Corporation of Michigan. Filed Jan. 18, 1926. Serial No. 80,923. 2 Claims. (Cl. 251—159.)

1. In a device of the character described: a valve seat; a valve having a member carried thereby comprising a stratum of elastic material adjacent the valve stem and adapted to contact the extremity of the valve seat, and a



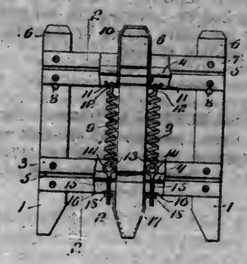
stratum of elastic material softer than the first-mentioned stratum and adapted to contact the side of the valve seat in the valve's seated position.

1,750,463. CLOTH HOLDER. ABRAHAM DEINSTEIN, Chicago, Ill. Filed Nov. 24, 1928. Serial No. 321,532. 12 Claims. (Cl. 164—78.)



1. A cloth holder comprising a grooved frame, clamping means for engaging the same transversely of a cutter's table, a row of pins slidably engaged in the groove of the frame, and means for clamping the pins in set positions of adjustment.

1,750,464. HORIZONTAL VULCANIZER. ANDREW J. FLEITER, Akron, HENRY C. BOSTWICK, Kenmore, and THEODORE ALBERT MILLER, Akron, Ohio, assignors to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed May 4, 1927. Serial No. 188,635. 2 Claims. (Cl. 18—19.)

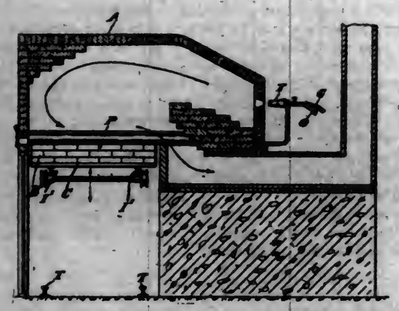


1. A vulcanizer of the class described comprising a stationary section and a movable section, a locking ring about the stationary section, lugs on the ring, mating lugs on the movable section, and means to rotate the ring about the movable section comprising a rack on the ring, a gear in engagement with the rack, a shaft for the gear, a pinion upon the shaft, a second rack in engagement with the pinion, and a hydraulic cylinder to move the second rack.

1,750,465. RAILWAY SWITCH. MACEO GAULT, Taylor, Tex. Filed Sept. 25, 1928. Serial No. 308,184. 3 Claims. (Cl. 246—278.)

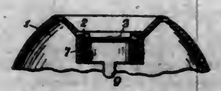
1. In a railway track having a switch track and a switch; a mechanism connected to the switch and through which the switch may be thrown into open or closed position said mechanism including a laterally shiftable bar to which the switch is connected, a shift lever pivoted at an intermediate point to a fixed anchor and one end of which is pivoted to said bar, oppositely disposed shifting levers whose adjacent ends are pivotally connected to the other end of the shift lever, said shifting levers being pivoted, intermediate their ends, to fixed anchors, actuating levers pivoted at their outer ends to fixed anchors and at their inner ends to the other ends of the shifting levers, and a yieldably mounted anchor and a toggle lever, pivoted at one end, to said yieldably mounted anchor and, at its other end, to said shift lever.

1,750,466. BALING BLOCK. THOMAS GRAY, Lyndon, Kans. Filed Jan. 28, 1929. Serial No. 335,425. 11 Claims. (Cl. 100—24.)



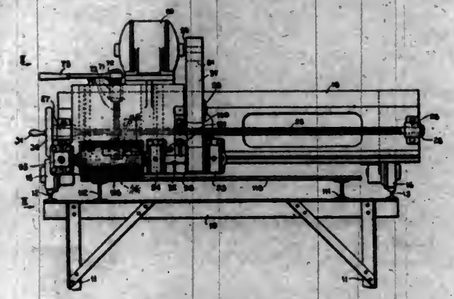
5. A baling block comprising a lower member having a fastening plate provided with a vertical hole therethrough, an upper member pivoted at its lower edge on the upper edge of said lower member so as to swing laterally to and from a position alined with the lower member, said upper member having two transverse plates at opposite sides respectively of and overlapping said lower member, said two plates each having in its outer side a longitudinal wire receiving groove, a spring fastened at its upper end to said upper member, a bolt to which the other end of the spring is fastened slidable in said hole, and a nut on said bolt bearing against the under side of said plate having said hole, the tension of said spring normally swinging said upper member to the alined position.

1,750,467. PROCESS OF TREATING KRAUT. OSWALD H. HANSEN, Port Washington, Wis., assignor to Hansen Canning Machinery Corporation, Cedarburg, Wis., a Corporation of Wisconsin. Filed Oct. 2, 1924. Serial No. 741,212. 8 Claims. (Cl. 99—8.)



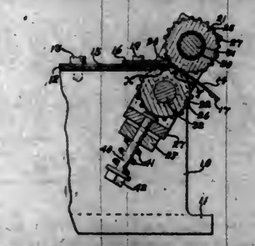
1. The process of preserving kraut, which comprises, introducing kraut in bulk into a bath of hot liquid in order to separate the individual fibres and to simultaneously bleach and sterilize the kraut, and subsequently packing batches of the finally treated kraut in sealed receptacles.

1,750,468. METHOD OF AND APPARATUS FOR TREATING REFRACTORY MATERIAL. EARL LESSON HAUMAN, St. Catherines, Ontario, Canada, assignor to The Exolon Company, Blasdell, N. Y., a Corporation of Massachusetts. Original application filed Oct. 11, 1926, Serial No. 141,021. Divided and this application filed Jan. 31, 1929. Serial No. 336,813. 4 Claims. (Cl. 25—157.)



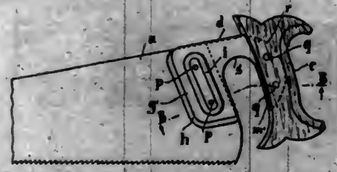
1. In a step by step retort of the class described, an arch, a material support adjustable relative to said arch, and means for progressively lowering the support to maintain the surface of successive layers of material in predetermined spaced relation thereto.

1,750,469. PUSH-BUTTON HOUSING. NEIL G. HAYES, Bridgeport, Conn., assignor of one-half to Adelbert R. Auray, Bridgeport, Conn. Filed Feb. 17, 1928. Serial No. 254,944. 1 Claim. (Cl. 200—168.)



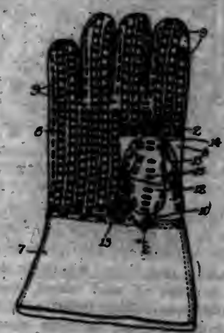
A push button construction formed from a single piece of sheet metal, comprising an outer shell having a central and inwardly depending tubular portion, said tubular portion being adapted to embrace and support the electrical mechanism, and an inwardly projecting push button support formed by folding and upsetting the metal of said tubular portion.

1,750,470. MOLD-CLEANING MACHINE. HERMAN J. HOMMES, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 21, 1928. Serial No. 255,936. 9 Claims. (Cl. 15—77.)



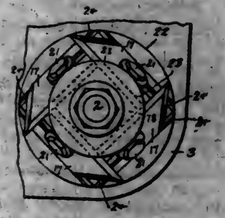
1. A machine for cleaning molds, comprising a movable frame, a shaft in the frame adjustable laterally of the latter, screws for adjusting the shaft, a brush on the shaft, and means for rotating the shaft.

1,750,471. MACHINE FOR FORMING ARTICLES. ALAN C. HOOVER, Chicago, Ill. Filed Mar. 28, 1929. Serial No. 350,482. 5 Claims. (Cl. 153—54.)



1. A machine for imparting circular form to an element, comprising means for guiding the element, supporting means having rollers therein for advancing and curving the element, and spring actuated means for adjusting and moving one of said rollers and its supporting means with respect to the other roller and its supporting means to compensate for various thicknesses of the elements.

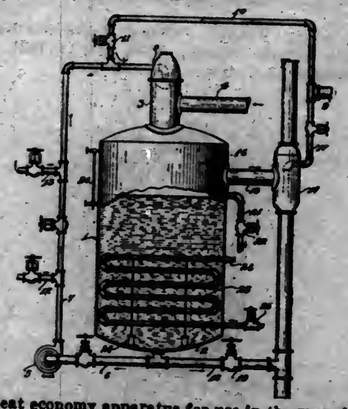
1,750,472. HANDSAW. WILHELM HÜCKINGHAUS, Remscheid, Germany. Filed July 8, 1929, Serial No. 376,552, and in Germany Jan. 7, 1927. 1 Claim. (Cl. 145—31.)



In a handle for saws, a saw blade, a handle having a concavely curved front edge extending between its top and bottom edges and of a depth substantially equal to the depth of the rear edge of the saw blade, said curved edge of the handle being formed with a pair of parallel kerfs opening only through said curved edge of the handle and closed at their upper and lower ends, and a tie-piece connecting the blade and the handle and comprising a pair of rear parallel plates engaging the kerfs of the handle, a pair of front parallel plates lying on opposite sides of the rear end of the saw blade, a pair of arched intermediate plates forming a shank uniting the afore-mentioned plates, and a top plate closing the spaces between the front plates and the intermediate plates, said intermediate plates having inbent flanges closing the space between them at their lower edges and said front plates having inbent marginal flanges and instruck intermediate portions bearing against the faces of the saw blade, rivets passing through the handle and rear pair of plates and uniting the same, and rivets passing through the saw blade and instruck intermediate portions of the front plates and uniting the same.

1,750,473. GLOVE. KARL E. JENSEN, Chicago, Ill., assignor to Industrial Gloves Corporation, Chicago, Ill., a Corporation of Delaware. Filed Nov. 16, 1928. Serial No. 319,781. 3 Claims. (Cl. 2—161.)

1. A glove comprising, in combination, a hand covering including a palm portion having a part thereof cut away to provide a reinforcing flap and a thumb opening, a separately formed thumb stall having a pair of side members arranged to fit on either side of said opening with said palm flap extending outwardly overlying one side of the thumb stall, means for securing said side members to the palm of the glove and said flap to the thumb stall, and a reinforcing patch having a portion secured to the palm of the glove between the ends of said side members and having another portion secured to the thumb stall.

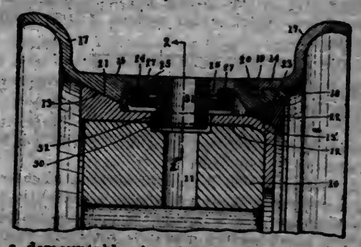


1,750,474. CUTTER HEAD. LUTHER C. JOHNSTON, Morganton, N. C., assignor of one-fourth to J. E. Garrison and one-fourth to Joe Kjellander, Burke County, N. C. Filed July 15, 1927. Serial No. 206,100. 4 Claims. (Cl. 144—231.)

1. In combination a shaft, a pair of clamping blocks fitting the shaft, the blocks provided with triangular channels, and blades of rectangular cross section engaging the channels with the blades at an angle to the axis of the shaft.

CARNEGIE LIBRARY OF ATLANTA

1,750,475. WATER HEATER. ALFRED G. KERNIN, Mosinee, Wis., assignor to Mosinee Paper Mills Company, Mosinee, Wis., a Corporation of Wisconsin. Filed Apr. 2, 1928. Serial No. 266,704. 4 Claims. (Cl. 257—52.)



1. A heat economy apparatus for use in the manufacture of pulp, comprising a tank having a mixing dome, means for introducing blow-off steam into said dome, an outside circulating system for drawing water from the bottom of said tank and introducing said water into the top of said dome to condense said steam and be heated thereby and closed pipe coils positioned in said tank for heating water circulated through said coils.

1,750,476. MEANS FOR FACILITATING THE TYING AND SEALING OF PACKAGES. FRITZ KILLING, Cologne, Germany. Filed Nov. 4, 1927, Serial No. 231,126, and in Germany Nov. 13, 1926. 7 Claims. (Cl. 292—325.)

1. A package seal comprising a pair of clamping disks, and a collapsible hollow stem connecting said disks, one of the disks being provided with an inwardly directed marginal retaining flange forming a locking channel, and the other locking disk having an annular series of spaced tongues forming intervening cord passages, said tongues being normally directed toward the first-named disk and the free edges thereof being adapted, upon the collapse of the collapsible stem, to be moved radially outward and interlocked with said locking channel.

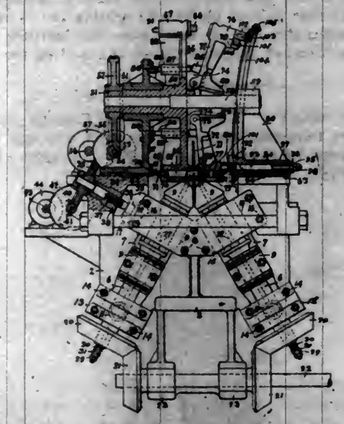
1,750,477. DEMOUNTABLE RIM. FRED R. KLAUS, Warren, Ohio, assignor, by mesne assignments, to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 26, 1925. Serial No. 39,689. 8 Claims. (Cl. 301—35.)

5. In a demountable rim structure, the combination of a separable transversely split rim section, a locking mem-

ber spanning the ends of and engaging the base of the rim section adjacent thereto, and a housing apertured to slidably receive a valve stem and adjustably connected to the section to clamp the member in locking relation to the section.

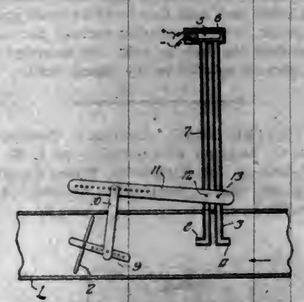
1,750,478. WHEEL. CONRAD ROBERTSON KOEHLER, Toronto, Ontario, Canada. Filed Feb. 14, 1927. Serial No. 168,027. 3 Claims. (Cl. 152—20.)

1. In a wheel, the combination of a hub; a tire-carrying member loose on said hub; a tire mounted on said member; and means independent of said tire-carrying member forming a direct drive connection between the hub and the tread portion of the tire.



1,750,479. ARCH INSERT. HENRY LIPSCHUTZ, Brooklyn, N. Y., assignor to Elco Shoe Manufacturers, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 7, 1927. Serial No. 231,485. 2 Claims. (Cl. 36—71.)

1. A turn shoe having a bendable leather insert built therein, the front of said insert extending in front of the arch portion of the shoe and being spaced from the toe of the shoe so as to leave the toe portion thereof substantially unobstructed, said insert having a longitudinally curved spring connected to the underside thereof to impart a longitudinally curved contour thereto, said insert having a lateral single wing which is substantially confined to the inside arch portion of the shoe, said wing substantially contacting with the inner side of the arch portion of the upper of the shoe, said wing being confined to the central portion of said insert and projecting laterally from said central portion and being free from metal stiffening means which would prevent it from being built into the shoe.

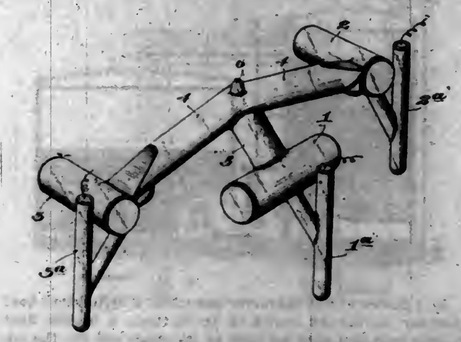


1,750,480. ROLLING MILL FOR TAPERED DISKS. ARTHUR MARTIN, Pittsburgh, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 13, 1921. Serial No. 507,444. 22 Claims. (Cl. 80—16.)

12. A feeding device for metal-working machines comprising a rotatably mounted wheel, a plurality of antifriction bearings equally spaced around the periphery of said wheel, blank-holding mandrels rotatably mounted in said bearings and projecting laterally from the face of said wheel, pins slidably carried by said wheel adjacent to said bearings, clamping arms pivotally carried by said wheel and adapted to co-operate with said mandrels to secure blanks thereon, each of said clamping arms carrying a rotatable socket member adapted to fit over the end of the adjacent mandrel, two rollers carried by each of said clamping arms, a resiliently mounted cam track adapted to operate through one set of said rollers to force each

clamping arm into engagement with the adjacent mandrel during a portion of the rotation of said wheel, a stationary cam track for causing the said pins to move the said clamping arms away from said mandrels during another portion of the rotation of said wheel, and a circularly curved cam track cooperating with the second set of rollers on the clamping arms in their movement toward and away from the mandrels.

1,750,481. CONTROL SYSTEM. CHARLES A. MARTIN, Chicago, Ill. Original application filed Aug. 6, 1925, Serial No. 48,592. Divided and this application filed Dec. 4, 1928. Serial No. 323,739. 9 Claims. (Cl. 137—78.)



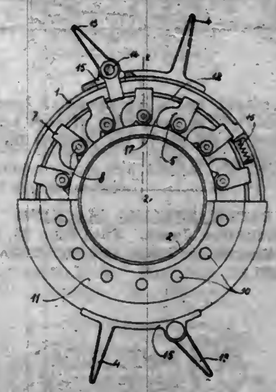
1. A device of the character described comprising a valve for controlling the flow of fluid thru a passage, means for heating a portion only of said fluid during its travel, and means controlled by the thermal condition of said heated fluid for controlling said valve.

1,750,482. MERCURY-VAPOR LAMP FOR ALTERNATING CURRENTS. RUDOLF ANTON FRANZ MATOUCH, Leipzig, Germany, assignor to Adolf Gustav Köllmann, Leipzig-Gohlis, Saxony, Germany. Filed June 5, 1924, Serial No. 718,032, and in Germany Apr. 25, 1924. 2 Claims. (Cl. 176—42.)

1. An alternating current mercury vapor lamp comprising a central illuminating tube, anodes at the end of said tube at right angles thereto and extending in one direction,

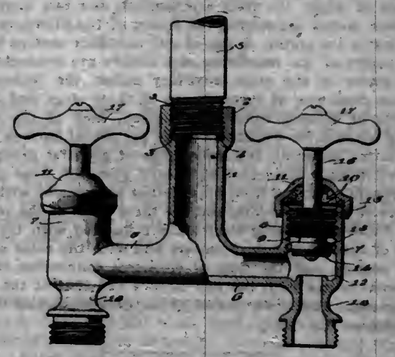
a cathode vessel connected with said illuminating tube by a thick walled connecting tube at substantially the center of said illuminating tube, said connecting tube extending in a general direction opposite to that in which the anodes extend, said cathode vessel being horizontally disposed when in use in a direction parallel with said illuminating tube

and at right angles to said anodes and lying in a plane that is laterally displaced from a plane running vertically through said illuminating tube and in a horizontal plane substantially below and parallel to a horizontal plane passing through said illuminating tube at the point where said connecting tube is thereto attached.



1,750,483. VEHICLE WHEEL. ANDRÉ JULES MICHELIN, Paris, France, assignor to Michelin et Cie., Clermont-Ferrand, France, a Corporation of France. Filed Apr. 10, 1929, Serial No. 354,008, and in France Nov. 19, 1928. 2 Claims. (Cl. 301—9.)

1. In a wheel, the combination with a hub provided with an annular flange projecting therefrom, of a wheel body, provided with an axially disposed annular rib on the inner edge thereof adapted to bear against said flange, said wheel body being also provided with axially disposed perforations, the parts of the wheel body adjacent said perforations being bent over to form stiffening ribs, the inner portions of said ribs bearing against said hub flange, with fastening bolts passing through said wheel body and said hub flange intermediate of the points of engagement of said wheel body ribs and said hub flange, said bolts holding said wheel body in firm engagement with said hub flange.

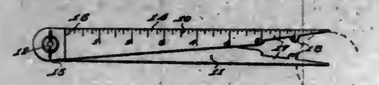


1,750,484. EGG CUTTER. PIERRE MICHELON, Valence, and GEORGES FUOSS, Bourg-les-Valence, France. Filed Dec. 3, 1927, Serial No. 237,474, and in France Dec. 11, 1926. 4 Claims. (Cl. 146—2.)

2. An egg cutter comprising a stationary annular frame; a ring disposed concentrically within the frame and rotatable thereon, said ring having a set of notches equidistantly spaced along its circumference and also having an indentation between two successive notches; fixed and pivoted handles on said frame, the pivoted handle being located opposite said indentation and having a tail engaged in the same so as to rotate the ring when said handle is pressed

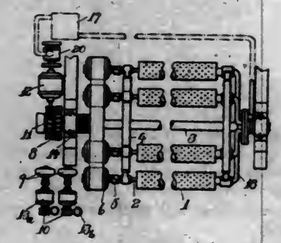
toward the fixed handle; and a set of cutters, one for each notch, each cutter embodying an actuating tail engaged in the corresponding notch and a sharp tooth adapted to project into the central aperture of the frame, whereby the rotation of said ring will cause all the cutters to rock simultaneously.

1,750,485. COMPOUND FAUCET. GUSTAV MULLER, Jr., Jacksonville, Fla. Filed July 13, 1927. Serial No. 205,408. 3 Claims. (Cl. 277—67.)



1. As a new article of manufacture, a compound faucet comprising an upstanding inlet pipe enlarged at its upper end and internally threaded for detachable connection with an ordinary spigot, said inlet pipe merging at its lower end into oppositely extending horizontal outlet branches, said inlet pipe and branches being in the same vertical plane, upstanding valve casings at the outer ends of said outlet branches, said casings including independently controlled vertically movable screw valves, and seats therefor, said casings extending above and below the horizontal outlet branches.

1,750,486. COMBINATION CALIPER AND DIVIDER. FRANCIS M. NOLDER, Westboro, Ohio. Filed Feb. 4, 1928. Serial No. 251,940. 1 Claim. (Cl. 33—149.)

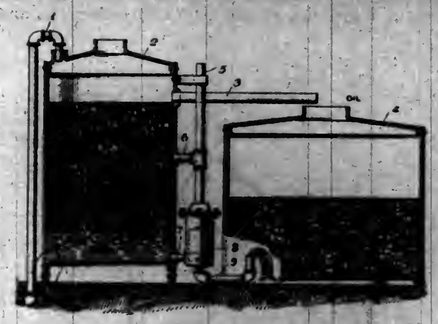


A tool comprising a pair of arms pivotally connected at one end and tapering from their pivoted to their free ends,

one edge of each arm being inset for a relatively short distance inward at its free end and providing straight edges disposed in a plane substantially parallel to the adjacent edge of the arms with the inset portions of the arms being

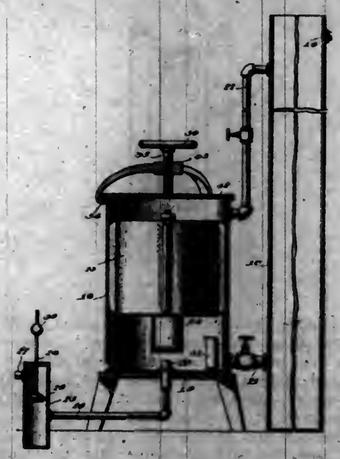
oppositely arranged, and a lug extending from the intermediate portion of the inset edge of each arm with the outer extremity of the lug in the plane of the major portion of the edge of the arm.

1,750,487. PAPER-REELING MACHINE. WASABURO OKUURA, Muko-Gun, Japan. Filed Sept. 23, 1926, Serial No. 137,345, and in Japan Oct. 13, 1925. 1 Claim. (Cl. 242—75.)



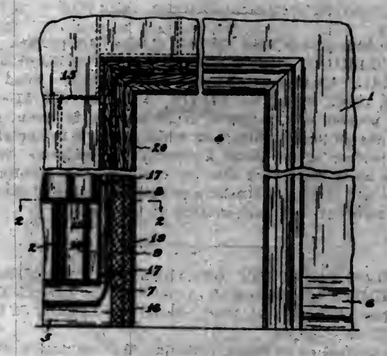
In a paper reeling machine of the type comprising a plurality of reels mounted in a rotary frame, each brought into working position by intermittent rotation of said frame, a plurality of induction motors one for each reel, to the rotors of which the reels are coupled, and two auxiliary motors, means connecting the rotors of the alternate reel motors to the stator of one of said auxiliary motors while the rotors of the remaining reel motors are connected to the stator of the other auxiliary motor, the connecting means consisting of three groups of three rings and three groups of brushes contacting thereon, each of the rings being covered for five-sixths of its peripheral surface with insulating material, the three rings of the first group being electrically connected with each phase of three phase alternating current from an external source and with the rotors of six reel motors, and the three rings of the second and third group being electrically connected with the stators of the two auxiliary motors and with the rotor of six reel motors, and the time of electrical connection of the external source with the reel motors and that of the auxiliary motors being controlled by the proper position of the brushes on the rings.

1,750,488. AUTOMATIC ALARM SIGNAL. THOMAS PERNEK, Sr., Hartford, Conn. Filed July 18, 1925. Serial No. 44,597. 2 Claims. (Cl. 116—61.)



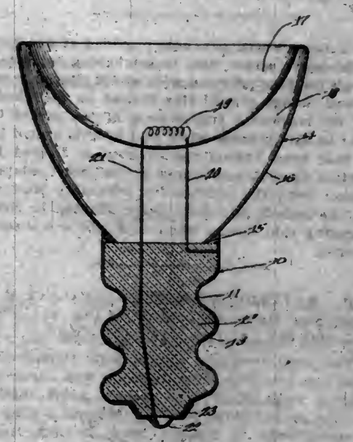
1. An audible alarm, comprising a bell, a V-shaped lever, a clapper for the bell secured to one arm of said lever, an escapement mounting the lever, a motor geared to the escapement, an arm pivotally mounted and provided in one position to hold said lever and escapement inactive, means to hold the arm in said position, and spring means engaging the arm and adapted to move the arm when released to release the lever to actuation by the escapement.

1,750,489. DEVICE FOR SEPARATING WATER FROM OIL. JOHN W. PIPPIN, Hebbronville, Tex. Filed Mar. 2, 1927, Serial No. 172,176. Renewed Sept. 7, 1929. 1 Claim. (Cl. 210—54.)



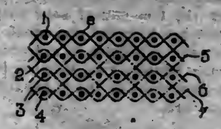
In a device of the character described, a cylindrical float chamber having an outlet in its bottom, a hollow float therein provided with an inlet at its upper end for the admission of ballasting liquid into the float, a closure for the inlet, a valve element carried by the bottom of the float and adapted to seat upon the outlet, and a plurality of radially disposed ribs formed on the vertical walls of the float, the ribs being V-shaped in cross section and having their outer edges in contact with the walls of the float chamber, the ribs serving to guide the float in a true vertical direction, and also to prevent rotation of the float in the liquid contained in the float chamber.

1,750,490. DEVICE FOR SEPARATING WATER FROM OIL. JOHN W. PIPPIN, Hebbronville, Tex. Filed Oct. 19, 1927, Serial No. 227,250. Renewed Sept. 7, 1929. 7 Claims. (Cl. 210—54.)



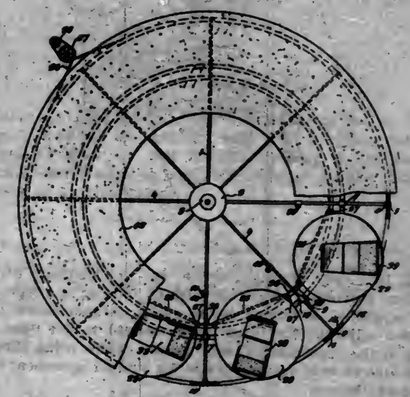
1. In an apparatus for separating liquids of different specific gravity, a separator tank having communication with a source of liquid supply and an outlet, a float valve in the separator tank for controlling the outlet and normally sustained in open position by liquid of one specific gravity but permitted to descend to close the outlet in liquid of a different specific gravity, and means normally sealing the outer end of the outlet to prevent vacuum therein and the consequent sticking of the float valve, such means being actuated to open the outlet to the atmosphere by liquid pressure from the separator tank when the float valve is open.

1,750,491. WALL CONDUIT. HERBERT N. PUTNAM, Lakewood, Ohio. Filed Aug 15, 1927. Serial No. 212,919. 10 Claims. (Cl. 72—98.)



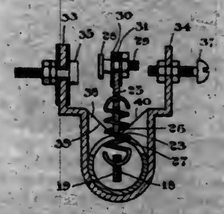
1. A wall structure having an opening therein and a tubular conduit built into the wall and composed of metallic structural members forming wall supports, said conduit extending laterally from opposite sides of the opening and along the margin of the opening around one end thereof.

1,750,492. ELECTRICAL ELEMENT. HURLEY D. RALSTON, Oak Park, Ill., assignor of forty per cent to Robert J. Blum, River Forest, Ill. Filed May 28, 1928. Serial No. 281,277. 2 Claims. (Cl. 219—34.)



1. A device of the character stated including a substantially bowl-shaped portion having another bowl-shaped portion fitted into the open side thereof, a base member, means for connecting the base member to said first named portion whereby an air tight chamber may be defined between said portions, an electric element mounted in said second named portion at the inward-most disposed section thereof, and means for connecting said element to electric contact portions on said base member, said base member having connecting portions provided thereon to permit the mounting thereof in an electric socket or the like.

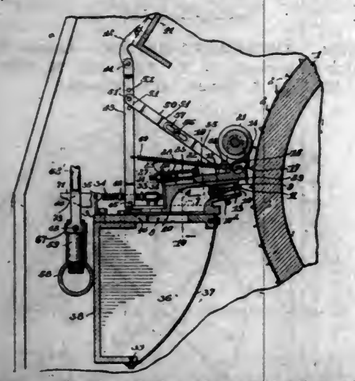
1,750,493. MULTIPLE-PLY WOVEN FABRIC. ROWLAND SPENCER, St. Annes-on-Sea, England. Filed May 10, 1928, Serial No. 276,743, and in Great Britain June 27, 1927. 1 Claim. (Cl. 139—408.)



A multiple ply cloth adapted to form a cover for the drying cylinder of a paper-making machine composed of weft of doubled cotton and worsted, the outer ply having a warp of doubled cotton and worsted, the warps of other plies being of doubled cotton.

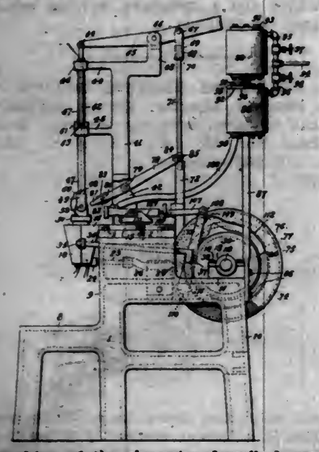
1,750,494. AMUSEMENT DEVICE. ALBERT SPILLMAN, North Tonawanda, N. Y. Filed Jan. 20, 1927. Serial No. 162,393. 3 Claims. (Cl. 272—44.)

1. In an amusement device, an undulated track, a movable structure supported and functioning independently of the track, a passenger carrying platform pivotally connected to the structure, a plurality of running wheels extending from the platform and rolling upon the track so that the platform receives a wave like motion from its undulations and a passenger carrying car pivotally mounted upon the platform.



1,750,495. ELECTRIC HEATING DEVICE. EDWARD ARTHUR STANGER, Montreal, Quebec, Canada, assignor of one-half to Aaron Schwartz, Montreal, Quebec, Canada. Filed Nov. 18, 1927. Serial No. 234,258. 2 Claims. (Cl. 200—138.)

1. A heat controlling device for an electrically heated unit comprising a tubular member mounted in the unit near the heating surface thereof, a bi-metallic strip secured at one end to the tubular member at one end thereof, a



pair of arms extending upwardly from the other end of the member, one of said arms carrying a pair of contacts connected in series with the heater circuit, a bar mounted on a member pivotally mounted on the tube, said bar being adapted to normally bridge the contacts and a resilient connection betwen the free end of said strip and the pivotally mounted member to make and break the circuit, to automatically keep the unit between a predetermined minimum and maximum temperature, said switch being operated through the movement of the bi-metallic strip due to changes in temperature.

1,750,496. RUG-CLEANING MACHINE. WILLIAM T. STRIDE, Rochester, N. Y., assignor to A B C Rug Cleaners Inc., Rochester, N. Y., a Corporation of New York. Filed Oct. 19, 1928. Serial No. 313,453. 21 Claims. (Cl. 15—4.)

2. In a rug cleaning device, the combination with a rotary supporting drum upon which the rug is adapted to be supported, a rinsing device and a vacuum device positioned adjacent the drum and arranged to act upon the rug in the order named, said rinsing device being slidably mounted on said vacuum device for limited movement with respect thereto.

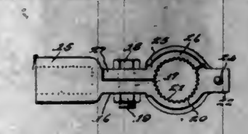
1,750,497. ICE-CREAM-CONE-MAKING MACHINE. JOSEPH ANDREW TALLENT, Alton Park, Tenn., assignor of thirty per cent to David Thomas Jones and thirty per cent to James Ulysses Jones, Chattanooga, Tenn. Filed Mar. 14, 1925. Serial No. 15,487. 15 Claims. (Cl. 107—66.)

1. A machine of the character described comprising a mold, a core adapted to be received in the mold, a slidable support, a plate carried by the support and adjustable thereon, said plate having a passage therein for the discharge of batter, a valve for controlling the discharge through the passage, and means for operating the support for positioning the passage in the plate over the mold.

1,750,498. PROCESS OF DRYING, CLEANING, AND POLISHING SHEET METAL WITH CORNCOB MATERIAL. CHARLES C. TRUAX, Toledo, Ohio. Filed Sept. 22, 1926. Serial No. 137,170. 1 Claim. (Cl. 51—278.)

A process of treating a metal surface to clean, polish and absorb liquids therefrom which consists in applying to the surface of the metal a comminuted material, meal or flour made from corn cobs by crushing and grinding the same and causing a brushing or rubbing action of said corn cob material over said surface of the metal.

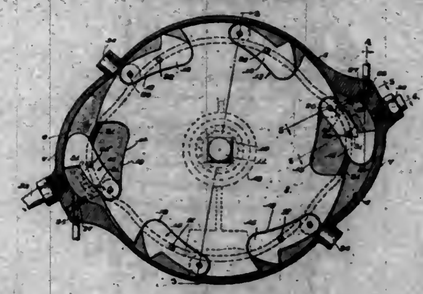
1,750,499. METHOD OF TREATING ARTICLES IN TUMBLING BARRELS. CHARLES C. TRUAX, Toledo, Ohio. Filed Oct. 9, 1926. Serial No. 140,679. 1 Claim. (Cl. 51—278.)



A method of cleaning, polishing and burnishing articles which comprises placing the same loosely in a movable container, along with attrition objects such as balls, and with a quantity of finely divided material, meal or flour made from corn cobs by crushing and grinding the same and then agitating the container.

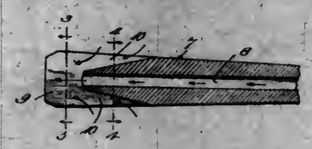
1,750,500. TOOTHBRUSH. GEORGE REX WEISZ, Chicago, Ill., assignor of one-half to A. S. Shapiro, Chicago, Ill. Filed July 12, 1926. Serial No. 121,872. 2 Claims. (Cl. 15—176.)

1. In a tooth brush, a handle provided at one end with a flat transverse socket, said socket having oppositely disposed wall portions provided with wedge shaped grooves, a brush head, wedge shaped ribs formed on said head and adapted for movement transversely of the socket for engagement in said grooves when said head is seated in said socket, said head having spaced notches formed in one edge portion thereof, and means on the socket adapted for engagement with the notches for releasably latching the head in the socket, said head being adapted to ride over and engaging said means when said ribs are inserted in said grooves.



1,750,501. BATTERY CONNECTER. MAURICE M. ARMSTRONG, New Harmony, Ind. Filed Oct. 16, 1926. Serial No. 142,071. 1 Claim. (Cl. 137—259.)

A battery terminal clamp comprising a pair of clamping jaws pivotally connected together at one end, the opposite end portions of said jaws being extended and provided with openings to receive a clamping bolt, the extended end portion of one of said jaws being formed with a socket extending laterally therefrom past the end of the other jaw to receive an electrical conduit, and a clamping bolt passing through the openings in said extended end portions, said socket portion opposite the extended end portion of said other jaw being flattened to provide a side

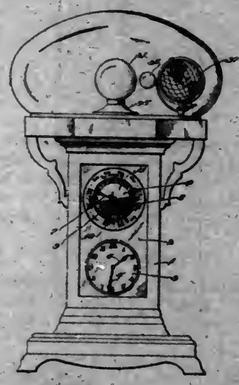


surface, and said extended portion of said other jaw having an end face to oppose the flattened side of said socket when the jaws are closed.

1,750,502. ROTARY INTERNAL-COMBUSTION ENGINE. THOMAS A. BAKER, Bakersfield, Calif. Filed Sept. 28, 1927. Serial No. 222,600. 3 Claims. (Cl. 123—17.)

3. In an internal combustion engine, a circular casing having a plurality of combustion chambers therein, a rotor journalled in the casing and having a plurality of spaced circumferential pockets therein, a swinging vane pivoted in each of the pockets and normally lying therein but successively movable into the combustion chambers, a U-shaped lever pivotally mounted adjacent each combustion chamber, a valve connected with each U-shaped lever and controlling the admission of gaseous fuel to the combustion chambers, and means carried by the rotor for engaging the legs of the U-shaped levers to alternately open and close the valves as the vanes assume operative and inoperative positions.

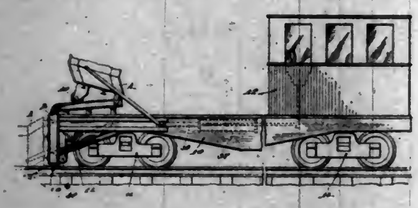
1,750,503. PIPE OR ANALOGOUS MOUTHPIECE. CHARLES BLOSSOM, Celina, Ohio. Filed Dec. 28, 1928. Serial No. 329,005. 2 Claims. (Cl. 131—12.)



1. A pipe or analogous mouthpiece comprising a horizontally elongated body having a longitudinal smoke passage, the rear end of said body being formed with a transverse horizontal kerf which communicates with said smoke passage and opens through said end and opposite longitudinal sides of said body, said sides being each formed with a longitudinal kerf extending to said transverse kerf from a point exposed to atmosphere when the mouthpiece is in use.

1,750,504. SCISSORS SHARPENER. ALVIN HUDSON BROPHER, Markleton, Pa. Filed June 14, 1924. Serial No. 720,060. 1 Claim. (Cl. 51—58.)

A tool sharpening device comprising a vise including jaw members hingedly secured to each other, means for securing the jaw members with respect to a fixed support, a supporting arm formed with and extending from one of said jaw members, a slotted head formed with the free end of said arm, a rod having one end pivotally secured in the slot of the head, a rack formed with the other arm and arranged concentrically with respect to the pivot of the rod, a handle formed with the free end of said rod, a pinion mounted on the rod, a cylindrical abrasive member mounted on said rod and meshing with the teeth of the rack, a coil spring having its end convolutions engageable with the slotted head and adjacent end of the abrasive member respectively, said jaw members being adapted to receive a tool for arrangement in the path of the abrasive member, and said abrasive member being disposed at an inclination.

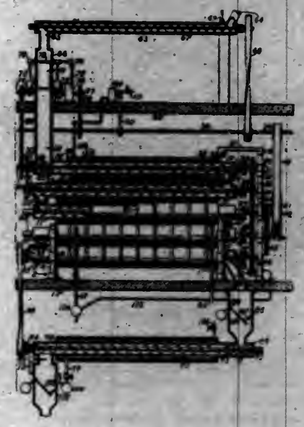


1,750,505. ASTRONOMICAL CLOCK. MICHAEL N. BULKA, Chicago, Ill. Filed July 1, 1922, Serial No. 572,192. Renewed May 10, 1926. 1 Claim. (Cl. 58—8.)

In an astronomical clock, a dial structure including an inner dial member having characters on the face thereof indicating the hours of the day, an outer dial member disposed around said inner dial member and having characters thereon representing the calendar months and the days thereof, hands adapted for cooperation with said dial structures, means for driving said hands including a shaft supporting one of said hands and adapted for a revolution once in twenty-four hours, a rotatable sleeve disposed around said shaft and adapted to carry the other of said hands, said sleeve being operatively connected to said

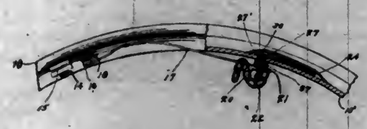
shaft for rotation therewith in the ratio of 366 to 1, said inner dial being mounted on said sleeve for rotation therewith, said first mentioned hand cooperating with said inner dial whereby to indicate the hour of the day, and said second mentioned hand cooperating with said outer dial whereby to indicate the day of the month.

1,750,506. BALLAST-DRESSING MACHINE FOR RAILROADS. SOLON F. CLAPP, deceased, Temple, Tex., by Clara Clapp, administratrix, Temple, Tex. Filed Aug. 30, 1927. Serial No. 216,480. 4 Claims. (Cl. 37—104.)



4. In combination, a railroad car, channel members depending from the car to provide outer guide-ways and central guide-ways, and ballast leveling plates independently movable in said guide-ways.

1,750,507. TYPEWRITING MACHINE. GABRIEL DE LA PEÑA CONCEPCION, Habana, Cuba. Filed July 12, 1928, Serial No. 292,137, and in Cuba Apr. 7, 1928. 1 Claim. (Cl. 197—143.)

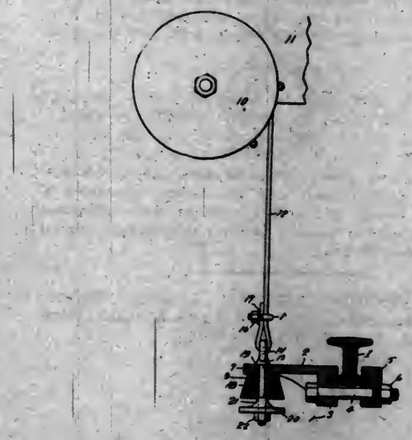


In typewriting machines, a paper guiding attachment which comprises in combination with the platen of the machine, a support including a bar bent at its upper end; a ring of substantially circular form hinged to the bent end of the support and maintained spaced from the same by means of stops; a ring attached to the rear side of the support in concentric relation to the first mentioned ring; and means for mounting the support behind the platen of a typewriting machine.

1,750,508. METHOD FOR CONDITIONING GRAIN. JOHN W. CORNELIUS, Kansas City, Mo., assignor to General Mill Equipment Company, Kansas City, Mo., a Corporation of Missouri. Filed June 28, 1928. Serial No. 287,816. 11 Claims. (Cl. 83—28.)

1. A method of treating grain including moistening the grain, enclosing the moist grain, sealing the grain in the enclosure, and applying heat to the enclosed grain for building up pressure to drive the vapor into the grain kernels.

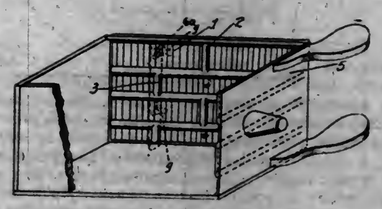
1,750,509. TIRE-DEFLATION SIGNAL. ARTHUR S. CRAIG, Kansas City, Mo. Filed Mar. 27, 1929. Serial No. 350,307. 11 Claims. (Cl. 116—34.)



1. A tire deflation signal comprising, in combination with the tire tube and wheel, a releasable alarm-signal element carried by the wheel, and a detent member engaged with the tube and operating in response to a reduction of the air-pressure therein to release said signal element.

1,750,510. SHOCK-ABSORBER ATTACHMENT. WILLIAM PATRICK DAY, Cleveland Heights, Ohio. Filed Sept. 9, 1926. Serial No. 134,415. 12 Claims. (Cl. 267—10.)

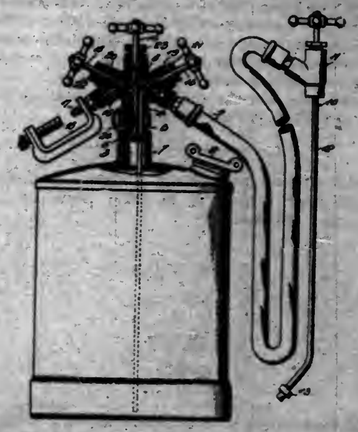
1. In combination with a shock absorber of the type having a flexible connection with a vehicle axle, of an auxiliary shock absorbing device comprising an arm adapted to be secured to a vehicle axle and having an opening therethrough, a stud extending through said opening and having its upper end connected with said flexible connection, the lower end of said stud having a frusto-conical resilient block secured thereto and adapted to bear against



CARNEGIE LIBRARY OF ATLANTA

the lower side of said arm, a disk slidably mounted on the lower end of said stud and having a conical portion

adapted to enter the aperture in said resilient block and compress the same and an operative connection between said stud and disk.

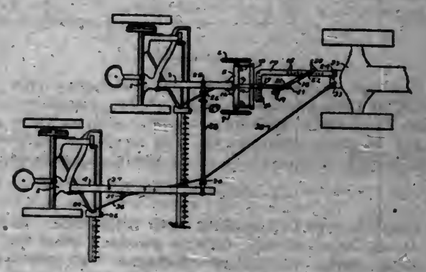


1,750,511. PROCESS OF AND APPARATUS FOR MOLDING BUILDING BLOCKS. GEORGE W. DUNN, Newport, Ky. Filed June 11, 1926. Serial No. 115,366. 8 Claims. (Cl. 25—155.)

1. A process of molding divisional cleavage lines in building blocks, which consists in molding with a standard sized die, a face of a brick with the die provided with portions to indicate staggered courses of a plurality of rows of straight edged bricks, and securing against said die means forming a vertical cleavage groove on the face of the brick along a line adjacent a divisional line between the bricks of one of said indicated courses.

1,750,512. LIQUID-SPRAYING DEVICE. ARNO A. EWALD, Oakfield, Wis., assignor to Romort Manufacturing Company, Oakfield, Wis. Filed Nov. 25, 1927. Serial No. 235,589. 2 Claims. (Cl. 299—95.)

1. In a liquid spraying device, a gas pressure and liquid-containing tank, a valve body projecting therefrom and provided with two laterally projecting bosses, said body having both gas and liquid conducting ports formed longitudinally therein, a main transverse discharge passage leading from said gas and liquid conducting ports through one of said bosses, and a transverse gas inlet port leading through the other boss to said gas conducting port, a liquid conducting tube leading to said liquid conducting port from the lower portion of the tank, a valve threaded in the outer end of said body for controlling discharge of gas from said gas conducting port into said main discharge port, a valve threaded in said one boss for controlling discharge of liquid from said liquid conducting port into said main discharge port, and a valve for said gas inlet port threaded in said other boss.

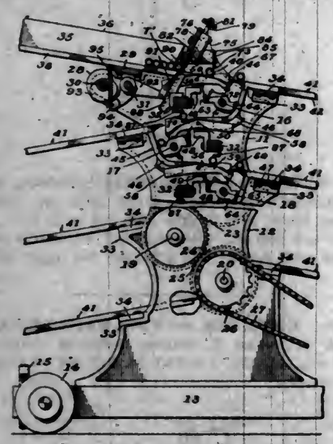


1,750,513. DRAPERY HOOK. BEULAH BEATRICE FICK, Baltimore, Md. Filed June 28, 1929. Serial No. 374,571. 2 Claims. (Cl. 156—21.)

1. A device of the class described comprising a member of substantially inverted U-shape, with one limb longer than the other, said longer limb tapering to a point at its free end and an upwardly and outwardly extending prong on said longer limb adjacent the upper end of the device.

1,750,514. HITCH FOR MOWING MACHINES AND THE LIKE. CHARLES E. GATES, Sedgwick County, Kans. Filed Aug. 11, 1927. Serial No. 212,284. 1 Claim. (Cl. 280—33.44.)

In a device of the class described, an L-shaped draft bar, a guiding element adjustably attached to the base



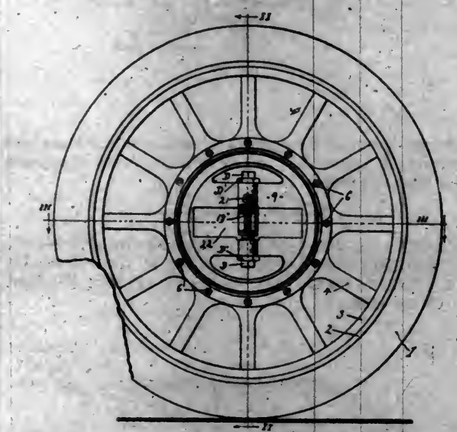
element of said bar and a diagonal brace adjustably connecting between the bar and the guiding element; a truck and a pair of wheels mounted on spindles supporting the truck; a crank arm for each spindle, a link hinged to the guide element and connecting to the spindles; a tongue of a machine carried by the truck; an adjustable brass member, a tongue of another machine, said brace member connecting and spacing said tongues; and a cable associated with said brace member and adapted to connect from the source of draft to the second machine.

1,750,515. TENSION DEVICE. VICTOR J. GOVER, New Haven, Conn. Filed May 26, 1928. Serial No. 280,833. 2 Claims. (Cl. 96—18.)

2. In combination with a spindle having a bobbin rotatably mounted thereon, ratchet teeth provided on the top of said bobbin, a vertical slidable member, a dog pivotally mounted on said member for swinging movement beyond the vertical plane of said bobbin, and a spring catch carried by said member and engaging said dog for locking said dog against swinging movement in a vertical plane with said bobbin for co-action with said ratchet teeth.

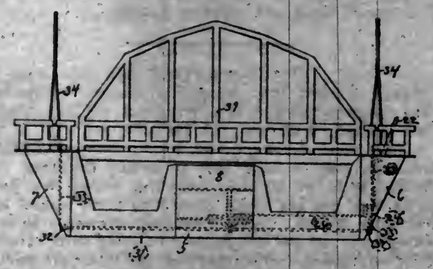
1,750,516. GRADING MACHINE. DAVID E. GRAY, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Apr. 11, 1927. Serial No. 182,896. 20 Claims. (Cl. 209—121.)

1. In an assorting machine, the combination of a plurality of vertically-spaced scales set for progressively increasing weights, guideways between said scales, a plurality of grade-compartments, and means for delivering each article weighed to one of the grade-compartments.



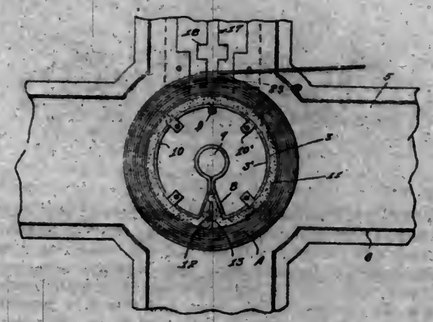
1,750,517. CIRCUIT MAKER AND BREAKER. HAROLD DAVID GROH, Toronto, Ontario, Canada. Filed Oct. 18, 1926. Serial No. 142,449. 4 Claims. (Cl. 200—140.)

1. A circuit maker and breaker comprising a duct containing a column of mercury, a member provided with a cupped recess adapted to contain mercury and form a barrier wall between said mercury and the mercury of the duct, and an expansible vapor subject to temperature changes to exert pressure upon the mercury body to raise



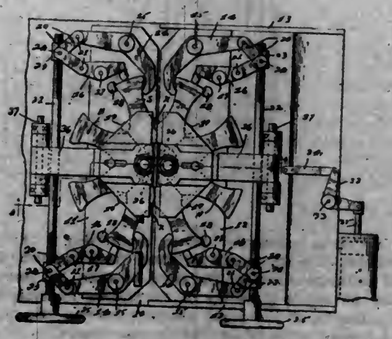
or lower the level thereof above or below the barrier wall to make or break contact with the mercury contained in the cupped recess, and a thin resilient wall interposed between the body of mercury forming the mercury column and the expansible fluid.

1,750,518. STEERING KNUCKLE. ARTHUR P. HELDENBRAND, Three Sands, Okla. Filed Dec. 8, 1925. Serial No. 74,136. 1 Claim. (Cl. 280—96.3.)



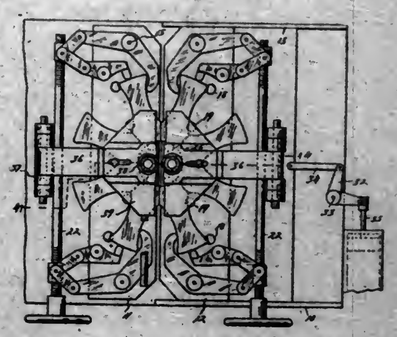
In a front wheel mounting for automotive vehicles and the like, an annular member formed concentric to a wheel at its center and being trunnioned therein by ball bearings, a spindle bracket diametrically positioned on the said annular member, the said spindle bracket being divided at the center to accommodate a knuckle pin mounted in the end of an axle, ball races threadedly engaging in the portions of the divided spindle bracket and forming thrust bearings for the upper and lower portions of the knuckle pin, and means to lock the ball races in the desired position substantially as shown.

1,750,519. TOY BRIDGE. HANS JADE, San Francisco, Calif. Filed Sept. 29, 1926. Serial No. 138,467. 1 Claim. (Cl. 46—37.)



In a toy of the character described, a pair of portable spaced abutments connected to each other, a pier fixedly positioned between said abutments, a bridge portion pivotally supported on said pier and adapted to be rotated into and out of contact with said abutments, a gear mechanism positioned within said pier, and adapted to rotate said bridge, gates positioned on said abutments, a shaft extending between said abutments, means for rocking said shaft when said bridge is actuated and means for transmitting said rocking motion from said shaft to said gates.

1,750,520. CHANGE-OVER SIGNAL FOR MOTION-PICTURE MACHINES. HUBER K. JONES and EDMUND A. CHASE, St. John, New Brunswick, Canada. Filed June 8, 1928, Serial No. 283,981. Renewed Aug. 7, 1929. 2 Claims. (Cl. 116—67.)



1. A reel for a motion picture apparatus comprising a pair of disks, a hub part connected with the central parts of the disks, a member of resilient material surrounding the hub part and having a slot therein for receiving the inner end of the film placed on the reel.

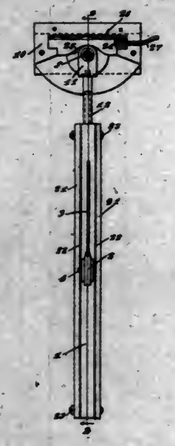
1,750,521. APPARATUS FOR MAKING WHEEL SPIDERS. IRVING H. JUDD, Detroit, Mich., assignor to Whitehead and Kales Company, River Rouge, Mich., a Corporation of Michigan. Original application filed Jan. 17, 1927, Serial No. 161,669. Divided and this application filed May 7, 1928. Serial No. 275,936. 14 Claims. (Cl. 113—104.)

1. In welding apparatus for forming wheel spiders, a work holding fixture comprising articulated levers, cooperating stops, and means for operating said levers to engage the work.

1,750,522. METHOD OF MANUFACTURING WHEEL SPIDERS. IRVING H. JUDD, Detroit, Mich., assignor to Whitehead and Kales Company, River Rouge, Mich., a Corporation of Michigan. Original application filed Jan. 17, 1927, Serial No. 161,669. Divided and this application filed May 7, 1928. Serial No. 275,937. 2 Claims. (Cl. 29—174.)

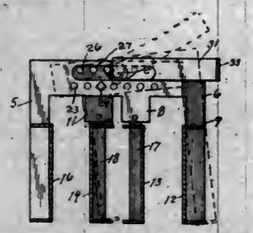
1. The method of manufacturing wheel spiders including the steps of arranging individual spokes in pairs on a table and welding the spokes of each pair together so that a plurality of quarter units are produced simultaneously, arranging a plurality of said quarter units as half units upon the table and welding together adjacent spokes of each quarter to form a plurality of half units simultaneously, and arranging two half units on the table and welding together adjacent spokes of said half units to form a complete spider.

1,750,523. NUT-LOCKING DEVICE. ALOIS KASCHTOFSKY, Prague, Czechoslovakia. Filed May 15, 1928. Serial No. 277,862. 3 Claims. (Cl. 151—4.)



1. A device for securing nuts to bolts, comprising a hollow centrally apertured body portion fitting cap-like on the top and sides of the nut, and an upwardly-extending tubular piece composed of an annular series of longitudinal bendable teeth, whereby diametrically opposite ones of said teeth registering with a diametric slot in the bolt to which the nut is applied can be bent into locking engagement with said slot.

1,750,524. WINDSHIELD WIPER. CHARLES J. KIMMICK, Jr., Rahway, N. J. Filed Mar. 8, 1929. Serial No. 345,339. 2 Claims. (Cl. 15—255.)

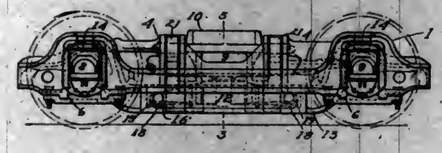


1. A wiper of the class described comprising a wiper arm, a heating coil therein, a shaft, a rod connecting the shaft with the wiper arm, means for grounding one end of the coil on the wiper arm which is electrically connected with the rod and the shaft, an insulated bushing through which the shaft passes, a member rotatably arranged on the bushing, a stem connected with the member and with the upper end of the wiper arm, means for electrically

connecting the other end of the coil with the stem, said stem being insulated from the wiper arm, a casing sur-

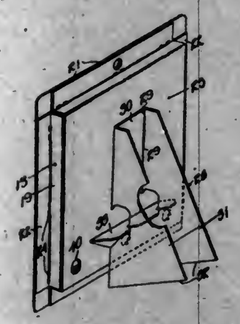
rounding the bushing, a spring pressed block arranged in the casing and bearing against the rotary member and a conductor connected with the block.

1,750,525. MOLD-FORM CLAMP. HAMPTON M. KISHPAUGH, Courtland, Calif. Filed Mar. 5, 1928. Serial No. 259,243. 1 Claim. (Cl. 25—131.)



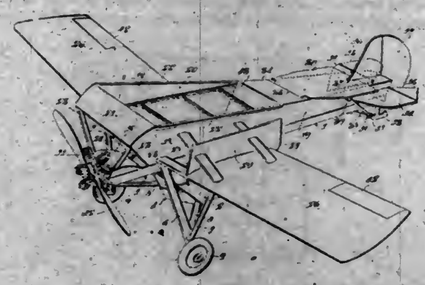
In a clamp of the character described, a pair of overlapping clamp members, each of said clamp members having an integral outer leg and a detachable inner leg, said detachable inner legs being so positioned that they will lie between the integral outer leg and inner detachable leg of the opposite clamping member, means for pivoting said clamping members to each other, means for rotating said clamping members on their pivotal connection for holding said legs in parallel position, said last mentioned means including an operating handle, a cam positioned on said operating handle, said cam being adapted to pivot on one of said clamping members and to engage in a slot in the opposite of said clamping members for the purpose specified.

1,750,526. ROOF FLASHING. ROBERT F. KNOX, Atlanta, Ga. Filed Dec. 9, 1927. Serial No. 238,950. 1 Claim. (Cl. 108—26.)



A flashing lock strip comprising a sheet having one edge bent at substantially right angles to the body and with the opposite edge bendable in an opposite direction, the distance between the angles of the two bends being substantially the width of a brick so that the strip can be placed in a brick wall with the right-angled edge embracing the angle of the brick with the other angle aligned with the front face of the brick and inclined downwardly in the direction it is to be bent, the body of the strip between the angles of the two edges being provided with a plurality of downwardly pressed projections spaced from the forward edge to provide a groove for freely receiving the edge of a cooperating flashing strip.

1,750,527. LOCOMOTIVE TRUCK. CHARLES F. KRAUSS, Ambler, and HENRY K. HARWICK, Darby, Pa. Filed Apr. 2, 1929. Serial No. 351,964. 5 Claims. (Cl. 105—189.)



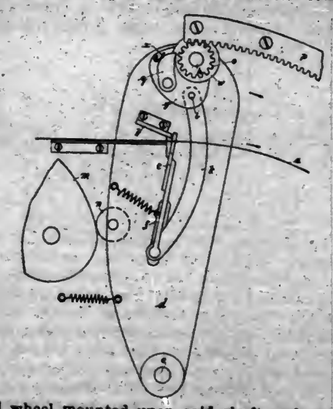
1. The combination in a four-wheeled truck, of a frame made as an integral casting and having two side members at each side thereof; cross-ties and end connecting members; pedestals for axle boxes, said members being connected by a web at the centre; an equalising beam located below the opening in the frame and extending into the opening and having portions extending above and resting upon the boxes, said beam having spring seats; and a spring, the ends of which rest upon the spring seats and the centre of which is adapted to seat in the frame.

1,750,528. ARTICLE DISPLAYING AND VENDING CABINET. GEORGE A. KREBS, Memphis, Tenn., assignor, by mesne assignments, to Plough, Inc., Memphis, Tenn., a Corporation of Delaware. Filed Apr. 3, 1929. Serial No. 352,239. 3 Claims. (Cl. 312—42.)

1. A display cabinet or carton comprising a relatively stiff front member, a compartment forming member secured to the rear face of the front member and including a body having a plurality of transverse folds disposed longitudinally of the front member defining rectangular compartments disposed in slightly spaced parallel relation and of a depth to house articles therein, the ends of said compartments being closed by portions formed integrally with the compartment forming blank and secured to the front member of the cabinet, and means for supporting the cabinet in a position for displaying articles contained therein, substantially as set forth.

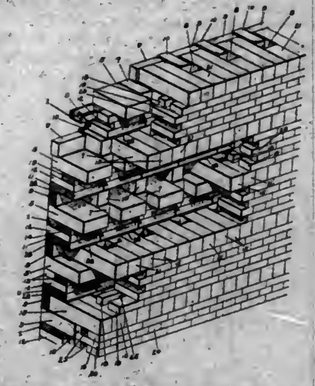
1,750,529. AEROPLANE. EDWARD H. LANIER, Miami, Fla. Filed Oct. 14, 1929. Serial No. 399,632. 27 Claims. (Cl. 244—12.)

25. In an aeroplane, a body including a cabin, wings extending laterally from the cabin but spaced apart to provide air passages, elevators, and a rudder at the rear of said body, said body having an open top chamber above the cabin between the wings and having an air deflecting nose at the front of said chamber for the purposes described.



1,750,530. COMBINED EYEDROPPER AND EYEWASH CUP. LOUIS T. LA PAUGH and ELIZABETH C. SHEA, Oakland, Calif. Filed July 11, 1928. Serial No. 291,955. 3 Claims. (Cl. 128—249.)

1. In a combined eye dropper and eye wash cup, a cup portion having a conformation adapted to fit the eye socket and being provided with an opening in the base thereof, a sac carrying tube slidably positioned in the opening of the cup and having a shoulder adjacent its end adapted to contact the base of said cup and an adjustable member carried by said tube and positioned thereon exteriorly of said cup, whereby the shoulder of the tube is tightened against the base of said cup.

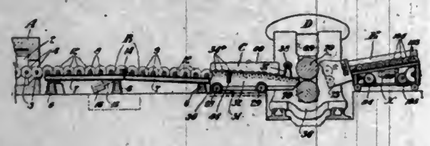


1,750,531. CUTTING DEVICE FOR TRANSVERSELY CUTTING MOVING PAPER WEBS. EDMUND LICHTENSTEIN, Berlin, Germany, assignor to the Firm: Deutsche Maschinenbau- und Vertriebs-Gesellschaft m. b. H., Berlin, Germany. Filed Sept. 26, 1925, Serial No. 58,910, and in Germany Nov. 11, 1924. 7 Claims. (Cl. 164—40.)

1. A cutting device for transversely cutting moving paper webs in duplicators operating upon the offset principle comprising an oscillatory frame, a shaft upon said frame, means for moving said frame with said moving web, fixed and movable cutters mounted in the frame, and means for operating said movable cutter comprising a

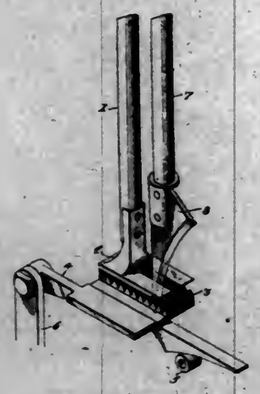
toothed wheel mounted upon said shaft and a stationary rack co-operating with said wheel, said operating means acting in response to the movement of said frame.

1,750,532. FIRE WALL. MICHAEL LIPTAK, St. Paul, Minn. Filed Nov. 1, 1928. Serial No. 316,513. 19 Claims. (Cl. 72—102.)



1. A permanent wall and a replaceable wall spaced therefrom, headers extending into both walls and across the space between them, and elements as part of the permanent wall arranged below the first mentioned headers as supports and extending into the space between the walls, but not into the replaceable wall.

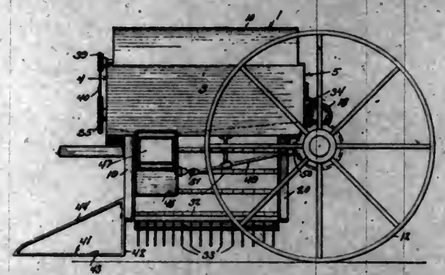
1,750,533. TAKE-UP DEVICE FOR RIBBON LOOMS. GUSTAV LÜDORF, Barmen, Germany, assignor to Artur Schulte, Velbert, Rhineland; Karl Küch, Barmen; and Wilhelm Hof, Elberfeld, Germany. Filed Dec. 28, 1927, Serial No. 243,158, and in Germany July 26, 1926. 2 Claims. (Cl. 139—305.)



1. A take up device for weaving curved ribbon, including in combination, a flat surface for supporting the ribbon and take up means cooperating with said support and rotatable on an axis coincident with the center of curvature of the ribbon to move the ribbon over the support in the direction of its curvature.

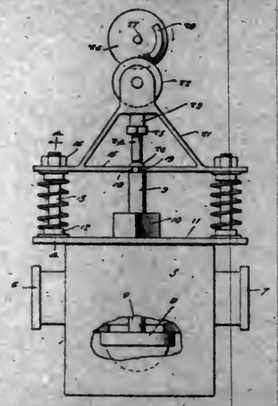
1,750,534. SHEET-MAKING APPARATUS. ARTHUR R. MCARTHUR, Gary, Ind., assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Mar. 21, 1928. Serial No. 263,572. 5 Claims. (Cl. 29—17.)

5. The combination with a sheet hot mill, of a continuous heating furnace for supplying heated sheets to said mill, a conveying table for receiving the heated sheets from said furnaces, an automatic mechanical feeding table for feeding the sheets into the bite of the hot mill rolls, said feeding table including a plurality of power operated conveying rollers inclined downwardly toward said mill so as to feed said sheets by combined gravity and power, and side guides on said feeding table for guiding the hot sheets square into said mill, said guides being adjustable for various sizes of sheets, and an automatic mechanical catcher on the exit side of said mill for catching and gaging the rolled sheets, said catcher being adapted to return all sheets under a predetermined gage to said feeding table for rerolling.



1,750,535. MECHANICAL MEANS FOR SEVERING OR TRIMMING THE EDGES OF CARPETS. ALFRED F. MCCOLLUM, Bloomsburg, Pa., assignor to The Magee Carpet Co., Bloomsburg, Pa., a Corporation of Pennsylvania. Filed Mar. 23, 1926. Serial No. 96,897. 2 Claims. (Cl. 164—48.)

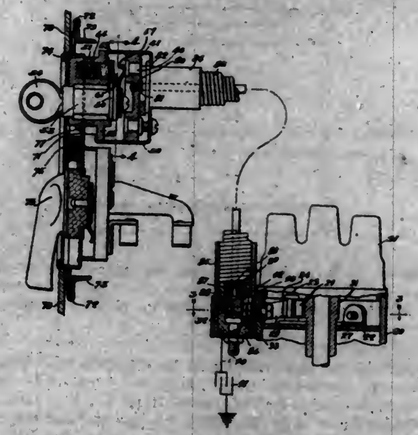
2. In a fabric-cutting machine, the combination with a vertically reciprocatory blade having an inclined cutting edge, of cooperating elements adapted respectively to engage the top and bottom of the fabric at points immediately adjacent the said blade for anchoring the fabric during the cutting operation, and mechanism including one of said elements for intermittently advancing the fabric with respect to and in timed relation with the movements of said blade.



1,750,536. COTTON-BOLL PICKER. ALBERT B. MCDONALD, Vernon, Tex. Filed Dec. 27, 1926. Serial No. 157,397. 2 Claims. (Cl. 56—49.)

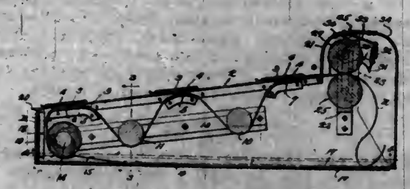
1. A cotton boll picker comprising a wheel supported housing, a pair of columns secured to and depending from each of the front and rear walls of the housing and provided at their lower ends with bearings and at their upper ends with vertical slots, bearing blocks slidably arranged in said slots, brackets secured to and extending upwardly from the upper ends of the columns, adjusting screws having threaded engagement with the brackets and extending into said slots and connected to the bearing blocks, lower rollers journaled in the bearings, upper rollers jour-

naled in the bearing blocks, a belt passing over each vertically alined pair of rollers and provided with picker fingers, cylinders arranged above the upper rollers and journaled in the brackets and provided with brush fingers, means establishing driving connections between the wheels and upper rollers, and means establishing driving connections between the upper rollers and the cylinders.



1,750,537. VALVE-OPERATING MECHANISM. DANIEL J. MURRAY, Chicago, Ill., assignor of one-half to Thomas Gasparic, Chicago, Ill. Filed Jan. 12, 1928. Serial No. 246,255. 1 Claim. (Cl. 137—145.)

A mechanism of the class described comprising a plate adapted to be mounted on a valve, bolts projecting from the plate, a second plate having openings for slidably receiving the bolts, nuts on the bolts to limit the movement of the second plate, springs about the bolt to hold the plates separated, means for attaching a valve stem to the second plate, a frame rising from the second plate, a roller journaled in the frame, a wheel having a cam thereon engageable with the roller so that the second plate may be moved toward said first-mentioned plate, said frame having a hollow boss projecting therefrom, a stem threaded in the boss so that the boss may be adjusted with respect to the second plate for clamping the valve stem thereto.

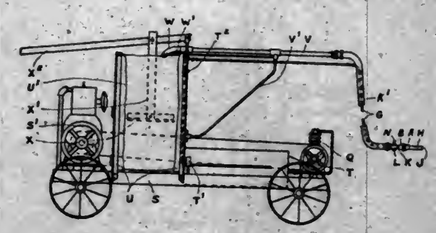


1,750,538. LOCK SWITCH. HARRY E. NORVIEL, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 5, 1927. Serial No. 210,904. 9 Claims. (Cl. 200—19.)

1. Theft-preventing apparatus for automobiles comprising, in combination, an ignition lock switch, an ignition timer having a threaded terminal member, a wire armor, connected with the lock switch and communicating with its case, an electric conductor insulatingly supported within the armor adjacent its other end and having threaded means cooperating with the threaded terminal to provide

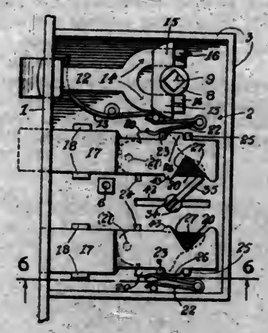
for connecting the conductor and terminal by bodily rotating the timer and the armor relative to each other, a wire connected with said conductor and extending through the armor and connected within the switch case with one of the switch contacts, said switch having means for grounding said wire when in the ignition-circuit open position.

1,750,539. RECORDING MACHINE. RUDOLPH H. PAULSON, Colfax, Wis. Filed Mar. 16, 1929. Serial No. 347,669. 3 Claims. (Cl. 281—8.)



1. Apparatus of the class described including a casing having a transverse window, a closure for the window, rolls in the casing, a guide under the window and between the rolls, means for supporting a rolled record strip in one end portion of the casing, said strip being adapted to extend over the guide and under the rolls, feed rolls in the casing for the reception of the record strip therebetween, means for binding said rolls upon the strip, means for rotating the rolls to draw the strip longitudinally across the window, and means for holding the strip against free and unrestrained movement, said means including a removable bottom plate slidably connected to the casing, and springs carried by said plate for wedging engagement with a rolled record strip.

1,750,540. MANUFACTURE OF RUBBER. UGO PESTALOZZA, Milan, Italy, assignor to Società Italiana Pirelli, Milan, Italy. Filed Mar. 9, 1929, Serial No. 345,901, and in Italy Mar. 13, 1928. 12 Claims. (Cl. 18—58.)

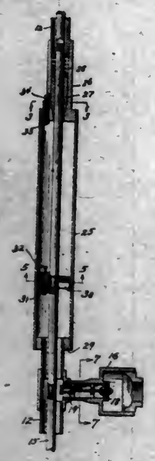


1. The process of manufacture of rubber articles from latex which comprises adding to the latex a suitable proportion of an aromatic disubstituted guanidine and then subjecting the latex to local heating to the forming temperature at the surface whereat the rubber is to be formed so as there to produce a local thickening of the latex and the formation therefrom at said surface of a layer of compact coagulated rubber.

1,750,541. AIR-BLAST COTTON PICKER. WILLIAM ALEXANDER PRESTON, Brisbane, Queensland, Australia. Filed Nov. 24, 1926. Serial No. 150,568. 6 Claims. (Cl. 56—13.)

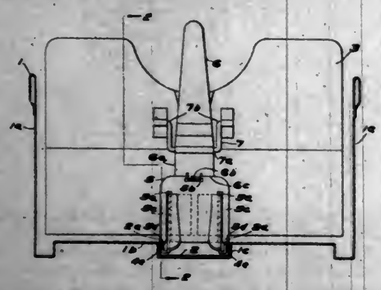
1. In an air blast cotton picker, a pipe, a chamber formed in the wall of said pipe, a passage leading from said chamber to within said pipe, said passage being arranged diagonally towards the outlet of said pipe, as and for the purposes herein set forth.

1,750,542. LOCK AND KEY STRUCTURE. FELIX PUCEK, Chicago, Ill., assignor of one-third to Frank Diblick and one-third to John Forman, Chicago, Ill. Filed July 8, 1926. Serial No. 121,168. 1 Claim. (Cl. 70—75.)



A lock comprising a casing having a key opening and provided at one side of said opening with spaced lugs, said lugs being located one at one side of the point midway between the ends of the key opening and the other at the opposite side of said point, a bolt slidably mounted between said lugs and having at its edge an extension, said bolt having one side portion cut away forming a recess, a latch plate pivoted to the bolt at a point within said recess and having at its edge a lug disposed transversely across the bolt and located at a point between the pivot of the bolt and one of the first-mentioned lugs carried by the casing, and the bolt having at its edge adjacent the key opening a cut away recess provided with inclined side edges.

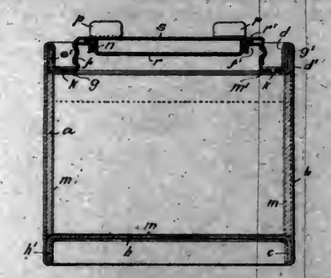
1,750,543. PRESSURE HEAD. JOHN F. PULFORD, Boise, Idaho, assignor of one-half to Daniel F. Hackett, Boise, Idaho. Filed Apr. 20, 1928. Serial No. 271,512. 1 Claim. (Cl. 103—9.)



In a hydro-pneumatic pumping system, a pump including a drop pipe and a plunger rod operating therein, a storage tank, a supply pipe extending from the drop pipe and having communication with said tank, a check valve to control communication between the drop pipe and supply pipe, and a pressure head located in the drop pipe above

the supply pipe, said head including a pressure cylinder of relatively large diameter having its opposite ends connected to and in communication with the drop pipe, a plunger carried by the plunger rod of the pump and operat-

ing within the pressure cylinder, a valve controlled air inlet for the pressure cylinder, a check valve for the plunger, and a tapered yieldingly seated combined plunger rod guide and packing surrounding the plunger rod at the juncture of the pressure cylinder and drop pipe.



1,750,544. FILE FOLLOWER. FRED A. SCHMITZ, Canton, Ohio, assignor to The Berger Manufacturing Company, a Corporation of Ohio. Filed June 8, 1929. Serial No. 369,284. 3 Claims. (Cl. 129—29.)

1. In combination with a drawer having a track therein provided with inturned flanges, a file follower adapted to be moved longitudinally along said track and comprising a resilient sheet-metal follower board capable of being flexed, shoes secured to said follower board and having portions which underlie said inturned flanges, a clutch plate having portions overlying said inturned flanges, and toggle means for moving the clutch plate toward or away from the portions of the shoes which underlie said inturned flanges to thereby lock the follower board against longitudinal displacement or release the same, operation of the toggle means being permitted by the flexing of said follower board.

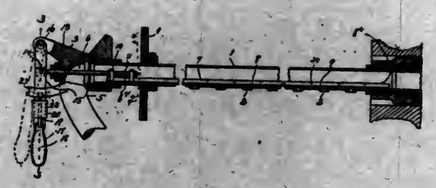
1,750,545. PACKING CONTAINER. GEORG STABERNACK and RICHARD STABERNACK, Offenbach-on-the-Main, Germany. Filed June 28, 1928, Serial No. 288,884, and in Germany July 8, 1927. 5 Claims. (Cl. 229—5.5.)

1. A packing container, comprising in combination, a card board lid, the inner edge of which is folded over, a sheet metal ring having an upwardly bent outer edge engaging between the folded inner edge of said lid, an inner upwardly bent flange on said ring, which flange is

threaded to form a screw neck, the upper edge of said inner bent flange being bent horizontally and then downwardly, and a screw cap threaded on said screw neck.

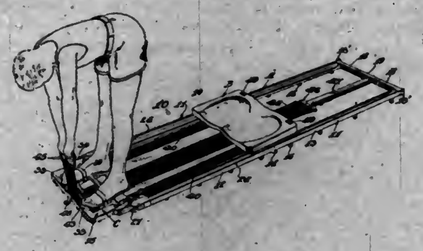
1,750,546. CORN-HUSKING MECHANISM. HENRY SYNCK, Coldwater, Ohio, assignor to The New Idea Spreader Company, Coldwater, Ohio, a Corporation of Ohio. Filed Aug. 20, 1928. Serial No. 300,692. 9 Claims. (Cl. 130—5.)

3. In a corn husking mechanism, husking rolls, an endless apron comprising sprocket chains and cross connecting strips, sprocket wheels about which said chains are passed, the lower run of said apron being permitted to sag, and means for intermittently tightening the said chains to relieve a portion of the sag of said apron.



1,750,547. TOY VEHICLE. FRANK F. TAYLOR, Norwood, Ohio. Filed Jan. 31, 1924. Serial No. 689,787. 4 Claims. (Cl. 155—22.)

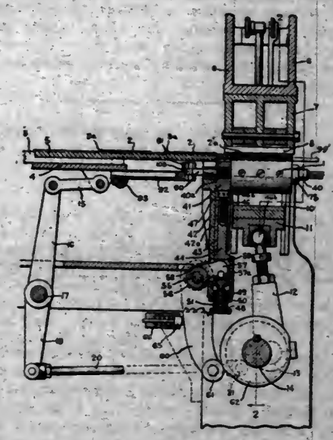
1. In a toy vehicle of the character specified, a board forming the seat with wheels for supporting the same at the rear, an upright rotatably mounted post at the front provided with connecting means for supporting and guiding a single wheel, caster mounting element with two widely interspaced caster wheels to give a wide wheel base having means for securing it to the vehicle interchangeably with said single wheel, and a guard ring to hold and protect the user, provided with means for engaging and locking the post when the caster element is used.



CARNEGIE LIBRARY OF ATLANTA

1,750,548. BOILER CLEANER. WILLIS P. THOMAS, Detroit, Mich., assignor to Diamond Power Specialty Corporation, Detroit, Mich., a Corporation of Michigan. Filed Apr. 16, 1928. Serial No. 632,837. 17 Claims. (Cl. 122—392.)

1. The combination with a rotatable blower pipe having a plurality of discharge openings, of a member adjustable within said pipe closing all of said openings in one position and different groups of said openings in other positions, and means for imparting rotation to said pipe.

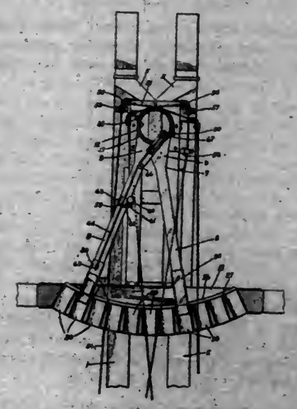


1,750,549. EXERCISING APPARATUS. JOHN MALCOLM THOMSON, Long Island City, N. Y., and PETER HARDY, Bridgeport, Conn. Filed Nov. 7, 1927. Serial No. 231,640. 4 Claims. (Cl. 272—72.)

1. An exercising apparatus comprising a track, a seat movable over said track, a foot rest at the forward end of said track, pulleys on said track adjacent said foot rest, elastic cables having their ends respectively attached to said seat and to a stationary part at the forward end of said track, elastic pull cables attached to the rear end of said track and extending forward about said pulleys, and hand grips attached to the free ends of said elastic pull cables.

1,750,550. EXPANDER AND CLAMP MECHANISM FOR CAN-BODY MACHINES. NELSON TROYER and PAUL E. PEARSON, Seattle, Wash., assignors to Seattle Astoria Iron Works, Seattle, Wash., a Corporation of Washington. Filed Oct. 1, 1928. Serial No. 309,662. 16 Claims. (Cl. 113—11.)

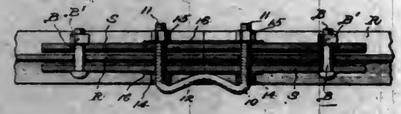
1. In a can body forming machine, a forming horn comprising a central body portion, side plates fitted thereto and adapted for outward and inward adjustment, horn expanding means, leaf springs disposed lengthwise within the horn and centrally attached to the horn body and engaging at their opposite ends with the side plates to draw them inwardly against the central portion and means



interposed between the expanding means and side plates for moving the plates outwardly incident to movement of the bar.

1,750,551. METHOD FOR SYNTHETICALLY PRODUCING AMMONIA FROM ITS ELEMENTS. GEORG FRIEDRICH UHDE, Bovinghausen, Germany. Filed June 30, 1927, Serial No. 202,747, and in Germany July 2, 1926. 8 Claims. (Cl. 23—199.)

1. In the process of synthesizing ammonia from a gaseous nitrogen-hydrogen mixture, the step which comprises contacting the gaseous mixture with a catalyst comprising a complex cyanide containing combined alkali-metal, aluminum and iron.



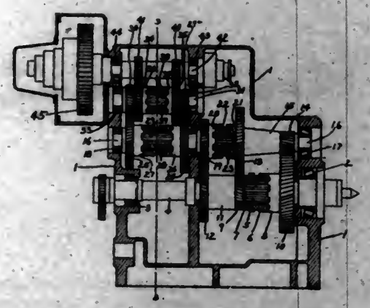
1,750,552. DISTRIBUTING APPARATUS. EMIL C. UMBREIT, Rocklake, N. Dak. Filed Oct. 22, 1928. Serial No. 314,147. 8 Claims. (Cl. 214—16.)

2. In combination with an elevator leg a structure providing a row of passages, a hollow cylindrical structure supported above said passages and having an arcuate opening in the lowermost portion of its wall, a spout having an upper open end engaged with the outer surface of the cylindrical structure and in register with said arcuate opening, means securing the spout to the support for pendular motion about the support as a center, a

spout extension translatable upon said spout to enter any passage when aligned therewith, and a spout establishing communication between the delivery end of said leg and said arcuate opening to deliver therethrough, the areas of the arcuate opening and of the upper open end of the pendular spout being such that delivery communication is maintained for all angular positions of said pendular spout.

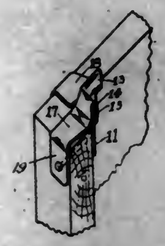
1,750,553. RAIL BOND. ROBERT S. WALLACE, Pocahontas, Va. Filed Feb. 11, 1927. Serial No. 167,463. 1 Claim. (Cl. 173—262.)

A rail bond and splice embodying in combination with joined rails, splice bars at opposite sides of and across the joined rail ends, and a readily removable rail bonding and splice securing member comprising a bar of electrical conducting material formed into approximately U-shape to provide spaced bolt members connected at one end by a bridge forming base, said bolt members extended transversely through the splice bars and rails at opposite sides of the rail joint with the base bridging the rail joint, clamping members on said bolt members at the inner ends thereof adjacent said connecting base, an electrical conductor plate mounted over and across said bolt members between said clamping members and the adjacent splice bar, an electrical conductor plate mounted over and across the outer extended ends of said bolt members, nuts on the outer ends of said bolt members with the splice bars, rails ends and conductor plates clamped between said nuts and clamping members, and the said bridge forming base extended inwardly between said clamping members to provide the intermediate portion thereof positioned within and between said clamping members and in electrical contact with the adjacent conductor plate, the said rail bonding and splice securing member with the conductor plates being removable from the rail splice without injury for reuse.



1,750,554. BUSHING FOR LINING THE BORES OF JOINTS. JOSEF WALTER, Modling, Austria. Filed Jan. 6, 1927, Serial No. 159,432, and in Austria Jan. 11, 1926. 2 Claims. (Cl. 308—237.)

1. An arrangement for lining the bores of joints particularly for use in connection with railway shunts including a one piece bushing having a slot extending parallel to its axis, the walls of said slot extending in converging planes in the axial direction of the bushing, and a wedge member adapted to be driven into the slot in the axial direction of the bushing whereby to cause the latter to firmly press against the wall of a member receiving it, and external screw threads on said bushing adapted to be fitted into a member receiving the latter.

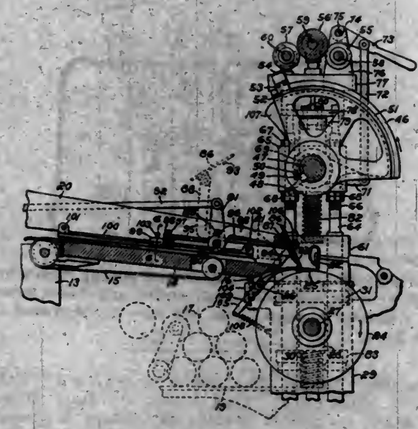


1,750,555. GEARED HEADSTOCK FOR LATHES. WENDELL E. WHIPP, Sidney, Ohio, assignor to The Monarch Machine Tool Company, Sidney, Ohio, a Corporation of Ohio. Filed May 21, 1928. Serial No. 279,383. 3 Claims. (Cl. 74—69.)

3. A geared headstock for lathes, comprising an initial driving shaft, a first intermediate shaft, a second intermediate shaft and a spindle, gears fixed on the initial driving shaft, gears loosely mounted on the first intermediate shaft in mesh with the fixed gears, fixed gears on the last named shaft, loose gears on the second intermediate shaft, two of said gears being in mesh with the fixed gears on the first intermediate shaft, loose gears on the spindle in mesh with some of the loose gears on

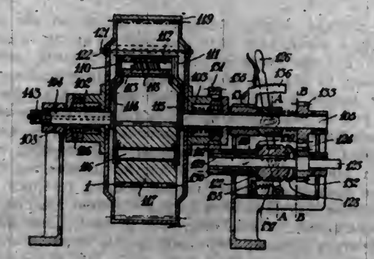
the second intermediate shaft, clutches splined on the first and second intermediate shafts and the spindle, free to be moved into operative relation with the selected gears thereon to provide different gear ratios between the initial driving shaft and the spindle, and a four lever control for said clutches.

1,750,556. CORNER IRON FOR BOXES. RICHARD M. WILDBERG, Cincinnati, Ohio, assignor, by mesne assignments, to United Milk Crate Corporation, Cincinnati, Ohio, a Corporation of Ohio. Filed June 17, 1926. Serial No. 116,680. 1 Claim. (Cl. 217—69.)



A corner iron for open boxes, formed substantially without waste from an integral blank of sheet metal cut and scored to fold longitudinally to form sides, with tongues integral with the sides folded to form a pair of upwardly two ply return bent projecting portions to form stacking guides and then horizontally and downwardly to fit over corners of a wooden box, with rivet openings in the respective sides and tongues for riveting metal to metal.

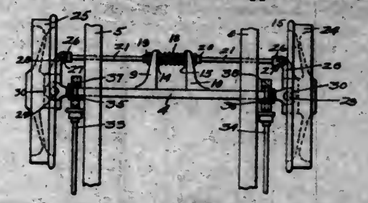
1,750,557. PRINTING PRESS. FRANK T. WOOD, Brookline, Mass., assignor to American Bank Note Company, New York, N. Y., a Corporation of New York. Filed July 10, 1928. Serial No. 291,526. 20 Claims. (Cl. 102—214.)



1. In a printing press, the combination of a printing couple including an impression cylinder and a type-carrier, the former being above the latter, an auxiliary type

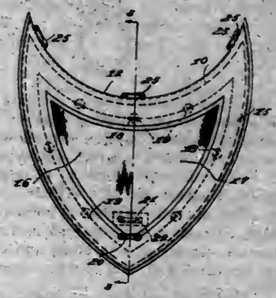
carrier coacting with said impression cylinder above the latter, a feed board along which a sheet is fed toward said impression cylinder, a support which supports said

sheet between said feed board and said impression cylinder, and means for moving said support toward and from said impression cylinder.



1,750,558. MACHINE FOR KNEADING, CRUSHING, AND SIMILAR OPERATIONS. BIRGER ZETTERGREN, Stockholm, Sweden. Filed Oct. 2, 1928, Serial No. 309,751, and in Sweden Dec. 23, 1927. 6 Claims. (Cl. 259—85.)

1. A machine of the character described comprising a rotatable drum having a cylindrical peripheral wall and two vertical side walls, said cylindrical wall being provided with a port and a closure therefor to allow introduction and removal of the material to be treated or having been treated in the drum, a roller within said drum extending substantially along the entire axial length of the drum, two horizontal shafts, each extending through an individual one of the side walls of the drum, means secured to said shafts to carry a spindle within said drum eccentrically with respect to the axis of the drum so as to allow it to move in a circular path parallel to the peripheral wall of the drum due to relative rotation of the shafts and the drum, and a pair of arms loosely mounted on said spindle to carry said roller.

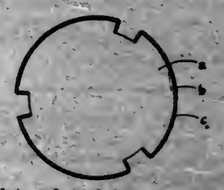


1,750,559. RAILWAY CAR. WALTER S. ADAMS, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 24, 1928. Serial No. 301,788. 8 Claims. (Cl. 105—168.)

1. In an axle structure having wheel mounting knuckles at its opposed ends, means on said axle for supporting a shaft, said shaft having opposed threads near its center and being pivotally connected at its opposite ends to said

wheel knuckles, a spring around said shaft between said first-mentioned means, and means threaded on said shaft for retaining said spring in position.

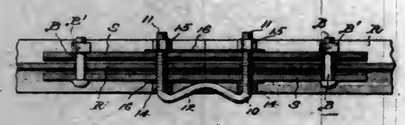
1,750,560. CLOTHING SHIELD. JOSEPH ABRAMOFSKY, Toledo, Ohio. Filed Apr. 11, 1929. Serial No. 354,398. 4 Claims. (Cl. 2—56.)



1. A reversible shield of the character described comprising two substantially triangular sections each having one edge thereof curved to correspond to the curvature of the sleeve opening of a garment, a pivotal connection between said sections at said edges affording longitudinally spaced openings and securing elements connected to the sections at the openings and movable through the openings to lie between the sections in either position thereof.

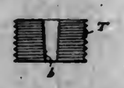
1,750,561. STERILIZING OF WATER. OSCAR ADLER and RUDOLF ADLER, Karlsbad, Czechoslovakia. Filed June 11, 1928, Serial No. 284,678, and in Czechoslovakia June 13, 1927. 5 Claims. (Cl. 210—28.)

1. A process for sterilizing water by means of chlorine comprising first passing the chlorine containing water over substances which cause the heavy metal compounds dissolved in the water to separate out and thereupon over carbon in sufficient quantity to quantitatively and continuously convert the excess of chlorine into the chlorine ion.



1,750,562. PRINTING SURFACE. PETER ALLMAN, Manchester, England. Filed Mar. 16, 1929, Serial No. 347,708, and in Great Britain Feb. 16, 1928. 1 Claim. (Cl. 101—395.)

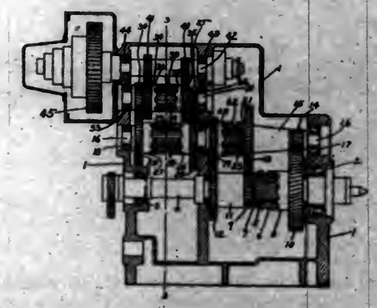
A printing plate, adapted for use on cylinders of printing presses, and a backing on said plate comprising a resilient layer of hardened bituminous composition closely adherent to the plate.



spout extension translatable upon said spout to enter any passage when aligned therewith, and a spout establishing communication between the delivery end of said leg and said arcuate opening to deliver therethrough, the areas of the arcuate opening and of the upper open end of the pendular spout being such that delivery communication is maintained for all angular positions of said pendular spout.

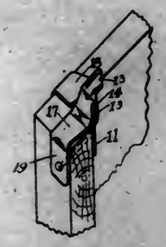
1,750,553. RAIL BOND. ROBERT S. WALLACE, Pocahontas, Va. Filed Feb. 11, 1927. Serial No. 167,463. 1 Claim. (Cl. 173—262.)

A rail bond and splice embodying in combination with joined rails, splice bars at opposite sides of and across the joined rail ends, and a readily removable rail bonding and splice securing member comprising a bar of electrical conducting material formed into approximately U-shape to provide spaced bolt members connected at one end by a bridge forming base, said bolt members extended transversely through the splice bars and rails at opposite sides of the rail joint with the base bridging the rail joint, clamping members on said bolt members at the inner ends thereof adjacent said connecting base, an electrical conductor plate mounted over and across said bolt members between said clamping members and the adjacent splice bar, an electrical conductor plate mounted over and across the outer extended ends of said bolt members, nuts on the outer ends of said bolt members with the splice bars, rails ends and conductor plates clamped between said nuts and clamping members, and the said bridge forming base extended inwardly between said clamping members to provide the intermediate portion thereof positioned within and between said clamping members and in electrical contact with the adjacent conductor plate, the said rail bonding and splice securing member with the conductor plates being removable from the rail splice without injury for reuse.



1,750,554. BUSHING FOR LINING THE BORES OF JOINTS. JOSEF WALTER, Modling, Austria. Filed Jan. 6, 1927, Serial No. 159,432, and in Austria Jan. 11, 1926. 2 Claims. (Cl. 308—237.)

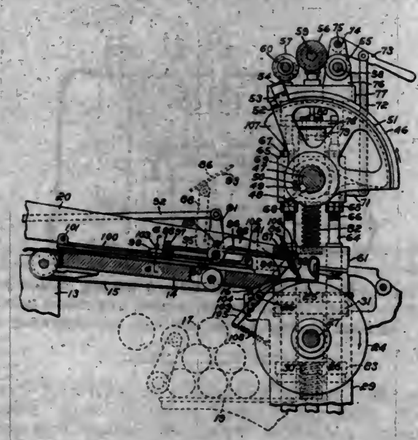
1. An arrangement for lining the bores of joints particularly for use in connection with railway shunts including a one piece bushing having a slot extending parallel to its axis, the walls of said slot extending in converging planes in the axial direction of the bushing, and a wedge member adapted to be driven into the slot in the axial direction of the bushing whereby to cause the latter to firmly press against the wall of a member receiving it, and external screw threads on said bushing adapted to be fitted into a member receiving the latter.



1,750,555. GEARED HEADSTOCK FOR LATHES. WENDELL E. WHIPP, Sidney, Ohio, assignor to The Monarch Machine Tool Company, Sidney, Ohio, a Corporation of Ohio. Filed May 21, 1928. Serial No. 279,383. 3 Claims. (Cl. 74—59.)

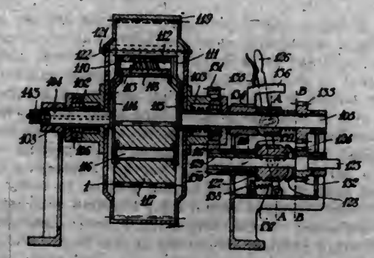
3. A geared headstock for lathes, comprising an initial driving shaft, a first intermediate shaft, a second intermediate shaft and a spindle, gears, fixed on the initial driving shaft, gears loosely mounted on the first intermediate shaft in mesh with the fixed gears, fixed gears on the last named shaft, loose gears on the second intermediate shaft, two of said gears being in mesh with the fixed gears on the first intermediate shaft, loose gears on the spindle in mesh with some of the loose gears on

the second intermediate shaft, clutches splined on the first and second intermediate shafts and the spindle, free to be moved into operative relation with the selected gears thereon to provide different gear ratios between the initial driving shaft and the spindle, and a four lever control for said clutches.



1,750,556. CORNER IRON FOR BOXES. RICHARD M. WILDBERG, Cincinnati, Ohio, assignor, by mesne assignments, to United Milk Crate Corporation, Cincinnati, Ohio, a Corporation of Ohio. Filed June 17, 1926. Serial No. 116,680. 1 Claim. (Cl. 217—69.)

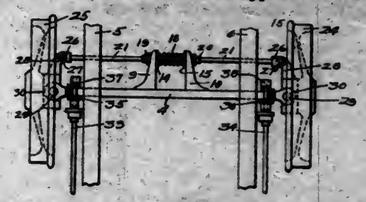
A corner iron for open boxes, formed substantially without waste from an integral blank of sheet metal cut and scored to fold longitudinally to form sides, with tongues integral with the sides folded to form a pair of upwardly two ply return bent projecting portions to form stacking guides and then horizontally and downwardly to fit over corners of a wooden box, with rivet openings in the respective sides and tongues for riveting metal to metal.



1,750,557. PRINTING PRESS. FRANK T. WOOD, Brookline, Mass., assignor to American Bank Note Company, New York, N. Y., a Corporation of New York. Filed July 10, 1928. Serial No. 291,526. 20 Claims. (Cl. 102—214.)

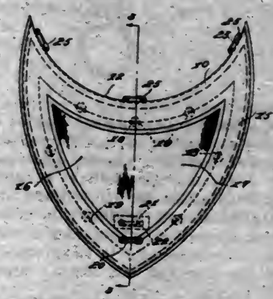
1. In a printing press, the combination of a printing couple including an impression cylinder and a type-carrier, the former being above the latter, an auxiliary type carrier coacting with said impression cylinder above the latter, a feed board along which a sheet is fed toward said impression cylinder, a support which supports said

sheet between said feed board and said impression cylinder, and means for moving said support toward and from said impression cylinder.



1,750,558. MACHINE FOR KNEADING, CRUSHING, AND SIMILAR OPERATIONS. BIRGER ZETTERGREN, Stockholm, Sweden. Filed Oct. 2, 1928, Serial No. 309,751, and in Sweden Dec. 28, 1927. 6 Claims. (Cl. 259—85.)

1. A machine of the character described comprising a rotatable drum having a cylindrical peripheral wall and two vertical side walls, said cylindrical wall being provided with a port and a closure therefor to allow introduction and removal of the material to be treated or having been treated in the drum, a roller within said drum extending substantially along the entire axial length of the drum, two horizontal shafts, each extending through an individual one of the side walls of the drum, means secured to said shafts to carry a spindle within said drum eccentrically with respect to the axis of the drum so as to allow it to move in a circular path parallel to the peripheral wall of the drum due to relative rotation of the shafts and the drum, and a pair of arms loosely mounted on said spindle to carry said roller.

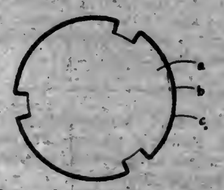


1,750,559. RAILWAY CAR. WALTER S. ADAMS, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 24, 1928. Serial No. 301,788. 3 Claims. (Cl. 105—160.)

1. In an axle structure having wheel mounting knuckles at its opposed ends, means on said axle for supporting a shaft, said shaft having opposed threads near its center and being pivotally connected at its opposite ends to said

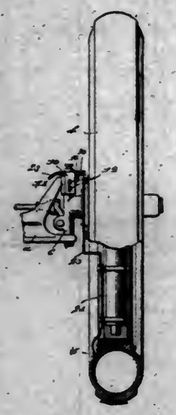
wheel knuckles, a spring around said shaft between said first-mentioned means, and means threaded on said shaft for retaining said spring in position.

1,750,560. CLOTHING SHIELD. JOSEPH ABRAMOFSKY, Toledo, Ohio. Filed Apr. 11, 1929. Serial No. 354,898. 4 Claims. (Cl. 2—56.)



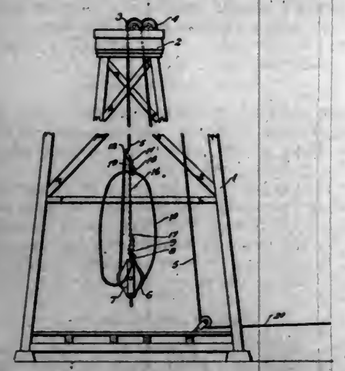
1. A reversible shield of the character described comprising two substantially triangular sections each having one edge thereof curved to correspond to the curvature of the sleeve opening of a garment, a pivotal connection between said sections at said edges affording longitudinally spaced openings and securing elements connected to the sections at the openings and movable through the openings to lie between the sections in either position thereof.

1,750,561. STERILIZING OF WATER. OSCAR ADLER and RUDOLF ADLER, Karlsbad, Czechoslovakia. Filed June 11, 1928, Serial No. 284,678, and in Czechoslovakia June 13, 1927. 5 Claims. (Cl. 210—28.)



1. A process for sterilizing water by means of chlorine comprising first passing the chlorine containing water over substances which cause the heavy metal compounds dissolved in the water to separate out and thereupon over carbon in sufficient quantity to quantitatively and continuously convert the excess of chlorine into the chlorine ion.

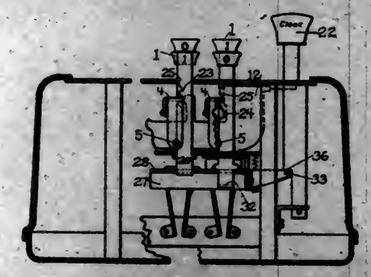
1,750,562. PRINTING SURFACE. PETER ALLMAN, Manchester, England. Filed Mar. 16, 1929, Serial No. 347,708, and in Great Britain Feb. 16, 1928. 1 Claim. (Cl. 101—395.)



A printing plate, adapted for use on cylinders of printing presses, and a backing on said plate comprising a resilient layer of hardened bituminous composition closely adherent to the plate.

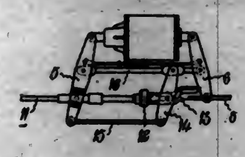
1,750,563. TIRE-DEFLATION SWITCH. JOSEPH BERGER, Carson City, Nev. Filed Jan. 24, 1927. Serial No. 163,173. 4 Claims. (Cl. 200—58.)

1. A circuit closure comprising a two-part clamp to be attached to a part of the running gear of a motor vehicle, a hollow cylindrical portion formed at one end of one part of said clamp, a contact extension formed at one end of said cylindrical portion, a resilient contact member supported within the said cylindrical portion and insulated therefrom and having a portion cooperative with the said contact extension, and means for flexing said resilient contact member to make and break the circuit between the same and said contact extension.



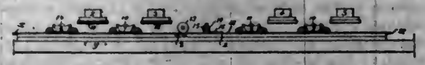
1,750,564. TUBING-LINE ATTACHMENT. ALBERT L. BILLENWILLMS, Augusta, Kans. Filed Dec. 10, 1928. Serial No. 325,112. 7 Claims. (Cl. 254—135.)

1. A line tie chain for oil well rigs comprising an elongated cable engaging bar, a flexible connection suspended from one end of the bar having pulley block engaging means and a flexible connection connected to the bar for engaging a bight in the line.



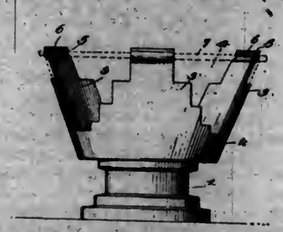
1,750,565. ZERO-KEY MECHANISM FOR KEY-SET REGISTERS. EDWIN F. BRITTEN, Jr., Maplewood, N. J., assignor, by mesne assignments, to Munroe Calculating Machine Company, Orange, N. J., a Corporation of Delaware. Filed Sept. 22, 1925. Serial No. 57,868. 7 Claims. (Cl. 235—79.)

1. Selecting mechanism for key-set calculating machines, including a plurality of columns of digital value and zero keys, holding means for each column, said keys being each adapted when depressed to be so held by the related holding means and each further adapted



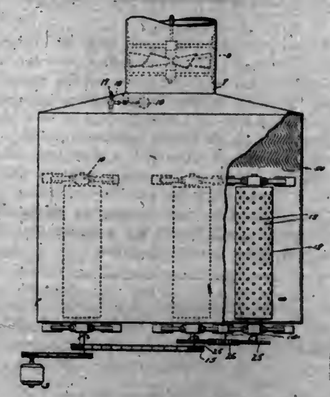
upon depression to move the related holding means and release any set key of the same column, and means including a member common to the zero keys for depressing all zero keys.

1,750,566. BRAKE RIGGING FOR RAILWAY CARS AND THE LIKE. BERT HENRY BROWALL, Malmo, Sweden, assignor to Svenska Aktiebolaget Bromsregulator, Malmo, Sweden, a Corporation of Sweden. Filed Dec. 23, 1927, Serial No. 242,195, and in Germany Feb. 24, 1927. 5 Claims. (Cl. 188—53.)



1. A brake rigging, especially designed for use on cars having a small axle base, comprising an air brake cylinder, a brake lever having a fixed fulcrum positioned adjacent to one end of the brake cylinder, another brake lever having a floating fulcrum positioned at the opposite end of said cylinder, a third brake lever positioned intermediate two first mentioned brake levers and also provided with a floating fulcrum, a connecting rod between all of the levers and another connecting rod between both of the levers having floating fulcrums, a pull rod connected to the lever having the fixed fulcrum, a pull rod connected to the intermediate lever, and an automatic slack adjuster interposed in this lastmentioned pull rod.

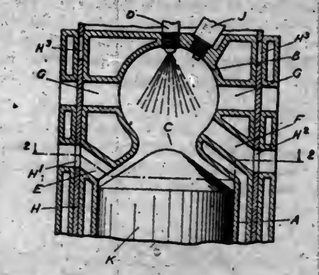
1,750,567. APPARATUS FOR MAKING MOTTLED FLOOR COVERINGS. NEIL L. CAMPBELL, Salem, N. J., assignor to Mannington Mills, Inc., Salem, N. J., a Corporation of New Jersey. Original application filed Apr. 16, 1928, Serial No. 270,346. Divided and this application filed Apr. 2, 1929. Serial No. 351,985. 7 Claims. (Cl. 41—1.)



1. In a printing machine for floor coverings and the like the combination of a plurality of printing elements adapted to engage the surface of a web of base material passing between said printing elements and an adjacently positioned platen, a series of irregularly shaped printing fins on one of said printing elements, a series of rectilinear printing fins on another of said printing elements, means for supplying paint to the web engaging surfaces of said printing fins, and means for interspersing and blending the paint deposits placed on the web by said printing fins.

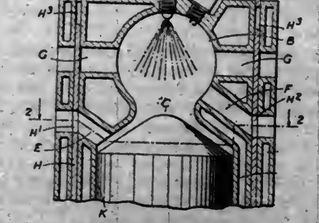
1,750,568. DISH HOLDER. HERMAN CAREW, Easton, Pa., assignor to Individual Drinking Cup Company, Inc., Easton, Pa., a Corporation of Pennsylvania. Filed Jan. 6, 1930. Serial No. 418,811. 2 Claims. (Cl. 65—61.)

1. A dish holder of the character described including a body portion having upwardly extending arms, each of the arms having a circumferentially extending groove formed in its inner face to receive a bead formed around the upper edge of the dish.



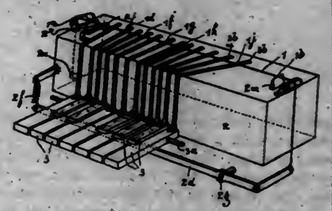
1,750,569. HUMIDIFYING APPARATUS. JOHN W. CHASON, Chandler, Aris. Filed June 11, 1928. Serial No. 284,616. 1 Claim. (Cl. 261—92.)

A humidifying apparatus comprising a spray tank having a liquid reservoir formed in its lower portion and provided with air intake and discharge openings at its opposite sides and above said reservoir, a plurality of spray drums rotatably mounted in the tank and with a portion of each drum submerged in the liquid of the reservoir and adapted through the rotation thereof to form a spray in the upper portion of the tank, a suction fan mounted adjacent to the air discharge opening and arranged above said drums and at one end thereof, whereby to cause a movement of the air longitudinally thereof, one of said drums being arranged adjacent to one end of the tank, and the other drums being in spaced relation adjacent to the opposite end of the tank, means for rotating the first mentioned drum, means for rotating one of the last mentioned drums from the first mentioned drum, said last mentioned drums being provided each with a gear wheel, and an idler wheel meshing with said gear wheels for causing the rotation of the last mentioned drums in opposite directions.



1,750,570. INTERNAL-COMBUSTION ENGINE. ALAN ERNEST LEOFRIC CHORLTON, London, England, assignor of one-half to William Beardmore, London, England. Filed May 22, 1924, Serial No. 715,281, and in Great Britain May 29, 1923. 4 Claims. (Cl. 123—32.)

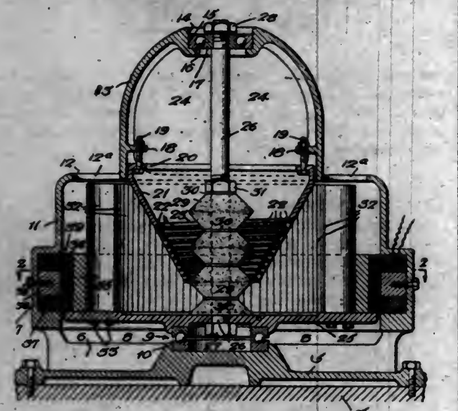
1. The method of operating an internal combustion engine having a cylinder provided with combustion and piston chambers connected by a short restricted passage which consists in admitting air and hydrogen at separate points into the combustion chamber on the suction stroke of the piston, compressing this charge of air and hydrogen into the combustion chamber, igniting the hydrogen in the



combustion chamber near the end of the compression stroke and injecting a charge of liquid fuel into the hot gaseous media in the combustion chamber, the charge of air being sufficient for burning both the hydrogen and the charge of liquid fuel.

1,750,571. INTERNAL-COMBUSTION ENGINE. ALAN ERNEST LEOFRIC CHORLTON, London, England, assignor of one-half to William Beardmore, London, England. Original application filed May 22, 1924, Serial No. 715,231, and in Great Britain May 29, 1923. Divided and this application filed Nov. 13, 1925, Serial No. 68,859. Renewed June 19, 1928. 14 Claims. (Cl. 123—32.)

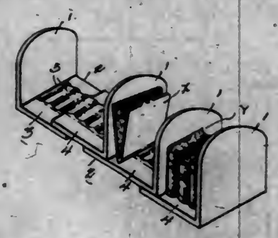
1. In an internal combustion engine, in combination a cylinder, a combustion chamber, a restricted passage connecting the cylinder with the combustion chamber, means for injecting a charge of fuel in a liquid state directly into the combustion chamber, ports through which gases can enter and leave the cylinder and combustion chamber, at least one of said inflow ports leading directly into the combustion chamber while the others of said entry ports lead into the cylinder, and a sleeve valve controlling all of the inflow and outflow ports.



1,750,572. MUSICAL INSTRUMENT. GEORGES CLOSTENS, Brussels, Belgium. Filed Sept. 26, 1927, Serial No. 222,131, and in Belgium Apr. 30, 1927. 16 Claims. (Cl. 84—173.)

16. The method of operating a musical instrument having a single string, actuated by percussive elements from

an ordinary key-board, comprising, striking the string percussively, maintaining the percussive element in contact with the string long enough after the moment of percussion to inhibit the vibration of the string as a whole, so as to cause the complementary parts of the string determined by the point of percussive contact to emit, simultaneously, two notes and withdrawing the percussive element from the string while the said complementary parts thereof are independently vibrating, thereby permitting the string as a whole to vibrate simultaneously with the vibrations of its said parts.



1,750,573. ABRADING AND CRUSHING MACHINE. PAUL L. CROWE, Baltimore, Md. Filed July 27, 1928. Serial No. 295,754. 7 Claims. (Cl. 83—13.)

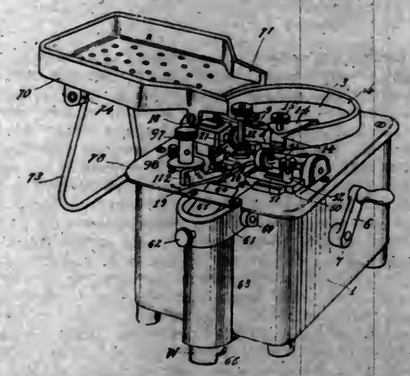
1. In a machine of the character described, the combination of a hopper which is open at its upper and lower ends, a shaft extending upward through the lower and upper openings of the hopper and provided with an abrading element which is disposed in the lower end of the hopper and has various diameters, means to effect a relative rotary movement between said shaft and hopper, means to effect an air current thru said hopper, and means to effect a relative vertical adjustment between said shaft and hopper, for the purposes specified.

1,750,574. [WITHDRAWN.]

1,750,575. SECTIONAL DESK ACCESSORY. WARNER I. CUBBERLY, Washington, D. C. Filed Aug. 2, 1929. Serial No. 382,856. 4 Claims. (Cl. 211—11.)

1. Interlocking devices serving as supports for files and the like having each a substantially vertical portion, and a horizontal portion, the horizontal portions overlapping part way their length, and provided with series of protuberances, and certain of the protuberances of one device being pocketed in certain of the protuberances of the next adjacent device to be locked against longitudinal or side slipping, and to self-align said devices.

1,750,576. DESK DISTRIBUTOR SET. WARNER I. CUBBERLY, Washington, D. C. Filed Sept. 5, 1929. Serial No. 390,584. 6 Claims. (Cl. 211—11.)

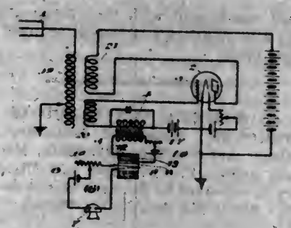


1. An office accessory of the type described comprising a plurality of members, certain of which have substantially vertical portions and horizontally arranged tongues formed with corrugations, and others having substantially vertical portions and horizontal corrugated portions formed each with a slot to receive the tongue of the first mentioned devices; said devices being relatively interengaging to form a compartmented assembly when set up.

1,750,577. KNIFE ATTACHMENT. JOSEPH DE BRACHT, Altoona, Pa., assignor of one-half to Corie H. Smith, Bedford, Pa. Filed Mar. 6, 1928. Serial No. 259,466. 2 Claims. (Cl. 30—9.)

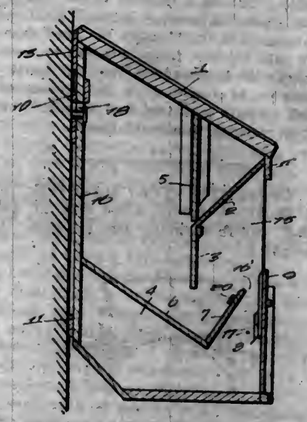
1. A finger grip for the back edge of cutting blades comprising a spring clip for mounting over the back edge of the blade having anchoring abutments thereon and a finger grip member having spaced sides embracing said clip and engaging and anchored thereto by said abutments, said member having its upper portion longitudinally concaved and transversely extended to a width substantially greater than the back of the blade edge to form a relatively broad finger gripping surface extending longitudinally of the blade edge and having an upstanding ridge forming a gripping abutment for a finger traversing and overlying said upper concave portion.

1,750,578. COIN-COUNTING MACHINE. CLEMENT LEE DOWNEY, Cincinnati, Ohio. Filed July 27, 1923. Serial No. 654,286. 4 Claims. (Cl. 133—8.)



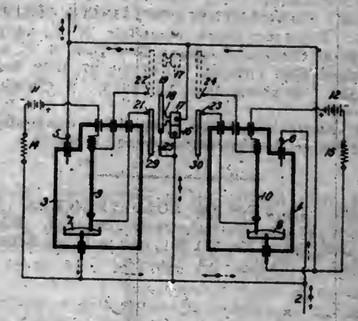
1. A coin counting machine, comprising a coin counting device, adapted to be operated by the coins, and means for feeding the coins past said counting device, comprising rollers to engage the top and bottom of the coin, and means for driving both rollers, and means for mounting one of said rollers, at least, so as to move to and from the coins being fed to adapt itself to the thickness of the coin, said means comprising a shaft for the roller, a long journal piece for said shaft, and means for pivotally mounting said journal piece so as to permit an oscillation thereof, the driving means for said roller comprising a gear on the

roller shaft, and a resiliently mounted and driven gear meshing with the gear first named, whereby resilient action is imparted to said journal piece and feed roller.



3. In a coin counting machine, the combination of a rotary device energized by the coins being counted, a limit means adapted to control the number of rotary movements of said device, comprising a member intermeshing with said rotary device, a stop device adapted to block the passage of coins to the rotary device, and means adapted to automatically control the stop and the limit means comprising a pawl movable from an adjustable stop to a fixed stop, said fixed stop formed as an arm having a small pivotal movement, a rock shaft connected to the stop device to actuate it, and said arm being adapted to clear said rock shaft in one position, and to engage the rock shaft in another position, said pawl adapted when coming into contact with said arm to move it to the said one position, and manually controlled means for tripping said pawl, said means being formed so as to force over the rock shaft to coin stop release position, and to force the said stop arm to its other position.

1,750,579. MODULATOR FOR RADIOTELEPHONES. HENRY H. C. DUNWOODY, Interlaken, N. Y. Filed Apr. 20, 1926. Serial No. 103,397. 2 Claims. (Cl. 179—171.)



1. In a system of radio communication, an oscillator including a grid circuit, said oscillator having an associated antenna, and a modulator for varying the amplitude of the oscillator current impressed upon the antenna, comprising a transformer having one side connected in the grid circuit of said oscillator, a microphone circuit including a filament, and means connected with the other side of the transformer being variable in electrical conductivity by variations in the light emitted by the filament.

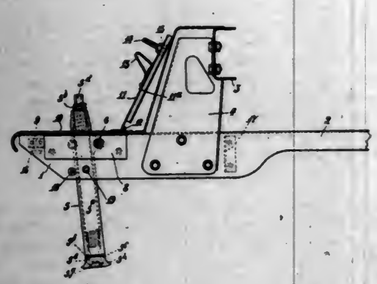
1,750,580. CHICKEN-FEEDING HOPPER. GREGORY N. EBEL, St. Paul, Minn. Filed May 3, 1929. Serial No. 360,254. 4 Claims. (Cl. 119—52.)

1. In a poultry feeding device, a box provided with a vertical side wall, a hopper within the box, the base of the hopper depending within the box at an acute angle to the side wall and terminating in an upwardly extending portion at substantially right angles to the depending portion, and a septum within the box forming a side wall of the hopper and extending vertically above the depending portion and spaced apart from the depending portion to form a feeding neck, the hopper provided with an incline extending from the said upwardly extending portion and a sliding septum in alinement with the said vertical septum.

1,750,581. VACUUM SWITCH FOR ALTERNATING CURRENTS. HARTMANN EGG, Zurich, Switzerland, assignor to the Firm Maschinenfabrik Oerlikon, Oerlikon, near Zurich, Switzerland, a Corporation of Switzerland. Filed Feb. 25, 1928, Serial No. 257,030, and in Switzerland Feb. 25, 1927. 3 Claims. (Cl. 175—294.)

1. In a vacuum switch for alternating currents, vacuum valves permeable to opposite semi-cycles of said current connected in parallel, starting-up and excitation circuits of said valves, switches in said starting-up and excitation circuits, and mechanical switching means arranged in parallel with said valves, said switches closing said starting-up and excitation circuits prior to opening of said mechanical switching means and opening said excitation circuits after opening beyond arcing range of said mechanical switching means.

1,750,582. MEANS FOR HANDLING, HOLDING, STORING, AND DISPLAYING ROLLS OF LINOLEUM, FABRIC, AND OTHER MATERIAL IN THE FORM OF ROLLS. HENRY ELLIOTT, Glasgow, Scotland. Filed Sept. 5, 1925, Serial No. 54,720, and in Great Britain Sept. 19, 1924. 9 Claims. (Cl. 242—55.3.)

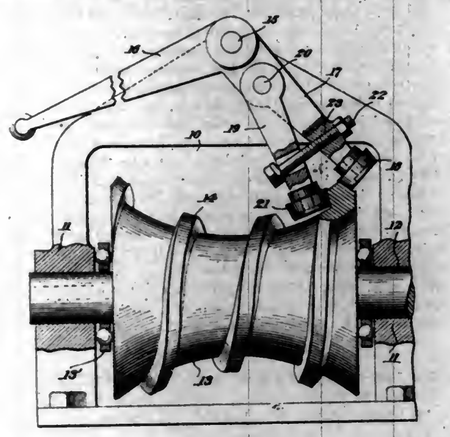


5. An apparatus for handling, storing and displaying rolls of linoleum, fabric and other rolled goods compris-

ing the combination of a series of vertically arranged brackets with shafts to be inserted in the cores of the rolls and means whereby the shafts with rolls thereon can be raised, deposited, and rotatably supported on said brackets, means for securing the rolls to their shafts, half clutch members on the ends of said shafts, a series of spindles, complementary half clutch members carried by said spindles and capable of an axial movement thereon, gear wheels on said spindles, spring means tending to force the co-operating half clutch members into engagement, independent spring means tending to force the spindle axially with respect to their gear wheels, means whereby the clutch members of any selected roll can be brought into engagement, and means whereby any selected roll can be driven through its clutch.

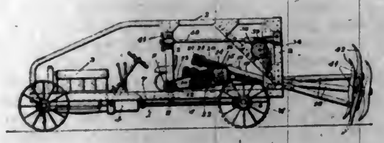
1,750,583. COMPOSITION CONTAINING CHLOR RUBBER. CARLETON ELLIS, Montclair, N. J., assignor to Chadeloid Chemical Company, New York, N. Y., a Corporation of West Virginia. Filed Oct. 27, 1922, Serial No. 597,416. Renewed Dec. 11, 1929. 3 Claims. (Cl. 106—23.)

1. A chlorinated rubber composition comprising chlorinated rubber, di-ethyl phthalate and camphor.



1,750,584. JACKING OF ROAD VEHICLES. WALTER ERNEST EVANS, Wolverhampton, England. Filed Oct. 10, 1928, Serial No. 311,691, and in Great Britain Dec. 9, 1927. 4 Claims. (Cl. 254—86.)

1. In a road vehicle, a chassis frame including a side member, a running board adjacent said side member, an opening in said running board, means on said side member projecting outwardly beyond said frame, and jacking means on said projecting means adapted to be swung into an operative position in which it is accessible at said opening and into an inoperative position in which it is stowed in a substantially horizontal position.



1,750,585. STEERING DEVICE. OTIS N. FARLEY, Lynden, Wash. Filed Dec. 21, 1927. Serial No. 241,645. 1 Claim. (Cl. 74—79.)

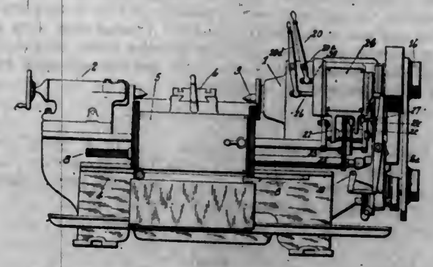
A steering device comprising a concaved worm gear, the tooth for the gear being spaced for greater distances than the usual and pitched toward a common center, a steering arm pivotally mounted at the common center having one end disposed in juxtaposition to the tooth, a bearing member carried upon the particular end of the steering member and adapted for engagement with one side of the tooth, an arm being pivotally connected with the aforementioned end of the steering arm, having a bearing member upon the extremity thereof engageable with the tooth in diametrically opposed relation to the first mentioned bearing, and a bolt member carried by the pivoted arm and adapted

for threaded engagement with the aforementioned end of the steering arm to afford adjustment between the bearing members and tooth.

1,750,586. AUTOMATIC CONSTRUCTION PICK AND DIRT REMOVER. ARTHUR E. FIELD and ULYSSES G. FIELD, Gray, and NICOLAUS HARITHAS, Mechanic Falls, Me.; said Arthur E. Field and said Ulysses G. Field assignors of one-sixth to Nicolaus Harithas. Filed Mar. 13, 1928. Serial No. 261,346. 4 Claims. (Cl. 37—1.)

1. In apparatus of the class described the combination with a tractionally mounted frame, a crank-shaft having thereon a plurality of cranks, a pick-arm journalled on each of said cranks, means whereby said crank may be yieldingly held against longitudinal movement in one direction in said pick arm, a fulcrum frame, means to locate said fulcrum frame in various vertical positions on and with relation to said tractionally mounted frame, a fulcrum roll in said fulcrum frame adapted to normally support said pick-arm intermediate its ends as it oscillates and reciprocates in response to the movement of said crank, a pick on said pick-arm, and means to rotate said crank-shaft at various rotational speeds.

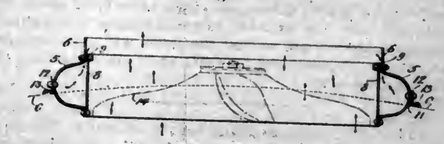
1,750,587. OFFSET-PRINTING MACHINE. FERDINAND FISCHER, Berlin, Germany. Filed Mar. 21, 1928, Serial No. 263,841, and in Germany Apr. 16, 1927. 11 Claims. (Cl. 101—217.)



1. An offset printing machine in which the printing is effected by an offset roll and an impression roll and between which rolls the paper is to be fed, comprising, in combination with said rolls, means for collecting said sheets after passing between said rolls, and means on said offset roll for guiding said sheets into said collecting means.

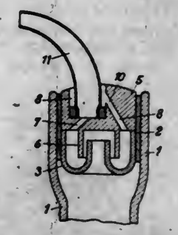
1,750,588. FASTENER FOR WOMEN'S APPAREL. HELEN M. GILMORE, New York, N. Y. Filed Apr. 13, 1928. Serial No. 269,632. 1 Claim. (Cl. 24—73.)

In combination with a garment having a shoulder portion, of a ribbon-holding device including disks adapted to be attached to the shoulder portion in spaced relation to each other, flexible prongs projecting from the periphery of each disk to be pushed through the fabric of the shoulder portion and bent back on the body part of the disk to fasten detachably the disk to the fabric, one of said disks comprising a member of a snap-fastener, a chain secured at one end to the other disk, and a third disk secured to the free end of the chain and comprising the complementary member of the snap-fastener, said chain and the adjacent fabric of the shoulder portion forming a loop between the disks attached to the shoulder portion when the two disks forming the snap-fastener are mutually engaged, said loop so formed operating to hold in place, a ribbon passing therethrough.



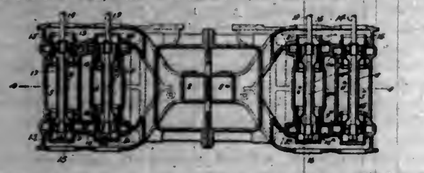
1,750,589. AUTOMATIC LATHE CONTROL. WILLIAM F. GROENE, Cincinnati, Ohio, assignor to The R. R. Le Blond Machine Tool Company, Cincinnati, Ohio, a Corporation of Delaware. Filed Nov. 30, 1927. Serial No. 236,831. 12 Claims. (Cl. 82—2.)

1. In a machine tool, a control mechanism comprising a shaft for controlling rapid drive, a shaft for controlling work drive, clutches operable by reciprocation of said shafts for rapid and work drives respectively, and means operated by the machine tool for alternately reciprocating said shafts, said means comprising cylindrical cams about said shafts, rotatable but not slidable thereon, members having substantially fixed position against movement with said shafts, and arranged, when actuated, to engage said cams, means for rotating the cams, and a timing mechanism adapted to actuate said members.



8. In a control device for machine tools, a member to be moved, a rock shaft, a double cam on the member to be moved, double cam engaging means on the rock shaft, means to rock the said shaft so that one of the cam engaging means engages one of the cams selectively depending upon the direction in which the shaft is rocked, means to rotate said cams so as to force the member to be moved into a desired path of motion when the engaging means are effective, said cams arranged to force the cam engaging means out of engagement at the end of an operation, thus rocking the shaft, and a locating device for said shaft arranged to hold said rock shaft resiliently against movement in four positions, i. e. when in the position of being rocked into engagement with either of the cams, and when rocked out of engagement by either of the cams, said means comprising a notched sector and an engaging member therefor having terminal notches in which the engaging member rests to secure the shaft in cam engagement position, and having intermediate partial width notches, in which the engaging member secures the forced out positions, said rock shaft being slidable sufficiently to move the partial width notches alternately into position for engagement with said member.

1,750,590. MUFFLER. CHARLES O. GUERNSEY, Philadelphia, Pa. Filed Dec. 31, 1926. Serial No. 158,260. 2 Claims. (Cl. 137—160.)

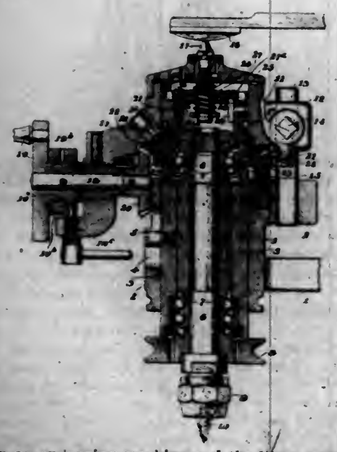


1. Means for discharging the exhaust gases from an internal combustion engine including a U-shaped ring provided with an inlet on its exterior and having upper and lower vertically disposed flanges, the diameter of the lower flange being less than the diameter of the upper flange, a cylindrical band mounted inside of the said ring and secured to said flanges to produce an unobstructed annular chamber, the exterior of the band being spaced from the upper flange so as to provide a substantially unobstructed circumferential outlet for the chamber, and a rotary fan disposed centrally within the said ring and adapted to create an up-draft therethrough, said inlet being substantially tangential to said cylindrical band.

1,750,591. CLOSURE FOR NONREFILLABLE BOTTLES. ALFRED HAFERMANN, Berlin-Lichtenrade, Germany. Filed Aug. 15, 1927, Serial No. 213,128, and in Germany Sept. 6, 1926. 2 Claims. (Cl. 215—15.)

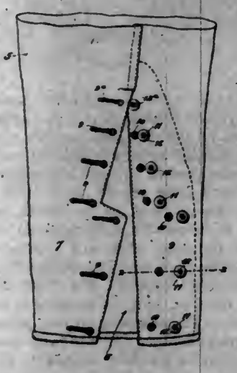
1. A closure for non-refillable bottles comprising in combination an annular dished member inserted in the neck of the bottle, said member having an upwardly extending inner rim, an outer closing member inserted in the neck of the bottle above said annular dished member, an inverted dished member below the said closing member and extending downwardly into the said annular dished member over the inner rim thereof without touching the walls of the dished member, passages in said outer closing member, extending upwardly therein from the part of the bottom thereof outside the said inverted dished member, for allowing the escape of liquid from the bottle and the admission of air thereto when pouring out the contents of the bottle, the inverted dished member below said closing member being adapted to coact with said upwardly extending inner rim so as to trap a quantity of liquid in the annular dished member, sufficient to prevent liquid being poured into the bottle, through said passages, as set forth.

1,750,592. TWIN VALVE FOR LOCOMOTIVES. LAWRENCE W. HANCE, Philadelphia, Pa. Filed Nov. 28, 1928. Serial No. 322,542. 3 Claims. (Cl. 121—193.)



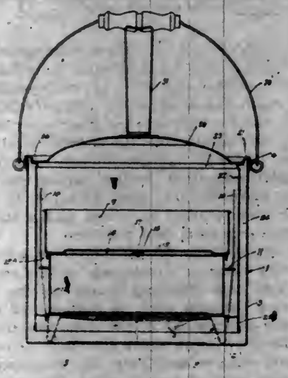
3. The combination in a locomotive, of a cylinder; a piston therein; two valve chambers arranged side-by-side and communicating with the cylinder, one of said valve chambers being a steam inlet chamber and the other being an exhaust chamber; two reciprocating valves in each valve chamber; and an exhaust passage extending past the ends of each of said valves, the steam valve being closed at each end, and the exhaust valve having a longitudinal passage therethrough, so that the steam will pass through the exhaust chamber and its valve and from either end of the steam chamber.

1,750,593. HYDROPNEUMATIC GLIDER. REIDAR HAUGAN, White Sulphur Springs, W. Va. Filed Mar. 26, 1929. Serial No. 350,042. 1 Claim. (Cl. 114—67.)



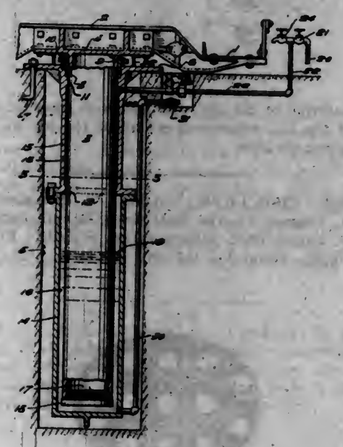
A glider of the character described comprising opposed side walls having a portion of their lower ends turned inwardly, said portions being remote from the forward end of each side wall and terminating in vertical upturned ends, a bottom wall connecting the upturned end and the forward lower edges of the side walls, an upwardly and downwardly curved air conducting tube extending from the front of the glider and terminating under the rear thereof, and an upper wall connecting the forward portions of the upper end of the side plates and having a downturned rear end portion connected to the tube for supporting same.

1,750,594. ENGRAVING MACHINE. PETER M. HENKES, Racine, Wis., assignor to George Gorton Machine Company, Racine, Wis., a Corporation of Wisconsin. Filed Jan. 25, 1928. Serial No. 249,410. 11 Claims. (Cl. 90—13.)



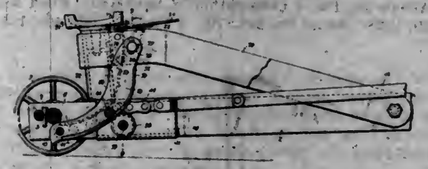
1. In an engraving machine and the like; a cutter head, a non-rotary barrel slidably confined thereto; a rotary cutter spindle carried by said barrel and adapted to carry and drive a cutter; feed mechanism for feeding the barrel to carry the cutter toward and from the work; and a cutter depth stop mechanism embodying manually actuated adjusting means and annular stop members arranged in said barrel concentric with the axis of the cutter spindle and cooperating with the barrel and supported independently of said spindle.

1,750,595. ADJUSTABLE RIDING-BREECHES LEG. JOHN K. HICKS, El Paso, Tex. Filed Apr. 1, 1929. Serial No. 351,735. 3 Claims. (Cl. 2—228.)



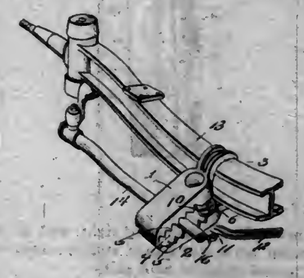
1. An adjustable riding breeches leg having a slit extending upwardly from its lower end, the leg portion at one side of said slit being provided with a row of button holes, the leg portion at the other side of said slit being provided with a plurality of rows of small openings, said small openings being horizontally spaced apart distances which gradually decrease from the lower towards the upper end of the slit, one set of buttons having eyes insertable through said small openings of any of said rows, and one set of fasteners insertable through said eyes at the interior of the leg, said button-holes being co-operable with said buttons when the latter are engaged with any of said rows of small openings.

1,750,596. STEAMER COOKER. LOUIS J. HOIS, Milwaukee, Wis., assignor to Geuder, Paeschke & Frey Company, Milwaukee, Wis. Filed May 23, 1927. Serial No. 193,471. 2 Claims. (Cl. 53—2.)



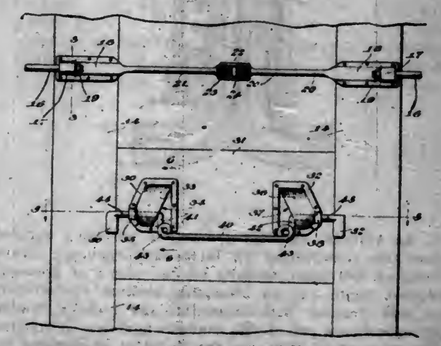
1. A steamer cooker comprising an outer container adapted to hold a quantity of water, a cover for the container and an inner cylinder supported by the cover and forming a steam tight bell-jar therewith, said inner cylinder projecting down into the outer container to a point adjacent the bottom of the container when the cover is placed thereon and said cylinder having restricted openings therein slightly spaced from the lower end thereof for permitting the escape of steam from the bell-jar to the space between the inner cylinder and the outer container when the pressure in the bell-jar is sufficient to lower the water level in the container to a point opposite said openings.

1,750,597. AIR-ACTUATED LIFTING DEVICE. EDWARD E. HOLLISTER, Quincy, Ill., assignor to Hollister-Whitney Company, Quincy, Ill., a Corporation of Illinois. Filed Aug. 24, 1926. Serial No. 131,262. 2 Claims. (Cl. 254—93.)



1. A lifting device comprising a cylinder, a plunger reciprocable therein, means for supplying compressed air to the upper portion of the cylinder to actuate the plunger, and a body of liquid contained in the cylinder and displaceable by the plunger into a clearance space surrounding the plunger to expel air from the cylinder.

1,750,598. AUTOMOBILE JACK. ERNEST W. HOLMES, Chattanooga, Tenn., assignor to Ernest Holmes Company, Chattanooga, Tenn. Filed Nov. 2, 1925. Serial No. 66,284. 47 Claims. (Cl. 254—2.)



1. A lifting jack including a frame, a lever, pivotally supported and constructed to carry a load at its free end, elevatable means pivotally connected to said lever adjacent to the free end thereof, means extending longitudinally from the free end of said lever to the opposite end thereof for operating said elevatable means, said elevatable means being curved so as to maintain substantially constant the lifting component of the force applied to said operating means, and means carried by said frame against which said elevatable means cams for changing the direction of movement of said elevatable means.

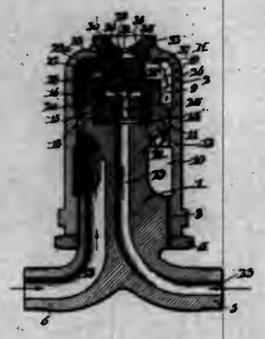
1,750,599. STEERING-GEAR CLAMP FOR TOWED AUTOMOBILES. ERNEST W. HOLMES and EARL E. CLINE, Chattanooga, Tenn., assignors to Ernest Holmes Company, Chattanooga, Tenn., a Corporation of Tennessee. Filed Oct. 16, 1926. Serial No. 142,096. 3 Claims. (Cl. 280—89.)

1. A clamp for holding the steering rod of an automobile immovable with respect to the front axle thereof, comprising upper and lower members adjustably connected intermediately of their ends and having jaws at their ends to engage the steering rod and axle respectively, one jaw of one of said members being relatively broad and the other jaw thereof relatively narrow, said narrow jaw being longitudinally concave and transversely convex on the side thereof confronting the other of said members.

1,750,600. DOOR FOR SILOS. LEVI D. HOUGHTALING, Reading, Pa. Filed Jan. 14, 1929. Serial No. 332,533. 1 Claim. (Cl. 20—1.4.)

A device of the character described comprising a door, spaced brackets secured to the door and provided with cams, a bail having a body portion spaced from the door, legs formed of resilient material and extending inwardly from the body portion and engaged by the cams for moving the inner ends of the legs towards each other when the bail is rocked, an arm projecting laterally from each leg and guided for reciprocation by a bracket, a foot projecting laterally from each arm and provided with a friction pad adapted to engage a fixed support beyond the ends of the door for holding the door to the fixed support, the feet being adapted to be moved out of engagement with the support when the bail is rocked.

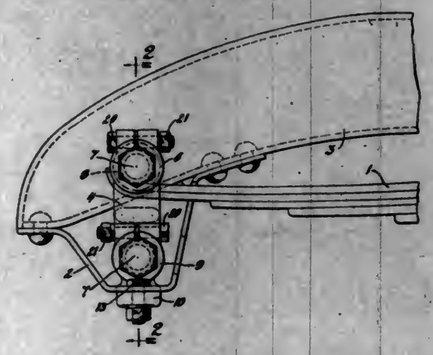
1,750,601. INSTRUMENT PANEL. DON E. KEENEY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Sept. 26, 1927. Serial No. 222,116. 4 Claims. (Cl. 248—30.)



1. In an instrument mounting, a supporting strip provided with an aperture serving as an observation opening,

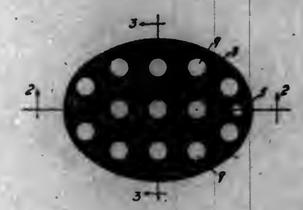
a locating cover secured by means extending through said aperture and provided with a cylindrical flange which has

a slot for permitting entrance of light, and an instrument case connected with said flange and provided with light-admitting means opposite said slot.



1,750,602. DEVICE FOR VAPORIZING LIQUIDS. JAMES D. LALOR, Baltimore, Md., assignor, by mesne assignments, to The Fluid Heat Company. Filed Feb. 18, 1925. Serial No. 10,048. 7 Claims. (Cl. 299—140.)

1. An atomizer embodying members providing opposed concavities constituting an interacting chamber, means serving as individual conduits for the supply of pressure-delivered liquid and an atomizing medium concurrently into said chamber with tangential and radially inward flow respectively, one of said conduits having a constricted orifice adapted to discharge the liquid at accelerated velocity, and the other of said conduits being adjustable to control the radially-inward flow of the atomizing medium into said chamber whereby the liquid is thoroughly vaporized and discharges as a tangentially-expanding combustible mist from the atomizer.

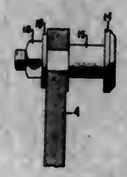


1,750,603. SPRING SHACKLE. EDWIN GEORGE LANE, Pontiac, Mich., assignor to Yellow Truck and Coach Manufacturing Company, Pontiac, Mich., a Corporation of Maine. Filed Nov. 7, 1927. Serial No. 231,568. 7 Claims. (Cl. 267—54.)

1. In a pivot joint, the combination with a pair of split ears and a member interposed therebetween, of a nut carried in one of the ears and having an axial groove in its periphery, an adjustable element connecting the split ends of said ear to contract the ear about the nut and hold it against movement, a key carried by said element and projecting into said axial groove to hold the nut against rotation but permit its axial sliding movement in the ear when the split ends are expanded, a pivot pin extending thru the other of said ears and the member into threaded engagement with the nut whereby to move the nut axially

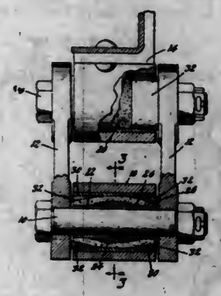
upon rotation of the pin, and means to contract the split ends of the last mentioned ear about the pin to hold the pin against rotation.

1,750,604. FISH LURE. CHARLES T. PFLUEGER, Akron, Ohio, assignor to The Enterprise Manufacturing Company, Akron, Ohio, a Corporation of Ohio. Filed June 23, 1926. Serial No. 117,990. 1 Claim. (Cl. 43—45.)



A fish lure having a surface of bright reflecting metal overlaid with a comparatively dull coating except in a plurality of isolated spots, at which points the bright reflecting metal is exposed to afford a plurality of separated and isolated shafts of reflected light.

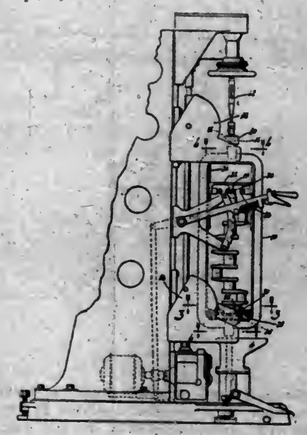
1,750,605. EMBLEM HOLDER. CHARLES S. PRICE, Bethlehem, Pa., assignor to L. F. Grammes & Sons, Inc., Allentown, Pa., a Corporation of Maryland. Filed Aug. 29, 1928. Serial No. 302,770. 4 Claims. (Cl. 40—125.)



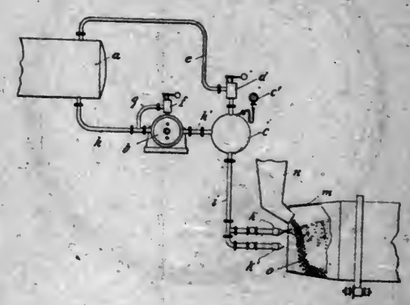
1. A holder for sustaining objects such as plate emblems comprising opposing clamp members, one to directly engage one edge of the emblem, a supplemental member adapted to interlock with the other clamp member and to engage the opposite edge of the emblem, and means operable to draw the two clamp members together in effecting concurrent gripping of the emblem and securing of the holder to a support.

1,750,606. DRIVING-ROD CONNECTION FOR LOOM LET-OFF MECHANISM. THOMAS E. REID, Concord, N. C., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 23, 1928. Serial No. 314,445. 3 Claims. (Cl. 139—100.)

1. In a let-off mechanism for looms, a rocker arm having a polygonal aperture in its free end, a pallet lever, a driving rod pivoted at one end to the pallet lever and having a longitudinally slotted casting at the other end, a steel stud having a head, a cylindrical shank and a polygonal end fitting the aperture in the arm, and means for detachably securing the stud in the end of the rocker arm with the casting guided between the arm and the head of the stud and with the slot riding in the shank of the stud.



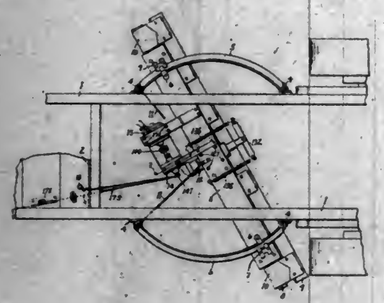
1,750,607. SPRING SHACKLE. CHARLES R. SHORT, Dayton, Ohio, assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 9, 1926. Serial No. 100,891. 6 Claims. (Cl. 267—54.)



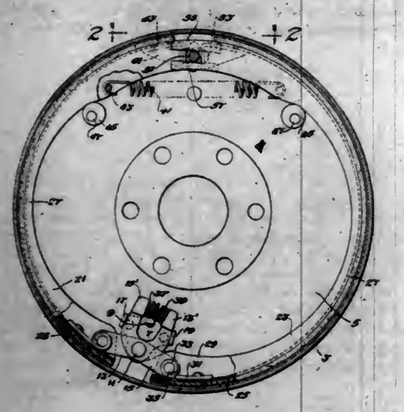
1. A joint comprising a plurality of relatively movable concentric members, a rubber bushing having a wall of uniform dimension throughout interposed between said members, and cooperating wedge devices on respective members adapted to force said bushing into gripping engagement with the members.

1,750,608. BALANCING-MACHINE FIXTURE. CALEB E. SUMMERS, Pontiac, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 2, 1927. Serial No. 188,384. 6 Claims. (Cl. 73—51.)

1. A balancing machine fixture consisting of a balanced holder adapted to receive an article to be balanced, said holder being adapted for mounting in a balancing machine, and having parts adapted for engagement with parts of the machine to indicate the state of balance of the assembled article and fixture, said holder being provided with spaced members receiving the article between them, one of the members being adjustable to permit the reception of articles of different sizes.



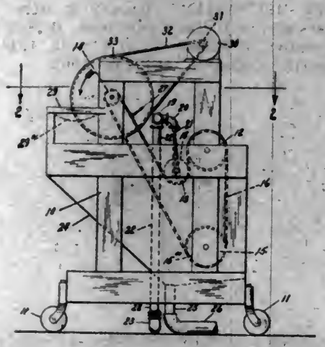
1,750,609. APPARATUS FOR BINDING PULVERULENT FUEL. JOHANNES TÜRKE, Beuthen, Germany, assignor to Emil Kleinschmidt, Frankfort-on-the-Main, Germany. Filed May 24, 1928, Serial No. 280,341, and in Germany Aug. 9, 1926. 1 Claim. (Cl. 44—02.)



Apparatus for applying liquid binder to pulverulent fuel comprising a supply tank for the liquid binder, a pump, a conduit connecting the tank and pump, a by-pass between the pump and conduit, a relief valve controlling said by-pass, a pressure tank, a supply connection between the pump and pressure tank, a return pipe connecting the pressure tank and supply tank, a relief valve controlling said return pipe, a spray nozzle in connection with said pressure tank, and means for directing an exposed flow of the pulverulent fuel into the spray issuing from said nozzle.

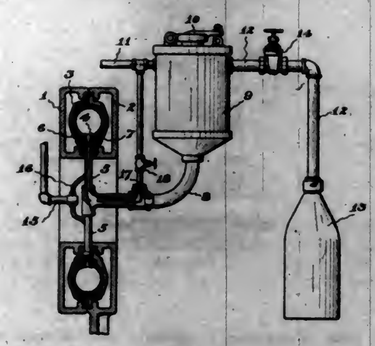
1,750,610. ROAD SCRAPER. ERNEST A. WEEKS, Kalamazoo, Mich., assignor to Root Spring Scraper Company, Kalamazoo, Mich. Filed Dec. 7, 1928. Serial No. 324,442. 4 Claims. (Cl. 37—155.)

3. The combination of a motor truck, a hanger board therefor, a scraper on a rockshaft carried by the hanger board, an electric motor supported on the said hanger board, and power connections from the motor for operating the said scraper, as specified.



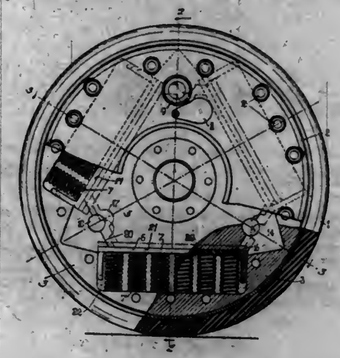
1,750,611. INTERNAL BRAKE. LLOYD BLACKMORE, Highland Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 30, 1927. Serial No. 236,766. 10 Claims. (Cl. 188—78.)

1. In a brake, a drum, brake means to frictionally engage the drum, actuating means therefor, a rock shaft carrying said actuating means, means on the adjacent ends of said brake means to support said rock shaft.



1,750,612. VEGETABLE WASHER. CHARLES L. DALLINGA, Akron, Ohio. Filed Jan. 16, 1929. Serial No. 332,814. 8 Claims. (Cl. 146—194.)

1. A vegetable washer comprising a belt from which water may drain to effectively carry dirt therefrom, means over which the belt is trained to form a pocket therein to receive and support the vegetables, means for directing a spray into the pocket, means to drive the belt whereby the vegetables will be tumbled or rotated in the pocket while sprayed, conveying lug means so mounted on the



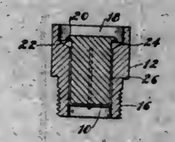
belt as to pass through said pocket at intervals to remove the washed vegetables from the pocket after repeated tumbling of the vegetables therein, a tray having a draining bottom to receive the washed vegetables from the belt, and a drain pan under the pocket and tray.

1,750,613. APPARATUS AND METHOD OF VULCANIZATION. HAROLD A. DENMIRE, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 26, 1927. Serial No. 194,280. 7 Claims. (Cl. 18—2.)

7. Means for expanding tire casings during vulcanization that consists in an air-tight container adapted to receive finely divided solid material, a mold for receiving a tire casing, a sealing ring interposed between the bead portions of the casing and having a plurality of distributed apertures therethrough, means connecting the container with each of the apertures, pressure supply apertures formed in said sealing ring intermediate said communicating apertures, means for supplying fluid pressure to the interior of said casing through said intermediate apertures for removing the finely divided material from the tire casing, and collecting means in communication with said container for collecting the finely divided material.

1,750,614. RESILIENT WHEEL. HENRY ASPDEN HOWSON, Osbaldeston, near Blackburn, England. Filed July 13, 1929, Serial No. 378,072, and in Great Britain June 18, 1928. 2 Claims. (Cl. 152—28.)

1. In a resilient wheel having a cylindrical outer casing and a floating center plate, the combination of sliding box elements guided in said outer casing for movement in a respective radial direction of said wheel, springs located between said box elements and said outer casing and operating to oppose outward radial movement of the respective box elements, said box elements and center plate having sliding surfaces to permit relative movement thereof in a direction at a respective right angle to the permitted radial movement of said box elements.



1,750,615. ELECTRIC-CIRCUIT-CONTROL APPARATUS. JOHN E. LONG, Multnomah, Oreg. Filed June 14, 1928. Serial No. 285,306. 9 Claims. (Cl. 200—46.)

1. In circuit control apparatus of the character described, including a container adapted to hold a body of electrically conductive liquid and devices for guiding a non-conducting tape element into such container, thru such body, and out of such container, the combination

therewith of a wiper for such tape arranged at a side of the path of such tape near the point where it leaves the container.

1,750,616. BURNER FOR NATURAL GAS. PHILIP W. McCOY, Toledo, Ohio, assignor to The Surface Combustion Company, Inc., Toledo, Ohio, a Corporation of New York. Filed Jan. 10, 1929. Serial No. 331,541. 6 Claims. (Cl. 158—99.)

5. A gas burner for premixed gas comprising a cylindrical plug, a tubular body within which said plug is supported in concentrically spaced relation to provide an annular feed passage for the gaseous mixture to be burned, a radial baffle on said plug against which the mixture impinges upon issuing from said feed passage, and a relatively shallow well within which said baffle is positioned in spaced relation with respect to the sides and bottom of the well, the bottom of the well sloping upwardly and outwardly from beneath said baffle, and the underside of said baffle being curved outwardly and downwardly so as to tend to direct the impinging mixture downwardly against the bottom of the well.

Patents Nos. 1,750,617 to 1,751,460

United States Patent Office

Vol. 392—No. 3 TUESDAY, MARCH 18, 1930 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adjudicated Patents

(C. C. A. N. Y.) Moyer patent, No. 1,195,252, for rim tool, claims 1 and 2 *Held* invalid. *General Rim Co.* v. *Firestone Tire & Rubber Co.*, 36 F. (2d) 774.

(C. C. A. N. Y.) Ensign patent, No. 1,506,229, for carburetor, claims 1 and 8 *Held* not infringed. *Ensign Carburetor Co.* v. *Zenith-Detroit Corporation*, 36 F. (2d) 684.

(C. C. A. Minn.) Wheaton patent, No. 1,586,764, for method of manufacturing water-softening compounds, claims 6 and 19 *Held* valid and infringed, claim 7 *Held* invalid. *American Dowell Co.* v. *Twin City Water Softener Co.*, 36 F. (2d) 673.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,435,249, T. G. Martin, Automatic telephone system, decided January 3, 1930, claim 4.

Pat. 1,612,473, E. G. Shalkhauser, Variable condenser, decided December 20, 1929, claims 1, 2, 3, and 4.

Pat. 1,665,434, A. C. Bennett, Air cleaners for carburetors, decided January 24, 1930, claim 1.

Pat. 1,675,002, P. H. Steiner, Fuel burner, decided January 28, 1920, claims 1, 2, 3, 4, 9, 10, 11, 12, 17, 18, 19, and 20.

Pat. 1,723,852, J. T. Hohberger, Overhead railway, decided February 7, 1930, claim 1.

Final decisions in interference have been rendered against the following trade-marks:

T. M. 235,228, Hosiery, aprons, dresses, etc., A. B. Eggers, Huntington Park, Calif. Registered November 15, 1927. Decided January 24, 1930.

T. M. 246,606, Shirts, M. H. Raab Co., Philadelphia, Pa. Registered September 11, 1928. Decided January 17, 1930.

Trade-Marks Canceled

142,043. Nonalcoholic, maltless beverage. Howard P. Miller, Cincinnati, Ohio. Registered May 3, 1921. Canceled February 21, 1930.

178,507. Radio receiving and transmitting sets and parts thereof. Baldwin Radio Electrical Manufacturing Co., Inc., Brooklyn, N. Y. Registered January 15, 1924. Canceled February 21, 1930.

238,785. Candy laxative. Purette Products Company, Logan, Utah. Registered February 14, 1928. Canceled February 21, 1930.

250,145. Piston rings. Osborne P. Sells, doing business as Double Seal Ring Company, New York, N. Y. Registered November 27, 1928. Canceled February 21, 1930.

260,294. Ladies' shoes. Johnson-Stephens & Shinkle Shoe Company, St. Louis, Mo. Registered August 20, 1929. Canceled February 21, 1930.

Suggestion for Use of Coupons

The execution of orders for printed copies of U. S. patents, trade-marks, etc., will be considerably expedited if coupons are used. Such coupons may be purchased at the Patent Office in lots of 20 at $2.00 and 100 at $10.00.

Coupon orders do not have to be accompanied by letters of transmittal. They require nothing but the filling in of the patent number, the name of the inventor, the date of issue, and the name and address of the party desiring the service.

Condition of Applications Under Examination at Close of Business March 7, 1930

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 116,672; Trade-Mark Division, 1,523. Oldest new case, May 6, 1929; oldest amended, May 1, 1929. The dates given are 1929 except where † indicates 1930.) CARNEGIE LIBRARY OF ATLANTA

DECISIONS IN PATENT AND TRADE-MARK CASES

Supreme Court of the United States

MINERALS SEPARATION NORTH AMERICAN CORPORATION *v.* MAGMA COPPER COMPANY

No. 71. Decided February 24, 1930

1. PATENTABILITY—ANTICIPATION—PRIOR PATENT—WHAT IS TO BE CONSIDERED.

In considering whether a patent is anticipated by a prior patent the question is not what is the precise scope of the claims of the prior patent, but what is disclosed in the specification and made known to the world.

2. SAME—EXTENSIVE USE.

"The petitioner adverts to the success that has attended the later patent and to the fact that the world waited until it appeared. But interlopers naturally would be slow to venture into the field occupied by a powerful company armed with Patent No. 835,120 and supported by a subtle ingenuity that we can not doubt would have been exercised with even more effect to show that a process like that in No. 962,678 was an infringement than it now is to prove that the later patent was a revelation that transformed the art."

3. SAME.

Sulman et al. Patent No. 962,678 for ore concentration, claims 1 and 2 *Held* invalid.

ON WRIT of certiorari to the United States Circuit Court of Appeals for the First Circuit.

Mr. Henry D. Williams, Mr. William Honston Kenyon, Mr. Lindley M. Garrison, Mr. Frederic D. McKenney, and *Mr. Sidney St. F. Thaxter* for Minerals Separation North American Corporation.

Mr. William H. Davis and *Mr. Morton W. Sage* for Magma Copper Company.

Mr. Justice HOLMES delivered the opinion of the Court.

This is a suit for the infringement of Letters Patent, No. 962,678, claims 1 and 2, brought by the petitioner in the District Court of Maine, where the petitioner prevailed (23 F. (2d) 931,) the Court acting partly in deference to the decision of the Circuit Court of Appeals for the Third Circuit in *Miami Copper Co.* v. *Minerals Separation, Ltd.*, 244 F. 752. The decision of the District Court was reversed by the Circuit Court of Appeals for the First Circuit, 30 F. (2d) 67, and because of the conflict with the third circuit, a writ of certiorari was granted by this Court.

The claims are (1) for a "process of concentrating ores which consists in mixing the powdered ore with water containing in solution a small quantity of a mineral frothing agent, agitating the mixture to form a froth and separating the froth," and (2) the same as (1) except that it inserts the word "organic" before "mineral frothing agent." The only defence that it is necessary to consider is that the disclosure is anticipated by the earlier patent, No. 835,120, which has been before this Court in *Minerals Separation, Ltd.*, v. *Hyde*, 242 U. S. 261, 234 O. G. 1311, and *Minerals Separation, Ltd.*, v. *Butte & Superior Mining Co.*, 250 U. S. 336, 264 O. G. 701. It is enough to refer to those cases without repeating them. The process described in 835,120—

consists in mixing the powdered ore with water, adding a small proportion of an oily liquid having a preferential affinity for metalliferous matter, (amounting to a fraction of one per cent on the ore), agitating the mixture until the oil coated mineral matter forms into a froth, and separating the froth from the remainder by flotation.

The specification describes the object as being to separate metalliferous matter, etc., from gangue by means of oils, fatty acids, "or other substances which have a preferential affinity for metalliferous matter over gangue." It refers to a previous patent to Cattermole by which a considerable amount of oil is used to form granules, and announces the discovery that if the proportion of oily substance is reduced to, say, a fraction of 1 per cent on the ores, granulation ceases to take place, and on vigorous agitation the ore instead of sinking forms a froth on the surface that can be removed. The process is helped by the addition of a little acid, by warming and the fine pulverization of the pulp.

The petitioners, admitting that both patents are for processes, say that they are fundamentally different in their respective principles of action; that in the present patent, 962,678, the mineral frothing agent is dissolved in the water and produces the metal bearing bubbles, no one knows exactly how, by "modifying the water"; whereas in the earlier, 835,120, oil is used which does not dissolve in the water but coats the particles of metal with a thin coating of oil, which it could not do if it were soluble, and thus shows its preferential affinity when shaken up with the metal pulp.

The question is not what is the precise scope of the claims in 835,120, but what is disclosed in the specification and made known to the world. *Alexander Milburn Co.* v. *Davis-Bournonville Co.*, 270 U. S. 390; 344 O. G. 817. Therefore we are relieved of the inquiry whether the words "oily liquid" in claim (1) can be read as a shorthand expression for the previously mentioned oils "and other substances which have a preferential affinity for metalliferous matter over gangue," as "oil" was expressly interpreted in earlier patents, including one to Cattermole referred to at some length in 835,120, and as there is evidence that it thus was understood by men skilled in the art. It is disclosed that it was well known there were other substances besides oil that had the preferential affinity and that could be used. The nature of the affinity is not specified and it cannot be confined to the kind of action shown by oil. It is neither said nor implied that the added element must be insoluble or that it must coat the metal, although it is assumed in accordance with the prevailing theory that the metal will be coated when the oil mentioned in the claims is used. All that is required is that in some effective way the other substance should pick the metal out. It is said that oil does it by coating the metal particles and that of course a substance in solution could not do that. There is no

"of course" as to what nature can do, except as proved by observation and experiment. A substance in solution can combine chemically with another and become a solid. Whether a given thing will unite mechanically or whether by its presence it will promote an activity in which it does not share, it is to be found out by trial not by reasoning, and the petitioner agrees that in this case we do not know. It is a matter of reasoning rather than of observation that the oil coats the mineral particles. The experts differ whether the same thing does not take place when a soluble substance is used. But we agree with the defendant's argument that no one concerned in this business would care a straw as to the intimate nature of the action if it produced the result, and that No. 835,120 was not describing the work of insolubles alone. It was not attempting to anticipate a theory of the invisible, but to tell how the practical end could be achieved with any of the different things named.

The discovery was that a very minute portion of the oil worked in an unexpectedly different way from that familiar with larger quantities—not in the matter of coating the particles, but in helping to produce a froth that floated instead of granules that sank, and thus in preserving the slime made by the smaller particles with the water, and so saving a large proportion of metal that otherwise would have been lost. The fact was a general one. No particular oil was mentioned and the fact was not confined to oils. The public was directed to make a "simple preliminary test to determine which oily substance yields the proportion of froth or scum desired". The patent having been held good as to the oils although experiment was necessary to find out what oil would work best with a given ore the disclosure was an anticipation although experiment might be necessary to choose among the substances having the required affinity the one that would produce the best result.

The petitioner adverts to the success that has attended the later patent and to the fact that the world waited until it appeared. But interlopers naturally would be slow to venture into the field occupied by a powerful company armed with Patent No. 835,120 and supported by a subtle ingenuity that we cannot doubt would have been exercised with even more effect to show that a process like that in No. 962,678 was an infringement than it now is to prove that the later patent was a revelation that transformed the art.

Decree affirmed.

U. S. Court of Customs and Patent Appeals

IN RE GILL

No. 2,176. Decided December 19, 1929

PATENTABILITY—THE METHOD OF ASSEMBLING INTERNAL-COMBUSTION ENGINES.

Claims for the method of assembling internal-combustion engines in which the pistons are mechanically clamped in a common vertical plane *Held* anticipated by the prior art in which the pistons were held in place by hand.

APPEAL from the Patent Office. Affirmed.

Mr. W. B. Kerkham and *Mr. F. B. Smith* for Gill.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from a decision of the Board of Appeals affirming the decision of the Examiner denying all claims in appellant's application for a patent for an alleged invention relating to a method of assembling "certain major units" of internal-combustion engines, during manufacture, including the crank case, crank shaft, pistons, connecting rods, and cylinder blocks.

Claims 1, 4, and 9 are illustrative and read as follows:

1. The method of assembling internal combustion engines which consists in first placing the crank shaft in its bearings in the crank case of said engine, then securing the connecting rods and pistons to the crank shaft, then mechanically clamping all the pistons in a common vertical plane, then lowering the cylinder block to the crank case while mechanically guiding the cylinders in a predetermined, fixed path over the pistons.

4. The method of assembling the cylinder blocks and crank cases in internal combustion engines which consists in first securing the crank case in position to receive the cylinder block, then suspending the cylinder block over the crank case, then mechanically securing the pistons in the vertical plane of the cylinder block and securing the crank shaft in its corresponding position, then in lowering and mechanically guiding the block into position on the crank case over the pistons and vibrating the block during the lowering thereof.

9. The method of assembling the pistons in the cylinder block of an internal combustion engine which consists in arranging the pistons in a common axial plane and a pair of parallel planes at right angles thereto, then compressing the rings of said piston in the grooves thereof, then mechanically clamping the pistons to retain them in position and to retain said rings in their grooves, then alining the cylinder blocks in the axial plane of the pistons, and then moving the cylinder block into cooperation with the pistons while mechanically maintaining said alinement.

The application of appellant also discloses an apparatus for carrying out the alleged novel process. The apparatus, however, is not involved in this appeal. With reference to the prior art, appellant states in his application that:

In the assembly of these engines as heretofore practiced, it has been customary to lower such cylinder blocks over the pistons toward the crank case either by hand, or by the use of an ordinary chain block. As the heavy casting was lowered, the pistons, secured to their respective connecting rods on the engine crank shaft, were individually started into their proper cylinders in the cylinder block, the rings on each of the pistons being compressed in turn, as necessary. In this process of handling the work, there is no adequate control over motions of the cylinder block, especially lateral motions thereof. As a result, pistons have frequently stuck in their cylinders, because of difficulty in adequately compressing the rings in their grooves and for other reasons, and it has not been uncommon practice to pull and shake the cylinder block, and even to rap it with a hammer, in an endeavor to free a stuck piston. Such practices result in more or less lateral motion of the block with respect to the crank case, and as will be readily understood, such lateral motion puts a tremendous strain upon the rods and bearings of those pistons that are already engaged in their cylinders, and rods were frequently sprung and bent, and bearings distorted and cracked for this reason.

Appellant was allowed certain claims in his divisional application for an apparatus patent.

It appears from the record that prior to the invention of appellant's apparatus, the pistons were secured to their respective connecting rods, the piston rings were held in position by compression clamps, and the cylinder block, suspended over the pistons, was lowered "either by hand, or by the use of an ordinary chain block." The cylinder block was held in place or guided by workmen as it approached the crank case and the pistons were held and inserted into the cylinders by other workmen. Frequently, because of the inability of the workmen to hold it precisely in its predetermined plane, the cylinder block moved laterally as the pistons were being inserted causing one or more of them to "stick" in the cylinders. The strain thus placed upon the rods and bearings caused injury to them. In an effort to overcome these difficulties the cylinder block was sometimes shaken or struck with a hammer in order to cause it to vibrate.

The apparatus disclosed by appellant provides a means for mechanically clamping and holding the pistons in the desired positions. The cylinder block is not only mechanically guided in its descent to the crank case, but it is, also, mechanically vibrated as it comes in contact with the pistons. These mechanical operations save time and effort, prevent the pistons sticking in the cylinders, and, also, prevent injury to the connecting rods and bearings.

In denying the process claims of appellant, the Board of Appeals, among other things, said:

• • • Stating the ground of rejection broadly it is that the essential steps of the claimed method are old in the procedure followed in assembling pistons in cylinder blocks as set forth on pages 3 and 4 of appellant's specification. In the memorandum filed with the request for rehearing it is pointed out that the prior art does not disclose the step incinded in certain of the claims of "clamping all the pistons in a common vertical plane" or guiding the cylinder block while lowering the same in a predetermined rectilinear path." The point is also made that the limitation to "vibrating" the cylinder block "within fixed limits" and included in certain claims is not disclosed in the prior art. But the prior art procedure was attempting to do these things although not with entire success. Thus when the pistons were moved to vertical positions under the cylinder block they were held there as rigidly as they could be manually and the only difference between appellant's method and the prior art so far as holding the pistons in an upright position is concerned is the difference between holding a thing manually and holding it by a machine. The same situation exists with respect to the lowering of the cylinder block in a predetermined rectilinear path. Obviously, that is the way in which the block would be lowered in prior art procedure so far as it was possible to guide the block in its lowering movement manually. Here again there is no new conception so far as a method is concerned but only the selection or invention it may be of a better apparatus for controlling the lowering movement. Touching the limitation in some of the appealed claims to vibrating the cylinder block "within fixed limits" the prior art procedure as acknowledged in appellant's specification was to rap the cylinder block with a hammer when the piston stuck in the cylinder. So far as the vibrating step is concerned this is merely a refinement based on the particular machine employed to effect the vibration.

If the process disclosed by appellant is novel, he is entitled to be protected by the patent. If, on the contrary, as held by the Board of Appeals, the claimed process is old, and the invention of a new and improved apparatus is appellant's sole contribution to the art, he is not entitled to a patent and the decision of the Board of Appeals should be affirmed.

It is contended by counsel for appellant that prior to the use of the method disclosed in appellant's application, it was impossible to control the lateral motions of the cylinder block as it came in contact with the pistons, and that, as a consequence, the cylinders, rods, and bearings were sometimes injured; that no one had "conceived the possibility of rigidly clamping the pistons in position to facilitate" their insertion into the cylinders, and that the old method of inserting them by hand was a time-consuming "diddling and fiddling" process; that in the old "hand" method of vibrating the cylinder block, it was impossible to secure the precise degree of vibration desired; and that time and money have been saved, and accuracy attained, by the use of appellant's new and improved process.

The Solicitor for the Patent Office concedes that appellant has invented a new and valuable apparatus for assembling internal-combustion engines, but he insists that the claimed process is old.

We think it clearly appears that the difficulties encountered in assembling certain major units of internal-combustion engines by "hand," have been considerably, if not entirely, eliminated by the use of the apparatus invented by appellant. We are unable, however, to accept the view that a novel process has been devised.

The process of lowering the cylinder block and causing it to vibrate as the pistons were inserted in the cylinders is old. Under the alleged novel process the pistons are held in place by clamps; formerly they were held in place by workmen. So, it seems to us, the claimed process is old, and the new and beneficial results are obtained by the means, and not by the process, employed.

We are in accord with the views expressed by the Board of Appeals, and its decision is, therefore, affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE GILL

No 2,177. Decided December 19, 1929

PATENTABILITY—MEANS FOR ASSEMBLING INTERNAL-COMBUSTION ENGINES.

Certain claims for means for assembling internal-combustion engines *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Messrs. Cameron & Kerkham and *Mr. W. B. Kerkham* and *Mr. F. B. Smith* for Gill.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GARRETT, *J.*:

This is an appeal from the action of the Board of Appeals of the Patent Office affirming a decision of the Examiner rejecting claim 6 and claims 11 to 15, inclusive, made by appellant relative to claimed invention or inventions of "improvements in means for assembling internal-combustion engines." It differs from appeal No. 2,176, in that 2,176 constitutes a method application and this one relates to the apparatus.

To express the matter nontechnically, it is the claim of appellant that his structure, taken as a whole, constitutes a device by means of which a great improvement has been wrought over the method of assembling certain parts of automobile engines, which method had been utilized prior to his claimed invention, and which is still utilized in many factories, the function particularly emphasized being that of lowering the cylinder block to the pistons and inserting the pistons into the cylinders.

It is explained that before appellant's structure was devised the customary method was to perform these operations wholly by hand, except that the block might be lowered by means of an ordinary chain block. Workmen stationed at each end would steady and guide the block on its downward

"of course" as to what nature can do, except as proved by observation and experiment. A substance in solution can combine chemically with another and become a solid. Whether a given thing will unite mechanically or whether by its presence it will promote an activity in which it does not share, it is to be found out by trial not by reasoning, and the petitioner agrees that in this case we do not know. It is a matter of reasoning rather than of observation that the oil coats the mineral particles. The experts differ whether the same thing does not take place when a soluble substance is used. But we agree with the defendant's argument that no one concerned in this business would care a straw as to the intimate nature of the action if it produced the result, and that No. 835,120 was not describing the work of insolubles alone. It was not attempting to anticipate a theory of the invisible, but to tell how the practical end could be achieved with any of the different things named.

The discovery was that a very minute portion of the oil worked in an unexpectedly different way from that familiar with larger quantities—not in the matter of coating the particles, but in helping to produce a froth that floated instead of granules that sank, and thus in preserving the slime made by the smaller particles with the water, and so saving a large proportion of metal that otherwise would have been lost. The fact was a general one. No particular oil was mentioned and the fact was not confined to oils. The public was directed to make a "simple preliminary test to determine which oily substance yields the proportion of froth or scum desired". The patent having been held good as to the oils although experiment was necessary to find out what oil would work best with a given ore the disclosure was an anticipation although experiment might be necessary to choose among the substances having the required affinity the one that would produce the best result.

The petitioner adverts to the success that has attended the later patent and to the fact that the world waited until it appeared. But interlopers naturally would be slow to venture into the field occupied by a powerful company armed with Patent No. 835,120 and supported by a subtle ingenuity that we cannot doubt would have been exercised with even more effect to show that a process like that in No. 962,678 was an infringement than it now is to prove that the later patent was a revelation that transformed the art.

Decree affirmed.

U. S. Court of Customs and Patent Appeals

IN RE GILL

No. 2,176. Decided December 19, 1929

PATENTABILITY—THE METHOD OF ASSEMBLING INTERNAL-COMBUSTION ENGINES.

Claims for the method of assembling internal-combustion engines in which the pistons are mechanically clamped in a common vertical plane *Held* anticipated by the prior art in which the pistons were held in place by hand.

APPEAL from the Patent Office. Affirmed.

Mr. W. B. Kerkham and *Mr. F. B. Smith* for Gill.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from a decision of the Board of Appeals affirming the decision of the Examiner denying all claims in appellant's application for a patent for an alleged invention relating to a method of assembling "certain major units" of internal-combustion engines, during manufacture, including the crank case, crank shaft, pistons, connecting rods, and cylinder blocks.

Claims 1, 4, and 9 are illustrative and read as follows:

1. The method of assembling internal combustion engines which consists in first placing the crank shaft in its bearings in the crank case of said engine, then securing the connecting rods and pistons to the crank shaft, then mechanically clamping all the pistons in a common vertical plane, then lowering the cylinder block to the crank case while mechanically guiding the cylinders in a predetermined, fixed path over the pistons.

4. The method of assembling the cylinder blocks and crank cases in internal combustion engines which consists in first securing the crank case in position to receive the cylinder block, then suspending the cylinder block over the crank case, then mechanically securing the pistons in the vertical plane of the cylinder block and securing the crank shaft in its corresponding position, then in lowering and mechanically guiding the block into position on the crank case over the pistons and vibrating the block during the lowering thereof.

9. The method of assembling the pistons in the cylinder block of an internal combustion engine which consists in arranging the pistons in a common axial plane and a pair of parallel planes at right angles thereto, then compressing the rings of said piston in the grooves thereof, then mechanically clamping the pistons to retain them in position and to retain said rings in their grooves, then alining the cylinder blocks in the axial plane of the pistons, and then moving the cylinder block into cooperation with the pistons while mechanically maintaining said alinement.

The application of appellant also discloses an apparatus for carrying out the alleged novel process. The apparatus, however, is not involved in this appeal. With reference to the prior art, appellant states in his application that:

In the assembly of these engines as heretofore practiced, it has been customary to lower such cylinder blocks over the pistons toward the crank case either by hand, or by the use of an ordinary chain block. As the heavy casting was lowered, the pistons, secured to their respective connecting rods on the engine crank shaft, were individually started into their proper cylinders in the cylinder block, the rings on each of the pistons being compressed in turn, as necessary. In this process of handling the work, there is no adequate control over motions of the cylinder block, especially lateral motions thereof. As a result, pistons have frequently stuck in their cylinders, because of difficulty in adequately compressing the rings in their grooves and for other reasons, and it has not been uncommon practice to pull and shake the cylinder block, and even to rap it with a hammer, in an endeavor to free a stuck piston. Such practices result in more or less lateral motion of the block with respect to the crank case, and as will be readily understood, such lateral motion puts a tremendous strain upon the rods and bearings of those pistons that are already engaged in their cylinders, and rods were frequently sprung and bent, and bearings distorted and cracked for this reason.

Appellant was allowed certain claims in his divisional application for an apparatus patent.

It appears from the record that prior to the invention of appellant's apparatus, the pistons were secured to their respective connecting rods, the piston rings were held in position by compression clamps, and the cylinder block, suspended over the pistons, was lowered "either by hand, or by the use of an ordinary chain block." The cylinder block was held in place or guided by workmen as it approached the crank case and the pistons were held and inserted into the cylinders by other workmen. Frequently, because of the inability of the workmen to hold it precisely in its predetermined plane, the cylinder block moved laterally as the pistons were being inserted causing one or more of them to "stick" in the cylinders. The strain thus placed upon the rods and bearings caused injury to them. In an effort to overcome these difficulties the cylinder block was sometimes shaken or struck with a hammer in order to cause it to vibrate.

The apparatus disclosed by appellant provides a means for mechanically clamping and holding the pistons in the desired positions. The cylinder block is not only mechanically guided in its descent to the crank case, but it is, also, mechanically vibrated as it comes in contact with the pistons. These mechanical operations save time and effort, prevent the pistons sticking in the cylinders, and, also, prevent injury to the connecting rods and bearings.

In denying the process claims of appellant, the Board of Appeals, among other things, said:

* * * Stating the ground of rejection broadly it is that the essential steps of the claimed method are old in the procedure followed in assembling pistons in cylinder blocks as set forth on pages 3 and 4 of appellant's specification. In the memorandum filed with the request for rehearing it is pointed out that the prior art does not disclose the step included in certain of the claims of "clamping all the pistons in a common vertical plane" or guiding the cylinder block while lowering the same in a "predetermined rectilinear path." The point is also made that the limitation to "vibrating" the cylinder block "within fixed limits" and included in certain claims is not disclosed in the prior art. But the prior art procedure was attempting to do these things although not with entire success. Thus when the pistons were moved to vertical positions under the cylinder block they were held there as rigidly as they could be manually and the only difference between appellant's method and the prior art so far as holding the pistons in an upright position is concerned is the difference between holding a thing manually and holding it by a machine. The same situation exists with respect to the lowering of the cylinder block in a predetermined rectilinear path. Obviously, that is the way in which the block would be lowered in prior art procedure so far as it was possible to guide the block in its lowering movement manually. Here again there is no new conception so far as a method is concerned but only the selection or invention it may be of a better apparatus for controlling the lowering movement. Touching the limitation in some of the appealed claims to vibrating the cylinder block "within fixed limits" the prior art procedure as acknowledged in appellant's specification was to rap the cylinder block with a hammer when the piston stuck in the cylinder. So far as the vibrating step is concerned this is merely a refinement based on the particular machine employed to effect the vibration.

If the process disclosed by appellant is novel, he is entitled to be protected by the patent. If, on the contrary, as held by the Board of Appeals, the claimed process is old, and the invention of a new and improved apparatus is appellant's sole contribution to the art, he is not entitled to a patent and the decision of the Board of Appeals should be affirmed.

It is contended by counsel for appellant that prior to the use of the method disclosed in appellant's application, it was impossible to control the lateral motions of the cylinder block as it came in contact with the pistons, and that, as a consequence, the cylinders, rods, and bearings were sometimes injured; that no one had "conceived the possibility of rigidly clamping the pistons in position to facilitate" their insertion into the cylinders, and that the old method of inserting them by hand was a time-consuming "diddling and fiddling" process; that in the old "hand" method of vibrating the cylinder block, it was impossible to secure the precise degree of vibration desired; and that time and money have been saved, and accuracy attained, by the use of appellant's new and improved process.

The Solicitor for the Patent Office concedes that appellant has invented a new and valuable apparatus for assembling internal-combustion engines, but he insists that the claimed process is old.

We think it clearly appears that the difficulties encountered in assembling certain major units of internal-combustion engines by "hand," have been considerably, if not entirely, eliminated by the use of the apparatus invented by appellant. We are unable, however, to accept the view that a novel process has been devised.

The process of lowering the cylinder block and causing it to vibrate as the pistons were inserted in the cylinders is old. Under the alleged novel process the pistons are held in place by clamps; formerly they were held in place by workmen. So, it seems to us, the claimed process is old, and the new and beneficial results are obtained by the means, and not by the process, employed.

We are in accord with the views expressed by the Board of Appeals, and its decision is, therefore, affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE GILL

No 2,177. Decided December 19, 1929

PATENTABILITY—MEANS FOR ASSEMBLING INTERNAL-COMBUSTION ENGINES.

Certain claims for means for assembling internal-combustion engines *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Messrs. Cameron & Kerkham and *Mr. W. B. Kerkham* and *Mr. F. B. Smith* for Gill.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GARRETT, *J.*:

This is an appeal from the action of the Board of Appeals of the Patent Office affirming a decision of the Examiner rejecting claim 6 and claims 11 to 15, inclusive, made by appellant relative to claimed invention or inventions of "improvements in means for assembling internal-combustion engines." It differs from appeal No. 2,176, in that 2,176 constitutes a method application and this one relates to the apparatus.

To express the matter nontechnically, it is the claim of appellant that his structure, taken as a whole, constitutes a device by means of which a great improvement has been wrought over the method of assembling certain parts of automobile engines, which method had been utilized prior to his claimed invention, and which is still utilized in many factories, the function particularly emphasized being that of lowering the cylinder block to the pistons and inserting the pistons into the cylinders.

It is explained that before appellant's structure was devised the customary method was to perform these operations wholly by hand, except that the block might be lowered by means of an ordinary chain block. Workmen stationed at each end would steady and guide the block on its downward

course to the point of contact with the pistons and other workmen were then required to hold the pistons rigid while they were guided into the cylinders. It is asserted that this method was a difficult and unsatisfactory one, not only because of the requirement for extra labor in making the assembly, but because of the great trouble in securing such precision of alignment with the different pistons as to enable the block to go down over them to its base. The statement is that frequently it would be necessary to strike the block with a hammer or other tool so as to obtain a vibration sufficient to slip the closely fitting pistons in their proper places and that these strokes sometimes resulted in injury to the pistons by bending them; and that if the block moved slightly just as the pistons were entering the cylinder the former would stick and it would be necessary to raise the block and lower it again. Affidavits on file allege ill effects from this hand method assembly to include (*a*) bent connecting rods, (*b*) damaged pistons, (*c*) scored pistons or cylinders, due to misalignment, (*d*) broken piston rings, (*e*) piston knock, due to a bent connecting rod, and (*f*) gas leaks in the engine, due to scored cylinders.

It is claimed by appellant that his machine is so devised as that in operation it will hold the pistons rigid and lower the cylinder block in a predetermined rectilinear path, so that the pistons will enter the cylinders in perfect alignment, the block being given any slight oscillation essential by means of a pneumatic vibrating mechanism.

Appellant's brief gives a technical description of the machine and its method of operation as follows:

> The Gill machine, constituting the subject-matter of the present invention, comprises a frame 36 adapted to be moved along a track, which frame carries hoisting mechanism that is preferably of the pneumatic type, the cylinder for the pneumatic hoisting and lowering device being designated by the numeral 41 in the application drawings. Rigidly attached to the piston rod 45 which projects from cylinder 41 is a fixture 53, which is rigidly secured to a cylinder block, to be assembled, by means of wing nuts 63 and lugs 61 which engage the stud bolt 62 on the cylinder. The construction is such that the heavy cylinder block can be lowered in a predetermined rectilinear path. The crank case 11 with the crankshaft 19 mounted therein and with the connecting rods 18 and pistons 17 attached thereto, is mounted by means of grooved wheels 28 on rails 32, constituting an assembly track. Mounted alongside the assembly track is a stationary fixture 65 which has a horizontally disposed portion 66 that overhangs the track and which supports a pair of vertically disposed guide posts 67 which, as the block is lowered, extend into and through openings 60 of the fixture or bracket 53. By this means the cylinder block is restrained in its lowering movement to a predetermined rectilinear path, and is lowered in absolute alignment with the pistons.

The Patent Office tribunals held that there were certain features of invention in the structure and some of the claims were granted, but Nos. 6 and 11–15 were disallowed, and these constitute the issue before us.

Claim 12 is taken by appellant as illustrative of all six, but we observe from the record that before the tribunals of the Patent Office No. 6 was very earnestly pressed and think it well to quote both of them in full:

> 6. The combination in a device for assembling internal combustion engines having a crank case and a cylinder block adapted for mounting on said crank case, of means for lowering the cylinder block into position on said crank case, and members adapted to guide said cylinder block in a rectilinear path while being lowered.

> 12. A device for assembling the pistons of an internal combustion engine in the cylinders of the cylinder block thereof comprising clamping means to secure the pistons in the plane of said cylinders, and means including guiding members for moving the said block into position with respect to said cylinders in a rectilinear path in the said plane of the cylinders.

The reference cited in the rejection of the claims is to a patent to Somers of August 20, 1872, being No. 130,758, entitled, "An improvement in tube-making machines."

It may be stated that after the rendition of the Board's decision on November 29, 1927, a petition for rehearing was filed and therewith were presented copies of affidavits filed in a co-pending appeal which is now the appeal No. 2,176, supra, and these affidavits are a part of the printed record in the instant case. The final decision upon the re-hearing was rendered January 16, 1928, the Board stating "we * * * find no reason for departing from the conclusions announced in our former decision."

The Board in its final decision says:

> The request for rehearing is accompanied by certain affidavits which establish the commercial unity of the claimed invention. But the affidavits do not, in our judgment, establish appellant's right to claims of the scope of those rejected in this application. In a companion case Serial No. 692,506 we have discussed at some length in a decision rendered this day on a request for rehearing the relation to the prior art of appellant's contribution. While the claims of the companion case are directed to a method the disclosures of the two cases are identical.

Referring to the decision in Serial No. 692,506, we find the language of the Board of Appeals:

> Stating the ground of rejection broadly it is that the essential steps of the claimed method are old in the procedure followed in assembling pistons in cylinder blocks as set forth on pages 3 and 4 of appellant's specification. In the memorandum filed with the request for rehearing it is pointed out that the prior art does not disclose the step included in certain of the claims of "clamping all the pistons in a common vertical plane" or guiding the cylinder block while lowering the same in a "predetermined rectilinear path." The point is also made that the limitation to "vibrating" the cylinder block "within fixed limits" and included in certain claims is not disclosed in the prior art. But the prior art procedure was attempting to do these things although not with entire success. Thus when the pistons were moved to vertical positions under the cylinder block they were held there as rigidly as they could be manually and the only difference between appellant's method and the prior art so far as holding the pistons in an upright position is concerned is the difference between holding a thing manually and holding it by a machine. The same situation exists with respect to the lowering of the cylinder block in a predetermined rectilinear path. Obviously that is the way in which the block would be lowered in prior art procedure so far as it was possible to guide the block in its lowering movement manually. Here again there is no new conception so far as a method is concerned but only the selection or invention it may be of a better apparatus for controlling the lowering movement.

The paragraph just quoted applied immediately to the method application involved in appeal No. 2,176, but the reasoning seems also to apply to the apparatus claims herein involved. and, as has been stated, certain apparatus invention was found and allowed in connection with appellant's structure.

We are unable to discover invention in those claims which were disallowed and are here involved. *Murray Rubber Co.* v. *De Laski & Thropp Circular Woven Co.*, 21 F. (2d) 822,825, seems to be directly in point, where it was said by the Circuit Court of Appeals of the Third Circuit, speaking through Judge Woolley:

> Although invention may be found in mechanism that supplants hand operation, particularly where mechanism, in way of its own, dispenses with human element, where there has been no substantial change in mechanism or method of making product, and steps are same, and succession from one step to the other is the same as those in manual art, general rule of patent law is against "invention."

We find no error in the decision of the Board of Patent Appeals, and the same is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE MARSON

No. 2,140. Decided December 23, 1929

1. PATENTABILITY—FOLDING CHAIR.

   A claim for a folding chair including "links pivotally connecting said back and brace legs" *Held* unpatentable to applicant as not reading upon his disclosure, in which the parts are connected by a pivoted sleeve sliding on the lower portion of the back.

2. SAME—SAME.

   Certain claims for a folding chair including sliding and pivoted sleeves connecting the back and legs *Held* patentable, since that feature does not appear in the references cited and is not suggested by them.

APPEAL from the Patent Office. Reversed in part.

Mr. B. G. Foster for Marson.

Mr. T. A. Hostetler for the Commissioner of Patents.

GARRETT, *J.*:

This is an ex parte appeal from a decision of the Board of Patent Appeals affirming the action of the Examiner in rejecting claims 1, 2, 3, and 4 made by appellant for a patent for a claimed invention of a folding chair.

The application in the form first rejected by the Examiner rested upon three claims, which read as follows:

> 1. A folding chair comprising front leg members, a back pivoted at its upper end to and between the upper end portions of the front leg members, rear legs pivoted at their upper ends to intermediate portions of the front leg members and being located at the inner sides of the same, a seat having its main body extending between and pivoted directly to the front leg members below the upper ends of the rear legs, the rear end of the main body of said seat being reduced in width and located between the upper ends of the rear legs, sliding connections between said reduced rear end of the main body of the seat and the rear legs, and sliding connections between the lower end of the back and the rear legs between the pivotal connections and the sliding connections of the seat therewith.
>
> 2. A folding chair comprising front leg members, a back pivoted at its upper end to and between the upper end portions of the front leg members, rear legs pivoted at their upper ends to intermediate portions of the front leg members and being located at the inner sides of the same, a seat having its main body extending between and pivoted directly to the front leg members below the upper ends of the rear legs, said rear legs having longitudinal slots and the rear end of the seat having lugs slidable in the slots, and sliding sleeve connections between the lower end of the back and the upper ends of the rear legs above the slots.
>
> 3. A folding chair, comprising front leg members, a back pivoted at its upper end to and between the upper end portions of the front leg members, rear legs pivoted at their upper ends to intermediate portions of the front leg members and being located at the inner sides of the same, a seat having its main body extending between and pivoted directly to the front leg members below the upper ends of the rear legs, said rear legs having longitudinal slots and the rear end of the main body of the seat being reduced in width and extending between the rear legs, said reduced portions having outstanding lugs slidable in the slots, the lower end of the back being reduced in width and extending between the upper ends of the rear legs above the seat, and sliding sleeve connections between the reduced lower end of the back and the upper end of the rear legs above the slots and the seat.

These were rejected upon three prior patents, to wit: Wolfe, No. 1,284,528, November 12, 1918; Travers, No. 1,396,794, November 15, 1921; Decker, No. 274,730, March 27, 1883.

The final decision by the Examiner as to these three claims was rendered September 1, 1925. An appeal was taken to the Board and while same was pending it was discovered that a patent, No. 1,609,689, had been issued on December 7, 1926, to George H. Bugenhagen, which was and is claimed to contain subject matter that constitutes an interference with appellant's application. Appellant, on May 27, 1927, filed a petition, asking that the case be withdrawn temporarily from appeal and that an amendment adding an additional claim as No. 4 be entered. This claim reads:

> 4. A folding chair, comprising rigid side bars extending throughout the length of the chair, brace legs pivoted thereto adjacent the centers thereof, a seat between and pivoted to said bars in a plane below the pivotal connection of the brace legs to the bars, a back between and pivoted at its upper end to said side bars, links pivotally connecting said back and brace legs, and means for limiting movement of the seat in one direction.

By direction of the Acting Commissioner, the petition was allowed to the extent necessary for the requisite procedure in the Patent Office, and the proposed amendment was directed to be entered and the Examiners in Chief authorized to consider it in connection with the claims on appeal. The Examiner rejected the claim made by this amendment and on October 6, 1927, the appeal having been prosecuted, the Board of Appeals affirmed the decision of the Examiner upon all four claims, and from this decision the present appeal has been taken, bringing the matter before this court.

Error is assigned upon the rejection of all four claims, but appellant here argues that the issue revolves primarily about claim No. 4, and invloves the question whether claim No. 1, in the Bugenhagen patent, embraces subject matter that constitutes an interference with appellant's application which was filed prior to the Bugenhagen application.

Appellant's claim 4 inserted by way of amendment is in the exact language of Bugenhagen's claim 1. Discussing it the Board of Appeals, in its decision, says:

> Applicant has copied a claim from the patent to Bugenhagen, No. 1,609,689, with a view to an interference. This claim was rejected as not supported by applicant's disclosure. In Bugenhagen the lower end of the back is connected to the rear legs by links 30, 31 and these links are an element of the claim. In applicant's chair the back is connected to the rear legs by the pivoted sleeve 23 sliding on the lower portion of the back. The Examiner holds that the term links in the claim is not broad enough to cover the pivoted sleeves 23. The word "link" is sometimes used very broadly to cover any connection or joining of parts together but when used to define a mechanical structure it is generally understood to refer to a bar pivoted at each end to other parts of the structure. The Examiner holds that it was used in this sense in allowing the Bugenhagen claim and if construed more broadly the claim would not be patentable over Wolfe of record. However this may be we are of the opinion that the word has a well understood meaning in the art and cannot be broadened to cover any and all forms of pivotal connections. In considering the right of a party to make a claim we are not concerned with the question of equivalents and if the structures were held to be equivalents, the patent to Wolfe would be a reference for both.

It seems from a study of the decisions of the Examiner and the Board of Appeals that they differentiated between the devices referred to in the Bugenhagen claim as links and those which they refer to in appellant's application as "sliding and pivoted sleeves." Relative to the former, the Examiner says:

> The links are links 30 and 31 of Bugenhagen, shown clearly in his Fig. 1 as elongated elements pivoted at one

end to the back 29 and at the other end to brace legs 18 and 19, respectively.

Of the latter he says:

Instead of these (links as immediately above described) applicant discloses sleeves 22 which are pivoted to the respective brace legs 5 and 6 by pivot 25 and have flanges 23, 24 slidingly embracing the lateral edges respectively of the back 14.

[1] We are not convinced that the "sliding and pivoted sleeves" of appellant's claim are so nearly identical with the "links" of the Bugenhagen patent as to justify us in holding that claim 4 of appellant, which was claim 1 of Bugenhagen, covers the device and entitles appellant to have the Bugenhagen patent declared an interference.

[2] We do think, however, that sliding and pivoted sleeve means as claimed by appellant in claims 1, 2 and 3 constitute invention and that he is entitled to patent thereon under the record before us.

The Board of Appeals, while stating in effect that they do not read directly upon Wolfe or upon any single reference, suggest that certain modifications may be made by substituting the seat-supporting construction of Travers for that of Wolfe so that the claims will be anticipated and that such substitution does not involve invention.

We think that in deducing this suggestion the Board has overlooked the fact that in the sliding operation of the sleeves there is presented a feature which does not appear in either of the references cited, nor, so far as we can determine, is it even suggested by them.

We have held with the Board that the sliding sleeves are not sufficiently similar to the Bugenhagen links to justify the declaration of an interference. We think they differ quite as much from any of the analogous parts of the reference patents as they do from the Bugenhagen links. *In re Levy*, 2 Fed. (2d) 193, the court said:

However, it appears from the Examiner's answer, as well as from appellant's brief, that some modification of the references at least is essential in order to literally meet the terms of the appealed claims. * * * It appearing that the Assistant Commissioner failed to give these claims the broad interpretation of which they reasonably were capable and that when so interpreted they probably would have been allowable to the applicant, we follow our usual course and resolve any doubt in applicant's favor.

It appears to us that the "sliding and pivoted sleeve" feature involved in claims 1, 2, and 3 as patentable.

The decision of the Board is affirmed as to claim 4 and reversed as to claims 1, 2, and 4.

Modified.

Patent Suits

[Notices under sec. 4921, R. S., as amended Feb. 19, 1922]

1,018,502, Just and Hanaman, Manufacture of incandescent electric lamps; 1,180,159, I. Langmuir, Incandescent electric lamp, D. C., S. D. Calif. (Los Angeles), Doc. E O–1–M, *General Electric Co.* v. *G. Hohenstein et al.* Patents held valid and infringed Nov. 5, 1928.

1,180,159. (See 1,018,502.)

1,224,632, W. Ghiglieri, Traffic signal; 1,236,441, F. J. Husbands, Automatic traffic signal; 1,524,247, same, Automatic traffic regulator, D. C., S. D. Calif. (Los Angeles), Doc. L–105–M, *Acme Traffic Signal Co.* v. *Waterhouse Signal Corp. et al.* Dismissed Jan. 7, 1930.

Re. 17,323, R. D. Davies, Process of facing the cutting edges of drilling tools, D. C., S. D. Calif. (Los Angeles), Doc. E G–17–M, *P. L. & M. Co.* v. *H. B. Ruggles (The Carboloy Co.).* Patent held valid and infringed Jan. 15, 1930.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 18, 1930

[VOL. 392. No. 8]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 294,638. INDUSTRIAL CHEMICAL SALES COMPANY, INC., New York, N. Y. Filed Jan. 10, 1930.

DIAFILT

For Diatomaceous Earth.
Claims use since Oct. 26, 1929.

CLASS 2

Receptacles

Ser. No. 294,208. THE DIAMOND MATCH COMPANY, Chicago, Ill. Filed Dec. 30, 1929.

DIAMOND

For Dishes of Paper or Fibre.
Claims use since April, 1925.

Ser. No. 294,210. THE DIAMOND MATCH COMPANY, Chicago, Ill. Filed Dec. 30, 1929.

For Dishes of Paper or Fibre.
Claims use since April, 1925.

Ser. No. 294,827. SAFEWAY SALES CORPORATION, Boston, Mass. Filed Jan. 15, 1930.

SAFEWAY

For Merchandise and Photograph Envelopes.
Claims use since Jan. 7, 1930.

CLASS 3

Baggage, Animal Equipments, Portfolios, and Pocketbooks

Ser. No. 294,667. FRANKLIN STEEL WORKS, Joliet, Ill. Filed Jan. 11, 1930.

The trade-mark consists of a comparatively large letter S coloured red and superposed upon the term "Sweet's Toe Calks" printed black. No claim is made for the descriptive words "Toe Calks" which are therefore disclaimed from the mark as shown in the drawing.
For Toe Calks for Horseshoes.
Claims use since Nov. 1, 1929.

Ser. No. 295,325. THE BANKETTE CO., Boston, Mass. Filed Jan. 29, 1930.

SCOTTIE

For Pocket Coin Holders.
Claims use since Dec. 26, 1929.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 266,946. THE NORTH AMERICAN POLISH COMPANY, Cleveland, Ohio. Filed May 24, 1928.

NAPCO

For Soaps, Scouring Powders, Spot Removers, Grease Eradicators, Dry-Cleaning Preparations, Paint and Varnish Cleaners, Automobile and Furniture Cleaning Preparations, Metal Polish, Metal-Polishing Cream, Washing Powder; Cleansers for Household, Kitchen, Laundry, Bathroom, and Dairy Use; Liquid Soaps and Shampoo Soaps.
Claims use since Apr. 28, 1926.

Ser. No. 275,293. PARFUMERIE ROGER ET GALLET, SOCIÉTÉ ANONYME, Paris, France. Filed Nov. 14, 1928.

The signature appearing on the drawing is the facsimile signature of Jean Marie Farina, deceased. The words "Eau de Cologne" and "Roger & Gallet Successeurs" are disclaimed apart from the mark as shown on the drawing.
For Soaps.
Claims use since about Dec. 26, 1862.

Ser. No. 278,133. LOOKOUT CHEMICAL CO., Chattanooga, Tenn. Filed Jan. 18, 1929.

The drawing is lined for the color blue.
For Cleanser for Automobiles, Battery Terminals, Carpets, Rugs, Dishes, Furniture, Linoleum, Painted Surfaces, Bathtubs, and Washable Silks and Woolens.
Claims use since January, 1927.

Ser. No. 287,193. MILWAUKEE LUBRICANTS CO., Milwaukee, Wis. Filed July 16, 1929.

FIRST SUDS

For Powdered Soap.
Claims use since June 25, 1928.

Ser. No. 287,261. LLOYD WILLIAM MILTON, doing business as Milton Laboratories, Chicago, Ill. Filed July 17, 1929.

No claim is made for the word "Savoy" apart from the mark shown in the drawing.
For Metal-Polishing Cream, Windshield Cloth, and Glass Cleaner.
Claims use since June 3, 1929.

Ser. No. 289,305. G. C. TAYLOR CO., Fairport, N. Y. Filed Sept. 3, 1929.

The words "Soap Powder" appearing on the drawing are disclaimed by applicant as apart from the mark shown.
For Soap Powder.
Claims use since Feb. 20, 1929.

Ser. No. 294,167. MISSOURI CHROMIUM PLATING COMPANY, St. Louis, Mo. Filed Dec. 28, 1929.

Applicant expressly disclaims the word "Chrome" appearing on the drawing apart from the mark shown.
For Metal Cleaner and Polish.
Claims use since Dec. 20, 1929.

Ser. No. 294,286. THOMAS FRANCIS CARROLL, New York, N. Y. Filed Dec. 31, 1929.

WOW!!

For Treated Cleaning, Polishing, and Wiping Cloths for Furniture, Autos, Etc.
Claims use since Nov. 28, 1929.

Ser. No. 294,455. WHITTEMORE BROS. CORP., Cambridge, Mass. Filed Jan. 6, 1930.

SUEDEDENE

For Powder for Cleaning and Recoloring Suede, Ooze, Buck, Castor, and All Undressed Leathers.
Claims use since 1890.

Ser. No. 294,626. DI-OX PRODUCTS CO., INC., New York, N. Y. Filed Jan. 10, 1930.

DI-OX

For General Cleanser for Household and Commercial Use.
Claims use since July 11, 1929.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 278,473. THE LOTAN PRODUCTS COMPANY, Cleveland, Ohio. Filed Jan. 26, 1929.

KA-TAR-OL

For Medicine for the Treatment of Colds and Catarrh.
Claims use since about Dec. 1, 1928.

Ser. No. 282,820. "HEILIT" CHEMISCHES LABORATORIUM INH. APOTHEKER WAGNER & GOEDICKE, Salzwedel, Germany. Filed Apr. 22, 1929.

Heilit

For Medicinal Tea for Use in the Treatment of Rheumatism, Lumbago, Backache, and Nervous Pains of All Kinds.
Claims use since Apr. 19, 1916.

Ser. No. 283,577. GOTTFRIED MILBRANDT, Croswell, Mich. Filed May 6, 1929.

Milbrandt's

The signature "Milbrandt's" is in the handwriting of the applicant.
For Bitters for Indigestion, Dyspepsia, and Asthma, Catarrh Medicine, Eye Medicine, Fever Powder; Green Salve for Burns, Boils, Cuts, Bruises, and Wounds; Cancer Salve, Eczema Ointment; and Tonic for Constipation, Neuralgia, and Rheumatic Conditions.
Claims use since June 6, 1893.

Ser. No. 289,356. H. L. LADD CHEMIST, INC., San Francisco, Calif. Filed Sept. 5, 1929.

KABIMA

For Antacid and Digestant.
Claims use since July 1, 1929.

Ser. No. 290,451. CHAS. C. CARROLL, Jacksonville, Fla. Filed Oct. 1, 1929.

The word "Pilease" is disclaimed apart from the mark as shown in the drawing.
For Medicinal Preparation for Treating Piles.
Claims use since Sept. 1, 1929.

Ser. No. 290,623. STANCO INCORPORATED, Wilmington, Del., and New York, N. Y. Filed Oct. 3, 1929.

STANCO INCORPORATED

For Insecticides, Deodorants, Disinfectants, Nose and Throat Sprays, Medicinal Mineral Oils, Isopropyl Alcohols, and Petrolatums.
Claims use since Apr. 9, 1928.

Ser. No. 291,510. VIOLA JACKSON, doing business as W. V. L. Jackson, Catskill, N. Y. Filed Oct. 24, 1929.

AMAWUNDA

For Salve for Use in the Treatment of Blood Poisoning, Burns, Bruises, Cuts, Piles, Felons, Boils, Carbuncles, Chilblains, and All Infections of the Skin.
Claims use since Oct. 1, 1929.

Ser. No. 292,592. ORLWEIN CHEMICAL COMPANY, Oelwein, Iowa. Filed Nov. 19, 1929.

The drawing is lined for the colors red and blue, but specific coloring is not an essential feature of the trademark.
For Mineral Compounds—Namely, Physics, Tonics, and Conditioners for Hogs, Sheep, and Poultry.
Claims use since on or about Oct. 1, 1929.

Ser. No. 292,657. MATILDA CREGER, doing business as Dicitrin Laboratories, Los Angeles, Calif. Filed Nov. 21, 1929.

DICITRIN

For Chemicals—Namely, Solvents; Medicines—Namely, Digestion Tablets; Toilet Preparations—Namely, Cold Cream and Hair Wash; Dentifrices, Mouth Washes, Disinfectants, Deodorants, Insecticides, and Douches.
Claims use since Jan. 1, 1921.

Ser. No. 292,919. ANCIENS ETABLISSEMENTS BAIGNOL ET FARJON, Boulogne-sur-Mer, France. Filed Nov. 26, 1929.

YAMILÉ

For Cologne, Toilet Waters, Bath Salts, Face and Body Powders, Paints (Thick and Thin) for the Face, Hands, and Body; Creams for the Face and Hands, Cosmetics and Lotions for the Hair, Brilliantines, Rouge for the Lips, Crayons for the Eyes, Polish for the Nails; and Dentifrices, Including Pastes, Powders, and Liquids.
Claims use since June 22, 1923.

Ser. No. 293,738. MARJORIE JOHNSON, INC., New York, N. Y. Filed Dec. 16, 1929.

Marjorie Johnson

The trade-mark comprises the words "Marjorie Johnson" in script, and is printed in red wherever used on labels or nonmetallic packages. The trade-mark comprises a facsimile of the signature of the secretary of Marjorie Johnson, Inc.

For Finishing Lotion, a Liquid Used for the Exposed Parts of the Body Except the Face for Whitening of the Skin; Foundation Cream, Face Powder, Cleansing Cream; Night Cream, a Lubricating Cream Used for the Face and Designed to Remain Thereon Over Night; Eyebrow Pencil; Eyelash Beautifier, a Mascara Cake for Purposes of Coloring the Eyelash; Lip and Face Rouges; and Eye Paste, a Paste Applied to the Eyelids to Make the Eye Appear Larger.
Claims use since Dec. 20, 1926.

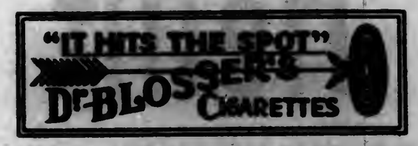
Ser. No. 293,822. CURELLJO G. M. B. H., Wernigerode, near the Harz, Germany. Filed Dec. 18, 1929.

Curelljo

For Preparations for the Hair, Comprising a Dry Shampoo Powder.
Claims use since Sept. 27, 1912.

Ser. No. 294,089. WILLIAM SIEGEL, doing business as Williams Specialty Co., New York, N. Y. Filed Dec. 26, 1929.

CARNOVITA.



For Tonic for the Relief of Anemia, General Debility, and Mental and Nervous Depression.
Claims use since Nov. 1, 1927.

Ser. No. 294,164. THE WM. S. MERRELL COMPANY, Cincinnati, Ohio. Filed Dec. 28, 1929.

ANTABS

For Medicinal Preparation for the Relief of Indigestion.
Claims use since Dec. 6, 1929.

Ser. No. 294,203. THE BLOSSER COMPANY, Atlanta, Ga. Filed Dec. 30, 1929.

The word "Cigarettes" is hereby disclaimed apart from the mark as shown in the drawing.
For Medicinal Smoking Preparations Free from Tobacco for Relief of Paroxysms of Asthma.
Claims use since Dec. 11, 1906.

Ser. No. 294,470. CATHERINE'S CHEMICAL LABORATORY, Oklahoma City, Okla. Filed Jan. 7, 1930.

CATHERINE'S
VAPO-BALM

Applicant disclaims the descriptive word "Balm" apart from the mark. The portrait used as a part of the trade-mark is that of a living person and is of one of the applicants, to wit, Catherine Langmack.
For Vapo-Balm or Ointment for External Application for Colds, Influenza, Congestion, Pain, and Neuritis.
Claims use since Sept. 1, 1929.

Ser. No. 294,544. ROHM & HAAS COMPANY, Philadelphia, Pa. Filed Jan. 8, 1930.

SOJAL

For Preparation for Dehairing Hides and Preparing Them for Tanning.
Claims use since about Oct. 16, 1928.

Ser. No. 294,686. MAXMILLIAN PFAFFINGER, doing business as Quality Poultry Ranch, Van Nuys, Calif. Filed Jan. 11, 1930.

CU-RO

For Preparation Used in the Treatment of Poultry Diseases—Namely, Roup, Bronchial Pneumonia, Bronchitis, Influenza, Pox, and Canker.
Claims use since about Dec. 30, 1929.

Ser. No. 294,772. ELSIE GRAY, doing business as Ferris & Wright of New York City, Flushing, N. Y. Filed Jan. 14, 1930.

CuFeTone

For Tonic Medicine for All Conditions Where Lowered Hemoglobin Content or Malnutrition is a Factor, Particularly in Simple Anemia, Secondary Anemias (Postoperative or Postinfectious), During Convalescence, and in Malnutrition or Cachexia.
Claims use since October, 1929.

Ser. No. 294,832. JOHN T. WILLIAMS, Jr., doing business as Williams & Co., Brooklyn, N. Y. Filed Jan. 15, 1930.

RHODINE

The drawing is lined to indicate the color red.
For Two Per Centum (2%) Solution of the Drug Dibrom-Oxymercuri Fluorescein.
Claims use since Oct. 25, 1929.

Ser. No. 294,889. PENN-STANDARD SOLE CEMENTING PROCESS, INC., Philadelphia, Pa. Filed Jan. 17, 1930.

For Bottom Finish for Shoe Soles.
Claims use since Jan. 4, 1930.

Ser. No. 294,890. PENN-STANDARD SOLE CEMENTING PROCESS, INC., Philadelphia, Pa. Filed Jan. 17, 1930.

For Bottom Finish for Shoe Soles.
Claims use since Jan. 4, 1930.

Ser. No. 294,930. ELMER SMITH, Wichita, Kans. Filed Jan. 18, 1930.

Sea-foam

For Salve for Cuts, Burns, Bruises, Boils, Pimples, Bone Felon, Corns, Bunions, Callouses, Itching Skin, and Chilblain.
Claims use since Jan. 15, 1930.

Ser. No. 294,934. THE TITANIUM ALLOY MANUFACTURING COMPANY, Niagara Falls, N. Y. Filed Jan. 18, 1930.

TITANAMEL

For Ceramic Materials Used in the Manufacture of Enamels and Glazes.
Claims use since May 3, 1929.

Ser. No. 294,961. EASTMAN KODAK COMPANY, Rochester, N. Y. Filed Jan. 20, 1930.

BROWNIE

For Developing Powders for Photographic Purposes.
Claims use since Jan. 1, 1901.

Ser. No. 295,118. DE MUSSET, INC., New York, N. Y. Filed Jan. 23, 1930.

pour l'amour

For Perfumes, Face Powders, Toilet Waters, Face Creams, Massage Creams, Rouge, Lip Stick, Eyebrow Pencils, Skin Lotions, Sachets, Bath Salts, Lavender Water and Verbena Water, Talcum and Dusting Powder, Hair Tonics, Shampoos, Pomades, and Brilliantine.
Claims use since about July, 1928.

Ser. No. 295,182. LABORATOIRE DE PHARMACOLOGIE, INC., New York, N. Y. Filed Jan. 24, 1930.

DEPUROSAN

The words "Morbinon Eloquentia Sed Remediis Curantur" are disclaimed apart from the mark shown.
For Horse-Radish Syrup Used as a Vehicle for Iodine Administered Internally.
Claims use since Jan. 11, 1930.

Ser. No. 295,203. R. AVENARIUS & Co., Stuttgart, Germany. Filed Jan. 25, 1930.

Dendrin

For Chemical Preparations for the Protection of Trees and Their Culture, Particularly Fruit Trees and Other Plants, Against Parasites of an Animal or Plant Nature.
Claims use since 1903.

Ser. No. 295,328. ANGELES CAUSA Y RAMIREZ, Habana, Cuba. Filed Jan. 29, 1930.

DIABECARD

For Medicinal Preparation for Treating Diabetes.
Claims use since July, 1928.

Ser. No. 295,523. LUDLOW LABORATORIES INC., Chicago, Ill. Filed Feb. 3, 1930.

NO-BO

For Deodorant.
Claims use since Jan. 2, 1928.

Ser. No 295,537. SIMON L. RUSKIN, doing business as Pasteurol Company, Brooklyn, N. Y. Filed Feb. 3, 1930.

PASTEUROL

For Medicinal Preparation Used in the Treatment of Head Colds.
Claims use since Jan. 28, 1930.

CLASS 7

Cordage

Ser. No. 295,663. FIRST NATIONAL STORES INC., Boston and Somerville, Mass. Filed Feb. 6, 1930.

FINAST

For Clotheslines.
Claims use since Oct. 26, 1926.

CLASS 9

Explosives, Firearms, Equipments, and Projectiles

Ser. No 291,643. VULCAN MATCH CO., INC., New York, N. Y. Filed Oct. 26, 1929.

No claim being made to the exclusive use of the outline of the label nor of the words "Safety Matches, Made in Sweden" apart from the mark as shown in the drawing.
For Matches.
Claims use since Sept. 4, 1929.

CLASS 10

Fertilizers

Ser. No. 278,807. CHAS. W. PRIDDY & COMPANY, INCORPORATED, Norfolk, Va. Filed Feb. 2, 1929.

SUNSHINE TOBACCO GROWER

No claim is made to the words "Tobacco Grower" except those rights arising when used in combination as shown.
For Fertilizer.
Claims use since Feb. 1, 1920.

CLASS 11

Inks and Inking Materials

Ser. No. 294,583. THE INTERNATIONAL PRINTING INK CORPORATION, New York, N. Y. Filed Jan. 6, 1930.

ipi

The shading on the drawing is intended to indicate the color red, and this is a particular feature of the mark as shown.
For Intaglio Ink, News Ink, Lithographic Ink, Printing Ink, Stamp Pads, and Inking Ribbons.
Claims use since Dec. 18, 1929.

CLASS 12

Construction Materials

Ser. No. 281,329. WRIGHT METAL INCORPORATED, Jamestown, N. Y. Filed Mar. 25, 1929.

No claim is made to the word and abbreviation "Jamestown, N. Y." and the showing of a partition apart from other elements of the mark as disclosed.
For Partitions.
Claims use since Feb. 23, 1929.

Ser. No. 283,110. FRANKLIN POTTERY (INC.), Lansdale, Pa. Filed Apr. 27, 1929.

POLYCHROME FLINTS

For Wall and Floor Tiles Used for their Decorative, Sanitary, or Surface-Wearing Qualities.
Claims use since January, 1928.

Ser. No. 286,637. INTERNATIONAL CASEMENT COMPANY, Jamestown, N. Y. Filed July 5, 1929.

COTSWOLD CASEMENTS

No claim is made to the word "Casements" apart from the mark as shown in the drawing.
For Casement Windows.
Claims use since Apr. 26, 1929.

Ser. No. 289,992. W. M. RITTER LUMBER COMPANY, Columbus, Ohio. Filed Sept. 19, 1929.

HF

For Rough and Dressed Lumber.
Claims use since 1903.

Ser. No. 291,730. MADERA SUGAR PINE COMPANY, San Francisco, Calif. Filed Oct. 29, 1929.

MADERA SUGAR PINE

The words "Madera Sugar Pine" are disclaimed apart from the other features of the mark shown in the drawings.

For Lumber.

Claims use since on or about Feb. 1, 1921.

Ser. No. 293,318. W. P. FULLER & CO., San Francisco, Calif. Filed Dec. 6, 1929.

Etcht-Kraft

For Sand-Blast Wood Used for Construction Purposes.

Claims use since Nov. 1, 1928.

Ser. No. 293,860. WISCONSIN LAND & LUMBER CO., Hermansville, Mich. Filed Dec. 18, 1929. Under 10-year proviso.

IXL

For Hardwood and Softwood Lumber, Hardwood Flooring and Shingles.

Claims use since on or about Dec. 1, 1889.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

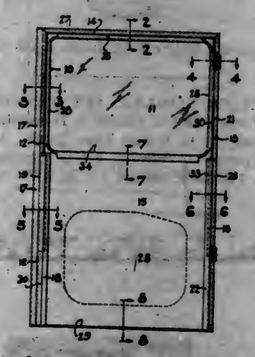
REISSUES



MARCH 18, 1930

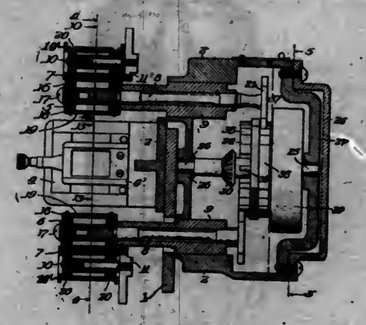
17,622. MARCEL WAVER. ANNA J. JANDA, Chicago, Ill., assignor to John J. Ryan, Chicago, Ill. Filed Nov. 15, 1928. Serial No. 319,535. Original No. 1,615,702, dated Jan. 25, 1927, Serial No. 118,978, filed June 5, 1926. 8 Claims. (Cl. 132—38.)

1. A hair marcelling device including a head-gear defining a front frame member formed of a resilient wire and defining a portion extending in serpentine formation, interior frame members formed of resilient wire having corresponding end portions connected to the serpentine formation part of the front frame member, said front frame member including a portion extending in circular direction rearwardly of the serpentine formation portion and having an end portion connected to the opposite end portion of the front frame member, the opposite corresponding end portions of the interior frame members being connected to the circular portion of the front frame member.

17,623. DOOR FOR AUTOMOBILE BODIES. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 29, 1929. Serial No. 367,109. Original No. 1,663,519, dated Mar. 20, 1928, Serial No. 80,797, filed Jan. 12, 1926. 9 Claims. (Cl. 296—44.)

1. In a pressed metal automobile door, in combination, a pair of pressed metal side rails, inwardly-extending integral tabs at the tops of said side rails, and a top rail having its ends seated under and secured to said inwardly-extending tabs.

17,624. HARD-METAL ALLOY AND THE PROCESS OF MAKING SAME. KARL SCHRÖTER, Lichtenberg, near Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed July 22, 1929. Serial No. 380,249. Original No. 1,549,615, dated Aug. 11, 1925, Serial No. 672,014, filed Oct. 31, 1923. 18 Claims. (Cl. 75—1.)



1. A hard metal alloy comprising a carbide of tungsten, the carbon content of which ranges from 8 to 10% of the carbide, said alloy having, in addition, a metal of a considerably lower melting point than the carbide, said metal forming not more than 10% of the alloy.

17,625. CINEMATOGRAPH FILM. ALBERT HENRY SMITH, Birmingham, England. Filed May 21, 1929. Serial No. 364,922. Original No. 1,674,528, dated June 19, 1928, Serial No. 116,928, filed June 18, 1926, and in Great Britain June 3, 1926. 11 Claims. (Cl. 88—19.5.)

1. In a device of the class described, a film having driving wheel perforations arranged in a longitudinal line adjacent to one edge of the film, and a reinforcing strip on one surface of the film and extended longitudinally of the film, the strip being provided with perforations registering with the perforations of the film, the material freed in the formation of the perforations of the strip being fashioned into tongues which are extended through the perforations of the film and overlapped on the opposite surface of the film, spaced pairs of adjoining tongues being extended toward each other in opposite directions, and all of the tongues intervening between the said pairs projecting in one direction, the edge of the perforation in the strip that is opposite to each of said intervening tongues being plain.

17,626. MOTION-PICTURE APPARATUS. RALPH P. DU VAULT, Chicago, Ill., assignor, by mesne assignments, to Acme Motion Picture Projector Company, Chicago, Ill., a Corporation of Illinois. Filed July 18, 1922. Serial No. 575,826. Original No. 1,347,826, dated July 20, 1920, Serial No. 248,851, filed Aug. 8, 1918. 16 Claims. (Cl. 88—18.3.)

5. In a structure of the class described, in combination, film advancing means and means for operating said advancing means comprising a driven member and driving

member, said driving member having a plurality of periods of movement in one of which it is out of engagement with said driven member, in a second of which it is in non-driving engagement with said driven member and in the third of which it is in driving engagement with said driven member, and means for locking said driven member against movement while the driving member is in said second period of movement.

15. In a device of the character described and including in combination an aperture gate, a film advancing means on each side of the gate and means for operating said film advancing means comprising a driving member having a plurality of driving elements, each of which operates only one of the film advancing means, of a film sprocket associated with each of said film advancing means, said sprockets being disposed substantially above and below said aperture gate, with the perimeter of the one disposed below the gate extending a substantial distance to the back of the aperture gate and means for causing the film to be held against the gate.

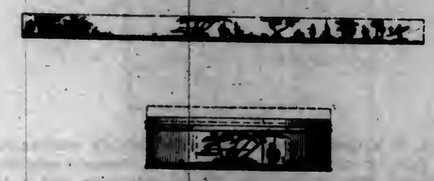
DESIGNS

MARCH 18, 1930

80,717. COFFEE PERCOLATOR. CHARLES C. ARMSTRONG, Huntington, W. Va., assignor to The Armstrong Electric and Manufacturing Corporation, Huntington, W. Va., a Corporation of West Virginia. Filed Dec. 26, 1929. Serial No. 33,919. Term of patent 14 years.

The ornamental design for a coffee percolator, as shown.

80,718. SLIPPER. SAMUEL BERNFELD, Worcester, Mass., assignor to International Footwear Co. Inc., Worcester, Mass., a Corporation of New York. Filed Nov. 11, 1929. Serial No. 33,408. Term of patent 3½ years.

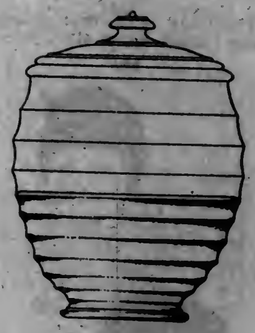


The ornamental design for a slipper as shown.

80,719. DRAPERY-POLE END. WILLIAM A. BLAKE, East Chattanooga, Tenn., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed May 8, 1929. Serial No. 31,136. Term of patent 3½ years.

The ornamental design for a drapery pole end, as shown.

80,720. BOX OR SIMILAR ARTICLE OF MANUFACTURE. JOHN ARTHUR CORBETT, Honolulu, Territory of Hawaii, assignor to Robert Love Estate, Limited, Honolulu, Territory of Hawaii, a Corporation of Hawaii. Filed Dec. 12, 1929. Serial No. 33,767. Term of patent 14 years.

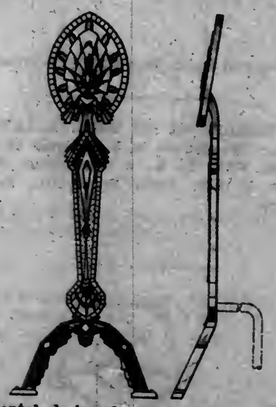


The ornamental design for a box or similar article of manufacture, as shown.

80,721. CLOSET. CHARLES R. CRANE, 2d, Chicago, Ill. Filed Sept. 25, 1929. Serial No. 32,863. Term of patent 14 years.

The ornamental design for a closet as shown and described.

80,722. BOWL OR SIMILAR ARTICLE. EDDY FAIRCHILD, Glen Ridge, N. J. Filed Aug. 10, 1929. Serial No. 32,371. Term of patent 7 years.



The ornamental design for a bowl or similar article, as shown and described.

80,723. SALT OR PEPPER SHAKER. ALFRED J. FLAUDER, Bridgeport, Conn., assignor to The Weidlich Bros. Mfg. Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Sept. 18, 1929. Serial No. 32,781. Term of patent 7 years.

The ornamental design for a salt or pepper shaker substantially as shown.

80,724. ANDIRON. HENRY JOHN GROSS, Chicago, Ill. Filed Dec. 30, 1929. Serial No. 33,981. Term of patent 7 years.

The ornamental design for an andiron as shown and described.

80,725. GRILLE FOR SOUND REPRODUCER. ISAAC HARRIS, Buffalo, N. Y., assignor, by mesne assignments, to United Reproducers Corporation, Rochester, N. Y., a Corporation of New Jersey. Filed Apr. 17, 1928. Serial No. 26,360. Term of patent 3½ years.

The ornamental design for a grille for sound reproducer, substantially as shown.

80,726. STOVE. FRANK H. HAYES, Morris, Ill., assignor to Hayes-Custer Stove and Furnace Co., Bloomington, Ill., a Corporation of Illinois. Filed Dec. 26, 1929. Serial No. 33,933. Term of patent 7 years.

The ornamental design for a stove substantially as shown.

80,727. CHANDELIER OR SIMILAR ARTICLE. OTTO HOFFMANN, Woodhaven, N. Y., assignor to Art Fixtures, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 8, 1930. Serial No. 34,051. Term of patent 3½ years.

The ornamental design for a chandelier or similar article as shown.

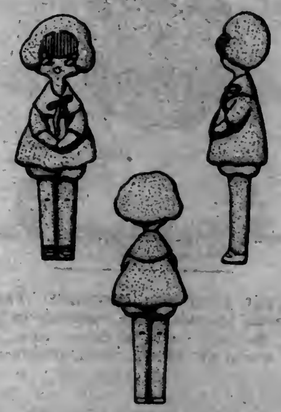
80,728. RADIATOR. JAMES R. HUGHES, South Bend, Ind., assignor to The Studebaker Corportion, South Bend, Ind., a Corporation of New Jersey. Filed Jan. 2, 1930. Serial No. 33,996. Term of patent 14 years.

The ornamental design for a radiator as shown.

80,729. BOTTLE. GEORGES HUBET, Paris, France, assignor to Societe Anonyme Jean Patou, Paris, France, a Corporation of France. Filed Apr. 16, 1929. Serial No. 30,917. Term of patent 7 years.

The ornamental design for a bottle as shown.

80,730. KNITTED CAP. PAUL IWAN, Chicago, Ill. Filed May 27, 1929. Serial No. 31,413. Term of patent 7 years.

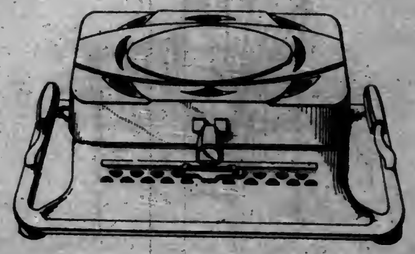


The ornamental design for a knitted cap substantially as shown and described.

80,731. GARTER OR SIMILAR ARTICLE. ANTONIOS G. KATSOUNAKIS, Steubenville, Ohio. Filed Dec. 6, 1929. Serial No. 33,674. Term of patent 7 years.

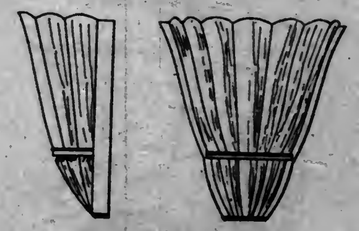
The ornamental design for a garter or similar article, as shown.

80,732. DOLL FIGURE. FANNY KEELER, New York, N. Y. Filed Dec. 7, 1928. Serial No. 29,147. Term of patent 14 years.



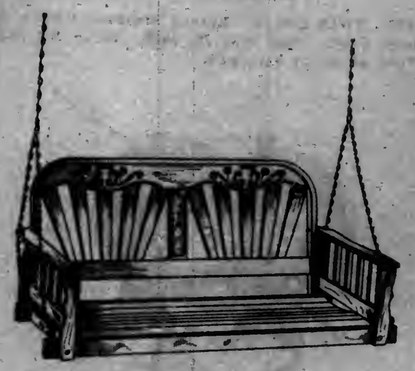
The ornamental design for a doll figure, as shown.

80,733. DOLL FIGURE. FANNY KEELER, New York, N. Y. Filed Dec. 7, 1928. Serial No. 29,148. Term of patent 14 years.



The ornamental design for a doll figure, as shown.

80,734. TOASTER. BRIAN A. LAPIN, Philadelphia, Pa., assignor to Proctor & Schwartz Electric Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 18, 1930. Serial No. 34,180. Term of patent 14 years.

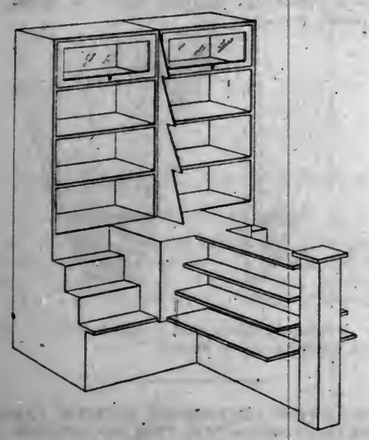


An ornamental design for a toaster, substantially as shown.

80,735. WALL BRACKET FOR LIGHTING FIXTURES. ABRAHAM LAZERSON, Chicago, Ill., assignor to Solar Illuminating Company, Chicago, Ill., a Corporation of Illinois. Filed May 15, 1928. Serial No. 26,681. Term of patent 7 years.

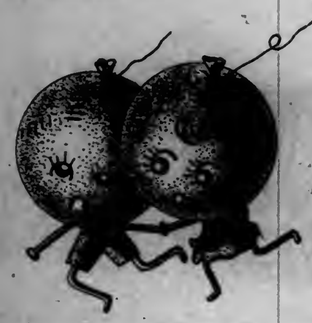
The ornamental design for a wall bracket for lighting fixtures, substantially as shown.

80,736. SWING OR SIMILAR ARTICLE. ARTHUR J. LEHMAN, Cannelton, Ind. Filed Nov. 18, 1929. Serial No. 33,479. Term of patent 14 years.



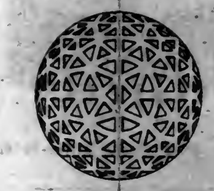
The ornamental design for a swing or similar article, as shown.

80,737. CHAIR. ARTHUR J. LEHMAN, Cannelton, Ind. Filed Nov. 18, 1929. Serial No. 33,480. Term of patent 14 years.

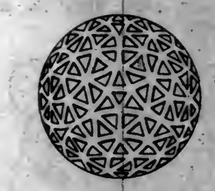


The ornamental design for a chair, as shown.

80,738. DISPLAY CASE. MAX M. ORR and CHESTER B. DOXEY, Minneapolis, Minn. Filed July 13, 1929. Serial No. 32,045. Term of patent 7 years.



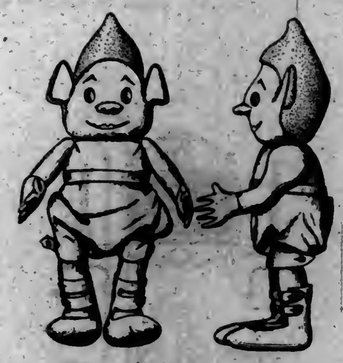
The ornamental design for a display case, as shown.



80,739. TWIN DOLLS. EVALYN STRATTON PARSON, Oakland, Calif. Filed Nov. 25, 1929. Serial No. 33,548. Term of patent 3½ years.

The ornamental design for twin dolls substantially as shown.

80,740. GOLF BALL. WILLIAM JOSEPH PERRY, Shooter's Hill, London, England, assignor to The India Rubber Gutta Percha & Telegraph Works Company Limited, London, England. Filed Jan. 3, 1930. Serial No. 34,013. Term of patent 14 years.

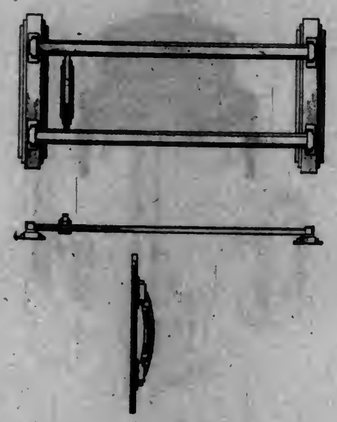


The ornamental design for a golf ball as shown.

80,741. METAL UNIT FOR JEWELRY. FREDERICK W. RETTENMEYER, Meriden, Conn., assignor to The Napier Company, Meriden, Conn., a Corporation. Filed Dec. 16, 1929. Serial No. 33,799. Term of patent 3½ years.

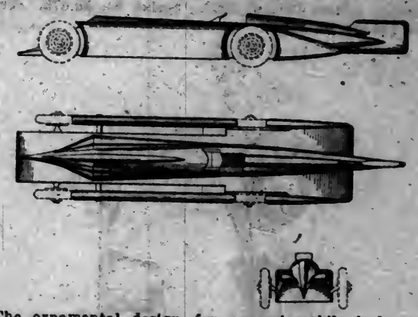
The ornamental design for a metal unit for jewelry, as shown and described.

80,742. DOLL. HILLMERT ROSS, Oakland, Calif. Filed Dec. 23, 1929. Serial No. 33,896. Term of patent 3½ years.



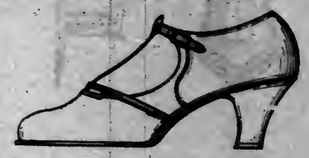
The ornamental design for doll, substantially as shown.

80,743. RING. ABRAHAM SAGER, Chicago, Ill. Filed Aug. 11, 1928. Serial No. 27,791. Term of patent 14 years.



The ornamental design for a ring as shown.

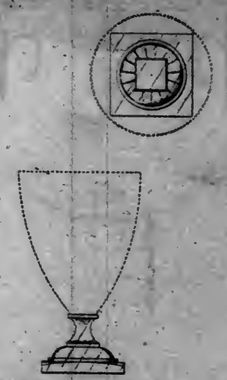
80,744. PUSH AND PULL BAR. OSWALD G. SEIDENSTICKER, Chicago, Ill., assignor to The Payson Manufacturing Company, a Corporation of Illinois. Filed Dec. 4, 1929. Serial No. 33,638. Term of patent 7 years.



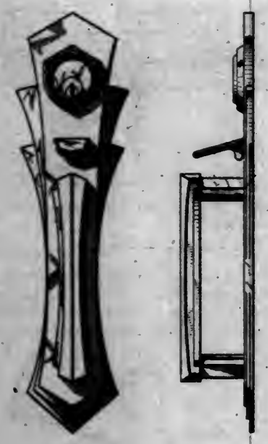
The ornamental design for a push and pull bar as shown.

80,745. AUTOMOBILE BODY. HENRY O. DE H. SEGRAVE, London, England. Filed Apr. 15, 1929. Serial No. 30,904. Term of patent 7 years.

The ornamental design for an automobile body substantially as shown.

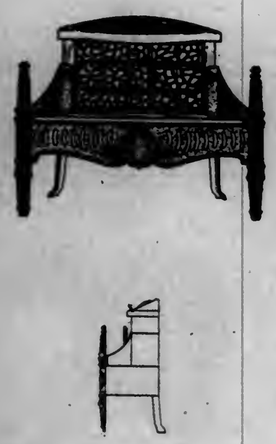


80,746. SHOE. ROGER A. SELBY, Portsmouth, Ohio, assignor to The Selby Shoe Company, Portsmouth, Ohio, a Corporation of Ohio. Filed July 5, 1929. Serial No. 31,949. Term of patent 3½ years.



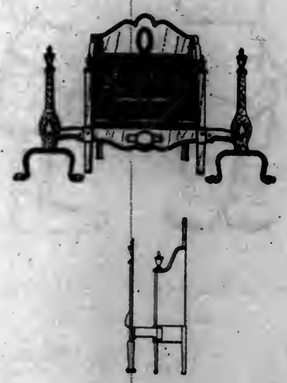
The ornamental design for a shoe, as shown.

80,747. GOBLET OR SIMILAR ARTICLE. EDWARD J. SCHAUB, Wheeling, W. Va., assignor to Central Glass Works, Wheeling, W. Va., a Corporation of West Virginia. Filed Dec. 18, 1929. Serial No. 33,880. Term of patent 7 years.



The ornamental design for a goblet or similar article, substantially as shown.

80,748. FRONT-DOOR-HANDLE PLATE. WALTER R. SCHLAGE, San Francisco, Calif., assignor to Schlage Lock Co., San Francisco, Calif., a Corporation of California. Filed Dec. 6, 1929. Serial No. 33,676. Term of patent 14 years.

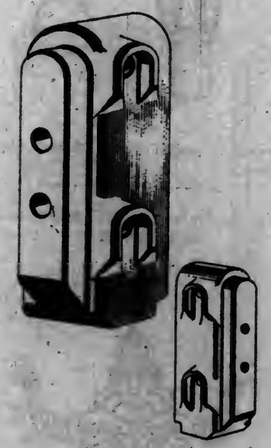


The ornamental design for a front door handle plate, substantially as shown.

80,749. GAS HEATER. WILLIAM L. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry and Manufacturing Co., Steubenville, Ohio, a Corporation of Ohio. Filed Jan. 24, 1930. Serial No. 34,268. Term of patent 7 years.

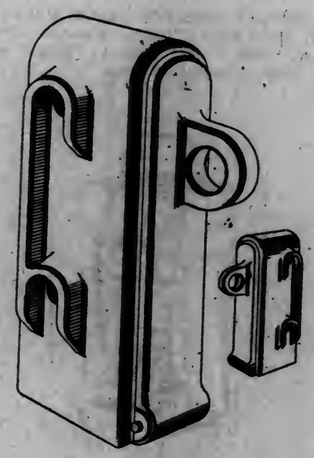
The ornamental design for a gas heater, as shown.

80,750. GAS HEATER. WILLIAM L. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry and Manufacturing Co., Steubenville, Ohio, a Corporation of Ohio. Filed Jan. 24, 1930. Serial No. 34,269. Term of patent 7 years.



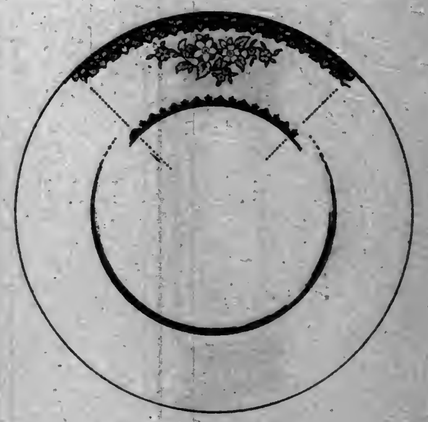
The ornamental design for a gas heater, as shown.

80,751. GAS HEATER. WILLIAM L. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry and Manufacturing Co., Steubenville, Ohio, a Corporation of Ohio. Filed Jan. 24, 1930. Serial No. 34,270. Term of patent 7 years.



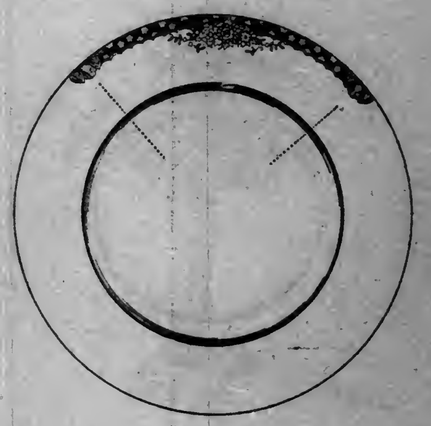
The ornamental design for a gas heater, as shown.

80,752. FUSE BOX. ALWIN G. STEINMAYER, Milwaukee, Wis., assignor, by mesne assignments, to Line Material Company, South Milwaukee, Wis., a Corporation of Delaware. Filed Nov. 21, 1928. Serial No. 28,977. Term of patent 14 years.



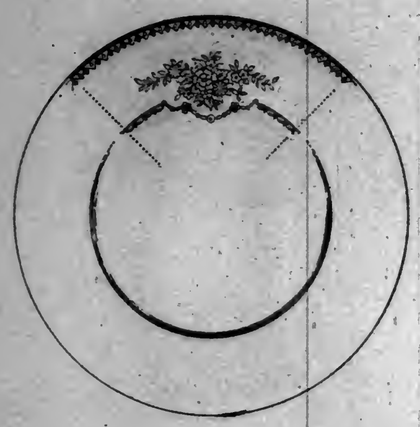
The ornamental design for a fuse box, as shown.

80,753. FUSE BOX. ALWIN G. STEINMAYER, Milwaukee, Wis., assignor, by mesne assignments, to Line Material Company, South Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 8, 1929. Serial No. 30,726. Term of patent 14 years.



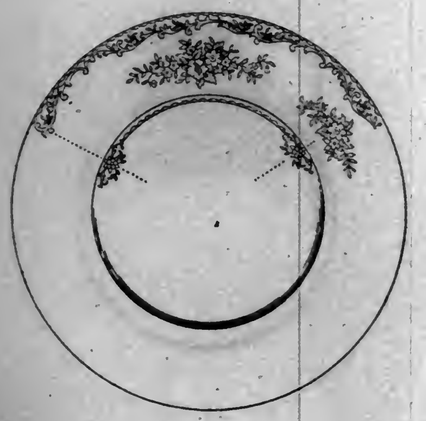
The ornamental design for a fuse box, as shown.

80,754. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, Astoria, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Jan. 21, 1930. Serial No. 34,199. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

80,755. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, Astoria, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Jan. 21, 1930. Serial No. 34,200. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown and described.

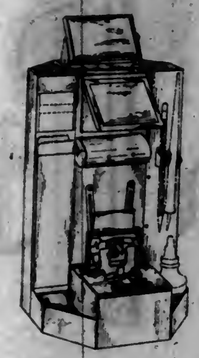
80,756. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, Astoria, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Jan. 21, 1930. Serial No. 34,201. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown and described.

80,757. PLATE OR SIMILAR ARTICLE. URASABURO TOMITA, Astoria, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a Corporation of Japan. Filed Jan. 21, 1930. Serial No. 34,202. Term of patent 7 years.

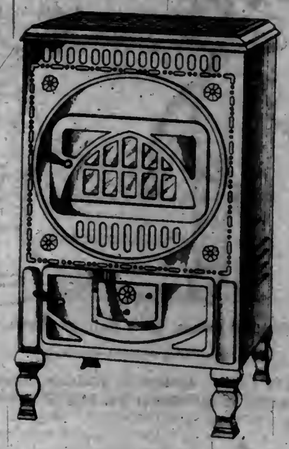
The ornamental design for a plate or similar article, as shown and described.

80,758. BOTTLE STOPPER. FERNAND TOURTOIS, New York, N. Y., assignor to Coty, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 21, 1929. Serial No. 33,881. Term of patent 14 years.



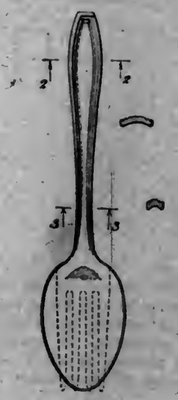
The ornamental design for a bottle stopper substantially as shown.

80,759. TOY. GOTTLIEB TRUMPF, Wilkinsburg, Pa. Filed July 17, 1929. Serial No. 32,093. Term of patent 7 years.



The ornamental design for a toy as shown.

80,760. DISPLAY-DESK-APPLIANCE MACHINE CASING OR SIMILAR ARTICLE. WILLIAM A. UTTZ, Sr., Cleveland, Ohio. Filed July 12, 1929. Serial No. 32,011. Term of patent 14 years.



The ornamental design for a display desk appliance machine casing or similar article as shown.

80,761. HEATER CASING. GEORGE D. WILKINSON, Oak Park, Ill., assignor to Cribben & Sexton Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 12, 1929. Serial No. 33,762. Term of patent 3½ years.

The ornamental design for a heater casing as shown.

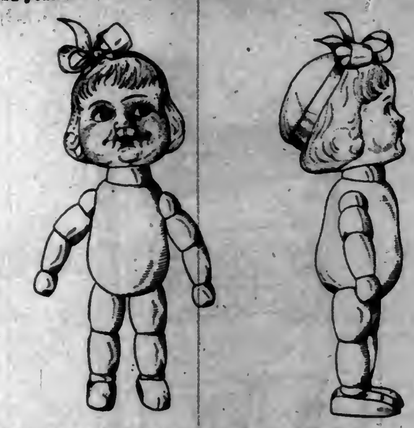
80,762. SPOON OR SIMILAR ARTICLE. GEORGE P. ITTIG, Bridgeport, Conn., assignor to Blackstone Silver Company, Inc., Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 21, 1929. Serial No. 32,489. Term of patent 7 years.

The ornamental design for a spoon or similar article substantially as shown and described.

80,763. HOUSING OF AIR-COOLING UNIT. HARRY D. BURR, Kansas City, Mo. Filed Jan. 27, 1930. Serial No. 34,310. Term of patent 7 years.

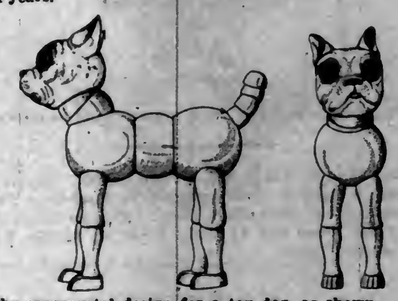
The ornamental design for a housing of air cooling unit, as shown.

80,764. ASH STAND. LOUIS HOFFBERG, Chicago, Ill., assignor to Vidrio Products Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 16, 1929. Serial No. 33,808. Term of patent 14 years.



The ornamental design for an ash stand as shown.

80,765. COMBINED ASH TRAY AND STAND. Louis Hoffberg, Chicago, Ill., assignor to Vidrio Products Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 16, 1929. Serial No. 33,809. Term of patent 14 years.

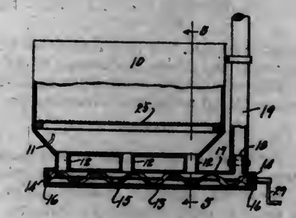


The ornamental design for a combined ash tray and stand as shown.

80,766. DOLL. Joseph L. Kallus, Brooklyn, N. Y. Filed Jan. 15, 1930. Serial No. 34,135. Term of patent 14 years.

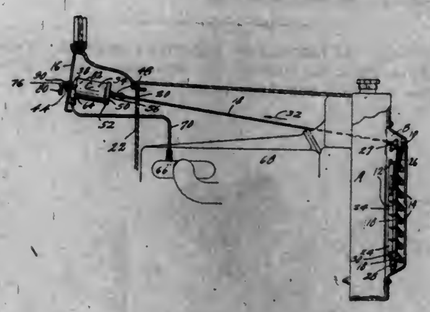
The ornamental design for a doll, as shown.

80,767. TOY DOG. Joseph L. Kallus, Brooklyn, N. Y. Filed Jan. 15, 1930. Serial No. 34,136. Term of patent 14 years.



The ornamental design for a toy dog, as shown.

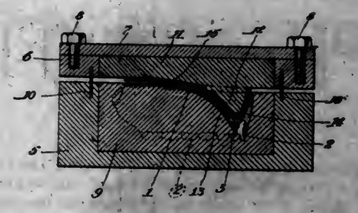
PATENTS



GRANTED MARCH 18, 1930

1,750,617. CHEMICAL APPARATUS. William H. Allen, Detroit, Mich., assignor, by mesne assignments, to Parker Rust Proof Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 14, 1927. Serial No. 175,164. 4 Claims. (Cl. 23—285.)

1. Apparatus for chemical treatment of articles comprising a tank adapted to contain liquid having a sediment chamber open thereto, a conveyor in said chamber and an outlet conduit leading from said chamber and extending to near the top of the tank when not discharging and means permitting lowering of said conduit to permit discharge.



1,750,618. RADIATOR-SHUTTER-CONTROL STRUCTURE. Bartlett R. Bennett, Mineola, N. Y. Filed July 2, 1928. Serial No. 289,947. 9 Claims. (Cl. 123—174.)

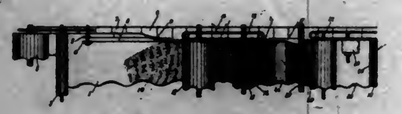
1. In a radiator shutter control structure, a cylinder, a piston therein and adapted to be operated by a reduction of air pressure within the cylinder and a manually controlled valve structure for controlling such reduction of pressure, said valve structure serving to support the cylinder and piston relative to an automobile instrument panel.

1,750,619. DENTURE. Charles E. Bradley, Mishawaka, Ind. Filed Aug. 23, 1927. Serial No. 214,846. 7 Claims. (Cl. 32—4.)

1. A vulcanite denture comprising a hard rubber mounting with artificial teeth thereon and having a layer of soft rubber containing an organic accelerator and from two to five parts combined sulphur vulcanized on the palatine side thereof.

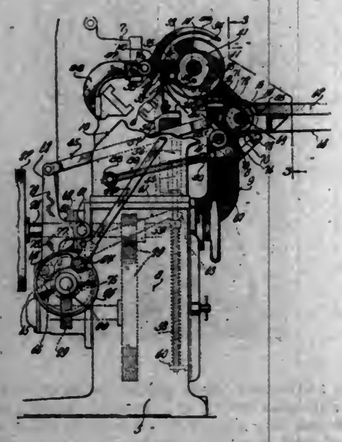
6. A vulcanite denture comprising a hard rubber mounting for artificial teeth and a layer of soft rubber vulcanized thereon in the initial stage of vulcanization of the hard rubber.

1,750,620. ARITHMETICAL TOP AND DICE GAME. Vertner D. Brittingham, San Antonio, Tex., assignor of one-half to Joe Oliver Naylor, San Antonio, Tex. Filed May 2, 1929. Serial No. 359,972. 3 Claims. (Cl. 273—134.)



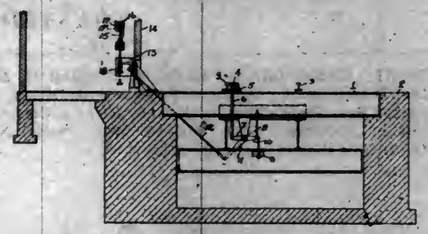
1. An arithmetical game comprising, a chart having a single continuous curved path outlined thereon, said path being divided into a plurality of spaces, each of which is numbered, said numbers comprising a plurality of similar groups, two markers, each of which serves to identify a numbered space, and means having areas provided with indicia representing the four arithmetical signs for determining by chance the arithmetical operation to which the two numbers corresponding to the positions of the markers must be subjected so as to determine the number of spaces each player may move his marker.

1,750,621. PLASTER WALL BOARD AND METHOD OF MAKING SAME. Harry E. Brookby, Evanston, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed June 5, 1926. Serial No. 113,845. 18 Claims. (Cl. 154—2.)



18. The method of making plaster wall board with a longitudinally fluted core which consists in continuously

advancing a fibrous cover sheet with a plastic material thereon, in scoring the opposite edges of the cover sheet and turning them up edgewise to contain the plastic material, in leveling and partially gauging the thickness of the plastic material on the cover sheet, and in supporting the turned up edges of the cover sheet during this operation; in longitudinally grooving the upper face of the plastic material in folding over inwardly the upstanding edges of the

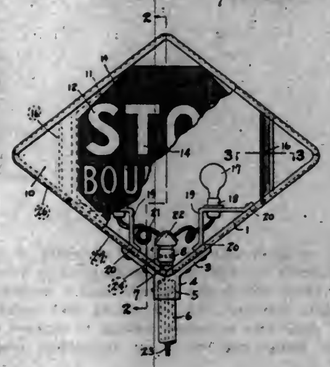


bottom cover sheet, in passing the lower cover sheet and the core thus formed through board forming rolls and in applying an upper cover sheet to the ridges of the core thus formed, the cover sheets bonding to the plastic core, in supporting the edges of the board during the board forming operation and thereafter, and in pressing down the edges of the board thus formed after the board forming operation until the plastic core is partially set.

1,750,622. DELIVERY MECHANISM FOR SIGNATURE-STITCHING MACHINES. ELMER W. BELLUCHE, Racine, Wis., assignor to Christensen Machine Company, Racine, Wis., a Corporation of Wisconsin. Filed May 4, 1928. Serial No. 275,222. 3 Claims. (Cl. 270—58.)

1. In a delivery mechanism for signature stitching machines, the combination with a substantially inverted V shaped saddle member, of a delivery roll mounted with its axis substantially parallel to the saddle whereby a line drawn vertically through the apex of the saddle is tangentially disposed with respect to the circumference of the roll, of means for oscillating the delivery roll, gripper fingers carried by the delivery roll and adapted to open at each limit of movement of the roll, means for elevating a completed book from the saddle into the gripper fingers when the delivery roll is at one limit of movement, the completed book being carried through its cycle by the delivery roll, and means for removing the completed book from the path of the delivery roll after the same reaches its other limit of movement.

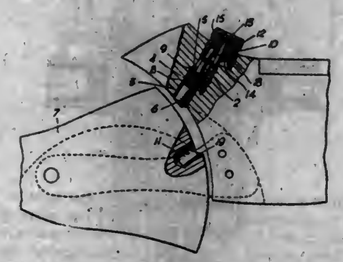
1,750,623. LOCKING DEVICE FOR WEIGHING SCALES. JESSE H. BRANT, Youngstown, Ohio. Filed June 2, 1927. Serial No. 195,036. 7 Claims. (Cl. 265—72.)



1. In a weighing scale, the combination of a scale-platform, a scale-beam, and means including a catch controlled by the load to be weighed for holding the beam inoperative until the load is placed properly on the platform.

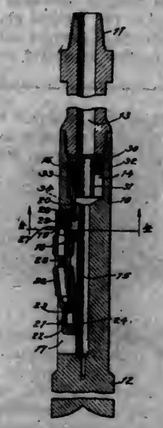
1,750,624. BOX-TRAY SUPPORT. WILLIAM L. BUEDINGEN, Milwaukee, Wis. Original application filed July 12, 1919, Serial No. 310,877. Divided and this application filed Mar. 2, 1922. Serial No. 540,471. 1 Claim. (Cl. 248—20.)

A support for readily removably securing a tray in the top open portion of a box and formed from bendable sheet metal and having its medial portion cut away to form two spaced arms connected by a transverse part at their inner ends, laterally struck hook members on the outer ends of the arms adapted to be engaged over the adjacent edges of the box to readily removably suspend the tray support therefrom, and a longitudinal shelf portion struck inwardly from the transverse part and upon which the tray is readily removably supported.



1,750,625. ILLUMINATED HIGHWAY SIGNAL. VETABELLE PHILLIPS CARTER, San Francisco, Calif. Filed Dec. 6, 1926. Serial No. 152,961. 3 Claims. (Cl. 40—132.)

1. A sign signal of the character described comprising a relatively flat box arranged vertically on edge, illuminating means within said box, a bracket provided with a depending pipe socket secured to the lower edge of the box, said box being formed of an inwardly turned channel member, a second wider inwardly turned channel covering the



upper run of said first channel, with the downwardly extending flanges of said second channel spaced outwardly from the downwardly extending flanges of said first mentioned channel and sides of the box bearing translucent cut-out indicia marginally inserted in the space therebetween.

1,750,626. HINGED LAST. WALTER CREBER, Leicester, England. Filed Dec. 20, 1927, Serial No. 241,298, and in Great Britain Feb. 11, 1927. 17 Claims. (Cl. 12—136.)

1. In a two-part hinged last, locking means comprising a locking element slidable in one part of the last and adapted to engage with the other part of the last to lock the two parts in straightened condition, and a member on the last adapted for turning to operate said slidable element.

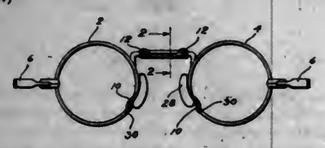
1,750,627. EXPANSIBLE UNDERREAMER. ROLAND R. CRUM, Whittier, Calif., assignor to H. C. Smith Manufacturing Company, Whittier, Calif., a Corporation of California. Filed Oct. 15, 1928. Serial No. 312,474. 14 Claims. (Cl. 255—75.)

1. In an underreamer, the combination of a body, having a longitudinally extending cavity in its periphery with a stepped inner surface at one end and an outwardly sloping ramp intermediate the steps, a cutter accommodated in said cavity for longitudinal play therein and having a connection to said body so that it may be moved laterally thereon into and out of expanded position, a supporting block secured to said cutter adjacent to said ramp, said block having a supporting surface to engage and coact with the outer step and a sloping bearing surface for engaging said ramp to cause said cutter to be projected upon upward movement thereof into expanded position, a cylinder chamber communicating with a source of fluid pressure, a piston in said cylinder, and a connecting rod for actuating said cutter to move the latter longitudinally upon introduction of fluid under pressure into said chamber so as to cause said block to ride outwardly over said ramp into position with said supporting surface overlaping the outer stepped surface.

1,750,628. EXPANSIBLE UNDERREAMER. ROLAND R. CRUM, Whittier, Calif., assignor to H. C. Smith Manufacturing Company, Whittier, Calif., a Corporation of California. Filed Oct. 15, 1928. Serial No. 312,475. 14 Claims. (Cl. 225—75.)

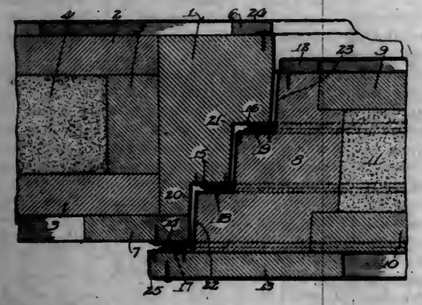
1. In an underreamer, the combination of a body having a longitudinally extending cavity in its periphery with an outwardly sloping ramp at one end, a cutter accommodated in said cavity for longitudinal play therein and having a connection to said body so that it may be moved laterally thereon into and out of expanded position, means tending to move said cutter toward said ramp, a catch secured to said cutter and having an outer lateral bearing surface, the tip of said catch engaging said ramp to cause said cutter to be retracted and projected upon longitudinal movement thereof, and a longitudinally movable latch on said body having a retaining surface complementary to and engaging the bearing surface on said catch to prevent outward lateral displacement of said cutter.

1,750,629. EXPANSIBLE UNDERREAMER. ROLAND R. CRUM, Whittier, Calif., assignor to H. C. Smith Manufacturing Company, Whittier, Calif., a Corporation of California. Filed Oct. 15, 1928. Serial No. 312,476. 20 Claims. (Cl. 255—75.)



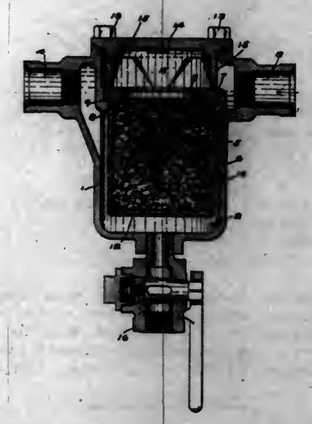
1. In an underreamer, the combination of a body having a longitudinally extending cavity in its periphery with a pocket at the upper end, said pocket having an outer wall, a cutter accommodated in said cavity for longitudinal play therein and having a connection to said body so that it may be moved laterally into and out of expanded position, means tending to move said cutter to its upper longitudinal position, a catch secured to the upper end of said cutter having a bearing surface, said catch having its tip within said pocket, a guide in said pocket having a coacting surface for sliding engagement by said bearing surface, one of said surfaces sloping to direct said catch outwardly against the outer wall of said pocket on its upward movement and dispose said cutter in expanded position and inwardly to the rear of said guide on downward movement with said

cutter in collapsed position, a longitudinally shiftable latch movable in said pocket to engage and retain said catch



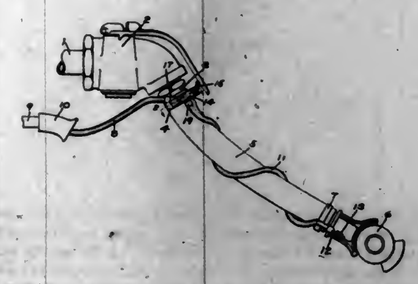
at its lower position, and means urging said latch into lower positon with said bearing surface out of engagement with said coacting surface.

1,750,630. OPHTHALMIC MOUNTING. GEORGE H. DAY, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 10, 1927. Serial No. 232,431. 3 Claims. (Cl. 88—43.)



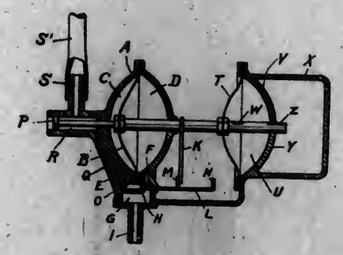
1. An ophthalmic mounting comprising two lens-holding members each having a projection, a tube longitudinally slotted along one side only of the tube, the projections extending into the tube through opposite ends of the tube, and clamping means for contracting the edges of the tube along the slot to force the walls of the tube into engagement with the projections.

1,750,631. CLOSURE. FREDERICK R. EAGLESFIELD, Niles, Mich., assignor to The Kawneer Company, Niles, Mich., a Corporation of Michigan. Filed Nov. 18, 1926. Serial No. 149,075. 12 Claims. (Cl. 20—69.)



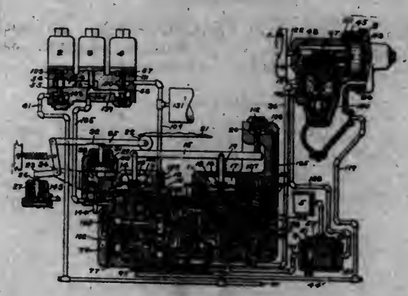
1. In a closure device having relatively movable parts, sheet material facings for said parts, and insulating means carried by the facing of one of said parts and adapted to form a sealing contact with the facing of the other of said parts.

1,750,632. AIR-STRAINING DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Apr. 1, 1927. Serial No. 180,156. 2 Claims. (Cl. 183—48.)



1. In an air straining device for fluid pressure systems, the combination with a casing having an internal horizontally disposed lug, of a strainer supported by said lug, a member removably secured to said casing, and a plurality of spaced lugs integral with said member adapted to engage said strainer in the vertical plane of said horizontally disposed lug, the space between said lugs being adapted to permit fluid to flow into said strainer.

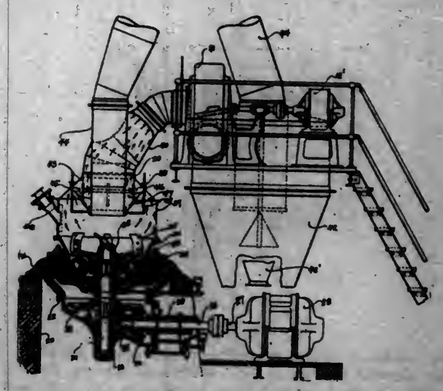
1,750,633. ELECTRIC TRAIN-WIRE DEVICE. CLYDE C. FARMER, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Mar. 1, 1928. Serial No. 258,238. 5 Claims. (Cl. 173—333.)



1. The combination with a section of flexible hose and a hose coupling carried at one end of the hose section, of a cable section having one end electrically connected to said coupling, a member associated with the other end of the hose section to which the other end of said cable section is electrically connected, a train wire cable, and strain detachable means for connecting the terminal of said train wire cable to said member.

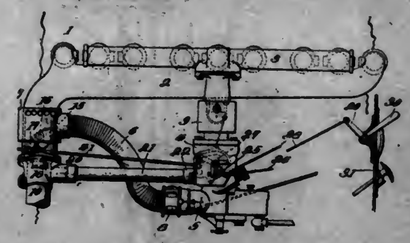
1,750,634. PULSATOR FOR MILKING MACHINES. ERIK AUGUST FORSBERG, Stockholm, Sweden, assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed May 8, 1928, Serial No. 274,803, and in Sweden Nov. 4, 1927. 8 Claims. (Cl. 31—61.)

1. A milking machine pulsator comprising a pneumatically operable working member, a pneumatic pulsation tube, means controlled by said member to effect pneumatic pulsations in said tube, and a fluid braking device connected with, operable by, and controlling the speed of, said working member; said braking device comprising walls forming two chambers shut off from the atmosphere, the exterior wall of one of said chambers comprising a movable diaphragm, and ports affording communication between said chambers.



1,750,635. VARIABLE-LOAD BRAKE. JOHN N. GOOD, Wilmerding, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 3, 1928. Serial No. 290,118. 14 Claims. (Cl. 303—22.)

3. In a braking apparatus, the combination with means for controlling the brakes electrically and means for controlling the brakes pneumatically, of a slide valve operative to render either the electric brake controlling means or the pneumatic brake controlling means effective to control the brakes, pistons subject to the pressure of fluid for operating said slide valve, pressure sensitive valve means operative to control the operation of said pistons, and valve means included in the pneumatically controlled means adapted to control the operation of said pressure sensitive valve means.

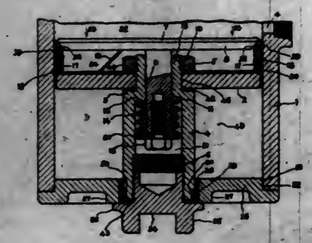


1,750,636. PULVERIZER MILL. RUSSELL ORLANDO GROMAN, Catasauqua, Pa., assignor to Fuller-Lehigh Company, Fullerton, Pa., a Corporation of Pennsylvania. Filed Feb. 11, 1927. Serial No. 167,421. 18 Claims. (Cl. 83—45.)

1. In a pulverizer mill, which includes pulverizing elements, the combination of a casing at one end of which said elements are disposed, an air inlet duct entering the casing at its opposite end for introducing air into the casing above the elements and in a downward direction, an air outlet duct at the said end of the casing surrounding and concentric with the air inlet duct for the outward flow of air from the casing in an upward direction, a baffle of inverted truncated form mounted within the casing in

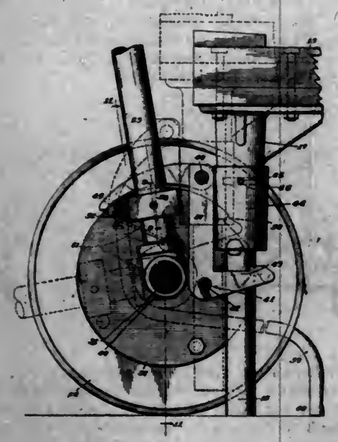
the path of air flowing into the outlet duct and causing the air to flow along the casing wall prior to its entrance into the said outlet duct, and a vertically adjustable end section for the air inlet duct movable to different positions of adjustment with reference to the elements to vary the point at which air is admitted into the casing, this end section being movable through the baffle.

1,750,637. HEAT-CONTROLLING MEANS FOR CHARGE-FORMING DEVICES. WALTER G. HEGINBOTTOM, Flint, Mich., assignor to Marvel Carbureter Company, Flint, Mich., a Corporation of Indiana. Filed Mar. 14, 1923, Serial No. 625,055. Renewed Feb. 1, 1927. 32 Claims. (Cl. 123—122.)



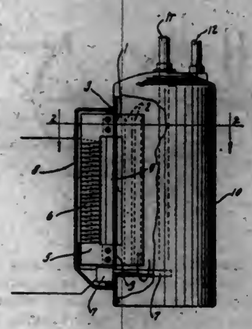
1. The combination with an internal combustion engine having an exhaust passage, intake manifold and charge forming device connected thereto, of a heater for heating the charge in its passage to the engine, a valve for controlling the passage of exhaust gases to said heater, a valve for controlling the passage of explosive charge to said engine, a member, a connection between said valves and member and adjustable means arranged in the path of travel of said member to vary the effect of movement of the charge controlling valve on the exhaust controlling valve.

1,750,638. PISTON. WILLIAM MCLEAN STEWART JACKSON, Cleveland, Ohio, assignor to The Guardian Trust Company, a Corporation of Ohio. Filed July 17, 1926. Serial No. 123,059. 12 Claims. (Cl. 74—108.)



1. In a piston, the combination with a metallic cup having resilient thin side walls, of a split metallic ring tele-

scoped within the cup, a piston body carrying said cup, the cup side walls being projected forwardly therefrom, of a piston head normally spring pressed toward the piston body and making at an edge portion engagement with an inner upper portion of the ring, said head movable under



the combined effects of spring pressure and pressure of fluid exerted against its outer surface to cam the ring outwardly to effect expansion of portions of cup side walls adjacent its rim into sealing engagement with enclosing cylinder walls.

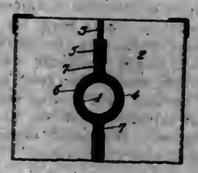
1,750,639. INDUSTRIAL TRUCK AND THE LIKE. LEE B. JONES, Kansas City, Mo. Filed Feb. 17, 1927. Serial No. 168,944. 13 Claims. (Cl. 280—46.)

13. In a truck capable of normally carrying a superimposed load on a pair of wheels and a leg support, means for shifting the load from the support to an auxiliary set of wheels, said means comprising a pair of wheels, a body carried by the wheels, and a post pivotally swung from the body adapted to be raised and lowered by rocking said body between said wheels, said post being formed to pivotally engage said truck, and releasable means cooperating between said body and said post to secure said post in its elevated position.

1,750,640. ELECTRICAL WATER HEATER. ERNEST E. KITTREDGE, Alameda, JOSEPH A. FORSTER, Oakland, and RASMUS D. JOHANSEN, Alameda, Calif. Filed Mar. 19, 1928. Serial No. 262,722. 1 Claim. (Cl. 219—47.)

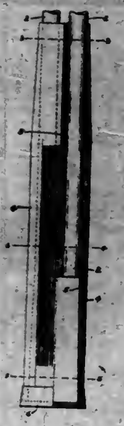
A water heater comprising a transformer of laminated construction, a heating element being substantially solid and having a plurality of longitudinal bores extending therethrough and opening at both ends of said element, arms carried by the transformer and complementary arms carried by the heating element for spacing said element from said transformer, said arms being adapted to extend through the side wall of a boiler for securing the heating element within the boiler.

1,750,641. CAGE FOR BALL BEARINGS. ANDREW H. LINDS, Philadelphia, Pa. Filed Jan. 8, 1927. Serial No. 159,758. 7 Claims. (Cl. 308—201.)



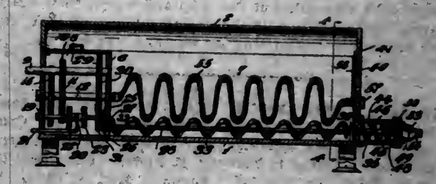
1. A ball bearing comprising a cage and balls therein; the cage comprising two circular members each of an approximate U-shape in cross-section and porvided at intervals along their free edges with pairs of flanges arranged opposite to the pairs of flanges in the other cage member and forming therewith ball pockets, each of said flanges extending through an arc substantially shorter than 180°, the corresponding ends of the corresponding flanges of the two cage members being spaced apart a substantial distance to prevent contact with the pockets of the fastest moving surfaces of contained balls.

1,750,642. DISPLAY APPARATUS. LESLIE R. MCDONALD, Montreal, Quebec, Canada. Filed June 28, 1928. Serial No. 287,719. 5 Claims. (Cl. 40—36.)



1. In a display apparatus, the combination of a case provided with a plurality of placard compartments, a series of placard carriers slidably disposed therein, means for shifting a placard carrier laterally, means for shifting a placard carrier transversely, embodying a shaft provided with a lower spring arm and with an upper spring arm pressing resiliently forward to engage the top of each placard carrier successively.

1,750,643. WELDING COPPER AND THE LIKE. THOMAS E. MURRAY, Jr., and IRVING T. BENNETT, Brooklyn, N. Y.; said Bennett assignor to Thomas E. Murray, Brooklyn, N. Y. Filed July 5, 1927. Serial No. 203,438. 7 Claims. (Cl. 219—10.)

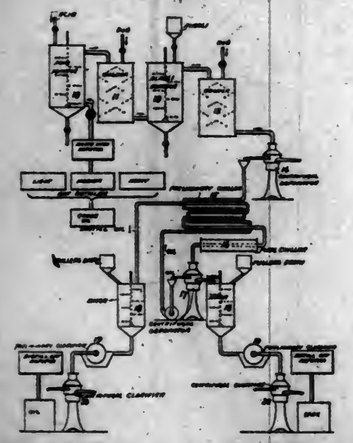


1. The method of making a lap joint between two pieces of metal of comparatively high conductivity which consists in applying at opposite sides thereof pieces of metal of comparatively low conductivity and electrically welding the latter together through the metal of the pieces of higher conductivity.

1,750,644. HANDLE FOR TENNIS RACKETS AND THE LIKE. HAROLD W. NORTON, Dayton, Ohio, assignor to The Dayton Steel Racquet Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 20, 1922. Serial No. 602,056. 3 Claims. (Cl. 273—73.)

1. The combination with a tennis racket frame, of a hard rubber handle having a porous interior molded to the legs thereof.

1,750,645. CUTTING AND MIXING MACHINE. CHRISTOPHER OFFENHAUSER, Philadelphia, Pa. Filed July 5, 1928. Serial No. 290,447. 11 Claims. (Cl. 146—182.)

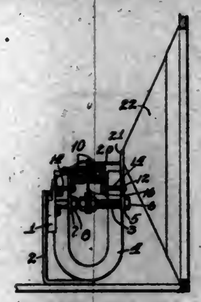


11. In a cutting and mixing machine, a casing having a mixing chamber provided with a discharge opening, a gate for said opening, cutting mechanism to which the material is discharged from said opening, side feed screws in said chamber connected to revolve in opposite directions, a central feed screw, means to drive said central feed screw in a forward or a reverse direction, driving means for said side feed screws, said feed screws being detachably connected with their driving means, means to actuate said cutting mechanism, and a discharge spout to receive the material from said cutting mechanism and detachably connected therewith and the discharge end of said spout being adapted to give a predetermined contour in cross section to the material being discharged.

1,750,646. PROCESS OF PURIFYING WAX DISTILLATES. EARL PETTY, Winfield, Kans., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 24, 1921. Serial No. 495,079. 6 Claims. (Cl. 196—21.)

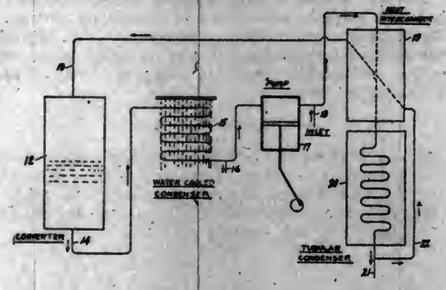
5. The process of producing wax-free oil of different specific gravities from a mineral oil stock containing wax and hydrocarbons having higher and lower boiling points than the wax, which comprises first distilling off from said stock a plurality of wax distillates of different specific gravities and afterward subjecting each wax distillate

separately to dilution with a light petroleum distillate and agitation with acid and alkali, with separation of the water and soap, then refrigerating and centrifugally separating the oil and wax, and then decolorizing each wax-free oil and distilling off the diluent, thereby avoiding a final distillation of the wax-free oil to separate the mixed distillates and the resultant impairment of color.



6. The process of producing refined wax and wax-free oil of different specific gravities from a mineral oil stock containing wax and hydrocarbons having higher and lower boiling points than the wax, which comprises first successively distilling off from said stock a plurality of wax distillates of different specific gravities and afterward subjecting each wax distillate separately to dilution with a light petroleum distillate and agitation with acid and alkali, with separation of the soap and water, then refrigerating and centrifugally separating the oil and wax, and then separately decolorizing the wax and wax-free oil.

1,750,647. LEAD PENCIL. EARL F. PIERCE and JOHN DAVID DICKINSON, Chicago, Ill.; Central Trust Company of Illinois, administrator of said Earl F. Pierce, deceased, assignor to Florence E. Pierce. Filed Dec. 13, 1922, Serial No. 606,581. Renewed Mar. 9, 1929. 16 Claims. (Cl. 120—18.)

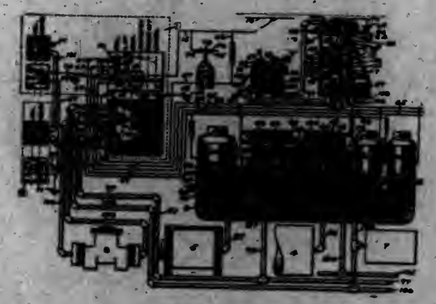


9. In a lead pencil a lead guiding tube having a longitudinally extending slot therein, lead containing means around said tube communicating therewith, closing means for said slot and means for actuating said closing means.

1,750,648. LOUD-SPEAKER UNIT. JAMES P. QUAM, Chicago, Ill. Filed Oct. 20, 1928. Serial No. 313,690. 4 Claims. (Cl. 179—114.)

3. In a loud speaker unit, a supporting bracket, a pair of spaced threaded studs projecting laterally therefrom, a horseshoe magnet positioned between the studs, means threaded on the studs for securing the magnet in position relative thereto and for adjusting the relative spacing of the legs of the magnet, an armature adjustably supported by said studs and projecting between the poles of the magnet, and means threaded on the studs for securing the armature in vertical and lateral adjustment.

1,750,649. SYNTHETIC PRODUCTION OF AMMONIA. RALPH S. RICHARDSON, Teaneck, N. J., assignor to Chemical Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Mar. 12, 1927. Serial No. 174,904. 7 Claims. (Cl. 23—199.)

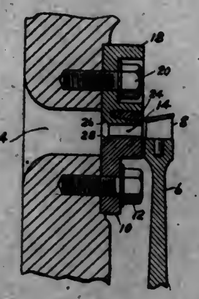


2. In the synthetic production of ammonia, the method of removing ammonia products from the circulation system which comprises condensing the synthesized ammonia gases to liquid anhydrous ammonia and removing the latter from the system, then adding fresh gases to the gases in the circulation system, then cooling the resultant gases with production of liquefied ammonia, and finally removing the latter along with condensable impurities which may have been introduced into the system.

1,750,650. ELECTROPNEUMATIC BRAKE EQUIPMENT. THOMAS H. THOMAS, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Aug. 13, 1928. Serial No. 299,135. 20 Claims. (Cl. 303—3.)

1. In an electro-pneumatic brake, the combination with three electro-magnets normally energized, of an application pipe normally charged with fluid under pressure, and means operative upon a reduction in the pressure of fluid

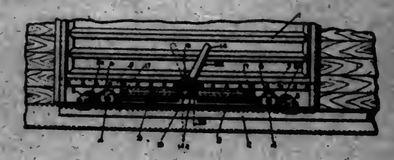
in said pipe and the deenergization of two of said electromagnets for effecting a service application of the brakes,



and operative upon a reduction in the pressure of fluid in said pipe and the deenergization of all of said magnets for effecting an emergency application of the brakes.

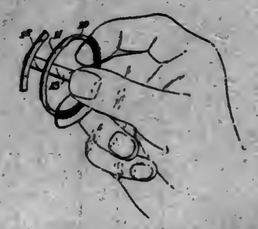
1,750,651. MEANS OF CLEANING AND PROTECTING METAL SURFACES. JAMES C. VIGNOS, Nitro, W. Va., assignor to The Rubber Service Laboratories Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 19, 1927. Serial No. 234,547. 14 Claims. (Cl. 148—8.)

1. A metal treating compound comprising a highly ionized mineral pickle acid solution containing less than 1% by weight of a sulfonated mercaptan.



1,750,652. NOZZLE CONSTRUCTION. CARL R. WALLER, Trenton, N. J., assignor to De Laval Steam Turbine Company, Trenton, N. J., a Corporation of New Jersey. Filed Oct. 28, 1927. Serial No. 229,818. 4 Claims. (Cl. 253—78.)

1. A nozzle construction for turbines comprising a vane supporting structure having opposed circumferentially extending walls forming a passage therebetween, a vane located in said passage and between said walls, and means for moving one of said walls towards the other to tightly clamp the vane therebetween, said means comprising a surface on the wall tapering relatively to a fixed surface, the angle between the surfaces opening in a direction substantially parallel to the walls, and a wedge engaging between said surfaces.



1,750,653. DOOR-LIFTING MEANS. AXEL WASBERG and KENNETH J. TOBIN, Chicago, Ill., assignors to Camel Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 24, 1928. Serial No. 308,120. 7 Claims. (Cl. 16—99.)

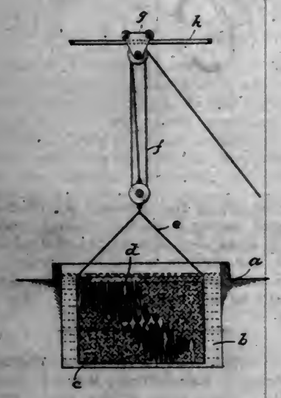
1. The combination with a track, of a sliding door having a support for frictionally engaging said track, a pair of guide members on the door, an element slidably confined with respect to said guide members, rollers carried by said element, said element having a horizontal flange, spaced housings upon said door enclosing said flange, a shaft ex-

tending through said housings above said flange, a pair of double acting cams upon said shaft, a third cam positioned between said double acting cams, and a lever for actuating said third mentioned cam.

1,750,654. URETHRAL CLIP. REINHOLD H. WAPPLER, Yonkers, N. Y. Filed Apr. 17, 1929. Serial No. 355,708. 8 Claims. (Cl. 128—346.)

1. A surgical clip of the character described comprising a loop element having a portion thereof constructed to form a jaw, a cross-piece element provided with a complementary jaw, and resilient means conforming to said loop for pivotally associating said elements at a point diametrically opposite to said jaws.

1,750,655. WHEEL. JOHN WILLIAM WHITE, Buffalo, N. Y., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed Nov. 3, 1924, Serial No. 747,520. Renewed Apr. 16, 1928. 3 Claims. (Cl. 301—9.)

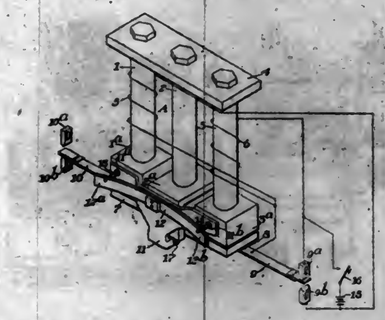


1. In a disc wheel a hub having adjacent its inner end, an annular flange projecting radially therefrom, an annular seat on said hub in front of said flange, a second annular seat on said hub in front of and smaller in diameter than said first named seat, a wheel disc, a brake drum

mounted behind said disc, on said first named seat, a clamping ring mounted in front of said disc on said second named seat and means for permanently securing said brake drum to said flange and for removably clamping said disc between said brake drum and said clamping means.

2. In a disc wheel a hub having, adjacent its inner end, an annular flange projecting radially therefrom, a brake drum mounted upon said hub, means securing said drum to said flange, said drum having an outwardly inclined annular portion outside said securing means, a wheel disc in front of said drum, an annular plate mounted upon said hub in front of said disc and means for clamping said disc between said plate and said drum, said disc being clamped by the plate adjacent its periphery against the outwardly inclined annular portion of said drum whereby the portion of the disc inside the periphery of the plate is unconfined.

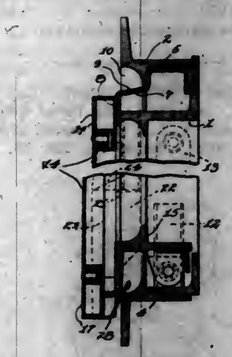
1,750,656. METHOD OF CASING TOBACCO. HARRY P. WUHMAN, Brooklyn, N. Y., assignor to Bayuk Cigars Incorporated, Philadelphia, Pa., a Corporation of Maryland. Filed Mar. 10, 1926. Serial No. 93,546. 2 Claims. (Cl. 131—55.)



1. The method of treating a bale of tobacco consisting of hands arranged in parallelism, including lowering the bale into water with the leaves composing the hands extending substantially vertically.

1,750,657. BLEACHING PROCESS. GUSTAV ADOLPH and ALBERT PIETZSCH, Hoellriegelskreuth, near Munich, Germany. Filed Mar. 11, 1927, Serial No. 174,691, and in Germany Mar. 29, 1926. 2 Claims. (Cl. 8—2.)

1. In the process of bleaching, the step which consists in treating the articles to be bleached in a bath containing hydrogen peroxide and a persulphate.

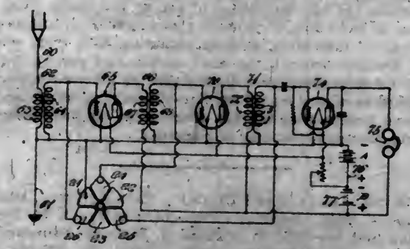


1,750,658. ELECTRICAL RELAY. HARRY E. ASHWORTH and BRANKO LAZICH, Pittsburgh, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 30, 1929. Serial No. 396,225. 10 Claims. (Cl. 175—336.)

1. In combination, an electromagnet, an armature controlled by said electromagnet, an auxiliary magnetic path between the pole pieces of said electromagnet for shunting a portion of the flux from said electromagnet away

from said armature, and means for varying the reluctance of said path in response to variations in the ambient temperature.

1,750,659. WINDOW SCREEN. GUSTAF IVAR BARCLAY, Detroit, Mich., assignor to Detroit Steel Products Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 8, 1927. Serial No. 158,743. 8 Claims. (Cl. 156—14.)

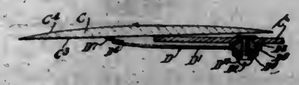


4. In a screen support of the type used with a swinging window sash, comprising retaining members secured in spaced relation upon the screen and having portions insertable into inwardly opening pockets formed in the frame for holding a portion of the frame in position upon the window frame, and supporting elements carried by the window frame and having inclined surfaces operable to guide the portions aforesaid of the retaining members into said pockets, said surface terminating in shoulders engageable with the retaining members to hold the remaining portions of the frame in position.

1,750,660. METHOD OF SELECTIVE ELECTRICAL TUNING. HAROLD N. BLISS, Ithaca, N. Y. Original application filed Nov. 4, 1924, Serial No. 747,846, Patent No. 1,588,438. Divided and this application filed May 18, 1926. Serial No. 109,902. 5 Claims. (Cl. 179—171.)

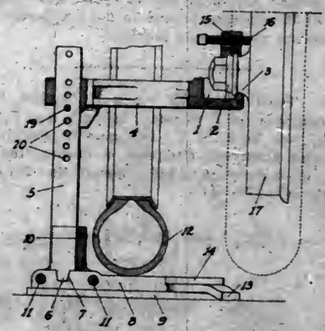
1. In an electrical tuning system, the combination of two or more stages each including cooperating elements whose position relative to each other determines the tuning, uni-control means for smoothly changing the relative positions of the cooperating elements within the various stages simultaneously to effect the broad tuning,

separately calibrated correctional means for one or more of said stages operating differentially to vary the relative position of the cooperating elements to accord with the individual corrections necessary to obtain accurate resonance, said correctional means being also operated by said



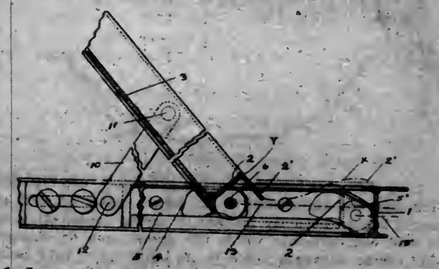
uni-control, whereby separate small corrections may be superposed differentially on the broad tuning simultaneously with the operation of the uni-control to afford a succession of accurate resonances in tuning from a uni-control.

1,750,661. CATHODE-RAY OSCILLOGRAPH. RALPH BOWN, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 22, 1928. Serial No. 263,875. 7 Claims. (Cl. 250—27.5.)



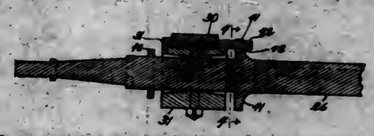
1. A cathode ray oscillograph tube provided with a screen at one end having a curved surface whose curvature is such that at least one plane intersection thereof will lie in a straight line.

1,750,662. SLICING MACHINE. WILLIAM J. CAMPBELL, Indianapolis, Ind., assignor to American Slicing Machine Company, Chicago, Ill., a Corporation of New York. Filed Jan. 19, 1929. Serial No. 333,652. 15 Claims. (Cl. 146—102.)



1. In a slicing machine, a knife and means for rotating it, and a scraper member adapted to engage the face of said knife, and a tiltable supporting and adjusting means for said scraper member, said supporting means including a generally spherical surfaced member.

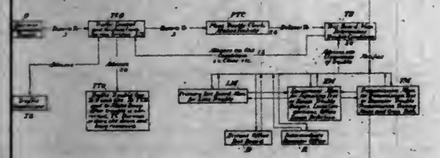
1,750,663. AUTOMOBILE JACK. ROBERT H. DART, Sacramento, Calif. Filed Sept. 5, 1928. Serial No. 304,085. 7 Claims. (Cl. 248—2.)



1. A wheel supporting structure comprising a base adapted to rest on the ground and project outwardly from a wheel in substantially parallel relation to the axis thereof, a vertical bar removably mounted on the base toward the outer end thereof, a horizontal arm in one end of which the bar is removably slidable said arm overhanging the base, a cradle rigid on the other end of the arm to detachably engage the hub of the wheel, and means on the bar for supporting the arm at different heights thereon.

1,750,664. SWINGING-WINDOW CONSTRUCTION. WILLIAM DREUSIKE, Oakland, Calif., assignor to United States Metal Products Co., San Francisco, Calif., a Corporation of California. Filed Dec. 18, 1928. Serial No. 326,758. 3 Claims. (Cl. 189—66.)

1. In a window of the swinging sash type a fixed frame, a sash fitting therein provided with a flange overlapping the frame, shoes at opposite edges of the sash, tracks provided whereby said shoes are slidable parallel with and along the frame, means pivotally connecting the shoes and sash at one edge of the sash so that the sash can swing open and closed with respect to the frame, and means for guiding said shoes to draw the pivoted edge of the sash toward the frame for seating said flange thereagainst upon closing the same, said shoes being formed to cooperate with the guiding means.

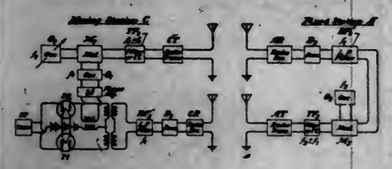


1,750,665. TRUCK CONSTRUCTION. ORLANDER W. FRY, Los Angeles, Calif., assignor to O. R. Fuller Co., Los Angeles, Calif., a Corporation. Filed Mar. 19, 1928. Serial No. 262,811. 2 Claims. (Cl. 280—106.5.)

1. In a motor vehicle having a frame, a driving axle, a parallel following rear axle, a leaf spring supporting each

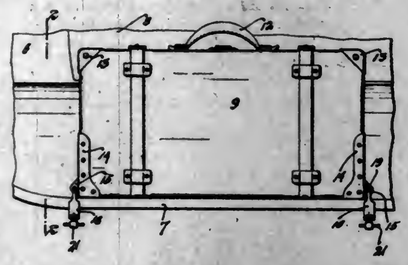
side of the frame and with their front ends suitably supported on said driving axle, a bearing for mounting each spring on said rear axle having its central part formed so as to snugly surround the axle and with the lateral portions of the bearing formed to have a flaring opening so the axle can rock in said bearing.

1,750,666. TOLL CIRCUIT. LEE L. GLEZEN, Millburn, N. J., and MORTON J. STIGERS, Baldwin, and EDMUND R. TAYLOR, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed July 10, 1928. Serial No. 291,682. 14 Claims. (Cl. 179—41.)



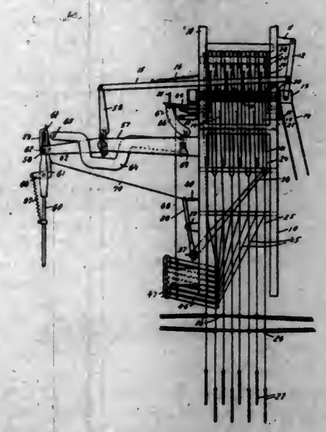
7. In a toll system, a toll line, an operator's toll board, said line being multipled to a plurality of positions of said toll board to enable operators to establish connections therewith, signaling and transmission elements associated with said line, a circuit control board and multiple connections from said line to a plurality of positions of said circuit control board, said multiple connections being associated with the line at a point between its connection to the toll board and said signaling and transmission elements.

1,750,667. CLASP FOR A BRACELET. HENRY GRASMERE, Newark, N. J., assignor to Krementz & Company, Newark, N. J. Filed Sept. 30, 1926. Serial No. 138,621. 4 Claims. (Cl. 24—71.)



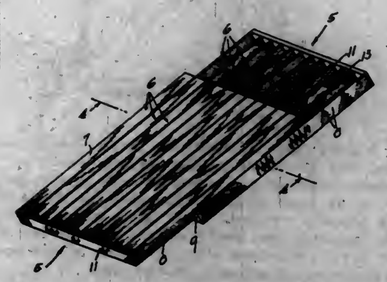
1. In a flexible bracelet having extensible, non-separable link elements interposed in its length, some of said elements being compactly foldable, a casing constituting one of said elements into which the others may be disposed, said casing having a notch in its outer wall; said casing having longitudinal slots in its side walls, a spring detent on one of said link elements to retain all of said elements firmly within the casing by engagement in the mentioned notch, projections extending through the slots in said casing and a corrugated knob on said detent to facilitate its release.

1,750,668. DETERMINING MOVEMENT AND POSITION OF MOVING OBJECTS. ESTILL I. GREEN, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 8, 1927. Serial No. 238,546. 17 Claims. (Cl. 250—2.)



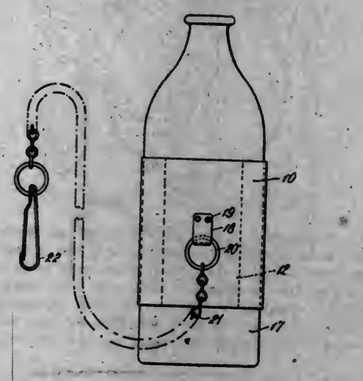
14. The method of ascertaining the position of a moving object, which consists in generating a frequency at the observing station, transmitting in both directions between the fixed and moving station frequencies whose phase is definitely related to the frequency generated at the observing station, comparing the phase of the frequency generated at the observing station with the phase of a frequency which has been shifted in phase by transmission, changing the effective phase of one of the waves with respect to the other to produce a measurable instantaneous change of indication, thereby obtaining data from which the distance between the fixed station and moving object may be determined, and making similar observations with respect to waves transmitted to the moving object and a second transmitting station whereby the absolute position of the moving object may be computed.

1,750,669. AUTO CASE CLAMP. PAUL J. HUBER, Minneapolis, Minn., assignor of one-third to Frank W. Peterson and one-third to William H. Wallraff, Minneapolis, Minn. Filed May 16, 1928. Serial No. 278,078. 3 Claims. (Cl. 224—29.)



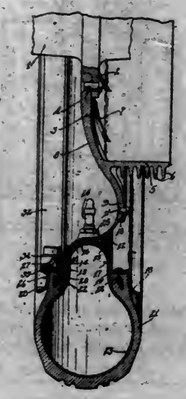
1. In combination with a case provided at its bottom with corner-reinforcing caps, a lug on each of said caps, a hole in each of said lugs, aligned with the hole in the other lug on its end of the case, U-shaped brackets each comprising a relatively long upper arm insertable through the aligned holes in the lugs on one side of the case, a relatively short lower arm, and a clamping device near the inner end of said lower arm and capable of engaging the under side of a suitable base of support upon which said case is to be secured.

1,750,670. JACQUARD MECHANISM. GEORGE HUNTER, Pompton Lakes, N. J. Filed Jan. 30, 1929. Serial No. 336,135. 19 Claims. (Cl. 139—59.)



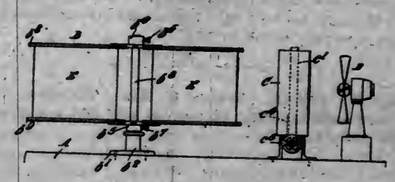
1. In a jacquard mechanism for looms, the combination of a plurality of needles and up-standers connected thereto, a card barrel, a single set of cards carried by the barrel, means for moving the barrel to bring the cards successively against the needles, means controlled by selected cards of the set for rendering the barrel-moving means inoperative, and means controlled by other cards of the set for acting on the up-standers to place them in position for the production of a ground shot shed.

1,750,671. ALLOY BLOCK FOR SOLDERING. FREDERICK W. KOCH, Oakland, Calif. Filed Nov. 20, 1928. Serial No. 320,594. 8 Claims. (Cl. 113—110.)



1. A set of solder bars disposed in parallel, spaced position, alongside each other and joined at an end thereof so as to allow the bending of each bar at its joint; each bar being of triangular cross section, the bases of the triangular bars being in alignment with each other to form a substantially continuous surface, the remaining sides of the adjacent triangular bars defining longitudinal troughs between the bars for receiving a complemental set of bars therein.

1,750,672. RECEPTACLE HOLDER AND GUARD. MAX KRISCHER, Brooklyn, N. Y., assignor to Krischer's Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 17, 1928. Serial No. 270,603. 3 Claims. (Cl. 215—11.)

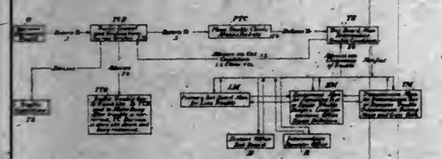


1. A receptacle holder comprising a permanently closed cylindrical sleeve to receive and encase the receptacle, this sleeve being made up of a pair of flexible sections extending lengthwise of the sleeve and together completing it cylindrically, one of these sections being distendable, and means attached to the non-resilient section for attaching the sleeve to a fixed object.

1,750,673. RIM FOR VEHICLE WHEELS. LUDGER E. LA BRIE, Chicago, Ill., assignor to Motor Industries, Inc., Chicago, Ill., a Corporation of Illinois. Filed Oct. 15, 1923, Serial No. 668,709. Renewed Aug. 22, 1925. 8 Claims. (Cl. 152—21.)

8. Tire carrying means comprising, in combination, a rim having a central depressed portion approximately semicircular in cross-section and flanges extending laterally from said depressed portion, said flanges adapted to support the side walls of a tire casing, the rim depression adapted to nest an inflated inner tube, said rim having at one side a substantially radially extending tire supporting flange and at its other side a detachable ring adapted to support one side of a tire casing, said ring provided with a part fitting under one laterally extending flange, and radially expansible means for locking the detachable ring in place.

1,750,674. DRYING OF PHOTOGRAPHIC PRINTS. STANLEY JAMES NEAL LLOYD, Guildford, England. Filed Aug. 22, 1929, Serial No. 387,685, and in Great Britain May 4, 1928. 2 Claims. (Cl. 34—26.)



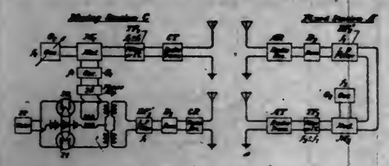
1. A drying apparatus of the class described having in combination, a stationary spindle, a frame revolubly mounted on said spindle and having vertically spaced upper and lower radial arms, said upper and lower arms having opposed grooves, print supporting plates slidably mounted in said grooves, and an air impeller positioned to one side of said frame for causing a current of air to impinge in a tangential direction against said plates whereby to rotate the frame and dry the prints on the plates.

1,750,675. BEVERAGE DISPENSING AND COOLING BOX. HENRY R. LOOSLEY, East St. Louis, Ill. Filed Oct. 11, 1928. Serial No. 311,740. 5 Claims. (Cl. 312—174.)

3. A beverage dispensing and cooling box comprising a box having a lid, a cooling compartment in the box, a

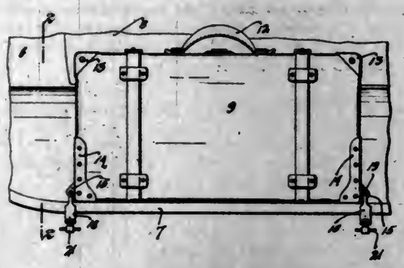
side of the frame and with their front ends suitably supported on said driving axle, a bearing for mounting each spring on said rear axle having its central part formed so as to snugly surround the axle and with the lateral portions of the bearing formed to have a flaring opening so the axle can rock in said bearing.

1,750,666. TOLL CIRCUIT. LEE L. GLEZEN, Millburn, N. J., and MORTON J. STIGERS, Baldwin, and EDMUND R. TAYLOR, New York, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed July 10, 1928. Serial No. 291,682. 14 Claims. (Cl. 179—41.)



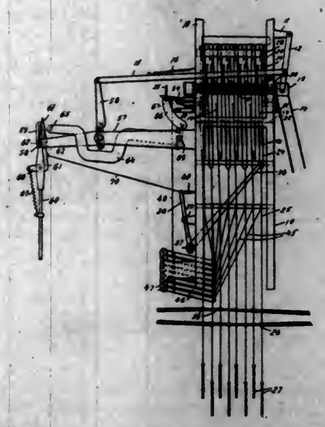
7. In a toll system, a toll line, an operator's toll board, said line being multipled to a plurality of positions of said toll board to enable operators to establish connections therewith, signaling and transmission elements associated with said line, a circuit control board and multiple connections from said line to a plurality of positions of said circuit control board, said multiple connections being associated with the line at a point between its connection to the toll board and said signaling and transmission elements.

1,750,667. CLASP FOR A BRACELET. HENRY GRASMERE, Newark, N. J., assignor to Krementz & Company, Newark, N. J. Filed Sept. 30, 1926. Serial No. 138,621. 4 Claims. (Cl. 24—71.)



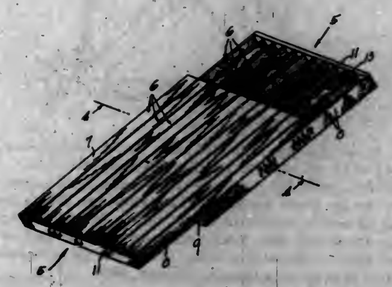
1. In a flexible bracelet having extensible, non-separable link elements interposed in its length, some of said elements being compactly foldable, a casing constituting one of said elements into which the others may be disposed, said casing having a notch in its outer wall; said casing having longitudinal slots in its side walls, a spring detent on one of said link elements to retain all of said elements firmly within the casing by engagement in the mentioned notch, projections extending through the slots in said casing and a corrugated knob on said detent to facilitate its release.

1,750,668. DETERMINING MOVEMENT AND POSITION OF MOVING OBJECTS. ESTILL I. GREEN, East Orange, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 8, 1927. Serial No. 238,546. 17 Claims. (Cl. 250—2.)



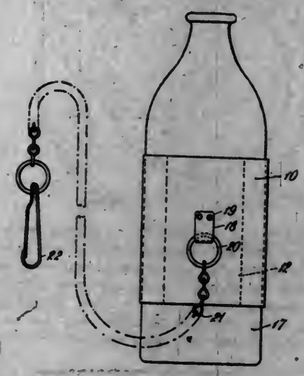
4. The method of ascertaining the position of a moving object, which consists in generating a frequency at the observing station, transmitting in both directions between the fixed and moving station frequencies whose phase is definitely related to the frequency generated at the observing station, comparing the phase of the frequency generated at the observing station with the phase of a frequency which has been shifted in phase by transmission, changing the effective phase of one of the waves with respect to the other to produce a measurable instantaneous change of indication, thereby obtaining data from which the distance between the fixed station and moving object may be determined, and making similar observations with respect to waves transmitted to the moving object and a second transmitting station whereby the absolute position of the moving object may be computed.

1,750,669. AUTO CASE CLAMP. PAUL J. HUBER, Minneapolis, Minn., assignor of one-third to Frank W. Peterson and one-third to William H. Wallraff, Minneapolis, Minn. Filed May 16, 1928. Serial No. 278,078. 3 Claims. (Cl. 224—29.)



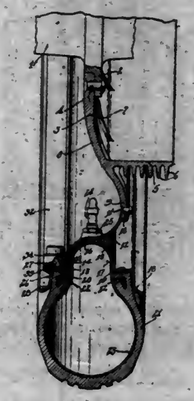
1. In combination with a case provided at its bottom with corner-reinforcing caps, a lug on each of said caps, a hole in each of said lugs, aligned with the hole in the other lug on its end of the case, U-shaped brackets each comprising a relatively long upper arm insertable through the aligned holes in the lugs on one side of the case, a relatively short lower arm, and a clamping device near the inner end of said lower arm and capable of engaging the under side of a suitable base of support upon which said case is to be secured.

1,750,670. JACQUARD MECHANISM. GEORGE HUNTER, Pompton Lakes, N. J. Filed Jan. 30, 1929. Serial No. 336,135. 19 Claims. (Cl. 139—59.)



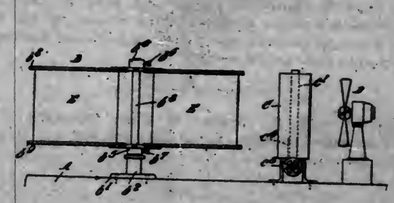
1. In a jacquard mechanism for looms, the combination of a plurality of needles and up-standers connected thereto, a card barrel, a single set of cards carried by the barrel, means for moving the barrel to bring the cards successively against the needles, means controlled by selected cards of the set for rendering the barrel-moving means inoperative, and means controlled by other cards of the set for acting on the up-standers to place them in position for the production of a ground shot shed.

1,750,671. ALLOY BLOCK FOR SOLDERING. FREDERICK W. KOCH, Oakland, Calif. Filed Nov. 20, 1928. Serial No. 320,594. 8 Claims. (Cl. 113—110.)



1. A set of solder bars disposed in parallel, spaced position, alongside each other and joined at an end thereof so as to allow the bending of each bar at its joint; each bar being of triangular cross section, the bases of the triangular bars being in alignment with each other to form a substantially continuous surface, the remaining sides of the adjacent triangular bars defining longitudinal troughs between the bars for receiving a complemental set of bars therein.

1,750,672. RECEPTACLE HOLDER AND GUARD. MAX KRISCHER, Brooklyn, N. Y., assignor to Krischer's Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 17, 1928. Serial No. 270,603. 3 Claims. (Cl. 215—11.)

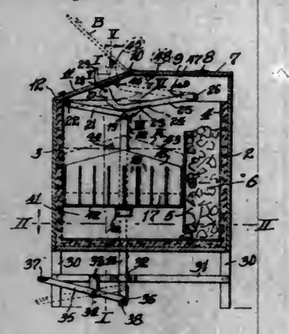


1. A receptacle holder comprising a permanently closed cylindrical sleeve to receive and encase the receptacle, this sleeve being made up of a pair of flexible sections extending lengthwise of the sleeve and together completing it cylindrically, one of these sections being distendable, and means attached to the non-resilient section for attaching the sleeve to a fixed object.

1,750,673. RIM FOR VEHICLE WHEELS. LUDGER E. LA BEIE, Chicago, Ill., assignor to Motor Industries, Inc., Chicago, Ill., a Corporation of Illinois. Filed Oct. 15, 1923, Serial No. 668,709. Renewed Aug. 22, 1925. 8 Claims. (Cl. 152—21.)

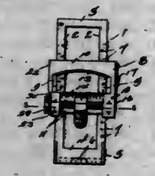
8. Tire carrying means comprising, in combination, a rim having a central depressed portion approximately semicircular in cross-section and flanges extending laterally from said depressed portion, said flanges adapted to support the side walls of a tire casing, the rim depression adapted to nest an inflated inner tube, said rim having at one side a substantially radially extending tire supporting flange and at its other side a detachable ring adapted to support one side of a tire casing, said ring provided with a part fitting under one laterally extending flange, and radially expansible means for locking the detachable ring in place.

1,750,674. DRYING OF PHOTOGRAPHIC PRINTS. STANLEY JAMES NEAL LLOYD, Guildford, England. Filed Aug. 22, 1929, Serial No. 387,685, and in Great Britain May 4, 1928. 2 Claims. (Cl. 34—26.)



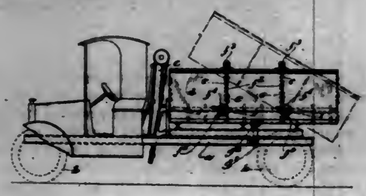
1. A drying apparatus of the class described having in combination, a stationary spindle, a frame revolubly mounted on said spindle and having vertically spaced upper and lower radial arms, said upper and lower arms having opposed grooves, print supporting plates slidably mounted in said grooves, and an air impeller positioned to one side of said frame for causing a current of air to impinge in a tangential direction against said plates whereby to rotate the frame and dry the prints on the plates.

1,750,675. BEVERAGE DISPENSING AND COOLING BOX. HENRY R. LOOSLEY, East St. Louis, Ill. Filed Oct. 11, 1928. Serial No. 311,740. 5 Claims. (Cl. 312—174.)



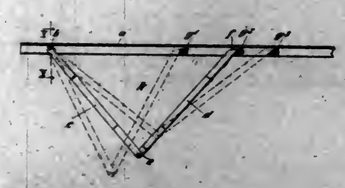
3. A beverage dispensing and cooling box comprising a box having a lid, a cooling compartment in the box, a

tray in said compartment, a pair of bars extending upwardly into the box each having its upper end bended downwardly and secured to said tray, a lever mechanism



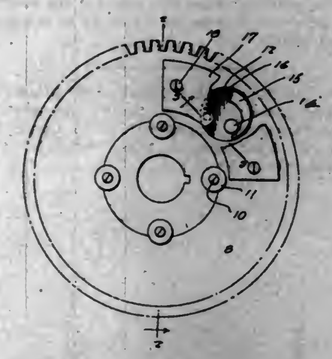
cooperable with said bar adapted to raise said bars and elevate said tray, and lifting means cooperable with said bars and said lid for opening said lid when the tray is elevated.

1,750,676. GUN SIGHT. CHARLES E. LYMAN, Jr., Middlefield, Conn. Filed July 6, 1928. Serial No. 290,796. 3 Claims. (Cl. 33—56.)



1. A gun sight comprising a sight leaf, a peep sight carrier having side bars notched to receive and slide upon the sight leaf, a pair of spaced bars horizontally of the carrier, a peep sight having a groove and a notch, the groove to receive one horizontal bar to support the peep sight, and the notch to engage and slide on the other horizontal bar, and a screw adjusting member for the peep sight arranged between said horizontal bars and journalled in the side bars of the carrier.

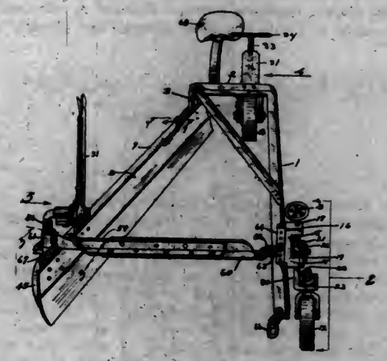
1,750,677. TRUCK. ROBERT D. MARX, Brooklyn, N. Y. Filed Aug. 3, 1928. Serial No. 297,358. 2 Claims. (Cl. 298—1.)



1. The combination in a truck of a supporting frame, a truck body tiltable to the rear, means to tilt the body to the rear, a floor for the body tiltable to the side independently of the body, a transverse partition comprising a relatively fixed portion spaced at its lower edge from the floor and a relatively movable portion adapted to rest normally on the floor, said partition forming compartments in the body, and means to raise the movable portion from the floor.

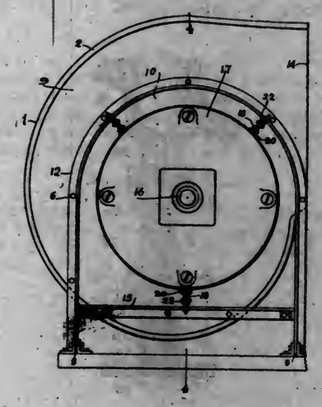
1,750,678. SUPPORTS OF ARTICLES SUCH AS FURNITURE AND THE LIKE. FRITZ MENG, Bern, Switzerland. Filed Mar. 30, 1928, Serial No. 266,019, and in Switzerland Apr. 12, 1927. 2 Claims. (Cl. 155—151.)

1. Supports, for an article, each thereof comprising two struts that slant downwardly towards each other, and pivotally connected at their lower ends against one another at an angle which is adjustable, one of the struts being pivotally connected at its upper end to the article being supported, and means whereby the free end of the other strut is adjustable along the article to be supported for the purpose of adjusting its elevation.



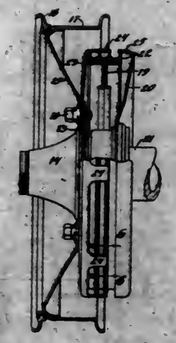
1,750,679. GEAR. HAROLD U. MITCHELL, Medford, Oreg. Filed May 5, 1928. Serial No. 275,442. 1 Claim. (Cl. 74—28.)

In combination, a gear having peripheral teeth and provided with an annular concentric shoulder, a ring movable about the shoulder and having peripheral teeth associated with the first mentioned teeth, said ring being provided with an opening, a pin on the gear extending in the opening, a wedge between the pin and one wall of the opening, and a spring impinging against the wedge.



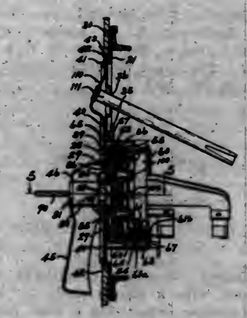
1,750,680. DITCHING MACHINE. ANTONIO MONTANO, La Jara, Colo., assignor of one-half to Belarmino Gonsales, La Jara, Colo., and one-sixth to Eugenio R. Romero, Antonito, Colo. Filed Apr. 9, 1929. Serial No. 353,863. 4 Claims. (Cl. 37—178.)

1. In a device of the class described, in combination, a frame comprising an L-shaped member, a ditching blade, means for attaching one end of the blade directly to the outer end of the short leg of the frame member, means for adjustably connecting the blade to the other end of the



frame and means for independently raising and lowering both ends of the blade with respect to the supporting surface on which the device rests.

1,750,681. BLOWER. CLARK T. MORSE, Detroit, Mich., assignor, by mesne assignments, to American Blower Corporation, Detroit, Mich., a Corporation of Delaware. Filed Sept. 22, 1927. Serial No. 221,375. 4 Claims. (Cl. 230—132.)

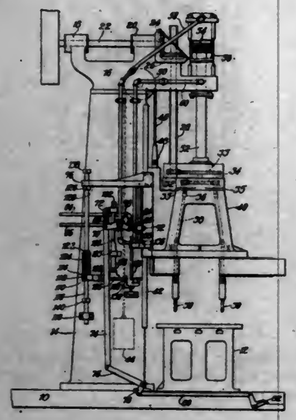


1. In a blower, a sheet metal scroll, sheet metal side walls, a fan within the side walls and scroll, inverted, U-shaped, angle iron, reinforcing members mounted on said side walls, a motor flexibly suspended from one of said U-shaped supports having its armature shaft projecting within said scroll through one of said side walls and the fan mounted thereon in such a manner that the fan and armature shaft as well as the motor do not touch the side walls or the scroll.

1,750,682. BRAKE-DRUM CONSTRUCTION. EMIL A. NELSON, Detroit, Mich. Filed Apr. 16, 1928. Serial No. 270,179. 10 Claims. (Cl. 188—218.)

1. In combination, a brake drum comprising a ring open at both ends, and means for externally supporting said ring between the edges thereof.

1,750,683. LIGHTING AND IGNITION SWITCH. HARRY E. NORVIEL, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 15, 1925. Serial No. 23,245. 23 Claims. (Cl. 200—14.)



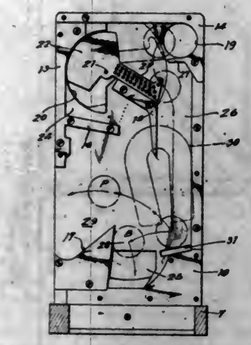
1. An electric switch comprising, in combination, a case including a nonconducting member carrying a battery terminal, a plurality of lamp terminals and an ignition terminal, stationary contacts connected with said terminals, a movable contact for connecting the battery and ignition terminals, and a movable contact for connecting certain of the lamp terminals with the battery terminal independent of movement of the first movable contact, and for connecting other of the lamp terminals with the battery terminal only when the first movable contact connects the battery and ignition terminals and is so maintained.

1,750,684. HYDRAULIC FEED MECHANISM FOR DRILLING MACHINES. JOHN OAKLEY, Springfield, Mass., assignor to Baush Machine Tool Company, Springfield, Mass., a Corporation of Massachusetts. Filed Nov. 16, 1925. Serial No. 69,232. 2 Claims. (Cl. 77—32.)

1. The combination with a drill head, of a fluid motor for moving the latter, a valve controlling the rate at which fluid pressure is supplied to said motor and means

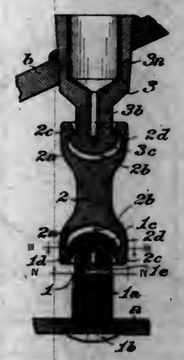
for shifting the valve to admit fluid at a fast rate to cause the head to rapidly approach the work and means for automatically shifting the valve to cause the head to feed the drills into the work at a slower rate, a member arranged to store energy as the drill head moves, and devices co-

acting with said member and said valve arranged to release the stored energy and transmit movement to said valve after the drills have travelled a predetermined distance into the work so as to cause the fluid motor to rapidly retract the drill head from the work.



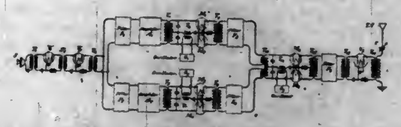
1,750,685. OPHTHALMIC MOUNTING. WILLIAM ROBERT OLSEN, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 29, 1926. Serial No. 84,759. 7 Claims. (Cl. 88—53.)

1. An ophthalmic mounting comprising a non-metal member provided with a substantially flat-bottomed recess, a hinge member comprising a base portion having two oppositely disposed sides, one of the sides being substantially flat, the hinge member lying in the recess with the said one side in contact with the bottom of the recess, the hinge member having an integral projection extending from the said one side and into the non-metal member through the said bottom, the hinge member having an integral attachment member extending from the said one side into the non-metal member, the hinge member having a hinge knuckle disposed on the other of the said two sides, the hinge member having a threaded opening extending through the hinge member between the said two sides and through the projection, and a screw extending through the non-metal member and the hinge member and threaded into the threaded opening for securing the non-metal member and the hinge member together, the screw being upset.



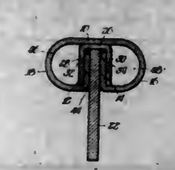
1,750,686. COIN SELECTOR. JAMES E. OLVIS, Los Angeles, Calif. Filed Jan. 28, 1929. Serial No. 335,501. 2 Claims. (Cl. 194—103.)

1. An apparatus of the class described including a coin inlet, a primary passage in registration with the inlet for the descent of a coin therethrough by gravity, a tiltable weight classifier having a channel for passage of coins therethrough with its intake end disposed intermediate said inlet and primary passage to arrest coins introduced therein and to be tilted by a proper coin to deliver it to said primary passage, a secondary passage in registration with the outlet of said channel for reception of underweight coins, a magnetic retarder disposed to influence the acceleration of a coin travelling through said primary pas-



sage, a rebound buffer disposed in the path of travel of a descending coin in said primary passage so as to hurl the coin laterally, and spaced rejection and reception passages disposed laterally of said buffer, said rejection passage being adjacent to said buffer and said reception passage remote from said buffer whereby a proper coin will be hurled over said rejection passage into said reception passage and an improper coin will fall short of said reception passage and be hurled into said rejection passage.

1,750,687. STEAM-BOILER STAY BOLT. ARTHUR F. PITKIN, Schenectady, N. Y. Filed Oct. 29, 1927. Serial No. 229,612. 4 Claims. (Cl. 85—1.5.)

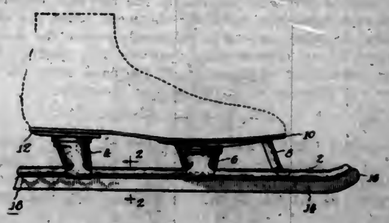


1. An articulated staybolt having opposed end portions adapted to be secured respectively in the inner and outer sheets of a steam boiler, and a tension resisting intermediate section having a substantially flat face at each end, said end portions being provided at one end thereof with a substantially flat face engaging a corresponding face of the tension resisting section when in the assembled position, said co-acting faces providing a rocking relative movement between the end portions and the tension resisting intermediate portion without creating relative sliding movement.

1,750,688. SIGNALING SYSTEM. RALPH K. POTTER, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 3, 1927. Serial No. 230,908. 11 Claims. (Cl. 179—1.)

1. The method of transmission of waves having a band of frequency components, which comprises dividing said band into a plurality of sub-bands which overlap each other, modulating said sub-bands on a plurality of carrier waves of different frequencies, one corresponding to each sub-band, so as to produce a plurality of side bands within substantially the same frequency limits as were occupied by these sub-bands before modulation though separated from each other in the frequency spectrum, and transmitting all of said spaced side bands simultaneously.

1,750,689. SKATE-RUNNER SUPPORT AND METHOD OF MAKING SAME. GUSTAV E. SCHMIDT, Chicago, Ill. Filed Jan. 23, 1928. Serial No. 248,683. 19 Claims. (Cl. 208—167.)



1. In an ice skate, the combination of a tubular support carrying the usual foot and toe plate cups, said support being formed of sheet metal and constructed and arranged to provide a longitudinal socket having tubular members arranged in covering relation on each side thereof and a skate runner mounted in said socket.

1,750,690. TUBULAR SUPPORT FOR SKATE RUNNERS AND PROCESS. GUSTAV E. SCHMIDT, Chicago, Ill. Filed Jan. 23, 1928. Serial No. 248,684. 9 Claims. (Cl. 208—167.)

1. An ice skate having a tubular support formed of sheet metal, said sheet metal being bent to provide spaced apart tubular portions extending longitudinally of the support, the adjacent walls of the tubular portions being interfolded and arranged to provide a pocket extending longitudinally of and between the tubular portions, and a skate runner seated in said pocket and permanently mounted therein.

1,750,691. TUBULAR SUPPORT FOR SKATE RUNNERS AND PROCESS. GUSTAV E. SCHMIDT, Chicago, Ill. Filed Jan. 24, 1928. Serial No. 249,045. 9 Claims. (Cl. 208—167.)

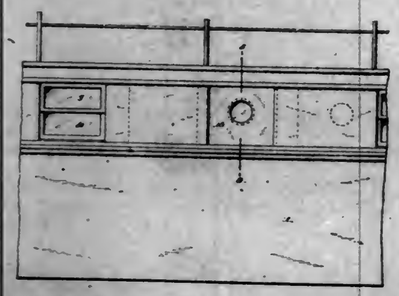
1. An ice skate having a support formed of an integral tube of sheet metal having a reentrant pocket and a runner mounted in said pocket.

1,750,692. SKELETON STRUCTURE SUCH AS AIRCRAFT FUSELAGE. FREDERICK SIGRIST, Oxshott, and SYDNEY CAMM, Long Ditton, England. Filed Feb. 25, 1928, Serial No. 256,886, and in Great Britain Dec. 23, 1927. 2 Claims. (Cl. 244—31.)

2. A skeleton structure such as a fuselage for aircraft, comprising a metal tubular member, another metal tubular member with its end abutting the first mentioned member intermediate its ends to constitute a joint, the second member being of a different diameter at its joint end from that of the other portion thereof, an inverted U-shaped clamping plate embracing at its closed end, the first mentioned member, the arms of said plate projecting over the end of the second mentioned member, a single bolt for the opposite sides of the clamping plate and first mentioned tubular member, and further fastening means for securing the sides of the clamping plate to the second tubular member.

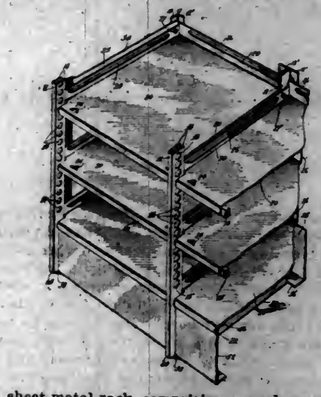
1,750,693. SWITCH. ALWIN G. STEINMAYER, Milwaukee, Wis., assignor, by mesne assignments, to Line Material Company, South Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 15, 1927. Serial No. 184,077. 6 Claims. (Cl. 200—169.)

1. In an electric switch having an upper and lower contact, a movable switch element and means pivotally



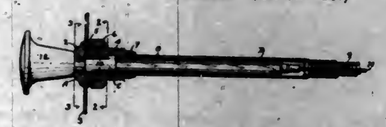
mounting the movable switch element for selective engagement with either of the contacts, a member carried by the mounting means adjacent the pivotal mounting of the movable switch element, an abutment on said member, and a pawl pivotally carried by the movable switch element and engageable with the abutment when the switch element is slowly moved to releasably secure the movable element in an intermediate position, the inertia of the parts preventing engagement of the pawl with the stop when the element is quickly moved therepast.

1,750,694. DRIVE RING. EVERETT ST. JOHN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 24, 1925. Serial No. 77,642. 1 Claim. (Cl. 248—36.)



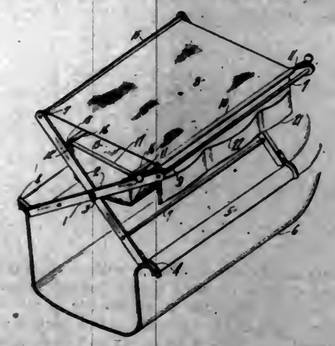
A drive ring comprising a piece of wire material of which one end forms a shank portion, said material being bent at substantially right angles at the upper end of the shank to form a horizontal portion of which the end is bent to form an open ring, said open ring extending upwardly from the horizontal portion and in offset relation to the plane thereof, the wire being also bent at the juncture of the shank and horizontal portion to form a substantially semi-circular loop portion of uniform cross-section extending outwardly and upwardly from the shank and horizontal portions, the curved uppermost portion of said loop forming a striking surface positioned in alinement with the axis of the shank and elevated above said horizontal portion so that hammer blows may be applied thereto to transmit a direct driving force to said shank without striking said horizontal portion, and said ring being spaced sufficiently far to one side of the axis of said shank to allow clearance for the hammer and permit of striking the upper surface of said loop portion without hitting said ring, the outwardly extending portion of said loop also forming a shoulder to enter the surface of a supporting wall and interlock therewith to prevent the rotation of the drive ring when it is positioned.

1,750,695. PROTECTED WINDOW FOR SHIPS' HULLS. JOHN TRUMPY, Haddonfield, N. J., assignor to Mathis Yacht Building Company, a Corporation of New Jersey. Filed Dec. 28, 1928. Serial No. 328,944. 11 Claims. (Cl. 114—177.)



1. A ship's hull provided below the deck thereof with a window having a sash, and a shutter closing the window exteriorly of the sash and removable to and from such position and provided with a deadlight.

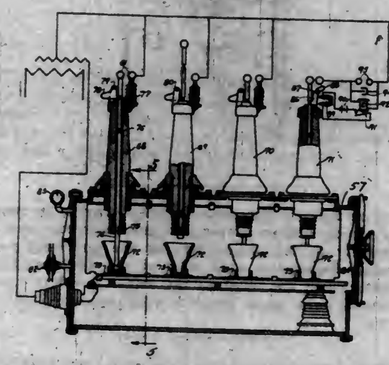
1,750,696. SHEET-METAL RACK. WALTER N. VANCE, Chicago Heights, Ill., assignor, by mesne assignments, to Lyon Metal Products, Incorporated, Aurora, Ill., a Corporation of Illinois. Filed May 16, 1927. Serial No. 191,584. 18 Claims. (Cl. 211—135.)



2. A sheet metal rack, comprising spaced apart U-shaped front uprights and rear uprights, each of said U-shaped uprights having a vertical series of spaced apart slots, each slot being rectangular in shape and having opposed arcuate portions, bearers for engaging in said slots, each bearer having arcuately notched ends to correspond with the opposed arcuate portions of a slot, whereby a bearer may be inserted in a slot and angularly turned and locked in position, and shelf members mounted on said bearers.

1,750,697. CONTROLLING DEVICE. ALBERT J. WEATHERHEAD, Jr., Cleveland, Ohio. Filed May 25, 1929. Serial No. 365,964. 10 Claims. (Cl. 74—39.)

1. A controlling device, substantially as herein described, comprising a tubular fitting having a reciprocable control rod extending therethrough, and a flat spring outlet housed within said fitting and completely encircling and gripping said rod equally at different radial places therein.

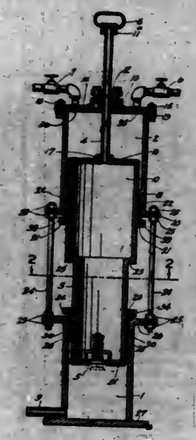


1,750,698. INFANT'S BATH AND DRIER. WELCOME FREDERICK ABBOTT, Mount Vernon, Ill. Filed Aug. 3, 1928. Serial No. 297,168. 2 Claims. (Cl. 4—177.)

1. In a device of the kind described, two spaced end frames each made up of two bars pivoted together medially

and having hooked feet for engaging the rim of a bath tub, two upper and two lower connecting tie rods extended longitudinally between the two spaced end frames, a flexible dressing or drying sheet having one margin fastened to one of the said upper tie rods, a free supporting rod fastened to the opposite margin of the said drying sheet, latches arranged near the upper ends of the two end bars opposite to the other two end bars supporting at one margin in the said drying sheet, the said latches being adapted to releasably engage the said free supporting rod carrying the opposite margin of the said drying sheet.

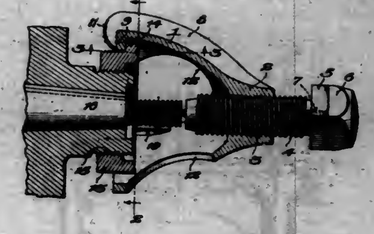
1,750,699. PROCESS AND APPARATUS FOR TESTING INSULATORS. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 2, 1922. Serial No. 579,133. 12 Claims. (Cl. 175—183.)



1. An insulator testing device, comprising a housing, means for supporting an insulator within said housing, a pair of terminals for subjecting said insulator to electric pressure while within said housing, and means for supplying air pressure to the interior of said housing, said terminals being separated at their point of closest approach by said insulator when in test position.

1,750,700. ALLOY. PIERRE BERTHÉLEMY and HENRY DE MONTBY, Paris, France. Filed Aug. 9, 1927, Serial No. 211,849, and in France May 20, 1927. 2 Claims. (Cl. 75—1.)

1. In the art of introducing cadmium into an alloy having an aluminum base, that step in the art which consists in adding the cadmium intermixed with aluminum and magnesium so that the cadmium is incorporated in the alloy in the form of a uniformly distributed solid solution, the proportion of cadmium in the final alloy being not less than .2%.

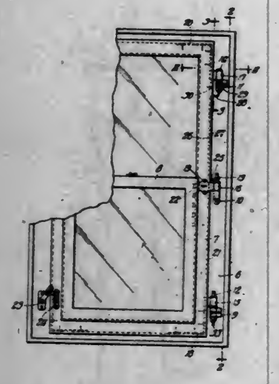


1,750,701. PRESSURE-FEED LUBRICATOR. WALTER BRAUER, Seminole, Okla. Filed Oct. 17, 1928. Serial No. 313,123. 6 Claims. (Cl. 184—39.)

1. A device of the class described, comprising an oil cylinder at its lower end adapted for feeding oil to parts to be lubricated, and a larger vertically alined cylinder at its upper end adapted for delivering steam to a pressure plunger, a hollow plunger adapted for holding oil and for reciprocation within said lower and upper cylinders, a filler pipe and gauge pole in its upper end adapted for filling said plunger and gauging said device, the upper end of said plunger being adapted for receiving pressure within said steam cylinder and its lower end being adapted for delivering pressure on the oil in said oil cylinder, spacer

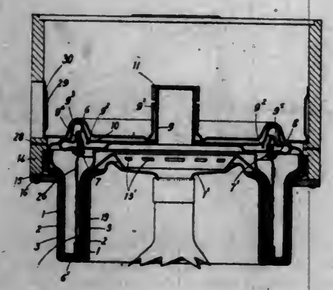
and holding means for holding said upper and lower cylinders apart and in vertical alinement and for holding said plunger in reciprocating relationship with said cylinders.

1,750,702. WHEEL PULLER. FREDERICK CARL, Washington, D. C. Filed Oct. 16, 1925. Serial No. 62,894. 10 Claims. (Cl. 29—85.)



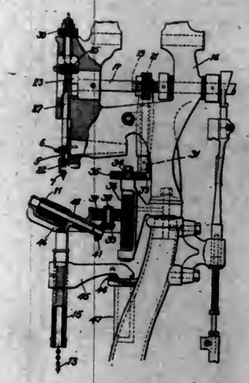
1. A wheel puller, comprising a hollow pulling member open at one end and having a feed screw extending through its opposite closed end, and an adapter provided with means for detachable connection with a wheel, one end of the adapter having a plurality of external lugs distributed equally around the adapter, the external diameter of the lugged portion of the adapter being less than the internal diameter of the open end of the pulling member so as to be received within the latter, and the pulling member having internal lugs spaced equally around the pulling member and disposed to be engaged with the rear faces of the lugs on the adapter, and reinforcing abutments extending longitudinally upon the interior of the pulling member and disposed for engagement with corresponding ends of the lugs on the adapter.

1,750,703. WINDOW CONSTRUCTION. GUSTAV RICHARD CARL, Chicago, Ill. Filed Apr. 29, 1929. Serial No. 358,967. 6 Claims. (Cl. 20—53.)



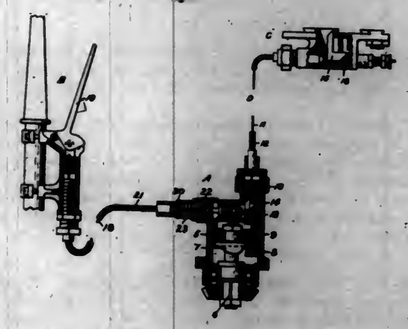
1. A device of the character described, a window casing, a window and means connecting said window to said casing for swinging movement about a horizontal and about a vertical axis comprising hinge members at one side of

said window having pins movable from a position permitting horizontal swinging of said window to a position permitting swinging of said window about a horizontal,



and means connecting a pair of said pins, said means being concealed in the frame of said window between said pins.

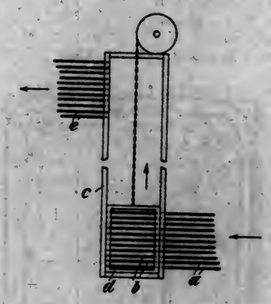
1,750,704. APPARATUS FOR THE PREPARATION OF CINEMATOGRAPHIC FILMS. LOUIS CAUTE, Ezanville, France, assignor to Louis Henry, Changai, China. Filed Apr. 26, 1928, Serial No. 273,132, and in France May 3, 1927. 3 Claims. (Cl. 95—90.5.)



1. An apparatus utilizable in full light for the preparation of cinematographic films, comprising in combination a set of vessels having an annular form and fitting into one another, the outer vessel being disposed as to form near its centre a discharge outlet, a sleeve forming a partition placed between the inner vessel and the vessel immediately next the said inner vessel, an upper downturned flange on the said partition leading to the discharge outlet of the outer vessel, a drum upon which is wound the film to be treated removably disposed inside the inner vessel, a light-proof cover fitting with a light-tight joint over the said vessels, means connecting the film-drum to the cover, means for rotating the said drum about its axis exteriorly to the said cover, a dark chamber removably disposed upon the set of vessels, and in which the film drum may be removed from the set of vessels, a device exteriorly disposed on the side of the said chamber and allowing the film to be treated to be wound in the dark chamber on the film-drum.

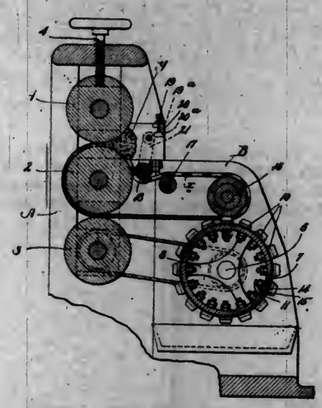
1,750,705. NAIL-BEDDING MACHINE FOR CLOG MAKING. GEORGE CHIASSON, known as Chisholm, Paris, France, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 17, 1928, Serial No. 270,767, and in Great Britain Apr. 26, 1927. 17 Claims. (Cl. 1—19.)

1. A machine of the class described, having in combination a reciprocatory driver, and guiding means movable transversely to the driver path at the operating point and being disposed on both sides of the driver and acting continuously to constrain the driver to follow a predetermined path upon grooved work presented to the machine.



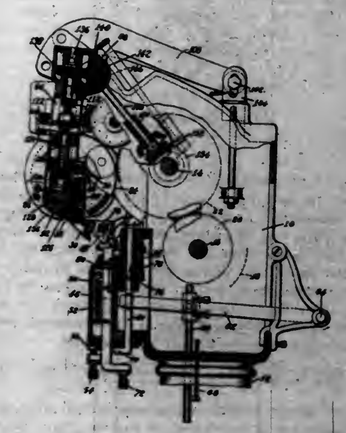
1,750,706. SYNCHRONIZED CONTROL SYSTEM FOR MACHINE GUNS. RICHARD C. COUPLAND, U. S. Army, Norfolk, Va. Original application filed Aug. 1, 1927, Serial No. 209,893. Divided and this application filed Nov. 6, 1928. Serial No. 317,553. 2 Claims. (Cl. 89—27.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

1. An impulse generator for synchronizing gear, including a housing having means for the interchangeable attachment of either mechanical or electrical control.



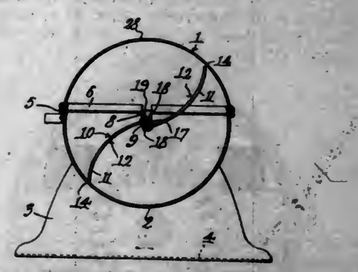
2. An impulse generator embodying an impulse transmitting member and a plunger for holding said member inoperative including means for adjusting said plunger.

1,750,707. MATRIX-SETTING AND LINE-CASTING MACHINE. JULIUS DORNETH, Konradshohe, near Tegel, Germany, assignor to the Firm Typograph G. m. b. H., Berlin, Germany. Filed Dec. 26, 1928, Serial No. 328,451, and in Germany Aug. 9, 1928. 3 Claims. (Cl. 199—4.)



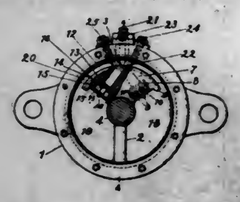
1. In a matrix-setting and line-casting machine a frame, wires guiding the matrices, pins on the ends of the wires, holders for the pins, each holder consisting of a folded sheet metal forming in the middle an eye for receiving the pin and a right-angle bent portion secured to the frame.

1,750,708. MEANS FOR DIEING-OUT RUBBER HEELS. ARTHUR J. EDWARDS, Cambridge, Mass., assignor of one-half to George N. Goddard, Newton, Mass.; Patrick E. Edwards administrator of said Arthur J. Edwards, deceased. Filed June 11, 1926, Serial No. 115,401. Renewed July 3, 1928. 3 Claims. (Cl. 164—28.)



1. In a machine for dieing out heel blanks from a sheet rubber composition while in a plastic condition, the combination of a bed-roll arranged to receive the plastic sheet as formed by a calender, a revolving series of hollow blank-cutting dies mounted to have rolling contact with the periphery of said bed-roll to cut out blanks of appropriate size and contour from the interposed plastic sheet, yielding plungers fitting the contours of said dies and normally pressed outward to substantially flush relation with the cutting edges of their respective dies to exert a predetermined yielding pressure upon the opposed blank-forming areas of the sheet and acting to expel the several blanks from the dies.

1,750,709. MACHINE FOR OPERATING UPON SHOES. ANDREW EPPLER, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 22, 1927. Serial No. 241,926. 24 Claims. (Cl. 12—88.)

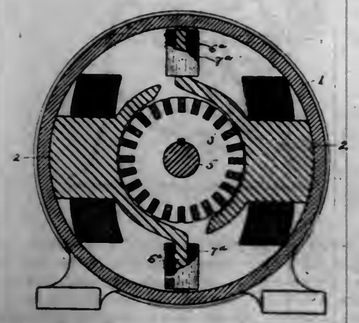


1. A machine for operating upon a shoe having a projecting shoe margin comprising a sole margin and a sole attaching flange of non-uniform thickness having, in combination, a reducing knife, work feeding means arranged to support the sole margin, and a feed member for engaging the sole attaching flange and co-operating with said means to feed the work past the knife to cause the knife to reduce the thickness of the sole margin to compensate for variations in the thickness of the sole attaching flange, said feed member being capable of yielding during the feeding of the work to accommodate portions of different thickness.

1,750,710. DOUGH MIXER AND BREAKER. HENRY GANS FAIN, Little Rock, Ark. Filed Jan. 23, 1928. Serial No. 248,881. 1 Claim. (Cl. 259—109.)

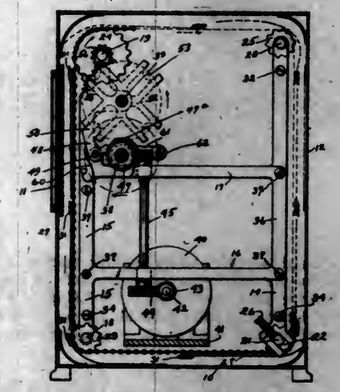
In a device of the class described, a receptacle including a body, plate-like standards secured to the ends of the body, the upper ends of the standards being formed into depending reinforcing flanges, the ends of the body, the standards, and the flanges, being supplied with bearing notches, a rotor movable in the body, a shaft carrying the rotor and journaled in the bearing notches, keepers mounted on the reinforcing flanges, pivot elements carried by the said flanges, and latches cooperating with the shaft to hold it for rotation in the bearing notches, the latches being detachably engaged with the keepers, and being mounted to swing on the pivot elements.

1,750,711. SHOCK ABSORBER. HENRY O. FLETCHER, Bridgeport, Conn. Filed Dec. 31, 1924. Serial No. 759,069. 8 Claims. (Cl. 188—89.)



1. In a shock absorber, two members relatively movable in relation to each other, one of said members constituting a liquid container and the other member dividing said container into two chambers, means to permit free passage of the liquid from one chamber to the other during the relative movement of the two members in either direction away from their normal position, means to restrict the flow of the liquid to a passage varying in size as they return in either direction toward their normal position, and means to adjust the size of said passage.

1,750,712. HEEL LIFT. BENJAMIN GILOWITZ, New York, N. Y., assignor of one-fourth to Samuel Thau, New York, N. Y. Filed Aug. 16, 1928. Serial No. 300,024. 3 Claims. (Cl. 36—35.)

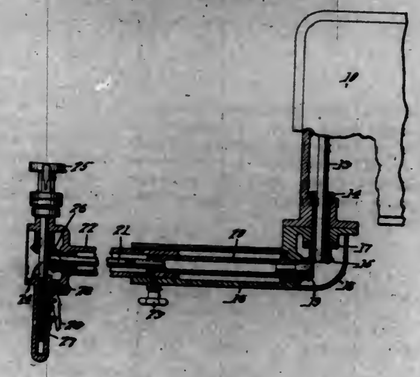


1. A heel lift, an attaching plate secured to said lift, said plate and lift having alined fastener-receiving openings, and an upstanding relatively long and narrow flange on the front end of said plate adapted to abut the breast of a shoe heel, said flange having free horizontally projecting ends adapted to be cut off in accordance with the width of the shoe heel.

1,750,713. VOLTAGE-REGULATION WINDING FOR ELECTRIC GENERATORS. EDWARD A. HOBART, Troy, Ohio. Filed June 18, 1923. Serial No. 646,109. 10 Claims. (Cl. 171—223.)

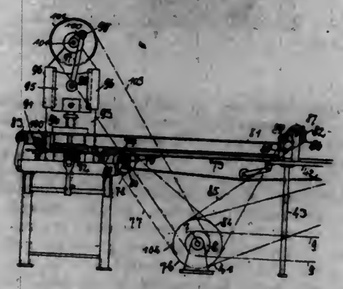
1. A generator comprising a field including a frame and pole pieces, an armature, diverting means arranged to divert magnetism from the pole pieces around the armature instead of through it, and means acting automatically to vary the amount of magnetism so diverted in accordance with changes in the amount of generated current, said diverting means being so constructed that there is no substantial increase in diverted magnetism and no substantial decrease in the main field strength upon reversal of current when the generator acts as a motor, whereby the generator may safely operate as a motor without excessive speed.

1,750,714. CHANGEABLE SIGN. FRED L. HOLT, Winston-Salem, N. C., assignor of one-half to John T. Benbow, Winston-Salem, N. C. Filed Jan. 31, 1929, Serial No. 336,491. Renewed Jan. 31, 1930. 2 Claims. (Cl. 40—97.)



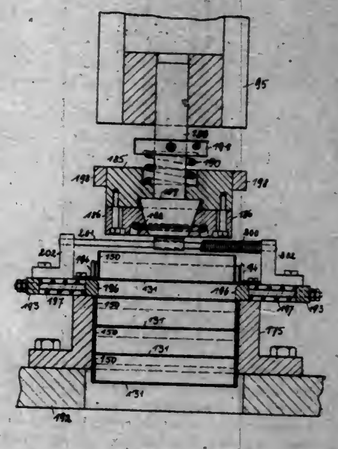
1. In an exhibiting machine, a casing, a window in said casing, a framework in said casing, four transversely disposed shafts in said framework, a Geneva stop movement, a wheel associated with said Geneva stop movement, teeth on the periphery of said wheel, a pinion on one of said transversely disposed shafts adapted to be engaged by said teeth, means for imparting movement to said Geneva movement, means for preventing movement of the said Geneva movement when the first-named operating means are inoperative, sprockets on the said transversely disposed shafts, continuous sprocket chains mounted on the said sprockets, and means on said sprocket chains for detachably securing objects for exhibition.

1,750,715. WINDOW REGULATOR. CLARENCE E. JEFFERS, York, Pa., assignor to Martin-Parry Corporation, York, Pa., a Corporation of Delaware. Filed Apr. 9, 1927. Serial No. 182,343. 3 Claims. (Cl. 292—228.)



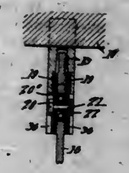
1. The combination with a vehicle door having a well therein, a sliding pane, a bracket carried by said pane, a vertically disposed rack in said well, a pintle carried by said bracket, a rocking latch, offset ears on said latch having apertures therein through which said pintle passes, a pawl carried by said latch, resilient means normally maintaining said pawl in operative relation with the rack, a stop projecting from said latch, a control lever pivoted on said pintle intermediate said ears, said control lever having a portion to engage said stop upon a lifting thereof to disengage the ratchet from said rack.

1,750,716. BOX-FORM ATTACHMENT FOR COVERING MACHINES. FREDERICK A. JONES and GEORGE W. KLAUCKE, Worcester, Mass., assignors to Hobbs Manufacturing Company, Worcester, Mass., a Corporation of Massachusetts. Filed May 18, 1928. Serial No. 278,809. 4 Claims. (Cl. 93—54.)



1. In a box covering machine, the combination of an arm pivotally mounted on the machine, a telescoping arm slidably connected therewith and means on the second arm for supporting a box form head thereon, with a telescoping shaft, means for rotating the telescoping shaft and a spindle carried by the telescoping arm for rotating said head which is geared to the telescoping shaft.

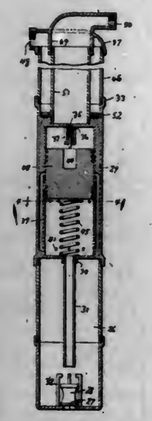
1,750,717. BOX-MAKING MACHINE. CLEMENS OTTO KURT LAUBE, deceased, Dresden, Germany, by Friedrich Bernhard Fischer, executor, Dresden, Germany. Filed Jan. 26, 1927, Serial No. 163,813, and in Austria Nov. 29, 1926. 7 Claims. (Cl. 93—55.)



1. A machine for the manufacture of cardboard boxes with inserted border tenon strips comprising a two-part conveyor device for the conveyance of the box member containing the border tenon strip, a locking device, and a movable stop coupled to the locking device, the two-part conveyer device for the box members containing the border tenon strips consisting of a conveyer belt (73) to carry the box member and a second conveyer belt (81) adapted to engage the border tenon strip from above, and press it into the correct position on the bottom of the box member, the belt (81) extending beyond the belt (73) and guiding the box right up to the movable stop coupled to the locking device, and the machine further comprising a table (90) forming a continuation of the upper side of the conveyer belt (73).

6. A machine for the manufacture of cardboard boxes with inserted border tenon strips comprising a press, and a lower stamp and an expansible upper stamp in said press, the lower stamp of the press being a rectangular through-jacket (175) without a bottom whereby the border tenon strips are pressed against the side walls of the box bottom to make a firm union.

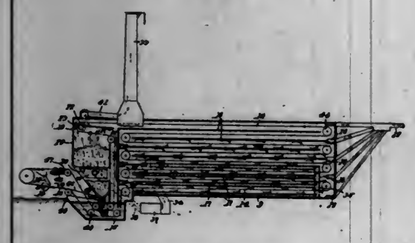
1,750,718. SCORING WHEEL. CHARLES S. LENSTON, Worcester, Mass., assignor to Hobbs Manufacturing Company, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 16, 1927. Serial No. 220,004. 5 Claims. (Cl. 164—70.)



1. In a supporting device for a circular scorer, the combination with a support having an opening providing opposite cheeks, a holder arranged to fit against the inner sides of the opposite cheeks, a ball bearing having an inner race just fitting in the holder and an outer race narrower than the inner race, and a circular scorer fixed to said outer race.

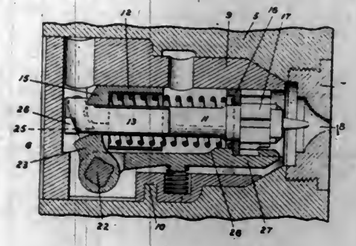
1,750,719. COMPRESSED-AIR PUMP. CLAUD C. MARTIN, Hillsboro, Tex., assignor of one-half to Thos. W. Mitchell, Hillsboro, Tex. Filed Dec. 8, 1928. Serial No. 324,708. 2 Claims. (Cl. 103—234.)

1. A compressed air pump comprising a pair of tandem cylinders having communicating ends, one of said cylinders having a valved water inlet and the other cylinder having a valved compressed air inlet, said other



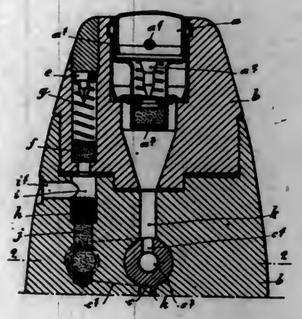
cylinder having its wall provided with longitudinally extending water passages having communication with the water inlet cylinder, said other cylinder being also provided with interiorly and longitudinal air passages extending between and communicating with the upper and lower portions respectively of the cylinders, a reciprocatory piston within said other cylinder, a spring supporting the said piston and positioning the same within the cylinder so as to normally close the inlet end of the said air passages, and a water receiving chamber carried by said other cylinder and having valved communication with the outlet ends of the said water passages.

1,750,720. PROCESS FOR THE MANUFACTURE OF BREAD. JEAN MATTI, Pully, Switzerland, assignor to Augmentine Holding S. A., Lausanne, Roquebrune, Switzerland. Filed Apr. 5, 1928, Serial No. 267,803, and in Germany Apr. 21, 1927. 3 Claims. (Cl. 99—10.)



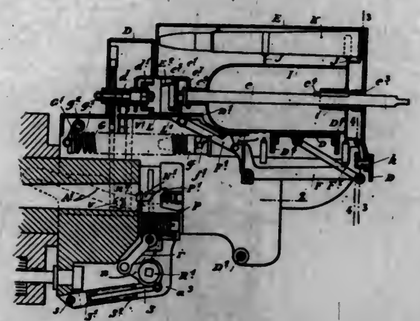
1. In a process for the manufacture of bread, wherein the preparation of the dough takes place in the usual manner by mixing flour, water, salt and yeast, the improvement which consists in adding an emulsion of paraffin oil, glycerine and water to the dough during its preparation.

1,750,721. OVEN. HENRY F. MAUREL, Providence, R. I., assignor to Maurel Investment Corporation, a Corporation of Rhode Island. Filed Jan. 27, 1928. Serial No. 250,047. 11 Claims. (Cl. 34—12.)



1. In an oven for baking purposes, the combination with an air-tight casing, of a conveyor therein having loading and discharge points outside the oven, and a single liquid seal through which the conveyor enters and leaves the oven, the discharge strand of the conveyor being located above the feed strand, whereby the water can be lowered to permit the discharge to take place in a dry state without interfering with the liquid seal for the feed strand.

1,750,722. FIRING MECHANISM. GEORGE M. MCCANN, New Castle, Del. Filed June 19, 1929. Serial No. 372,059. 4 Claims. (Cl. 89—27.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G., 757.)

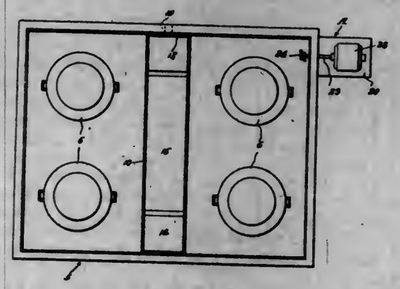


4. In a firing mechanism, a casing, an actuator in the casing, a firing pin in the casing, a spring seat associated with the firing pin, a spring confined between the actuator and spring seat, a stop member limiting forward movement of the firing pin, and means for limiting the forward movement of the spring seat short of the firing pin.

1,750,723. PERCUSSION FUSE. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed Apr. 29, 1929, Serial No. 359,089, and in France July 20, 1928. 2 Claims. (Cl. 102—39.)

1. Safety device for preventing the operation of supersensitive percussion fuses before the projectile reaches a sufficient distance from the muzzle of the gun, the said safety device comprising an obturator which is arranged on the path of the gases between the percussion device and the charge of the projectile and is adapted to be thrown out under the action of the pressure from a charge of powder which is ignited when the shot is fired by a striking mechanism and being characterized by the feature that the obturator, housed in a transverse duct in the fuse body, is provided at its end which communicates with the outside, with an enlarged portion upon which the gases produced by the striking mechanism act directly or through the medium of a hammer the powder producing these gases and the striking mechanism being arranged in a duct having no communication through the fuse body with the duct connecting the firing mechanism with the charge of the projectile.

1,750,724. COMBINED AUTOMATIC BREECH CLOSING AND OPENING AND LOADING MECHANISM FOR AUTOMATIC GUNS. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed July 1, 1929, Serial No. 375,194, and in France July 23, 1928. 2 Claims. (Cl. 89—4.)

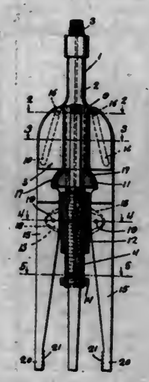


1. Combined automatic breech closing and opening and loading mechanisms for automatic guns comprising a drum loader characterized by the feature that the shaft of this drum which is movable longitudinally in the magazine casing, is provided at its front end with a clutch member guided in a helical guide in the said casing of the magazine so that a pull exerted upon the shaft of the drum imparts an angular movement to the said drum which causes a first cartridge to descend on to a loading and driving in tray suspended by rods from a fixed part while the clutch member carried by the shaft of the drum becomes coupled with a complementary clutch member carried by a release mechanism of any known type controlled by the movements of recoil and return into battery position of the gun barrel, the projectile being driven by a stressed spring pivoted at one end to the suspension links of the loading tray and at the other end to a shaft journalled in the fixed part.

1,750,725. METHOD OF TREATING AMPHIBOLE OF THE ASBESTOS VARIETY. CARLTON E. MILLER, San Francisco, Calif. Filed Jan. 31, 1927, Serial No. 165,048. Renewed Jan. 31, 1930. 4 Claims. (Cl. 252—1.)

3. The herein described method of producing a flocculent mass from amphibole asbestos, which consists in separating the closely matted parallel fibres of the amphibole, and beating the same while in suspension until they become distinct and independent felted pellets.

1,750,726. LIQUID AGITATION COOLER. CHARLES J. NAGLE, Herkimer, N. Y. Filed June 10, 1929. Serial No. 369,910. 3 Claims. (Cl. 257—208.)

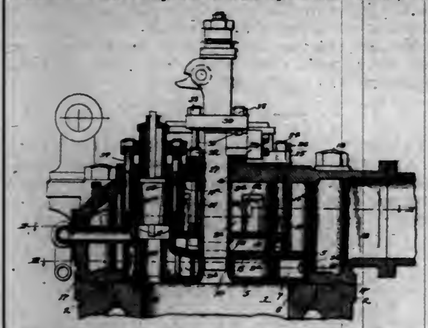


1. In a cooler of the class described, a cabinet of substantially rectangular configuration open at one end, hingedly mounted doors for closing the opening, an elongated trough located within the cabinet, means for supporting the trough transversely of the cabinet, said trough being of substantially T-shaped formation and having its lower end in spaced relation with the bottom of the cabinet, an electric motor disposed exteriorly of the cabinet, a propeller located within the cabinet, and means operatively associating the propeller with the electric motor.

1,750,727. ALL-METAL RACKET FOR TENNIS AND LIKE GAMES. HAROLD W. NORTON, Dayton, Ohio, assignor to The Dayton Steel Racquet Company, Dayton, Ohio, a Corporation of Ohio. Filed Oct. 22, 1926. Serial No. 143,361. 1 Claim. (Cl. 273—73.)

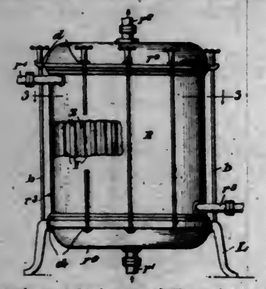
A racket for tennis and similar games, comprising a tubular metal frame, an elastic metal stringing therein, a hollow metal handle secured to the legs of said frame, and formed with channeled ends, and a cap formed with a flange that is crimped between the walls of the channeled ends of said handle to firmly secure it to the latter.

1,750,728. WELL-TOOL GRAB. GEORGE A. ROBISON, Bakersfield, Calif. Filed Apr. 30, 1928. Serial No. 274,002. 5 Claims. (Cl. 294—116.)



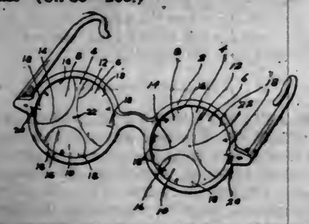
1. A tool grab comprising a head member, a stem extending through and rotatably supported by the head member, a sleeve arranged below the head member and screw threadedly engaged with the stem for downward movement with respect to the head member on the turning of the stem in one direction, arms connected between their ends to the sleeve for movement therewith and for pivotal movement with respect thereto, and means associated with the head member and the upper ends of the arms for swinging the lower ends of the arms inwardly during the downward movement of the arms.

1,750,729. CYLINDER HEAD FOR INTERNAL-COMBUSTION ENGINES. CLEMENT RUEGG, Milwaukee, Wis., assignor to Nordberg Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 13, 1927. Serial No. 198,566. 6 Claims. (Cl. 123—173.)



1. In a cylinder head for engines of the internal combustion type, the combination of an inner cylinder end closing member having a water cooling chamber formed therein; an outer member surrounding and overlying the

said inner member in spaced relation thereto; operation valves; aligned openings formed in said inner and outer members for the reception of said operation valves; valve

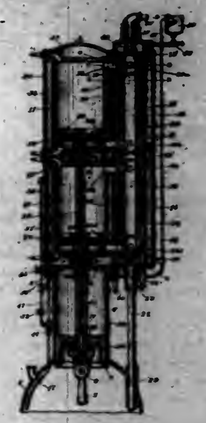


cages; and means extending freely through the outer member and connected to the inner member for drawing said members together and for forcing the valve cages into close contact with the inner member.

1,750,730. HEAT-EXCHANGE DEVICE FOR FOOD LIQUIDS. EMIL SCHMID, Washington, D. C. Continuation of application Serial No. 717,300, filed June 2, 1924. This application filed Feb. 1, 1926, Serial No. 85,371. Renewed Aug. 12, 1929. 7 Claims. (Cl. 257—242.)

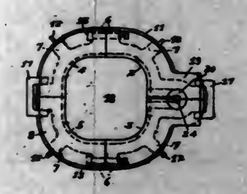
1. A heat exchange device consisting of a section having two separate end plates, openings in the end plates, flat tubes extending between corresponding openings in the end plates, the transverse dimension of each tube extending substantially the full width of the plate, an easily removable shell which may be placed around said section, removable closures for the ends of the section and means for holding the section, shell and closures in co-operative relationship to each other.

1,750,731. BIFOCAL FITTING DEVICE. GEORGE M. SMITH, deceased, Arlington, Mass., by George W. Perkins, administrator, Everett, Mass., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed June 25, 1925. Serial No. 39,509. 15 Claims. (Cl. 33—200.)



3. A bifocal fitting device comprising a fitting lens having an imitation bifocal wafer marked thereon and an index associated with the wafer.

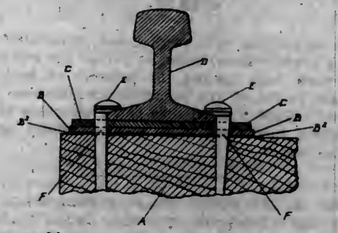
1,750,732. LEATHER-DRESSING PROCESS. OTTO LUDWIG STEVEN, Berlin, Germany. Filed June 30, 1928, Serial No. 289,624, and in Germany July 22, 1927. 3 Claims. (Cl. 149—6.)



1. In the art of tanning hides the step which comprises filling the leather with a substance which can be fixed therein by a water soluble salt of a carbocyclic amine, and the step of causing the so-filled leather to absorb from an aqueous solution thereof the amount of a salt of a carbocyclic amine almost sufficient to fix the said filling agent therein.

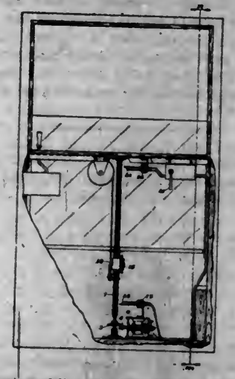
1,750,733. ROTARY VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. ALBERT F. STUART, Portland, Me. Filed Dec. 1, 1927. Serial No. 237,006. 4 Claims. (Cl. 123—190.)

1. A rotary valve mechanism for internal combustion engines comprising in combination a casing having ports therein so arranged as to provide communication between its interor and the interior of each cylinder in a plurality of multi-cylinder blocks, a fixed gas-inlet pipe concentrically disposed in said casing and spaced therefrom, a plurality of ports in said pipe radially and axially aligning, respectively, with the ports in said casing, a sleeve revolubly mounted interjacent said casing and said fixed gas-inlet pipe, a plurality of gas inlet ports in said sleeve adapted to intermittently register, respectively, with the ports in said gas-inlet pipe and the ports in said casing, a plurality of peripheral exhaust ports and channels cut on the outer periphery of said sleeve, a plurality of discharge openings leading out from the interior of said casing and into register with which said peripheral exhaust channels are adapted to be intermittently brought, and means to lubricate both the inner and the outer surfaces of said sleeve by oil from a supply in common and in which one end of said sleeve is submersed.



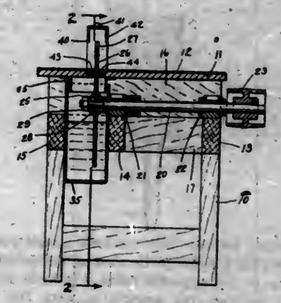
1,750,734. INGOT-MOLD FLASK. VINCENT TOPE, Sharpsville, Pa. Filed Feb. 25, 1929. Serial No. 342,360. 5 Claims. (Cl. 22—96.)

5. In an ingot mold flask of the character described, a hollow body portion having its periphery provided with



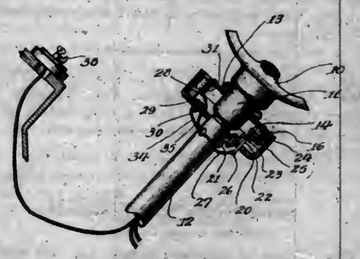
a plurality of reenforcing ribs, said body portion being divided vertically into four complemental quarter sections, means mounted in respective ribs for securing one side of each of said sections to the adjacent side of one of the adjacent sections and operable for effecting only the partial release thereof, means engaging respective ribs for clamping the other side of each of said sections to the adjacent side of the other of the adjacent sections and removable for effecting the full release of said sections secured thereby, one pair of adjacent sections combinedly formed to provide a vertical[illegible]y extending pouring gate and further to provide a horiz...ally disposed recess communicating with said pouring gate and with the interior of said body portion, and means fixed in each of said sections to facilitate the handling thereof.

1,750,735. RAILWAY PAD. RUSSELL E. TUPPER, Salem, Mass. Filed Dec. 11, 1928. Serial No. 325,192. 6 Claims. (Cl. 238—283.)



6. The combination with a railroad rail, tie plate and tie, of an intervening pad, having its underside coated with a waterproof adhesive material, as and for the purposes stated.

1,750,736. ELECTRICAL WINDOW LIFT FOR AUTOMOBILES. GEORGE H. VOLLE, Springfield, Ill. Filed Apr. 6, 1927. Serial No. 181,386. 3 Claims. (Cl. 268—124.)



1. In an automobile window lift of the character described the combination with an upright adjustment screw, a reversible motor adapted to operatively rotate the same through gears and a pair of oppositely disposed limit switches, of a balancing spring for balancing the weight of the window, a threaded sleeve and an integral lift pin adjustably supported on said upright screw, a slotted sleeve spring casing controllably secured to the adjustable window; said integral lift pin of said adjustable sleeve controllably and resiliently engaging said adjustable window through said slotted sleeve by a bearing resiliently mounted within this sleeve; and switch means for the optional control of said electric source of energy, whereby said window may be suitably balanced and controlled in its movements at the will of the operator through the motor actuated control of the lifting screw.

1,750,737. TILE-CUTTING MACHINE. OTTO WALTER, Perrysville, Ind. Filed Oct. 3, 1927. Serial No. 223,598. 4 Claims. (Cl. 125—13.)

1. A machine for cutting tile and the like having a stationary frame, a water tank mounted therein with its top open, a vertically disposed rotary cutter having its periphery formed of emery and the like and mounted in the machine so that the lower portion thereof will run in the water in the tank and the upper portion thereof will extend above the tank, an upper portion of the frame including a table which portion is hinged at the rear end to the stationary portion of the frame and arranged so that the front end thereof may be lifted and tilted upward and backward and the table thereof being provided with a slot through which the upper part of the cutter projects, and a water deflector secured at the rear end of said upper part of the frame and extending forward and free above the cutter with the sides and front end thereof extending below the upper edge of the cutter for concentrating the water which is thrown upward against said reflector down on the cutter, substantially as set forth.

1,750,738. CIRCUIT CLOSER. HENRY D. WALTRIP and RUPERT M. HORTON, Chicago, Ill. Filed Jan. 18, 1929. Serial No. 333,325. 4 Claims. (Cl. 200—59.)

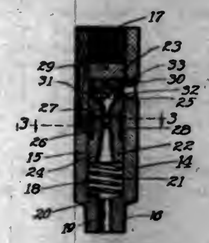
1. In a direction indicating mechanism of the character described, the combination with a steering post and a sleeve of a steering mechanism, of an annular track mounted and insulated from said post and adapted for rotation therewith, a depending flange extending from said track and having the ends thereof spaced from each other, a spring pressed button mounted on said sleeve and insulated therefrom, said button being adapted for constant engagement with said track, and a double contact switch also mounted on said sleeve and insulated therefrom, one contact of said double contact switch being adapted for engagement with the depending flange when the steering post is rotated in one direction, and the other contact of said double contact switch being adapted for engagement with the depending flange when the steering post is moved in the other direction.

1,750,739. LAMP-SOCKET RHEOSTAT. CARL L. WEICHELT, Philadelphia, Pa., assignor to Wirt Company, Philadelphia, Pa., a Corporation of Maine. Filed Mar. 29, 1926. Serial No. 98,170. 8 Claims. (Cl. 201—49.)

1. A current reducer for electric lamps comprising a socket embodying a shell portion mounted on an insulating disc carrying on its opposite faces a pair of joined center contacts, a rheostat ring associated with the socket and including an outer shell connected thereto, and having internally disposed resistance windings provided with circularly disposed terminals at one end of the ring, a rotary brush engaging one of the center contacts and adapted to successively cooperate with the rheostat terminals while in contact with said center contact.

1,750,740. CURRENT REGULATOR FOR ELECTRIC LAMPS. CARL L. WEICHELT, Philadelphia, Pa., assignor to Wirt Company, Philadelphia, Pa., a Corporation of Maine. Filed May 12, 1928. Serial No. 277,246. 7 Claims. (Cl. 201—49.)

1. In an electric lamp attachment, a rotary rheostat ring and a protective casing forming an annular air chamber around said rheostat ring, said casing having two ears formed thereon projecting into the chamber, and said ring comprising an outer tubular shell having a portion of one of its edges flanged outwardly and forming stops cooperating with said ears to limit the rotational movement of the ring.

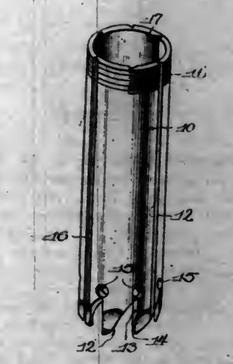


1,750,741. METHOD OF FINISHING COTTON-GIN RIBS. JOSEPH BEHLE, Dallas, Tex., assignor to The Murray Company, Dallas, Tex., a Corporation of Texas. Filed Jan. 10, 1929. Serial No. 331,467. 5 Claims. (Cl. 51—278.)

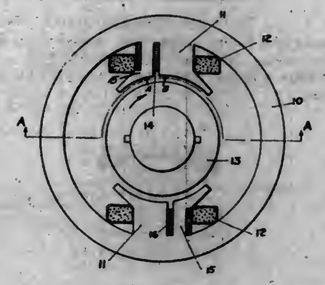
1. The method of finishing cotton gin ribs which consists in passing each rib between means for removing material from the ends of its feet, then passing said rib between means for removing material from the side edges of the feet, then presenting the feet of said rib to means for removing material from the under faces of said rib feet, then subjecting said rib to means for finishing the working face of the rib body between means for removing material, whereby each rib is finished and also gauged as to width and length.

1,750,742. SUCTION-PRODUCING MECHANISM. CLIFFORD C. BRADBURY, Oak Park, Ill., assignor, by mesne assignments, to Curtis B. Camp, trustee, Oak Park, Ill. Filed May 17, 1920. Serial No. 381,825. 3 Claims. (Cl. 158—36.1.)

1. In a fuel feeding system, a device for amplifying the suction for lifting fuel from a low level reservoir to a position above the level of the carburetor of an engine, said device comprising a plug in the suction line of said system having a bore extending therethrough a slidably mounted Venturi tube in said bore, the posterior end of said Venturi tube being subject to said suction, and the anterior end thereof being subject to atmosphere, and a spring for normally holding said Venturi tube in a position for amplifying said suction and when said suction attains a predetermined value, to permit the movement of said Venturi tube against the pressure of said spring, and means to cut off the communication between the anterior end of said Venturi tube and atmosphere to render said Venturi tube inoperative as an amplifier when the tube is so moved.



1,750,743. SPEED BOAT. FRANK B. BREMERMAN, Indianapolis, Ind. Filed Oct. 22, 1929. Serial No. 401,536. 3 Claims. (Cl. 114—66.5.)

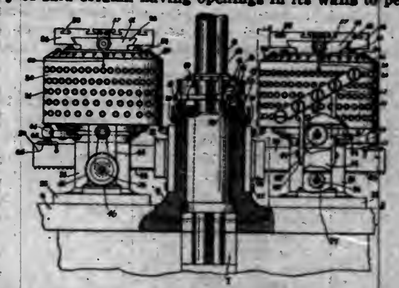


1. In a boat having a cockpit, a cowl extending rearwardly from the bow to a point adjacent the cockpit, said cowl having near its rear end a central raised portion from which the cowl slopes forwardly and laterally to the bow and sides, the cowl being outwardly convex at said raised portion and outwardly concave near the sides and bow.

1,750,744. ROTARY CORE BIT. MAURICE S. CHAMBERLAIN, Malvern, Ark. Filed Sept. 22, 1926. Serial No. 136,987. 3 Claims. (Cl. 255—72.)

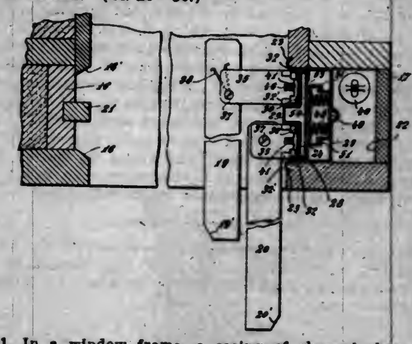
A rotary core bit comprising a body having beveled teeth, said body having openings therein adjacent the base of said teeth for facilitating the inward bending of said teeth by a force acting on the beveled surfaces thereof.

1,750,745. UNIVERSAL MOTOR. BROOKS L. CONLEY, Canton, Ohio, assignor to The Hoover Company, a Corporation of Ohio. Filed Dec. 15, 1924. Serial No. 755,829. 7 Claims. (Cl. 172—276.)



1. In a motor operable on either alternating or direct current, the combination of a stator arranged to form a magnetic circuit including a pole having leading and lagging pole tips, and an endless electrically conductive loop arranged to encircle a portion only of the sectional area of said magnetic circuit but including the leading tip of the field pole and accordingly be inductively energized through the magnetic flux variations of said magnetic circuit, said loop being unconnected with respect to all other sources of electrical energy and arranged to embody an electrical resistance gauged to balance said induced energy to attain a current value whereby the counter magnetomotive force created thereby will effect the speed of the motor to correspond with that speed which is normal when the motor is operating merely under the influence of direct current.

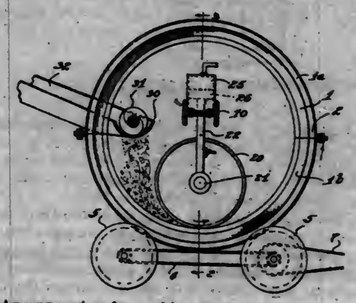
2. In a motor operable on either alternating or direct current, the combination of a stator arranged to form a magnetic circuit including a pole having leading and lagging tips, and an endless electrically conductive loop arranged to encircle a portion only of the sectional area of said magnetic circuit but including the leading pole tip and accordingly be inductively energized through the magnetic flux variations of said magnetic circuit, said loop being unconnected with respect to all other sources of electrical energy and arranged to embody an electrical resistance gauged to balance said induced energy to attain a current value whereby the counter magnetomotive force created thereby will effect the speed of the motor to a predetermined extent relative to that speed which is normal when the motor is operating merely under the influence of direct current.



7. In a motor operable on alternating or direct current, a magnetic circuit including a field pole having leading and lagging tips, said field pole being divided into a plurality of spaced parallel magnetic flux paths one of which includes said leading pole tip and means to increase the reluctance of said path including said leading pole tip when the motor is using alternating current, said means comprising a short-circuited coil encircling said path.

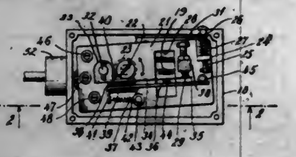
1,750,746. MACHINE-TOOL WORK HOLDER. HERMANN DEUTSCH, Chicago, Ill. Filed Apr. 10, 1929. Serial No. 353,945. 9 Claims. (Cl. 90—58.)

1. In a device of the class described a base, a standard on said base, a sleeve resting on said base and surrounding the standard, a working table, a hollow column slidingly resting on said base, said working table being supported by said column, a rack on said sleeve and extending horizontally of said column having openings in its walls to permit said rack to extend therethrough, a pinion rotatably mounted in said column and adapted to engage said rack, and means for rotating said pinion.



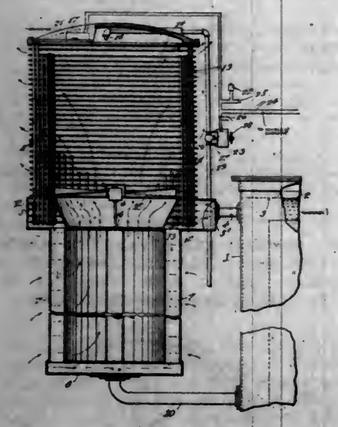
1,750,747. WINDOW. FREDERICK E. DOMBCHEIT, Brooklyn, N. Y. Filed July 21, 1928. Serial No. 294,330. 17 Claims. (Cl. 20—50.)

1. In a window frame, a casing of channel shape in cross section fixedly mounted in one side member of the frame and extending longitudinally thereof, a plate arranged for the slidable mounting of sash thereon mounted in said casing to extend longitudinally thereof and have movement in a direction into and out of the casing, yielding abutments mounted on the connecting portion of and within the casing, and means adapted to be positioned between said yielding abutments and the plate to move and urge the latter in a direction out of the casing.



1,750,748. METHOD AND APPARATUS FOR MAKING ARTICLES FROM A PLASTIC SUBSTANCE. STANLEY H. EDMUNDS, Detroit, Mich. Filed Jan. 16, 1928. Serial No. 246,971. 13 Claims. (Cl. 25—30.)

11. An apparatus for making a concrete pipe or the like, comprising a cylindrical form mounted for rotational

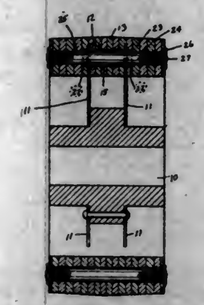


movement, a compression roller within the form adapted to compress the concrete against the cylindrical form, thus to shape the walls of the pipe, and means for locking this compression roller against movement whereby the same smooths off the inside surface of the formed pipe.

1,750,749. LIQUID-HEATER CONTROL MECHANISM. EDWARD L. FONSECA, Newark, N. J., assignor to The Wilcolator Company, Newark, N. J., a Corporation of Delaware. Filed Nov. 20, 1925. Serial No. 70,239. 19 Claims. (Cl. 200—138.)

1. A thermostatic control device comprising the combination of a thermostatic element having a portion movable to different positions in accordance with temperature variations, a base, a stationary contact carried by the base, a movable arm mounted on the base and carrying a pair of spaced contacts, one of which normally engages the stationary contact, a second movable arm mounted within the casing and carrying a contact adapted to be engaged by the second contact carried by the first mentioned movable arm, the first movable arm lying in the path of travel of the movable portion of the thermostatic element and being movable thereby both relative to the second movable arm and also with the latter, and means for moving the base to different positions of adjustment to vary the action of the thermostatic element upon the movable arms.

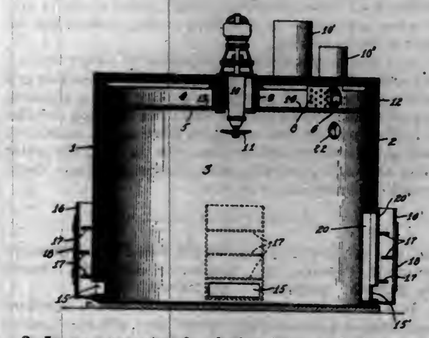
1,750,750. COOLING MEANS FOR ELECTRICAL AND OTHER APPARATUS. FRAZER W. GAY, Newark, N. J. Filed Apr. 20, 1928. Serial No. 271,478. 12 Claims. (Cl. 257—191.)



12. A radiator in the form of a chimney comprising, a plurality of spaced annularly arranged tubes, a cover for said radiator arranged to close the top thereof and a bottom member for said radiator arranged to close the bottom thereof, whereby cooling medium is caused to enter the lower part of said radiator by passing inwardly between the lower portions of said tubes and to leave the upper part of said radiator by passing outwardly between the upper portions of said tubes, and a fan positioned within said radiator intermediate the top and bottom thereof and adapted to accelerate the cooling medium in its passage through the radiator.

1,750,751. ALUMINUM ALLOY. ANDRÉ GEYER, Paris, France. Filed June 25, 1927, Serial No. 201,564, and in France Feb. 4, 1927. 2 Claims. (Cl. 75—1.)

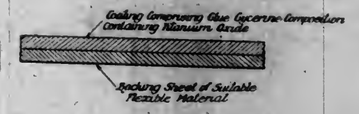
2. A process for the manufacture of aluminum alloys containing carbon which consists in introducing powdered charcoal wetted with water into the molten bath, protecting the surface of the said molten bath with broken up charcoal and operating at a temperature above 900° C.



1,750,752. PULLEY CONSTRUCTION. WILLIAM D. HAMERSTADT, Indianapolis, Ind., assignor to Rockwood Manufacturing Company, Indianapolis, Ind., a Corporation. Filed Aug. 26, 1927. Serial No. 215,611. 9 Claims. (Cl. 64—17.)

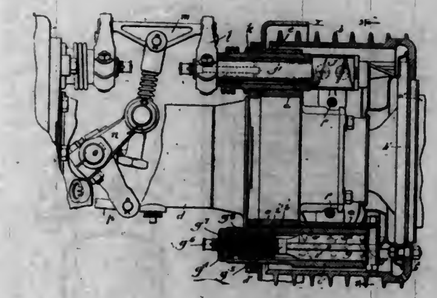
3. In a paper pulley and the like, the combination of a hub, a rigid annular driving and supporting portion concentric therewith comprising a plurality of compressed laminations retained under compression, a plurality of pairs of supporting arms connecting the hub to the annular portion, said arms being paired, and each pair including laminations therebetween, means uniting each pair of arms together for retaining the laminations therebetween in compressed relation, a laterally projecting pulley rim forming portion composed of laminations, and dowels extending through all of the laminations for uniting the portions and laminations together for support and driving.

5. A device as defined by claim 3, characterized by the paired arms being positioned opposite each other in lamination straddling relation and the arm uniting means extending through the arms including the laminations and having enlarged ends bearing on the arm exteriors, said arm uniting means being tubular and certain of said dowels extending therethrough and projecting beyond said tubular arm uniting means and into the adjacent laminations.



1,750,753. DRYING APPARATUS. ERNEST HOPKINSON, New York, N. Y., assignor to General Rubber Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 10, 1926. Serial No. 101,060. 5 Claims. (Cl. 18—2.)

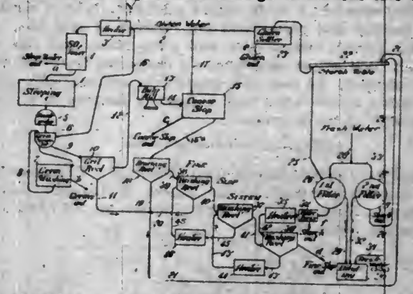
2. In an apparatus for drying latex and similar material, a drying chamber, a disk sprayer centrally disposed



adjacent the top thereof, means for supplying spaced downwardly directed currents of drying medium in annular form at points adjacent the sprayer and spaced from the side wall of the chamber, a plurality of equidistant exhaust openings in the side wall adjacent the bottom of the chamber, and exhaust boxes disposed around the outside of the drying chamber and communicating with said openings, one of said boxes being hingedly mounted and forming a doorway to the drying chamber.

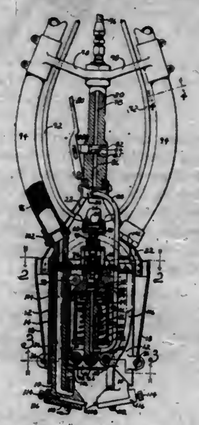
1,750,754. HECTOGRAPH BLANKET. WILLIAM HOSKINS, Jr., Chicago, Ill., assignor to Ditto Incorporated, Chicago, Ill., a Corporation of Illinois. Filed July 2, 1928. Serial No. 290,037. 2 Claims. (Cl. 41—31.6.)

1. A hectograph blanket, comprising a backing sheet and a coating on one face thereof of the usual glue and glycerin composition, said coating containing titanium oxide.



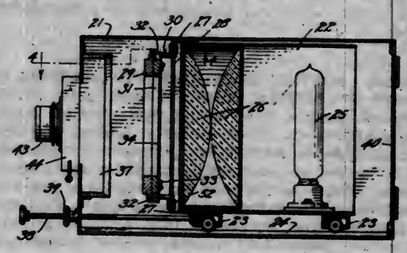
1,750,755. BRAKE MECHANISM. AXEL JANSSON, Hillside, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 11, 1926. Serial No. 115,155. 2 Claims. (Cl. 188—79.5.)

1. In brake mechanism, in combination, a brake anchor, brake shoes formed with curvilinear brake anchor bearings, cylindrical bearing members for each brake shoe formed respectively with opposed grooves of varying depth, a wedge member cruciform in cross section seated in the grooves and carried with the brake anchor and having a threaded shank, a nut carried with the shank and bearing on the brake anchor, and a spring surrounding the shank and bearing, respectively, on the nut and anchor bearing.



1,750,756. MANUFACTURE OF STARCH. FREDERICK L. JEFFERIES, La Grange, Ill., assignor to International Patents Development Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 8, 1928. Serial No. 304,687. 3 Claims. (Cl. 127—69.)

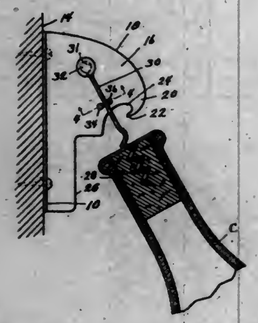
1. In the manufacture of starch from corn by a method comprising subjecting the starch liquor derived from germ and coarse slop separations to a fine slop separation in a system of sieving devices through which the fine slop



mixed with water is passed successively: the improvement which consists in heating the fine slop liquids at intervals during their passage through the fine slop system.

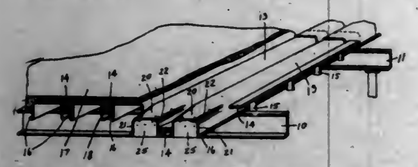
1,750,757. ELECTRIC WELDING MACHINE. FREDERICK H. JOHNSON, Detroit, Mich. Filed May 19, 1927. Serial No. 192,714. 10 Claims. (Cl. 219—4.)

1. In an electric welding machine, the combination of a pair of pivotally supported electric terminals, an electric welding circuit for said terminals, means for producing a predetermined pressure between the working ends of said terminals, means dependent on said pressure for automatically completing said welding circuit, and means for increasing the pressure between the working ends of said terminals after the welding circuit has been completed.



1,750,758. PHOTOGRAPHIC CAMERA. JESSE HOYT JOHNSON, Denver, Colo. Filed Feb. 1, 1929. Serial No. 336,748. 4 Claims. (Cl. 95—11.)

1. A photographic camera comprising: a camera box; a lens arranged at one extremity of said box; a supporting

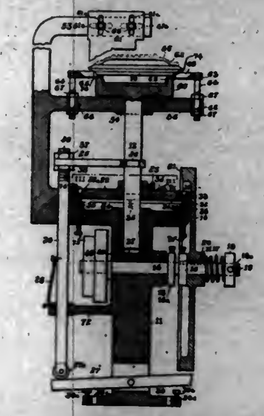


member longitudinally movable within said box; means for detachably mounting a plate holder upon said supporting member; a plate within said plate holder; means for sealing said plate from the interior of said box, so as to prevent exposure of said plate when said box is opened, said means comprising: a projecting frame within one extremity of said box adapted to contact with said mounting means when said supporting member is at one extremity of its movement.

1,750,759. BOTTLE-OPENING DEVICE. CLEMENT E. KENNEDY, Swampscott, and ELMER E. SANBORN, Lynn, Mass. Filed June 4, 1926. Serial No. 113,807. 7 Claims. (Cl. 65—48.)

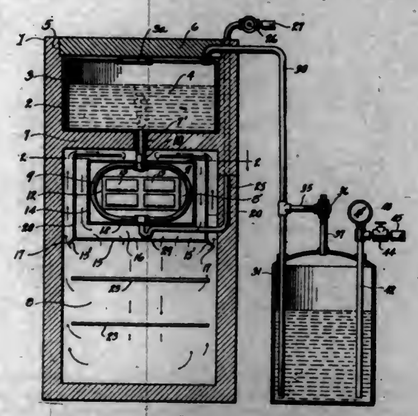
1. A bottle-opening device comprising a bracket having an attaching plate provided with a forward vertical flat extension, a cork-screw carried by and having a permanent pivotal connection at its upper end with said extension and adapted normally to be disposed adjacent said attaching plate and beside said extension and arranged to be moved away from said attaching plate and beyond and mainly below said extension for use.

1,750,760. SUPPORTING STRUCTURE FOR CONCRETE CONSTRUCTION. JOHN C. KEPPLE, Indianapolis, Ind. Filed July 20, 1928. Serial No. 294,201. 4 Claims. (Cl. 25—131.5.)



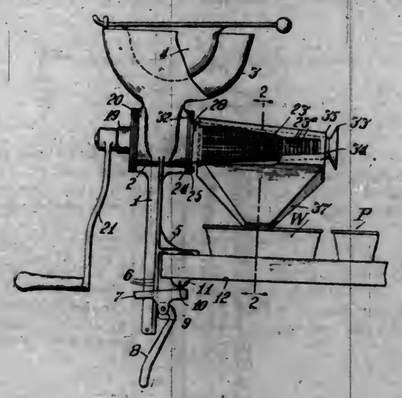
3. In a concrete structure, a centering form therefor made of sheet metal having a tapered end, said tapered end comprising a tapered top portion continuing from the top surface of the form, and inwardly bent sides having top portions separate from the before mentioned tapered top portion adapted to inter-engage therewith for forming a reduced outer end substantially as shown and described.

1,750,761. METHOD OF INHIBITING CORROSIVE EFFECT OF BRINES TOWARD IRON AND STEEL. OTTO V. MARTIN, Sand Spring, Okla., assignor to The Martin-Colvin Co., a Corporation of Illinois. Filed Oct. 26, 1927. Serial No. 228,983. 4 Claims. (Cl. 23—239.)



1. A method of substantially inhibiting the corrosive effect of brines and salt solutions toward iron and steel, which comprises creating in said brines and salt solutions a magnesium hydroxide content in excess of its solubility therein and maintaining a slight excess of magnesium hydroxide during the period of contact of said brines and salt solutions with iron and steel.

1,750,762. JIGGER FOR USE IN THE MANUFACTURE OF ARTICLES FROM PLASTIC MATERIALS. WILLIAM J. MILLER, Swissvale, Pa. Filed Oct. 25, 1926. Serial No. 143,994. 15 Claims. (Cl. 25—24.)



1. A pottery forming machine including a mold, a chuck for rotating the mold, means for automatically engaging and disengaging the chuck and mold, and means for stopping the rotation of the chuck before the mold is disengaged therefrom.

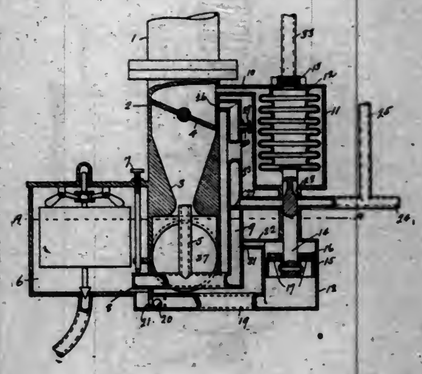
1,750,763. APPARATUS FOR REFRIGERATION. CLYDE E. MOLESWORTH, JOHN DUDMAN, and CARL G. ZOKELT, Seattle, Wash. Filed Sept. 12, 1927. Serial No. 219,028. 3 Claims. (Cl. 62—98.)

1. A device of the character described comprising an insulated housing providing an insulated compartment in the top portion thereof and a refrigerating chamber below said compartment, an insulated tank disposed within the top compartment for containing a supply of liquid refrigerant, a vent pipe leading from the top of said tank, an expansion coil located within the top of the refrigerating chamber having a pipe connection with the base of the refrigerant container through which the coil may be supplied by gravity flow and through which gas may be vented from the coils, a filling pipe connected with the base of the coil and extended upwardly to a point above the refrigerant container and a trap in said filling pipe adjacent its connection with the coil for preventing outward passage of the refrigerant.

1,750,764. SEPARATOR. FRANK M. SCHAEFER, Chicago, Ill., assignor to American Utensil Company, a Corporation of Illinois. Filed Dec. 17, 1926. Serial No. 155,480. 3 Claims. (Cl. 100—48.)

1. In a separator of the class described, a rotary pressure member, a screen having perforations of different size arranged in different zones of the screen, and a rotary cover for said screen for covering any of said zones.

3. In a separator of the class described, a feeding hopper having an outlet, a screen having a flange surrounding said outlet, a slotted ring positioned adjacent said flange, headed members extending through said slotted member and into the wall of said inlet, said ring having cam surfaces whereby rotational movement thereof will clamp said screen to said hopper.



1,750,765. PROPELLING MEANS FOR DIRIGBILE AIRSHIPS. JESSE W. SILVER, Tacoma, Wash. Filed Feb. 7, 1928. Serial No. 252,504. 4 Claims. (Cl. 244—6.)

1. In an airship of the character described, a propeller unit comprising a plurality of paired sets of guide sheaves and belt driving sheaves mounted at space intervals circumferentially about the body of the ship, flexible cable belts mounted for travel about the ship on the said sheaves, propeller vanes fixed to the belts and driving devices connected with the several driving sheaves for operating the belts.

1,750,766. METHOD AND MEANS FOR REGULATING FUEL. CHARLES L. STOKES, Los Angeles, Calif., assignor to Curtis B. Camp, trustee, Glencoe, Ill. Filed June 12, 1923. Serial No. 644,923. 19 Claims. (Cl. 123—180.)

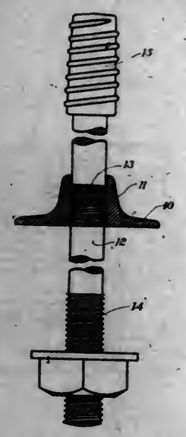
1. The method of supplying fuel to an internal combustion engine which consists in applying the engine vacuum and pressures varied by and in accordance with the engine temperature to a pressure responsive element, supplying an excess of fuel to start the engine, reducing

the amount of excess fuel suddenly and then gradually after the engine is started, and feeding an excess of fuel to the engine upon the reduction of vacuum applied to the pressure responsive element.

1,750,767. METHOD FOR TREATING AQUEOUS DISPERSIONS OF RUBBER AND PRODUCTS OBTAINED THEREBY. MERWYN C. TEAGUE, Jackson Heights, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Oct. 28, 1925. Serial No. 65,492. 7 Claims. (Cl. 87—17.)

1. A method of forming stable compositions from acidic substantially water-insoluble wood distillation products and aqueous dispersions of rubber which consists in neutralizing said wood distillation products, mixing an approximately neutral hydrocarbon containing material therewith, emulsifying the mixture in a substantially non-solvent thereof, and combining said emulsion with aqueous dispersions of rubber.

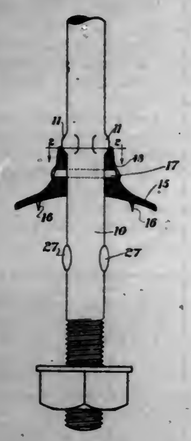
1,750,768. FLAVORING TEA. LOUIS ARONSON and ALBERT FELDBLET, Brooklyn, N. Y. Filed Dec. 31, 1927. Serial No. 244,040. 3 Claims. (Cl. 99—11.)



3. A process of treating tea by impregating same with a small proportion of a solution of citric acid and then subjecting the tea to the vapors of a solution of essential oil dissolved in ethyl alcohol.

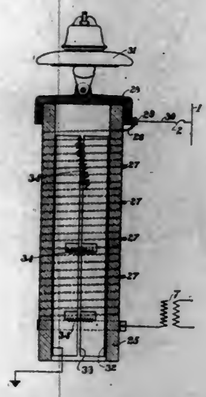
1,750,769. INSULATOR PIN. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed July 29, 1922. Serial No. 578,466. 10 Claims. (Cl. 178—321.)

1. An insulator pin having rolled threads thereon, the points of which project outwardly beyond the periphery of the unthreaded portion of said pin while the roots of said threads extend inwardly beyond the peripheral surface of the unthreaded portion of said pin, and a support having a threaded opening meshing with the tips of the threads of said pin but having a minimum diameter large enough to receive the unthreaded portion of said pin.



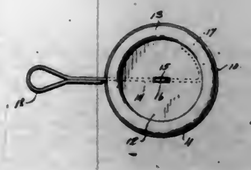
10. An insulator pin having a radially extending portion between the ends thereof and a flange secured to

aid portion, said flange having the upper extremity thereof formed inwardly over said extending portion substan-



tially throughout the peripheral extent of said portion to enclose said extending portion and lock said flange to said pin.

1,750,770. INSULATOR PIN. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 2, 1922. Serial No. 579,136. 2 Claims. (Cl. 173—321.)

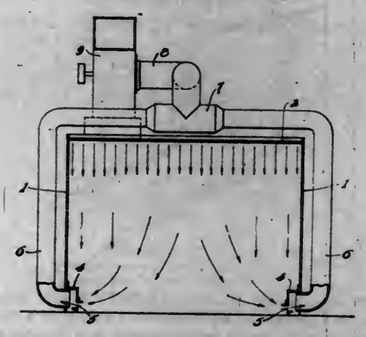


1. An insulator support comprising a rod of substantially uniform cross-sectional area throughout its length, said rod having a portion of the metal thereof pinched outwardly at a point between the ends of the rod to provide oppositely disposed outwardly-projecting flanges substantially equal in circumferential width to the ribs of metal left between said flanges, a support for said pin having a sleeve portion, and a radially extending flange connected with said sleeve portion, said sleeve portion having a circumferential recess in the top thereof for receiving said projecting flanges, there being a projection extending into said recess for engaging the projecting flanges on said pin to limit rotation of said pin in said sleeve, the portion of said pin below said sleeve being substantially equal in diameter to the portion of said pin above said outwardly extending flanges.

1,750,771. CONDENSER LIGHTNING PROTECTION DEVICE. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 11, 1924. Serial No. 731,499. 14 Claims. (Cl. 175—30.)

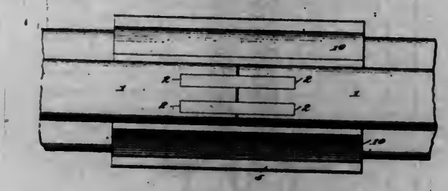
12. The combination with a transmission line and electrical apparatus connected therewith of a resistance element connected in series between said line and apparatus for protecting said apparatus against excess current due to high frequency disturbances on said line, and means for diverting current from said resistance element to ground, said means comprising a grounded conductor spaced from said resistance element and extending along the length thereof, and a dielectric member interposed between said resistance element and grounded conductor and forming with said element and conductor a condenser, the capacitance of said condenser and the impedance of said resistance element being sufficient to divert enough of the energy of disturbances on said line to protect said apparatus from injury for all voltages against which said protecting apparatus is designed to protect said apparatus, said resistance element being sufficiently insulated from ground to prevent arcing to ground for such voltages.

1,750,772. LICENSE BUTTON AND FASTENER THEREFOR. WILLIAM F. BLACKBURN, Columbia, S. C. Filed Mar. 19, 1929. Serial No. 348,258. 6 Claims. (Cl. 40—1.5.)



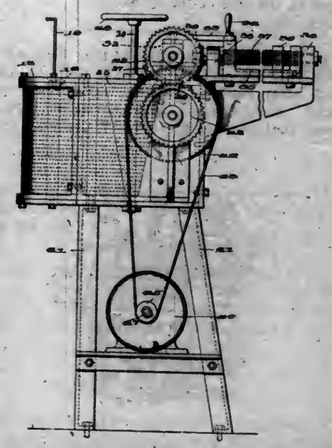
1. A button badge comprising a body having a front face, a rear face, means securing said faces together and frangible means projecting partly from said body to indicate that the badge has not been applied to its intended use, said frangible means providing a loop arranged to cooperate with the projecting portion after the removal of the latter from its original position to secure the badge to the clothing of the user.

1,750,773. BOAT. ERNST BURMESTER, Burg, near Bremen, and HERMANN HEIN, Bremen, Germany, assignors to Yacht- und Bootswerft Burmester m. b. H., Burg, near Bremen, Germany, a Corporation of Germany. Filed Nov. 26, 1928, Serial No. 322,019, and in Germany Dec. 15, 1927. 5 Claims. (Cl. 9—8.)



1. A boat comprising floating means arranged on the sides of the boat and projecting above the upper edge of the normal gunwale level, said floating means having channels therein at a level below the upper edge thereof.

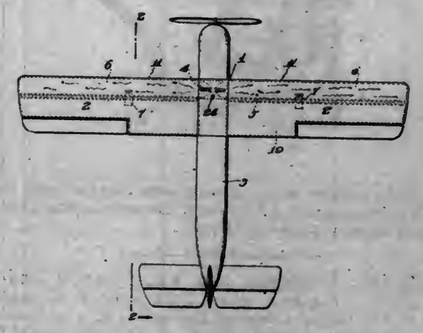
1,750,774. BOOTH FOR SPRAY PAINTING. JOHN G. FAHLSTROM, Kansas City, Mo., assignor to Butler Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed May 28, 1928. Serial No. 281,077. 1 Claim. (Cl. 91—60.)



An enclosure for spraying fluids, having a roof with openings uniformly distributed over the surface thereof, air discharge hoods along the lateral edges of the floor of the enclosure, means for creating a suction in the hoods and withdrawing air from the enclosure and thereby creating a relatively uniform vertical air flow in the enclosure from the roof to the discharge hoods.

1,750,775. RAILWAY-RAIL JOINT. SEPTIMUS H. GRIFFITHS, Wheeling, W. Va. Filed Sept. 11, 1929. Serial No. 391,791. 7 Claims. (Cl. 238—218.)

1. A rail joint of the character described, comprising track rails formed with a slotted portion at each end thereof, a base plate disposed beneath the end portions of the rails, an upper splice bar formed with an upward extension adapted to be fitted within the slotted portion of each rail, and a lower splice bar slidably disposed beneath the upper splice bar and in contact with said base plate.



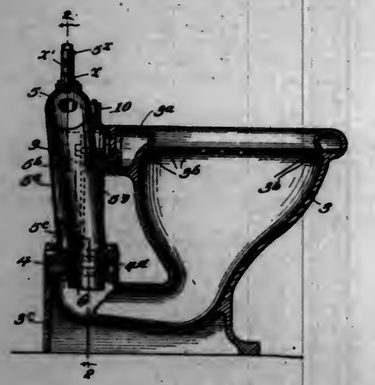
1,750,776. TWISTING NONCIRCULAR BLANKS FOR DRILLS, ETC. FERRIS T. HARRINGTON, Detroit, Mich., assignor to Whitman & Barnes, Inc., Detroit, Mich., a Corporation of Michigan. Filed Apr. 25, 1928. Serial No. 272,839. 9 Claims. (Cl. 158—78.)

1. A machine for twisting non-circular drill blanks and the like, comprising a series of rotatable carriers having axial openings to receive the work, dies carried by said carriers to engage the work and cause it to turn with said carriers, gear teeth on said carriers of uniform pitch diameter, and a series of gears of progressively and uniformly increasing driving ratio with respect to said carrier gears for turning the latter at progressively and uniformly increasing angular velocity conforming to the degree of twist desired.

9. The process of twisting non-circular drill shapes and the like which comprises grasping the work at uniformly spaced points along its length and twisting it at positively controlled progressively and uniformly increasing rates of angular movement applied to said points simultaneously, whereby the amount of twist thereby produced is uniform in the intervals between said points throughout the twisting operation.

1,750,777. ELECTRICAL HEATING MEANS FOR AEROPLANE WINGS TO PREVENT ACCUMULATION OF ICE AND SNOW. WILLIAM S. INGRAM, Philadelphia, Pa. Filed Aug. 28, 1928. Serial No. 302,524. 6 Claims. (Cl. 244—31.)

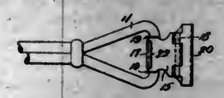
1. In an aeroplane, the combination with the load plane and side wings with intercommunicating chambers forming a heating chamber in the nose of the side wings, said



chambers being enclosed and extending through the load plane to the ends of the side wings, said wings having a storage space in rear of said heating chamber and the air driven electric generators carried by the side wings, of an electric heater contained wholly within the chamber of the load plane and electrically connected with said generators at the will of the operator.

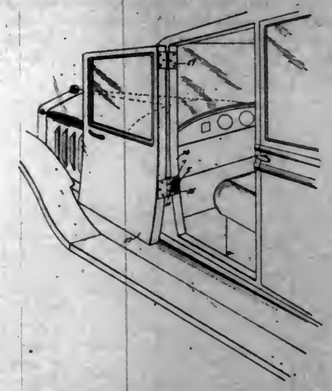
1,750,778. MEANS OF CONTROLLING THE ANGLE OF INCIDENCE OF AERO REVOLVING BLADES OR WINGS AND PROPELLERS. DAVID KAY, Blackford, Scotland. Filed Dec. 15, 1927, Serial No. 240,288, and in Great Britain Jan. 4, 1927. 7 Claims. (Cl. 170—164.)

1. Means to mount a propeller blade on its shaft so that its angle of incidence can be varied, comprising a hinge-pin journaled transversely on the end of the shaft, bearing means for the boss of the blade carried by said pin, the bearing surfaces of said means being so inclined that the axis of the boss mounted thereon lies at an angle to the axis of said pin, and means to control the rotation of said pin.



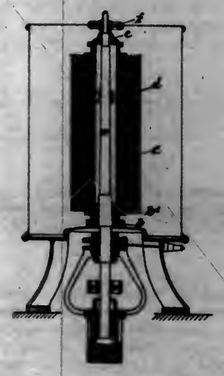
1,750,779. WATER-CLOSET. ULYSSES G. LEE, Chicago, Ill. Filed Nov 1, 1929. Serial No. 404,183. 9 Claims. (Cl. 4—76.)

1. In a water closet, a bowl, a discharge passage from the bowl, a water jet for said discharge passage, and a valve between the jet and bowl.



1,750,780. FASTENER FOR WRIST-WATCH BRACELETS. CHARLES A. MEALY, Nyatt Point, R. I., assignor to The Hadley Company, Providence, R. I., a Corporation of Rhode Island. Filed Jan. 24, 1929. Serial No. 334,717. 2 Claims. (Cl. 24—265.)

1. A fastener for connecting the looped ends of a bracelet to a wrist watch bail, comprising a pair of jaws hinged together near the bail end of the fastener and having a pair of correspondingly curved free ends adapted to be sprung into overlapping relation to enclose the watch bail at said bail end and the looped bracelet end at the oppo-



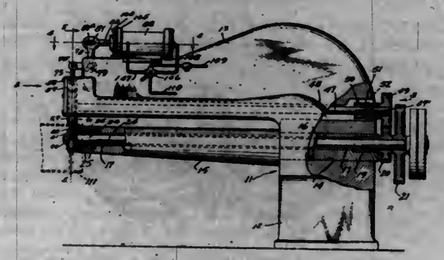
site end of the fastener, the inner portion of said overlapping jaw ends having side flanges covering the edges of the outer jaw end, thereby to protect the looped end from contact with said edges.

1,750,781. CUSHIONING DEVICE FOR DOORS AND WINDOWS. JACOB MILHANDER, Los Angeles, Calif. Filed Dec. 24, 1928. Serial No. 328,189. 2 Claims. (Cl. 16—86.)

1. In combination with the frame of a door having a door hinged therein, of a base member formed of a resilient material provided with a cavity therein, said member adapted to be secured to that portion of the door frame to which the door is hinged with the rim of the cavity engaging the face of said door frame, whereby to seal the door in its frame against movement.

1,750,782. EXTRACTOR FOR WARP BEAMS. OTTO JULIUS OBERMAIER, Neustadt, Germany. Filed Jan. 2, 1929, Serial No. 329,934, and in Germany Nov. 24, 1924. 1 Claim. (Cl. 34—26.)

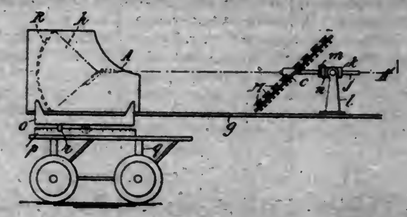
A centrifugal extractor for a warp beam, comprising a rotary shaft, a conical support for the beam secured on



the lower part of the shaft, means at the upper part of the shaft for clamping the beam against the said support, and a guide piece mounted on the shaft and having vertical ribs which project around it and are adapted to bear against the inside surface of the beam.

1,750,783. ARTIFICIAL BAIT. UZ C. PEMBERTON, Seffner, Fla. Filed Jan. 16, 1929. Serial No. 332,783. 11 Claims. (Cl. 43—40.)

1. An artificial bait comprising a body member; a vertically disposed slot in said body member; and a combined hook assembly and tail piece pivotally mounted to move in a vertical plane within said slot.

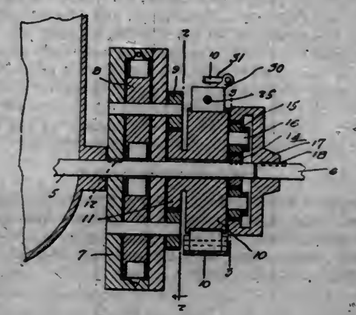


1,750,784. MACHINE FOR ROLLING BEADS IN STOVE-PIPE CASINGS. THORVALD A. M. PETERSEN, Los Angeles, Calif., assignor to Union Tank & Pipe Co., Los Angeles, Calif., a Corporation of California. Filed Feb. 13, 1929. Serial No. 339,576. 5 Claims. (Cl. 153—9.)

1. In a device for rolling corrugations in a tubular member, the combination of a primary forming element; a secondary forming element; means for synchronously operating said elements; a supporting body; walls forming a recess in said body; a plate covering said recess and secured to said body; a head operating in said recess; walls forming a notch in said head; a cover closing one side of said notch and secured to said head, said operating means extending through openings in said head and said cover, said secondary forming element secured to said operating means and operable therewith within said notch; retaining members securing said element to said operating means; a pivot bearing, said operating means supported in said pivot bearing; a gear train, said gear train synchronously operating said primary and secondary forming elements; and mechanism for moving said head and moving said element associated therewith toward or away from the other of said elements.

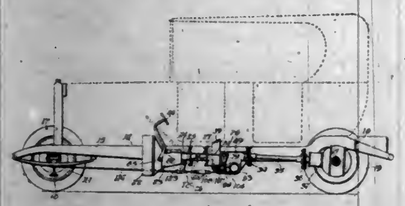
1,750,785. OPTICAL APPARATUS FOR PROJECTING ILLUMINATED SIGNS UPON SCREENS. CYRIL ERNEST RANDALL and LEONARD ROBERT THOMPSON, London, England, assignors to John Clifford Savage, London, England. Filed Dec. 13, 1928, Serial No. 325,848, and in Great Britain Dec. 14, 1927. 17 Claims. (Cl. 40—130.)

1. Method of projecting signs on to distant screens, consisting in projecting an approximately parallel beam of light on to an assemblage of light transmitters said assemblage intersecting the beam of light at a relatively short distance from the projector and adjusting indi-



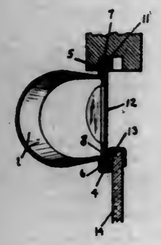
vidual transmitters so that light spots are brown on to the distant screen in predetermined disposition for constituting the sign.

1,750,786. BRACELET CHAIN. WILFRED J. ROY, East Orange, N. J., assignor to Gemex Company, Newark, N. J., a Corporation of New Jersey. Filed Aug. 20, 1928. Serial No. 300,784. 4 Claims. (Cl. 59—80.)



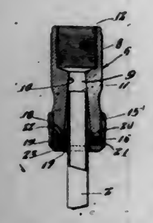
1. A bracelet chain structure comprising a series of units each having side walls with the end portions of the side walls of one unit overlapping the end portions of the side walls of the next unit, said overlapping portions being provided with registering openings, a member comprising a shell, a pin device slidably mounted in said shell with its ends extending into said openings to connect adjacent units together, a spring within said shell normally urging said pin device to extend into said openings while permitting yielding movement for withdrawal from said openings, a fingerpiece on said pin device extending outwardly thru said shell for withdrawing said pin device from the openings, and means for retaining said fingerpiece in withdrawn position.

1,750,787. TRANSMISSION MECHANISM. KARL JOSEF STRIGL, New York, N. Y. Filed July 6, 1928. Serial No. 290,721. 2 Claims. (Cl. 74—34.)



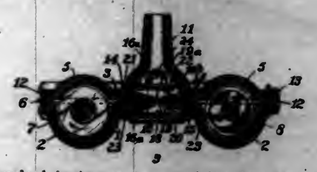
1. In combination, a drive shaft, a driven shaft, a fly wheel rotatable with the drive shaft, control members on the fly wheel for retarding the same under influence of centrifugal action, a brake drum rotatably mounted on the drive shaft, a gear carried by one end of the drum, planetary gears on the fly wheel for mesh with the gear carried by the drum, a brake band for co-action with the drum, a ring gear carried by the driven shaft, smaller gears carried by the opposite end of the drum, a gear on the drive shaft for mesh with the gears on the last-mentioned end of the drum whereby reverse motion may be imparted to the driven shaft upon the retardation of the drum.

1,750,788. VEHICLE BRAKE. CECIL HAMELIN TAYLOR, Detroit, Mich., assignor to Bendix Brake Company, South Bend, Ind., a Corporation of Illinois. Filed May 19, 1924, Serial No. 714,187. Renewed June 14, 1929. 14 Claims. (Cl. 188—140.)



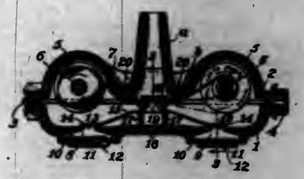
3. In combination, a vehicle having front and rear wheels, brakes for said wheels, brake actuating mechanism, and brake control mechanism operative to apply the greatest braking pressure to the wheels carrying the greatest load.

1,750,789. VENTILATOR. EUGENE A. THOMPSON, Syracuse, N. Y., assignor to Steadfast Manufacturing Company, Inc., Geneva, N. Y., a Corporation of New York. Filed Mar. 14, 1927. Serial No. 175,399. 1 Claim. (Cl. 98—2.)



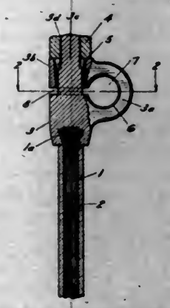
In a device of the class described, a plate having its central portion formed into an open sided cylinder, a second plate having a plurality of spaced apertures and having an outwardly extending baffle adjacent the edge of each aperture, a recess formed on the top longitudinal edge of the first named plate for the reception of one longitudinal edge of the second named plate, a recess formed on the bottom longitudinal edge of the first named plate for the reception of the other longitudinal edge of the second named plate and a glass receiving recess formed on the second-named plate adjacent the last named reception.

1,750,790. COUPLING. LELAND S. BESSONETT, San Francisco, Calif., assignor, by mesne assignments, to Standard Oil Company of California, a Corporation of Delaware. Filed Mar. 23, 1925. Serial No. 17,651. 1 Claim. (Cl. 285—123.)



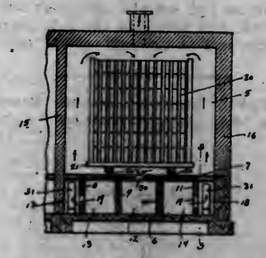
A suction hose coupling comprising a body having a tapered central passage, means for securing the body to a flexible conduit, a packing ring mounted within the tapered central passage at one end thereof and adapted to seat upon a seat formed within the body so that the packing ring will extend into said central passage at the end of the central passage, and means secured to said body for holding the packing ring in position, said latter means having a central bore larger than the bore of the packing ring so as to permit tubes of variant diameters to be removably inserted through the packing ring to engage the tapered walls of the bore of the said body to hold said tubes from being drawn through the body.

1,750,791. MUSICAL INSTRUMENT. HERBERT G. BEYER, Baltimore, Md. Filed Nov. 3, 1928. Serial No. 317,025. 8 Claims. (Cl. 84—93.)



2. A musical instrument comprising two separable casing members with spaced roll receiving pockets connected by a narrow passage, the walls of the said casing at said narrow passage being re-entrant relative to the walls of the pockets, said narrow passage having on each side thereof a tracker board surface, and a reed carrying member on each side of said narrow passage seated in the re-entrant wall, substantially as described.

1,750,792. MUSICAL INSTRUMENT. HERBERT G. BEYER, Baltimore, Md. Filed Nov. 17, 1928. Serial No. 320,148. 6 Claims. (Cl. 84—93.)



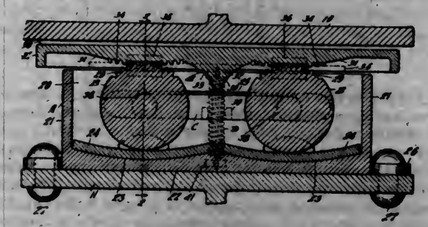
5. A musical instrument comprising a casing having a centrally disposed mouth piece, rolls in the casing on opposite sides of the mouth piece, feeler fingers disposed centrally of the casing in line with the mouth piece, wind chests carried by the casing, valves controlling the wind chests and operated by the fingers controlled by the perforated sheet passing from one roll to the other.

1,750,793. TERMINAL FOR ELECTRIC WIRES. OLIVER H. BROWN, Davenport, Iowa. Filed Dec. 16, 1927. Serial No. 240,457. 2 Claims. (Cl. 175—259.)

1. A clamp comprising a body, a threaded post united thereto, a split annular member having one end united to the body and its opposite end formed with a tapered opening adjacent and surrounding the post, the outer end of said tapered opening being the larger.

1,750,794. METHOD OF AND APPARATUS FOR DRYING LUMBER. CLIFFORD A. CUTLER, Buffalo, N. Y. Filed Jan. 14, 1925. Serial No. 2,274. 2 Claims. (Cl. 34—46.)

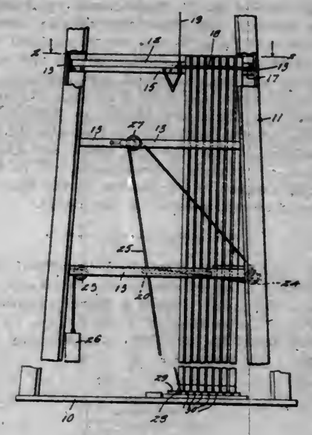
1. A lumber drying kiln comprising a chamber having a trackway extending lengthwise thereof and adapted to receive lumber carrying trucks, a suction duct located below the rails, a discharge duct at each side of the suction duct, a compartment at one side of each of the discharge ducts, the wall between each discharge duct and adjacent compartment being formed with openings, air reheating means, and means for withdrawing air from the kiln through the suction duct, passing it through the discharge ducts and into the compartments, and then discharging it upwardly into the kiln and bringing it in contact with the heating means.



1,750,795. PROCESS OF TREATING CACAO BEANS. GEORGE DEFREN, Newton, Mass. Filed Jan. 4, 1926. Serial No. 79,269. 4 Claims. (Cl. 99—11.)

4. The process of treating raw cacao beans preparatory to roasting which comprises soaking the raw beans in water, which is initially free from constituents that are to be extracted from the beans, for a sufficient period of time whereby to remove at least the greater part of the soluble bitter constituents of the beans, and changing the water to keep down the concentration of the extracted constituents in the water.

1,750,796. ALLOY, AND CUTTING TOOL MADE THEREFROM. BURNHAM E. FIELD, Douglaston, N. Y., assignor to Haynes Stellite Company, a Corporation of Indiana. Filed Aug. 29, 1925, Serial No. 53,429. Renewed Jan. 11, 1929. 6 Claims. (Cl. 75—1.)

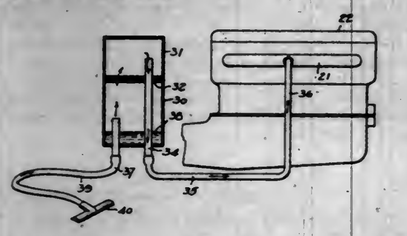


1. An alloy consisting chiefly of tungsten, cobalt, and chromium, and containing upward of 35% tungsten, upward of 30% cobalt, a substantial proportion of chromium less than 12%, and between 0.2% and 1.25% of boron.

1,750,797. ANTIFRICTION BEARING. WILLIAM A. GEIGER, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 5, 1926. Serial No. 86,171. 8 Claims. (Cl. 308—226.)

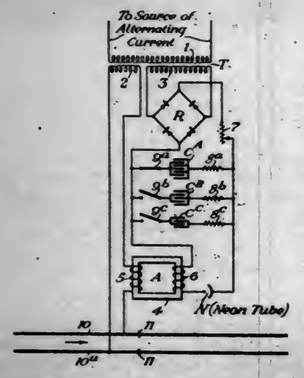
1. In an anti-friction bearing, the combination with a retainer provided with horizontally extending guideways; and anti-friction means adapted to move to either side of central position with respect to said retainer; transmitting members detachably associated with said anti-friction means, said transmitting members extending through said guideways; and vertically arranged springs extending through said transmitting members to maintain the same in cooperative relation with said anti-friction means, said springs being adapted to be flexed intermediate their ends upon movement of said anti-friction means to either side of central position, whereby said anti-friction means are returned to central position when free from load.

1,750,798. PIPE-HANDLING APPARATUS FOR DERRICKS. COLUMBUS MONROE GIDLEY, Corsicana, Tex. Filed Apr. 28, 1928. Serial No. 273,725. 9 Claims. (Cl. 255—1.)



1. In racking apparatus for racking pipe in oil well derricks, a platform upon the derrick floor for the reception of the lower end of the pipe, a rack at the upper end of the derrick for the reception of the upper end of the pipe, a horizontally swinging arm adjacent the upper end of the derrick, and means for connecting said arm with the lower end of a pipe section to cause said arm to be horizontally swung as the pipe is lowered to place the same upon the platform, said arm in its swinging movement engaging the upper end of the pipe to direct the same into said rack.

1,750,799. ORNAMENTED ARTICLE OF WEARING APPAREL. ALFRED A. GLIDDEN, Watertown, Mass., assignor, by mesne assignments, to Hood Rubber Company, Inc., Watertown, Mass., a Corporation of Massachusetts. Filed Aug. 22, 1927. Serial No. 214,621. 1 Claim. (Cl. 41—10.)



A shoe comprising an upper consisting of a single piece of fabric, and a sole, the upper having imprinted with ink impressed thereinto lines sub-dividing the same into conventional shoe upper parts.

1,750,800. VACUUM-CLEANER ATTACHMENT FOR AUTOMOBILE ENGINES. SYDNEY R. GOULD, Bakersfield, Calif. Filed Jan. 18, 1927. Serial No. 161,897. 1 Claim. (Cl. 183—51.)

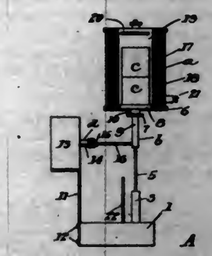
In a vacuum cleaner attachment for internal combustion engines, a tank, a body of liquid adapted to contain a filtering element in the tank above the liquid, a pipe extending through and above the filtering element and adapted for connection to the intake manifold of an engine to create an induced suction within the tank above the filtering element, a second pipe adapted for connection to a nozzle and extending into the tank to a point above the liquid and below the filtering element, so that the induced suction created within the tank will be transmitted to the pipe and nozzle and the air discharged into the tank as a consequence will be filtered by the filtering element in its passage to the first pipe and the filtered matter deposited on the liquid.

1,750,801. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LARS O. GRONDAHL, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 10, 1927, Serial No. 218,772. Renewed Aug. 29, 1929. 9 Claims. (Cl. 246—40.)

2. In combination with the rails of a railway track and a source of alternating current connected therewith, an impedance interposed between said source and a track rail, and means including a neon tube for periodically varying the value of said impedance and thereby periodically varying the amplitude of the current supplied to the rails from said source.

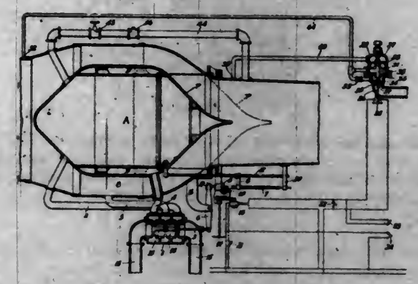
1,750,802. SWITCH RAIL FOR MONORAIL SUSPENDED RAILWAYS. OSWALD HAFERKORN, Poppitz, near Rochlitz, Germany. Filed Mar. 9, 1928, Serial No. 260,405, and in Germany Nov. 22, 1927. 2 Claims. (Cl. 104—100.)

2. In a switch for mono-rail suspended railways and in combination with a track rail and a branch rail having a free notched end, the arrangement of a switch rail pivoted to the free end of said track rail and movable



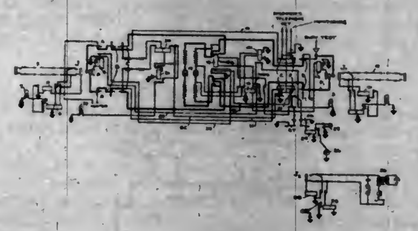
thereon in upward and sidewise directions and having a free notched end, and means on the said branch rail for guiding the free end of the said switch rail.

1,750,803. STAND. ARTHUR C. HAYDEN, Brockton, Mass. Filed Apr. 6, 1928. Serial No. 268,030. 2 Claims. (Cl. 248—41.)



1. A stand comprising a base, a post rising therefrom, a head on the post having forks, each having axially alined smooth and threaded holes therein, removable screws in the fork holes, arms pivotally mounted on the screws and having seats adapted to receive the base of a motion picture projector or the like, and screws threaded into the arms for abutting engagement with the post to cause the seats to press against the projector base and to relatively adjust the arms in levelling the base.

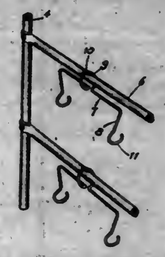
1,750,804. DENTAL DEVICE. GEORGE M. HOLLENBACK, Los Angeles, Calif. Filed Feb. 12, 1927. Serial No. 167,826. 4 Claims. (Cl. 161—16.)



1. In a device of the character as described, a heating oven having a chamber open at its lower end and formed to receive a flask, a flask carrier movable vertically into and out of the oven, means for supporting said flask within the heating oven for a predetermined length of time and for releasing the carrier at the end of said time, and means for enabling said carrier to drop a sufficient distance to withdraw the flask completely from the heating oven when the carrier is released.

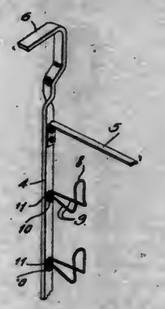
1,750,805. FLUID-CONTROL SYSTEM. OTTO V. KRUSE, Narberth, Pa., assignor, by mesne assignments, to I. P. Morris Corporation, a Corporation of Delaware. Filed Jan. 31, 1925. Serial No. 6,126. 41 Claims. (Cl. 137—139.)

1. In a fluid control system the combination with a conduit having a valve provided with a casing, and a plunger telescoping therewith to form a fluid chamber, of fluid pressure operating means for opening and closing said valve, and control means for said operating means comprising connections to said conduit adapted to develop different pressures upon changes in the velocity of the flow in said conduit and means whereby the difference between said pressures actuates said control means to cause continuous closing movement of said valve after it has once started.



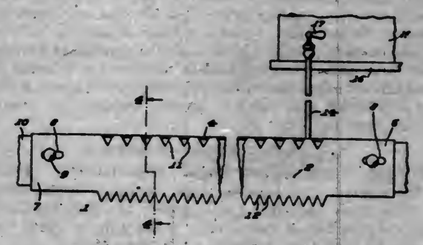
1,750,806. MANUAL TELEPHONE SYSTEM. JOHN H. LEWIS, Jr., Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 23, 1928. Serial No. 272,111. 10 Claims. (Cl. 179—41.)

1. In a telephone system, an incoming line, a plurality of outgoing lines, a plurality of cord circuits for interconnecting said incoming line with any of said outgoing lines, each of said cord circuits normally having its ends conductively connected together, and means including a manually controlled device for conductively separating but inductively connecting the ends of any desired one of said cord circuits.



1,750,807. HANGER FOR ARTICLES TO BE PLATED. LOUIS LICHTMAN, New York, N. Y., assignor to Chromeplate, Inc., New York, N. Y., a Corporation of New Jersey. Filed Nov. 27, 1928. Serial No. 322,223. 5 Claims. (Cl. 204—5.)

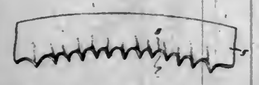
4. A hanger for articles having reduced ends, of substantially yoke shape and provided intermediate the ends of the body, and at the end of each arm with an open ring, the ring of the body being adapted for connection with a support, and the rings of the arms being adapted to receive the pointed ends of the article, the yoke being of resilient material, and the arms normally converging



toward their free ends for the purpose set forth, and a supporting bar over which the open ring of the body engages, said ring being secured to the bar.

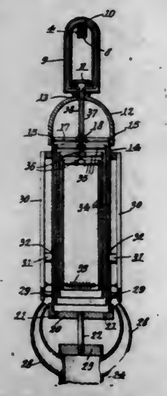
1,750,808. RACK FOR SUPPORTING ARTICLES TO BE ELECTROPLATED. LOUIS LICHTMAN, New York, N. Y., assignor to Chromeplate, Inc., New York, N. Y., a Corporation of New Jersey. Filed Nov. 27, 1928. Serial No. 322,224. 5 Claims. (Cl. 204—5.)

5. A rack or hanger for elongated articles having end openings, including a substantially rectangular frame, opposite members thereof having hangers, each hanger including a substantially horizontal portion connected with the member and a substantially vertical portion at the outer end thereof, said last named portion compressible to enter an opening of the article and resilient to expand to close contact with the walls thereof, the horizontal portions serving as stops to limit the downward movement of the article.



1,750,809. BASTER FOR MEATS. GEORGE JOSEPH LIEBER and PATRICK C. MURPHY, Chicago, Ill. Filed Apr. 22, 1929. Serial No. 357,165. 7 Claims. (Cl. 53—6.)

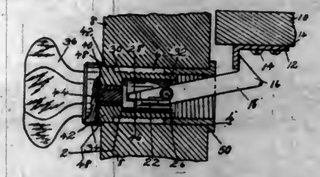
7. In a baster for meats, a container comprising front and rear faces and an open top, one of said faces being



perpendicular and serrated along its upper edge to permit the overflow of the contents of the container, said front and rear edges being brazed together along one edge, teeth formed in said perpendicular edge below its junction with said rear edge, and supply means for said container.

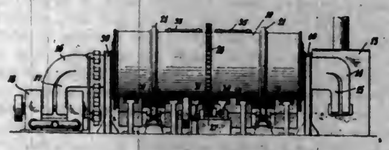
1,750,810. CARVED VENEER FOR ARTIFICIAL TEETH. FREDERICK C. MILLER, Detroit, Mich., assignor of one-half to William H. Warren, Detroit, Mich. Filed Mar. 7, 1927. Serial No. 173,434. 2 Claims. (Cl. 32—4.)

1. A method of producing a dental plate, which method consists in providing a pattern having teeth mounted therein, applying a pliable veneer to said pattern at the teeth thereof, forming an impression of said pattern, teeth and veneer in a mold, removing the pattern and veneer from the mold, and pouring into the impression.



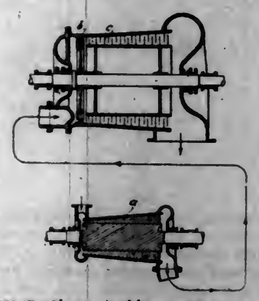
1,750,811. CIRCUIT CLOSER. WILLIAM J. MULLIGAN, Parkersburg, W. Va. Filed Mar. 2, 1926. Serial No. 91,759. 2 Claims. (Cl. 200—52.)

1. In apparatus of the class described a circuit closer including a supporting cap, a tubular contact member suspended therefrom, a tubular contact member concentrically disposed within the first named member and mounted for oscillation relative thereto, one contact member being electrically connected to one terminal of a circuit and the remaining contact member being electrically connected to the other terminal of the circuit, spring arms carried by the outer contact member, means thereon adapted when released from normal position, to contact with the inner contact member, thereby to close a circuit between the members, a spring connection between the arms extending diametrically through but out of contact with all of the contact members, fusible means interposed between each arm and the outer contact member for holding the arm against actuation by the connecting spring, and means for oscillating the tubular contact members to close a circuit therethrough.



1,750,812. COMBINED KNOB AND LATCH. FRANZ NETSCHERT, Los Angeles, Calif., assignor to The Technical Glass Company, Incorporated, Los Angeles, Calif., a Corporation of California. Filed July 6, 1927. Serial No. 203,708. 1 Claim. (Cl. 292—98.)

In a cupboard catch, an externally threaded sleeve, closed at one end, a knob having a shank threaded into said closed end, a cam member secured to said shank, and positioned in said sleeve, a cam on the lower end of said member, a catch pivoted within said sleeve at its opened end, a spring for opposing the movement of said catch,

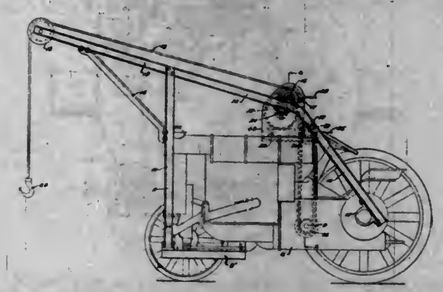


means on the inner end of said catch adapted to be engaged by said cam when said knob is turned to operate said catch, and an open ended threaded sleeve adapted to be adjusted on the threads of said first sleeve.

1,750,813. DRYING APPARATUS. ALFRED T. OAKLEY, Thompson, Ohio, and PAUL LUPKE, Jr., Trenton, N. J., assignors to Essex Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Nov. 10, 1926. Serial No. 147,414. 11 Claims. (Cl. 34—5.)

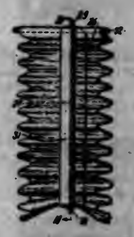
1. In drying apparatus of the character described, in combination, a rotatable drum, means for circulating gases through said drum comprising an inlet and outlet conduits supported independently of the drum but within the drum and having spaced openings distributed along the length of the drum substantially as and for the purpose described.

1,750,814. HIGH-PRESSURE STEAM TURBINE. WILHELM PAPE, Berlin, Germany, assignor to Bergmann-Elektricitätswerke Aktiengesellschaft, Berlin, Germany, a Corporation. Filed Feb. 10, 1925, Serial No. 8,250, and in Germany Feb. 22, 1924. 1 Claim. (Cl. 60—70.)



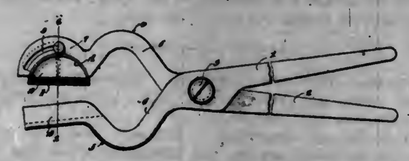
A high pressure steam turbine comprising a drum turbine for the high pressure stages, a drum turbine for the low pressure stages, and a wheel turbine for the medium pressure stages, said wheel turbine being arranged intermediate said drum turbine and immediately adjacent the high pressure stage.

1,750,815. HOISTING DEVICE. GLENWAY M. RIX, Cedarburg, Wis., assignor to Squier-Rix Company, Milwaukee, Wis. Filed Jan. 5, 1925. Serial No. 635. 4 Claims. (Cl. 212—142.)



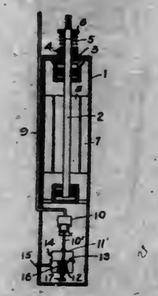
1. The combination with a tractor having a driving shaft, of a hoisting device therefor, comprising a frame

mounted on the tractor and having an extension forming a boom, a shaft journaled on the frame, a drum journaled on the shaft, a clutch means for connecting the drum to the shaft, a counter shaft journaled on the frame and having a geared connection with the drum shaft, a second counter shaft journaled on the frame and having a non-reversible worm and worm-wheel connection with the first counter



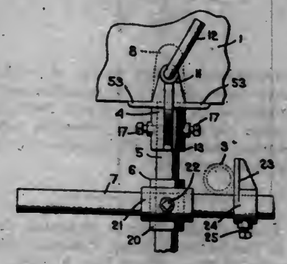
shaft, a third counter shaft journaled on the frame, gears journaled on the third counter shaft and having a geared connection with the second counter shaft, clutch means for positively connecting either one of the last mentioned gears to the third shaft, means for drivingly connecting the third counter shaft to the driving shaft, and a cable connected to the drum and extending towards the boom.

1,750,816. CURTAIN CONFINER. CATHERINE ROGERS, Taunton, Mass. Filed May 28, 1929. Serial No. 366,746. 4 Claims. (Cl. 156—33.)



3. A curtain confiner comprising a rod adapted to penetrate the folds of a portion of a shirred curtain and provided with a detachable stop at its penetrating end, the opposite end of the rod being provided with a hinge pintle member and with a hinge socket member attachable to a window casing, and having means for limiting turning movements of the pintle member and swinging movements of the rod.

1,750,817. TONGS. WILLIAM E. ROOT, Bloomfield, Conn. Filed Mar. 31, 1928. Serial No. 266,316. 1 Claim. (Cl. 81—51.4.)



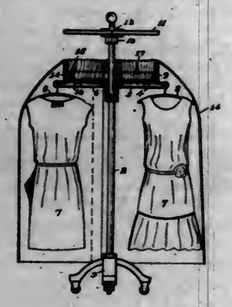
A tong of the character described, comprising a pair of handles being in crossed relation, pivotal means between said handles, each of said handle members being extended forwardly of the pivotal point and offset with respect thereto, one of said offset portions terminating in a straight jaw member, a curved jaw member extending from the other offset portion and having a groove in the inner face thereof and laterally opening slots communicating with said groove, a jaw element having a curved edge designed to fit in said curved jaw member, a securing pin carried by said curved jaw member having one end extended in said grooves, a retaining pin extending transversely of the curved jaw member and engaging and holding the extended end of said pin, said straight jaw member being of substantially V-shaped cross sectional design to receive said jaw element.

1,750,818. MEANS FOR PREVENTING LEAKAGE. HARRY SAUVEUR, Hanover, Germany. Filed Aug. 15, 1927, Serial No. 213,180, and in Germany Aug. 12, 1926. 4 Claims. (Cl. 286—9.)

1. In a high-speed machine comprising a casing filled with a fluid under pressure and having an aperture therein, a shaft extending through said aperture and into said casing, packing means on said casing and around said shaft comprising a rotatable packing member which is subjected to the combined action of the pressures within and without said casing, a stationary packing member around said shaft, the pressure outside the casing tending to press one member against the other member, means for applying an additional pressure on said rotatable member which tends to hold it engaged with said stationary member against a surplus of the pressure within said casing, and means for maintaining a pressure within said casing to a value somewhat in excess of the outside pressure.

1,750,819. TEMPORARY PIPE SUPPORT. JOHN L. SCHALLER, Wellesley, Mass. Filed Jan. 2, 1929. Serial No. 329,903. 7 Claims. (Cl. 248—34.)

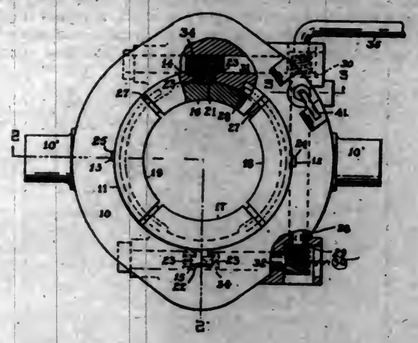
1. A temporary pipe support for use in running a length of pipe, said support comprising a clamping member adapt-



ed to be clamped to an overhead support, a suspender detachably but rigidly secured to the clamping member and depending therefrom, a bracket fitting adjustable on said suspender, a pipe-supporting arm carried by the fitting and adjustable horizontally relative thereto, and a pipe-positioning element adjustably secured on said arm.

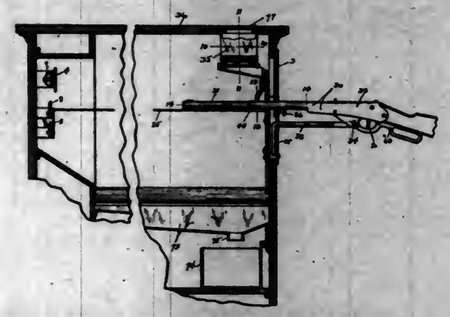
1,750,820. TOOL FOR REMOVING CAPS FROM JARS. JOHN SCHLEINZER, Rochester, N. Y. Filed Apr. 6, 1928. Serial No. 267,971. 4 Claims. (Cl. 81—3.1.)

1. A wrench for removing the caps of jars comprising a disc, fingers formed on the periphery of said disc and extending downward therefrom, said fingers being adapted to engage the rim of the cap to turn and lift the cap, said wrench having fingers extending up therefrom by which said wrench may be better grasped and turned and raised.



1,750,821. MERCHANDISE-COVER CONTAINER. WILLIAM EDWARD SNAMAN, Pittsburgh, Pa. Filed Dec. 2, 1927. Serial No. 237,251. 3 Claims. (Cl. 312—3.)

3. In a merchandise display device, the combination of a textile fabric cover member for enclosing said device, a container supported on the top of said device for storing said cover when not in use, and removable means for detachably securing the upper end of said cover member on the inside of said container.

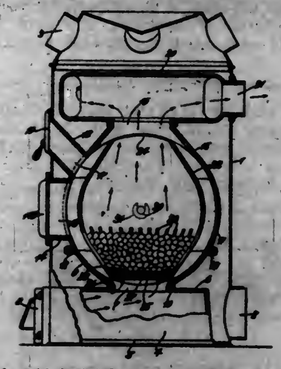


1,750,822. ELEVATOR. JOHN D. SPALDING, Crafton, Pa., assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 5, 1928. Serial No. 259,120. 3 Claims. (Cl. 24—263.)

1. In an elevator or the like, a frame having a downwardly tapering opening, slips guided on the wall of the opening, shafts, means for rotating the shafts, and connections between the shafts and the slips whereby the rotation of the shafts operate the slips, in combination

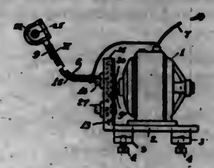
with means to lock the shafts from rotation in either direction while permitting the locked shafts to be rotated in the opposite direction.

1,750,823. RIFLE RANGE. RICHARD W. STEWART, Auburn, N. Y. Filed Apr. 28, 1928. Serial No. 272,185. 4 Claims. (Cl. 273—101.)



1. In a device of the class described, a cabinet, a plurality of targets secured in one end of the cabinet, a window in the opposite end of the cabinet, a rifle movably mounted on the cabinet, a hopper, a supply of bullets in the hopper, a movable bottom for the hopper, a plurality of apertures positioned in echelon on one edge of the bottom for the reception of bullets, a trough secured to the bottom of the hopper, a flexible conduit connecting the trough and the rifle, and means for moving such bottom whereby the bullets in the apertures are moved out from the hopper and deposited in the trough for movement through the flexible conduit to the rifle.

1,750,824. HOT-AIR FURNACE. HENRY TIELKEMEYER, St. Louis, Mo. Filed July 11, 1929. Serial No. 377,381. 8 Claims. (Cl. 126—99.)



1. A furnace comprising an enclosure having an opening at its lower end for the admission of air and the discharge of solid products of combustion and having an opening at its upper end for the discharge of smoke and fumes of combustion, means forming a fuel inlet passage at one side of said enclosure, an approximately oval fire pot supported in a horizontal axis in said enclosure and having an opening at its upper end, a grate

forming a fuel support at the lower end of said fire pot, and means for turning said fire pot to place said opening

in line with said fuel inlet passage to receive fuel and in line with said opening at the upper end of said enclosure to discharge smoke and fumes of combustion.

1,750,825. POWER-DRIVEN WRENCH. HARRY A. THOMPSON, Bronxville, N. Y. Filed Nov. 12, 1926. Serial No. 147,978. 6 Claims. (Cl. 81—54.)

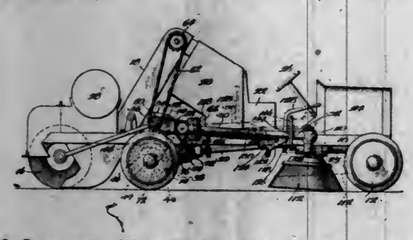
1. In combination, a support; a pair of rotary members mounted on said support; means for rotating the members in opposite directions; couplings respectively yieldably and rigidly mounted on said members; a flexible shaft adapted to interlock with either of said couplings; and a wrench driven by said shaft and including a member having oppositely opening sockets connected to said shaft.

1,750,826. WELL-DRILLING APPARATUS. GEORGE R. WATSON, Waterloo, Iowa, assignor to Armstrong Manufacturing Company, Waterloo, Iowa. Filed Nov. 9, 1928. Serial No. 318,207. 2 Claims. (Cl. 254—189.)

1. In combination, a relatively fixed support, a resilient device mounted thereon and comprising a pile of alternated centrally apertured rigid plates and soft rubber cushions, said sheave-block having a threaded shank passed through the central apertures of said pile and adjustably secured thereto to be resiliently supported thereon.

1,750,827. VIBRATION DAMPENER. ERNEST E. WEMP, Detroit, Mich. Filed Jan. 29, 1927. Serial No. 164,631. 6 Claims. (Cl. 192—55.)

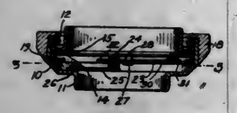
6. In a clutch, the combination of a driving member, a driven disc frictionally engaging the driving member near the periphery of the driven disc, a shaft, a hub for the driven disc, means connecting the hub and shaft so as to provide for a positive driving connection between said hub and shaft, said means permitting of limited relative movement between the hub and shaft, means tightly fixed to said shaft and having a frictional surface to surface engagement with said hub, said connection between the hub and shaft permitting relative movement when vibrations are received by the driven member from the driving member, said relative movement being materially multiplied near the periphery of the driven disc where it frictionally engages the driving member, and said tightly fixed means on the shaft frictionally opposing said relative movement.



1,750,828. CLUTCH. ERNEST E. WEMP, Detroit, Mich. Filed Aug. 24, 1927. Serial No. 215,171. 4 Claims. (Cl. 192—68.)

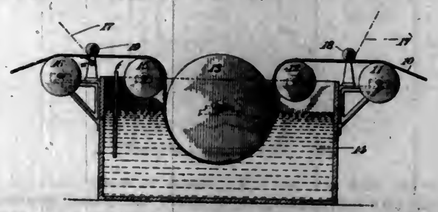
1. In a clutch, the combination of a driven disk provided with laterally projecting spring-abutment studs, a

hub provided with a hub flange having spring-abutment lugs and an annulus of coil springs interposed between the lugs and the studs for yieldingly resisting the relative movement, the said coil springs acting as shock absorbers and centralizers in a small lost motion between the disk and hub flange, and means entirely enclosed in said annulus for dissipating energy during such lost motion.



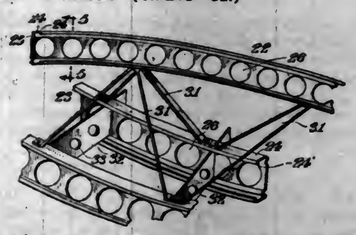
1,750,829. GUTTER-BROOM STREET SWEEPER. FRED D. WILSON, Harvey, Ill., assignor to Austin Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 16, 1925. Serial No. 9,600. 9 Claims. (Cl. 15—87.)

8. In a power driven street sweeper, a frame, front and rear wheels therefor, a transversely disposed power shaft in front of a rear wheel, a longitudinal power transmitting means operated by said power shaft, a gutter broom rotatable on a vertical axis, said longitudinal power transmitting means being pivoted to the frame at one end and at the other end rotatably supporting said broom, said broom being mounted to rock about said power transmitting means, means for placing said broom in different vertical positions, means for restricting the rocking of said broom about said power transmitting means, means on said transverse power shaft supplying power to the transmitting means to rotate the brush in all its adjusted positions, and guiding means on the frame controlling the lateral movement of the broom.



9. In a power driven street sweeper, a vertically disposed gutter broom, a horizontally disposed rotatable member supporting said broom, means supporting said member, means for rotating said broom, a lever connected to said member, said lever having oppositely extended arms, a spring connected to one of said arms so as to normally apply a tension tending to rotate said member in one direction, and means positioned to engage the other arm of said lever so as to limit said rotative movement in opposite directions.

1,750,830. VIGNETTING SHUTTER. ANDREW WOLLENSAK, Rochester, N. Y., assignor to Wollensak Optical Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 31, 1928. Serial No. 316,233. 1 Claim. (Cl. 95—63.)



In a vignetting shutter, the combination of an iris diaphragm, a shutter blade pivoted near the periphery of the diaphragm, a spring tending to swing said blade into position to cover the diaphragm opening, manually operable means for moving the diaphragm at a speed directly under the control of the operator, and interengaging members, on the shutter blade and said manually operable member, for swinging the blade positively to open position as the diaphragm is opened, and for holding the blade in open position, against the opposition of its spring, as the diaphragm is moved toward closed position, said interengaging members being arranged to release the blade as the diaphragm reaches its position of minimum opening, to permit the blade to swing freely to closed position, under the influence of the spring, at a speed independent of the speed with which the manually-operable member is moved.

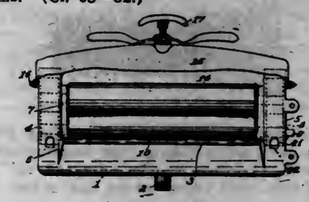
1,750,831. ART OF MAKING METAL FABRICS. EDMUND BURKE CARNS, New York, N. Y., assignor to Cairns Development Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 5, 1927. Serial No. 173,085. 1 Claim. (Cl. 204—6.)

The improvement in the art of producing a metal fabric which comprises covering one side of a wire mesh with a fabric sheet having conducting material next to the mesh, passing the wire mesh and fabric sheet through an electroplating bath whereby the metal of the bath is deposited on the wire mesh and the conducting material of the fabric sheet, and then removing the fabric sheet.

1,750,832. WING CONSTRUCTION FOR AIRCRAFT. EDMUND B. CARNS, New York, N. Y., assignor to Cairns Development Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 22, 1927. Serial No. 185,844. 6 Claims. (Cl. 244—31.)

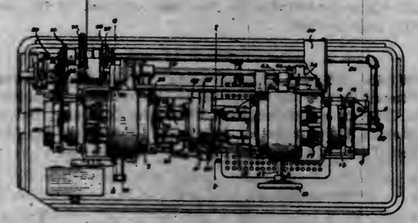
1. A wing construction comprising spar members, each having upper and lower chords formed of spaced channel members with their side portions united and struts connecting said chords, upper and lower cross ribs in staggered relation recessed to fit over the upper and lower parts of the spar members and gussets connecting the rigs and spars.

1,750,833. TUBULAR MEMBER. EDMUND B. CARNS, New York, N. Y., assignor to Cairns Development Company, Wilmington, Del., a Corporation of Delaware. Filed May 18, 1927. Serial No. 192,245. 5 Claims. (Cl. 189—34.)



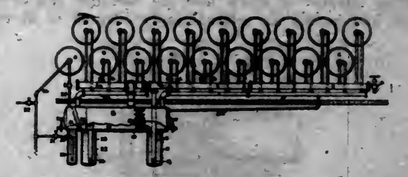
1. A tubular member formed of a one piece tapering blank folded to triangular cross section with two overlapping sides substantially equal in width the inner of which has its terminal edge fitting in a corner of said tubular member, said overlapping sides having registering holes with flanges around one set of holes extending through the other set of holes and clinched to fasten the sides together.

1,750,834. METAL FUSELAGE. EDMUND B. CARNS, New York, N. Y., assignor to Cairns Development Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 2, 1929. Serial No. 351,870. 3 Claims. (Cl. 244—30.)



1. A fuselage for aircraft, substantially triangular in cross section and made of three preformed sides tapering in wall thickness from a section of maximum stress to a section of minimum stress, each side having a convex curvature from one end to the other and having a continuous convex transverse curvature at all points along its length, whereby each side is longitudinally and transversely arched, such arched assembly of the three sides being substantially rigid in all dimensions.

1,750,835. WRINGER. FLOYD L. CHAMBERLAIN, Waterloo, Iowa, assignor to Chamberlain Corporation, Waterloo, Iowa. Filed Nov. 9, 1928. Serial No. 318,225. 2 Claims. (Cl. 68—32.)

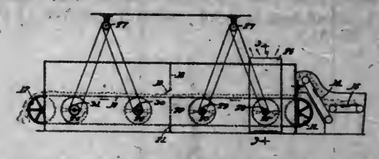


1. In a wringer, a U-shaped unitary sheet metal frame structure, consisting of like longitudinally united halves, the structure including inwardly troughed erect standards, and a basal connecting member therefor, being an upwardly troughed part with upwardly divergent walls wider at the top than said standards, the lower parts of said standards having pressed in tongues to support apertured bearings for roller terminations, and an end wall of one standard having an aperture to be traversed by one of the roller terminations, said basal member having a drainage outlet.

1,750,836. AUTOMATIC MACHINE TOOL. WILLIAM S. DAVENPORT and WILLIAM A. THOMAS, Rochester, N. Y., assignors to Davenport Machine Tool Co., Inc., Rochester, N. Y., a Corporation. Filed Feb. 13, 1926. Serial No. 88,042. 11 Claims. (Cl. 77—23.)

1. An automatic machine tool comprising two rotary tool carrying heads, two spaced bearings surrounding said heads and in which said heads turn about a common axis, means supporting one of said bearings so that it may be moved in the direction of the axis of rotation of its head, toward and from the other to vary the distance between the heads and a work supporting connection detachably secured to both of the heads and rotatable coaxially with the latter.

1,750,837. DRYING SYSTEM. FREDERICK C. FARNSWORTH, Bala, Pa. Filed Mar. 8, 1929. Serial No. 345,287. 7 Claims. (Cl. 34—48.)

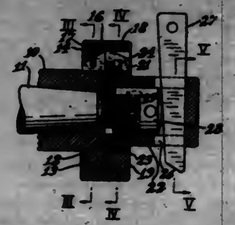


1. The herein described automatic method for supplying steam to a series of drying cylinders arranged in sections over which paper or other material in web form travels successively while being dried, which consists in supplying steam to the cylinders of the dry end section from which the web to be dried passes in its dried condition, separating the steam and water of condensation which passes from the said drying cylinders and delivering the uncondensed steam into another portion of the drying cylinders of a section nearer to the wet end of the apparatus, and similarly separating the water of condensation from the steam as it passes from said cylinders, and finally supplying the uncondensed steam to one or more cylinders at the wet end section or where the web to be dried is in its wettest condition, and wherein further, the steam is circulated from the cylinders of one section to the cylinders of the next section nearer the wet end and so on from section to section at a substantially constant pressure differential by supplying the steam from the supply side of the cylinders of one section through a water seal and static head to the supply side of the next section of cylinders whenever the differential between successive sections shall increase materially above the predetermined static head and differential thereby to be maintained.

1,750,838. CLEANER. HERMAN FUHRBERG and CONRAD T. JOHNSON, Seattle, Wash. Filed Mar. 5, 1927. Serial No. 173,213. 1 Claim. (Cl. 87—5.)

A composition of matter comprising a combination of flour, sodium carbonate, soap, water and thymol, the said ingredients being used in the following proportions; 12 level tablespoons full of flour, 6 ounces of water, 36 level tablespoons full of a composition of sodium carbonate and soap, 1 quart of luke warm water and 23 grains of thymol.

1,750,839. ONE-APRON DRIER. FRANK L. FURBUSH, Westford, Mass., assignor to C. G. Sargent's Sons Corporation, Graniteville, Mass., a Corporation of Massachusetts. Filed July 1, 1929. Serial No. 375,042. 5 Claims. (Cl. 34—12.)



1. In a drier, the combination with an apron for conveying the material to be dried, of a series of fans located between the strands of the apron, and means for driving the fans at the feed or wet end of the apron faster than the fans at the discharge or dry end of the conveyor.

1,750,840. WHEEL PULLER. PERCY C. GROVER, Birmingham, Ala. Filed Mar. 11, 1929. Serial No. 346,206. 8 Claims. (Cl. 29—85.)

1. In a wheel puller of the character described, a sleeve internally threaded at one end and having an internally tapered bore at the other end, a compressible member having threads to cooperate with the threads of a wheel

hub and being externally tapered to cooperate with the internal taper of the sleeve, a plunger guide having at one end an external taper, an expansible externally threaded bushing adapted to screw into the threaded end of the sleeve and having an internal taper adapted to fit over

the tapered end of the plunger guide and be expanded by force applied to the plunger guide, a plunger in the plunger guide and adapted to cooperate with a wheel axle, and a wedge member positioned to cooperate with the plunger and the plunger guide.

1,750,841. ANCHORAGE MEANS. CHARLES HOPPER and WILLIAM L. ARNOLD, Manhattan, Kans.; said Hopper assignor to said Arnold. Filed Jan. 18, 1926. Serial No. 82,038. 2 Claims. (Cl. 72—105.)

2. In an anchorage means, a housing having laterally and obliquely extending spur members, all being formed from a single sheet of metal, the housing functioning as a support for reinforcing rods, the spurs as attaching means to form boards and spacing means for the bottom of the housing from the form boards simultaneously, the housing having a circular aperture and a slot axially extending therefrom, and a stop member laterally extending inward and in close proximity to the intersection of the slot and the aperture, all substantially as shown.

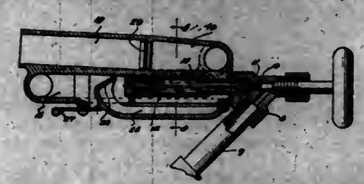
1,750,842. FISHING TACKLE. JOSEPH HERN, Kingston, N. Y. Filed Aug. 31, 1926. Serial No. 132,700. 1 Claim. (Cl. 43—51.)

An article of manufacture comprising a fishing float, loops at the ends thereof and centrally arranged headless pins projecting from the sides of said float in opposite alignment.

1,750,843. STRINGED MUSICAL INSTRUMENT. WALTER I. KIRK, Chicago, Ill. Filed Mar. 28, 1921. Serial No. 454,724. 10 Claims. (Cl. 84—291.)

1. A stringed musical instrument having a body comprising an annular wooden rim, a flat wooden top forming a sounding board, and a wooden bottom, the bottom being separated from the lower edge of the rim by an air space affording communication with the interior of the instrument and having a central aperture.

1,750,844. DECORATING MATERIAL. WILLIAM G. JOPSON, Williamsport, Pa., assignor to C. A. Reed Company, Williamsport, Pa., a Corporation of Delaware. Filed Aug. 3, 1926. Serial No. 126,861. 4 Claims. (Cl. 41—10.)

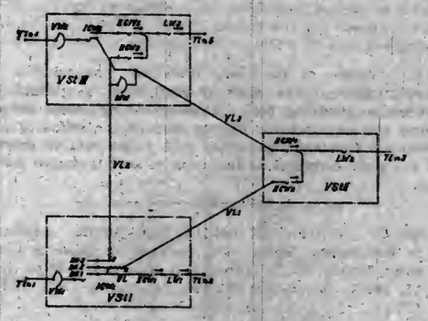


1. Pliant decorating material comprising superposed strips fastened together along their longitudinal median portions with a flexible medium only and cut inwardly diagonally from their edges toward said median portions.

1,750,845. BODY-DRYING IMPLEMENT. FRANK H. LACH, Chicago, Ill. Filed July 25, 1928. Serial No. 295,329. 2 Claims. (Cl. 15—245.)

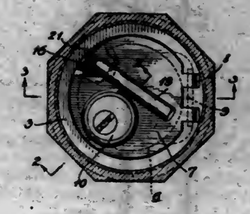
1. A drying implement for the purpose described comprising a body having a plurality of slotted edge portions of different contour, strips of flexible material secured in said edge portions, with marginal portions of substantially uniform width projecting therefrom, and having their edges conforming to the edge contour of its associated edge portion.

1,750,846. TORCH STRUCTURE. CHARLES F. LAMBERT, Grosse Pointe, Mich., assignor, by mesne assignments, to Clayton & Lambert Manufacturing Company, Detroit, Mich., a Corporation of Delaware. Filed Dec. 19, 1927. Serial No. 240,961. 16 Claims. (Cl. 158—33.)



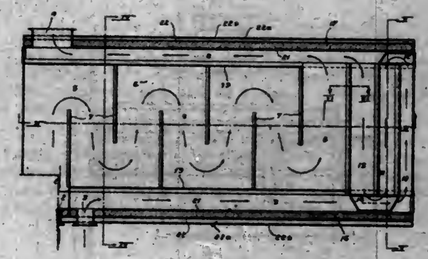
1. The method of starting, generating and conducting liquid fuel in torch structures of the type having generating tubes, which comprises passing liquid fuel through a generator tube, entrapping and heating a portion of the same while in the tube to expel the generated fuel therefrom, deflecting fuel vapors initially issuing from the tube backwardly against the tube to accelerate starting of the same, and then directly conducting the fuel vapor issuing from the generator tube backwardly and directing only a small portion against the generator in the form of flames for maintaining vaporization.

1,750,847. PROCESS OF TREATING GREENSAND OR GLAUCONITE FOR THE PURPOSE OF RENDERING IT AN EFFICIENT WATER-SOFTENING AGENT. FREDERICK K. LINDSAY, La Grange, Ill., assignor to Arizona Minerals Corporation, Yuma, Ariz. Filed Feb. 19, 1925, Serial No. 10,417. Renewed Jan. 8, 1930. 4 Claims. (Cl. 23—112.)



1. A process of producing an improved water-softening material which consists in producing a gel material from a mixture of sodium silicate with a soluble metal salt, agitating this mixture, adding greensand or glauconite while the mixture is being agitated and at the time gelation has begun to take place, and after complete gelation drying the resulting product.

1,750,848. AUTOMATIC TELEPHONE SYSTEM. FRITZ LUBBERGER, Berlin-Schmargendorf, and MAX LANGER, Hermsdorf, near Berlin, Germany, assignors to Siemens & Halske Aktiengesellschaft Wernerwerk, Siemenstadt, near Berlin, Germany. Filed Nov. 26, 1926, Serial No. 150,911, and in Germany Jan. 5, 1926. 11 Claims. (Cl. 179—18.)

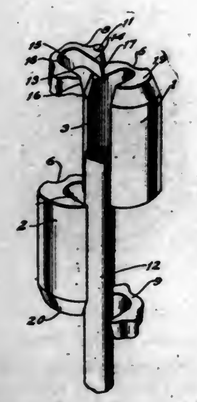


1. In a multioffice telephone system, three offices, trunks from the first office to the second office, trunks from the first office to the third office, trunks from the second office to the third office, switching mechanism in the first office operative for extending a connection over one of said trunks to the third office, said switch mechanism further operative responsive to a busy condition of the trunks from the first to the third office to extend said connection to the second office by way of one of said trunks instead of to said third office, a non-numerical hunting switch in said second office, and means responsive to said last mentioned extension for automatically operating said switch to hunt for a trunk extending from the second office to the third office.

1,750,849. COMBINED CLOSURE AND GAUGE ROD FOR OIL TANKS. ASSAD M. MALLUK, New York, N. Y., assignor to Standard Lock and Measure Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 6, 1928. Serial No. 304,224. 3 Claims. (Cl. 220—86.)

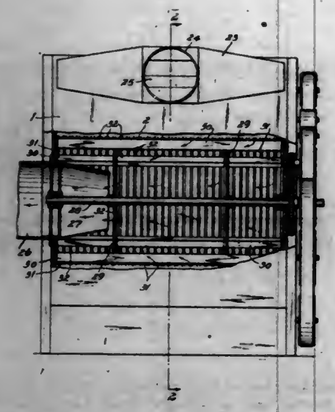
1. A tank, a filling neck thereon, a gauge rod within the neck, a lockable cover on the neck, a slot in the cover permitting opening and closing of the cover without removing the rod and permitting use of the rod without opening the cover, and means for sealing the slot when the cover is closed.

1,750,850. RECUPERATOR. GREGORY D. MANTLE and THEODORE W. MUNFORD, Pittsburgh, Pa., assignors, by mesne assignments, to Surface Combustion Company, Toledo, Ohio, a Corporation of New York. Filed May 23, 1927. Serial No. 193,446. 16 Claims. (Cl. 257—245.)



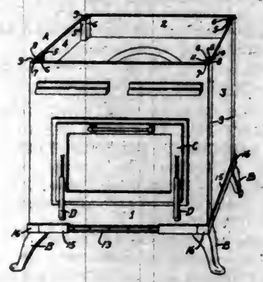
1. A recuperator having passages adapted to conduct air and having spaces through which hot gases are circulated, said recuperator comprising plates joined together, said joints being all disposed within the air passages out of contact with the hot gases.

1,750,851. SUCKER-ROD GUIDE. EARL C. MEIER, Wichita, Kans., assignor to The Production Equipment Company, Wichita, Kans., a Corporation of Kansas. Filed Jan. 8, 1929. Serial No. 331,040. 8 Claims. (Cl. 308—4.)



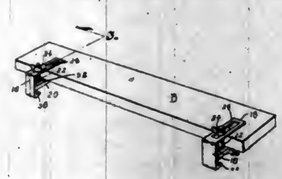
1. A rod guide for oil wells comprising an elongated pivot rod, a plurality of cylindrical rod guide members

having rod receiving grooves, said members being independently pivoted eccentrically on the pivot rod and locking members comprising malleable U-shaped castings pivoted on the ends of the pivot rod, the U-shaped members



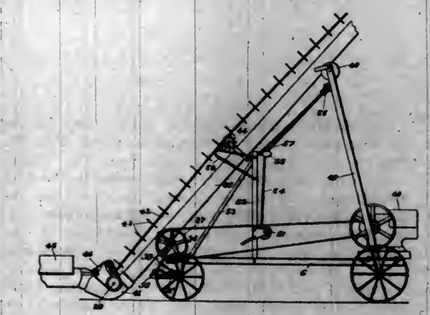
receiving a pump rod, the inner faces of the U-shaped members bearing against the ends of the first named members to flex the pivot rod to cause the inner edges of the U-shaped members to bind against the pump rod.

1,750,852. AIR-LINE HULL AND TRASH EXTRACTOR. JOHN E. MITCHELL, St. Louis, Mo. Filed Feb. 16, 1929. Serial No. 340,353. 7 Claims. (Cl. 19—37.)



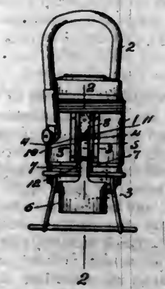
1. In a cotton cleaning machine, cotton cleaning mechanism including a hollow saw cylinder provided with circumferential openings between the saws, a casing hermetically enclosing the cleaning mechanism, means for drawing air through said circumferential openings into the interior of the saw cylinder whereby to create suction within the casing to draw crude cotton into the machine into contact with the cleaning mechanism, and hull-repelling and cotton-removing members co-operating with said saw cylinder.

1,750,853. CONSTRUCTION OF STOVES. GUILFORD S. MORLEY, University City, Mo., assignor to Majestic Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Dec. 1, 1927. Serial No. 236,894. 2 Claims. (Cl. 126—1.)



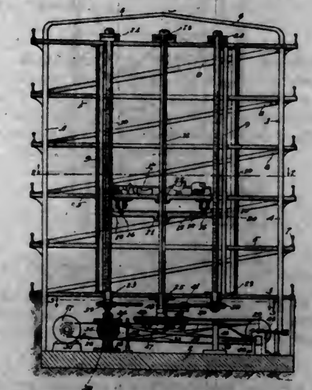
1. A stove comprising a supporting member fixed to a wall thereof and having marginal flange portions spaced outwardly from the wall to which said member is fixed, and a corner piece provided with a projection extended behind a portion of said decorative element, whereby said corner piece is supported.

1,750,854. SHINGLE GAUGE. FREDERICK L. NELSON, Alta, Iowa. Filed Feb. 13, 1928. Serial No. 253,876. 3 Claims. (Cl. 33—188.)



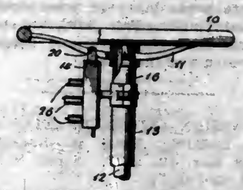
1. A device of the class described comprising a U shaped member, the arms thereof being longitudinally slotted, a clamping bolt extending through said slotted arms, and an extension on the connecting portion of the U-shaped member terminating in a finger bent to extend in the same direction as the arms of said U-shaped member.

1,750,855. PORTABLE GRAIN ELEVATOR. LEONARD B. NEIGHBOUR, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Aug. 11, 1927. Serial No. 212,135. 6 Claims. (Cl. 198—122.)



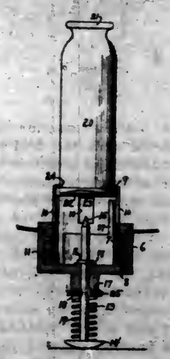
3. In a portable grain elevator, the combination of a frame comprising a rear axle, wheels mounted thereon, a front axle, steering wheels mounted thereon, a steering member projecting forwardly from said front axle and operatively connected with said latter wheels, an elevator tube, and means pivotally supporting said tube on the front end of said frame on a pivot axis disposed above said frame and intermediate the ends of said tube, said pivot axis being located forwardly of the plane of said front axle, whereby to prevent the downwardly swinging front end of said tube which extends forwardly beyond said pivot axis from interfering with actuation of said steering member when said tube is elevated to operating position.

1,750,856. LANTERN. HENRY B. PATCHE, Kansas City, Mo., assignor to Genesy Electric Lantern Company, Rawlins, Wyo., a Corporation of Wyoming. Filed Nov. 23, 1928. Serial No. 321,824. 2 Claims. (Cl. 240—10.5.)



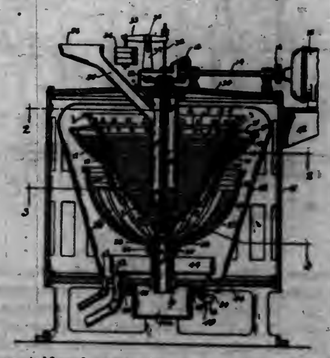
1. In a lantern, the combination with a lantern body and a handle and lamp carried thereby at the bottom and outer side thereof, of a glare shielding member movable on the outer side of the side wall of said body to two positions, in one of which it will only obstruct light projected in one direction from said lamp and so disposed as to be engaged and moved to said positions by a hand which is holding the handle, and means for engaging and releasably holding said member in either of said positions.

1,750,857. AMUSEMENT TOWER. ISAIAH D. PATTERSON, Gardena, Calif., assignor of two-thirds to John A. MacMeekin, San Jose, Calif. Filed Apr. 28, 1926. Serial No. 105,183. 11 Claims. (Cl. 272—7.)



11. An amusement tower comprising in combination a vertically movable platform having a control station thereon, a carousel mounted on said platform, means to elevate the platform, means operating centrally of the platform to rotate the carousel and means in said station to control the vertical movement of the platform and the rotational movement of the carousel.

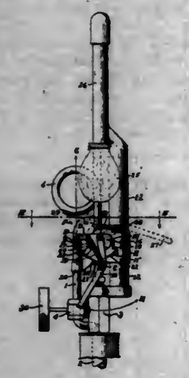
1,750,858. LOCK. ARMIN POLLAK, Bronx, N. Y. Filed July 10, 1928. Serial No. 291,579. 5 Claims. (Cl. 70—129.)



1. In a lock, a sliding lock bolt, a locking mechanism therefor, including a plurality of rotatable tumblers, a locking bar interposed between and engaged with said bolt and tumblers to retain said bolt in locking position, said bar being movable to release said bolt only when said tumblers are rotated to predetermined positions, and a plurality of locking pins also controlled by said tumblers for movement into and out of the path of said bolt.

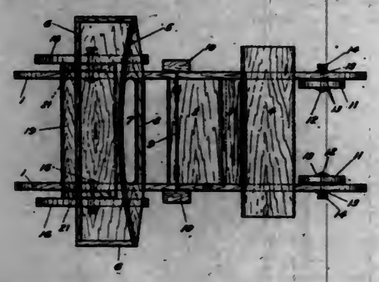
1,750,859. FIRE EXTINGUISHER. JOHN RAUS, Cleveland, Ohio, assignor, by mesne assignments, to The National Formetal Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 24, 1921. Serial No. 455,240. 3 Claims. (Cl. 220—3.)

1. As an article of manufacture an elongated acid capsule of incorrodible ductile metal having at one end an external securing flange and an integral perforable region adjacent thereto.



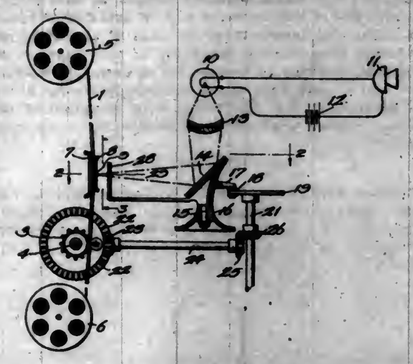
1,750,860. GOLD SEPARATOR. JACK V. RAWLINGS, Seattle, Wash., assignor to Edmond M. Beus, trustee, Soda Springs, Idaho. Filed June 8, 1929. Serial No. 369,458. 6 Claims. (Cl. 233—18.)

1. A centrifugal separator comprising an inner bowl having a flared upper section, said section having two



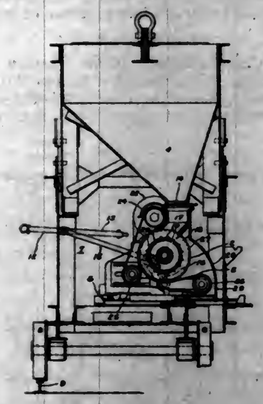
series of holes, horizontal rifles formed on the lower section, an intermediate bowl carried by the inner bowl, said inner bowl discharging through one series of holes into the intermediate bowl, discharge tubes extending downwardly from said intermediate bowl, an outer bowl receiving discharge from the tubes, and hoppers receiving the retained contents of the bowls.

1,750,861. IGNITION AND GENERATING MEANS FOR GASOLINE LAMPS. HEIM W. RESNICK, Wichita, Kans. Filed Mar. 22, 1927. Serial No. 177,338. 2 Claims. (Cl. 67—10.1.)



1. In combination with a gasoline lamp, having an auxiliary pipe connected with the feed pipe of the lamp below the valve, a funneled jet positioned in the outer end of the auxiliary pipe, a bracket attached to the feed pipe of the lamp, a needle carried by a disc-like member, and an arcuated knurled portion positioned on the disc, said disc being pivotally mounted on said bracket, a lever pivotally engaging with the disc-member but rockable independent of the disc, the disc and the lever being connected by a spring actuating means to open or close the jet as the lever is rocked, a spring supporting socket carried by the bracket and a flint positioned in the socket to engage with the knurled edge of the disc, by which means a spark is frictionally produced as the lever is rocked for the purpose specified.

1,750,862. CHILD'S RECIPROCATING ROCKER. ALBERT C. ROHM, Jr., Davenport, Iowa. Filed May 28, 1928. Serial No. 281,030. 8 Claims. (Cl. 272—53.)



2. A rocker of the character described, comprising side members having a seat between them, rolling supporting elements for the rear ends of the side members, eccentrically mounted rocker elements pivotally mounted adjacent the forward ends of the side elements, and a foot-rest connecting the rocker elements and located forwardly of the seat.

1,750,863. RECORDING APPARATUS. ROSCOE ROYAL, Chicago, Ill. Filed Dec. 13, 1926, Serial No. 154,592. Renewed Aug. 12, 1929. 10 Claims. (Cl. 179—100.3.)

4. The combination with a source of light; of operable means for varying the light; a structure receiving light from said source and contracting the light passed thereto into a beam tapering from such structure; a reflector in the path of said beam for deflecting the beam; a sensitised member impinged upon by said light beam where this beam is contracted; and mechanism effecting movement of the reflector to move the portion of the beam that impinges upon the sensitised member and effecting continuous travel of the sensitised member while the beam of light is impinging upon the sensitised member.

1,750,864. METHOD AND APPARATUS FOR PROJECTING LOOSE MATERIAL. BJARNE H. SCHIELDROP, Pittsburgh, Pa., assignor to Blaw Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed Sept. 29, 1927. Serial No. 222,740. 8 Claims. (Cl. 72—130.)
